There is an alternative style of management to the command-and-control, hierarchical bureaucratic method. It is a style which has been demonstrating its superiority world-wide, not just in the academic realm but in business and government as well. It means putting people first. In the words of one of the leaders of the Japanese ascendancy, "To motivate people, you must bring them into the family and treat them like repected members of it." A system which does this is decentralized, democratic and facilitative.

In the academic sphere the first postulate of the new system is the authority and dignity of the working academic. Once this is conceded, the organizational patterns that are coherent with it follow naturally. These include collegiality in the life of the department and of the institution, and the derivation of administrative authority from departmental and faculty councils.

Though it is widely conceded that nothing worthwhile can be accomplished without academic autonomy, the tendency is to let the fear of potential abuse lead back to the bureaucratic-hierarchical system.

III. Accreditation

As a way to assure the effectiveness of academic institutions while maximally supporting academic self-regulation, the Programme of Action of the National Policy on Education 1986 has called for the setting up of an autonomous Council on Accreditation and Assessment. The accreditation policy forms part of a reform which must be viewed as a whole and whose other important aspects include the provision for autonomy of colleges and the projected National Testing Service.

While the central motive to the accreditation system has come from the requirements of college autonomy, it also answers the need for a systematic and regular means for assuring that colleges and universities and functioning effectively.

The hierarchical-bureaucratic approach to possible academic abuses is like administering a dope-test while the race is still on. The system of institutional accreditation, on the other hand, is based on first giving an institution the maximum freedom in defining its goals and the means to achieve them, and then examining it closely, as a whole. The crucial difference from the bureaucratic system with its cumbersomeness and enforced uniformity is made possible by reliance on the faculty of judgment, in particular the judgment of responsible educators who know what academic excellence is through their own participation in it. They are able to evaluate the institution as a whole and to assess its parts in terms of their functional relation to this, and they are not constrained to see those parts only in terms of adherence to some preconceived bureaucratic prescription.

Operationalisation of an effective system of accreditation in the country will gradually lead to the establishment of norms and criteria for institutional performance assessment, and methodologies and tools for systematic institutional self-study and self-evaluation. Moreover, institutions themselves will collectively benefit through integration of this element of assessment into the institutional culture.

IV. Important Features of an Accreditation System

Institutional accreditation originated in the United States and has existed there in close to the present form for some decades and is also to be found in Canada and Japan among others. The division of authority and responsibility between central government and states in the field of higher education is similar in North America and India. Some of the main features of an operational institutional accreditation system which commend themselves are the following :

(1) Institutional accreditation, the recognition of the performance and integrity of an educational institution, is granted by an association of institutions of higher education. Accreditation means membership in the association, and the accrediting commission of the association is elected by the institutional members.

Accreditation, which is the assurance by a non-governmental body of the quality of an educational institution, must be distinguished from the granting by the (state or federal) government of a charter or licence to an institution, legally enabling it to award degrees. An institution must have a charter before it can be accredited.

(2) Institutional accreditation is a means for the self-regulation of the academic profession, with minimal political and bureaucratic interference.

(3) Institutional accreditation does not imply that accredited institutions have a similarity of goals or uniformity of process or that they are comparable. It permits diversity and innovation.

(4) The first part of the accreditation process is a self-study by the institution, involving in this activity all of its major constituents including faculty, students and administration. Included in this process is the sharp defining by the institution of its primary mission or goals. This must be soundly conceived; it must be realistic as well as appropriate to the collegiate level.

(5) The second part of the accreditation process is an onsite evaluation by a team of professional educators (faculty and administrators). Though they have the help of published association policies, their main reliance is upon their own experienced judgement. Institutional evaluation is ultimately subjective.

(6) Institutional accreditation indicates that, in the judgement of responsible members of the academic community, an institution's own goals are soundly conceived and appropriate, that its educational programmes have been intelligently planned and are competently conducted, and that the institution is accomplishing the majority of its goals substantially and has the resources to continue to do so for the forseeable future.

(7) Institutional accreditation is a matter of "yes" or "no" to the institution as a whole. It embraces all educational endeavours conducted by a single institution regardless of its complexity. Institutional accreditation must be distinguished from specialized or professional accreditation; where the latter applies, institutional accreditation is usually a prior necessity. Institutional accreditation must also be distinguished from the nationwide comparative assessments of departments in a particular discipline. This is usually carried out by a professional association in that discipline.

(8) In order to be accredited an institution must meet the Association's qualitative criteria for the assessment of institutional effectiveness in each of the principle areas of institutional activity and responsibility, as follows :

a. Institutional Mission and Objectives
b. Evaluation and Planning
c. Organization and Governance
d. Programmes and Instruction
e. Special Activities
f. Faculty
g. Student Services
h. Library and Learning Resources
i. Physical Facilities
j. Financial Resources
k. Ethical Practices
l. Publications and Advertising

(9) The accreditation agency is not simply a body for the assurance of educational quality. The process of accreditation encourages institutional improvement through continual self-study and evaluation. Accreditation agencies develop criteria and guidelines for assessing institutional effectiveness. And the expert criticism and suggestions of the evaluating team are invaluable.

(10) Developing or newly applying institutions can, prior to accreditation, be awarded candidate status on satisfying certain criteria. **These Requirements of Candidature** concern institutional characteristics largely capable of objective verification. Candidature is usually granted for a two-year term. If progress is being made, candidacy can be extended for up to six years.

(11) Accreditation must be periodically reaffirmed, within a period of five years after initial accreditation, and within ten years thereafter. Accrediting bodies reserve the right to review member institutions any time for cause. They also reserve the right to review any substantive change in the institution; such changes are reviewed within two years after the changes become effective. An accredited institution which shows serious weakness in one or more areas, but which also shows firm potential for remedying the deficiencies, may be put on probation. Accreditation continues, but generally for a sharply reduced term.

(12) The accrediting associations are institutional-membership organizations supported by annual dues, from the candidate and accredited institutions. They elect the accreditation commissions, the bodies which make the final decision on accreditation after receiving the institution's self-study report and the report of the evaluation team.

Expenses for accrediting activities are borne by the institution on a cost basis. This is kept low by the extensive use of volunteers on evaluation visits.

A typical Commission consists of sixteen members who are elected at the Annual Meeting for staggered three-year terms. Provision is made for different types of institutions and the general public to be represented on the Commission. Commissioners serve without compensation, and those who are institutional representatives are currently active on the faculties or staffs of institutions accredited through the Commission. The Commission normally meets four times a year, but various committees may meet more frequently. The day-to-day activities of the Commission are conducted by a Director of Evaluation, professional staff, and support staff.

(13) Though accreditation agencies are non-governmental their accreditation has come to be recognized as a necessary qualification for eligibility to receive federal funds. The federal government in turn recognizes, for a four-year duration, those accrediting agencies which it finds to be a reliable indicator of educational quality.

(14) Despite the diversity of accredited institutions, there are some substantive curricular requirements that they must all meet, most notably a coherent and substantial programme of liberal or general studies, amounting to no less than a quarter of all course-work in a four-year undergraduate programme. This requirement is also extended to post-baccalaureate degrees, in the sense that undergraduate work with a sufficient general education component must at least be a prerequisite to those post-baccalaureate programmes.

V. Steps Toward an Accreditation System in India

(1) These above features of an operational accreditation system will serve as benchmarks in establishing a system of institutional accreditation in the Indian context as a means of reorganising the assurance of educational quality, of making expert academic consultation widely available, and as a way of mobilising local initiative and energy through self-definition and continual self-appraisal.

(2) The initial impetus for an accreditation system will come from the UGC, through its selection of a group of about twenty good autonomous institutions for initial candidature.

Until such time as twenty institutions are accredited, there will be a provisional **Accreditation Association** made up of candidate institutions, the original twenty plus those that are later admitted into candidature. After twenty institutions are accredited they will constitute the core of the **Accreditation Association** or **Accreditation Council** and candidate institutions will thereafter have observer status. The Association will be an autonomous, self-governing body—to begin with, a registered society. It will meet once a year.

Each institution's representative to the Annual Meeting of the Association will be appointed by the administrative head of the institution, the vice-chancellor or the principal. At the Annual Meeting the representatives will elect **Commissioners** the members of the **Accreditation Commission**, the body which will make the final decision on accreditation. The Commission will comprise fifteen members, serving three-year terms. Eventually, the appointments will be staggered, with about one-third of the positions being vacated each year. Commissioners will be drawn from institutions of different types as well as from outside the academic world. From among these the Association representatives will at their first meeting elect a **Chairman of the Commission** and an **Associate Chairman** for one-year terms. Subsequently, the Associate Chairman will succeed the Chairman, and a new Associate Chairman will be elected annually. The Commission will meet about four times a year.

The Accreditation Commission will, with the consent of the University Grants Commission, initially and then whenever necessary appoint a Director of Evaluation, who will conduct the day-to-day activities of the Commission with the help of a secretariat of professional and support staff. The Director's term will normally be five years, but can be terminated earlier for valid reasons by the Accreditation Commission. His status, method of appointment and terms and conditions of service will be comparable with those of a Vice-Chancellor of a University.

The Commission will also, with the consent of the University Grants Commission, appoint an **Associate Director of Evaluation,** who will report to the Director. He will normally succeed the Director,

The Director will supervise the codification of the principles, guidelines, methods and observations of the accreditation agency into a Handbook, and will submit these to the Commission for its approval.

The Director will draw up a list of potential evaluators, with critical biographies, for the approval of the Commission. The accreditation agency will keep on file a list of at least a hundred approved evaluators. They will serve in an honorary capacity. The other terms of their association with the Commission, will be determined by the Commission.

The ultimate decision on accreditation will be made by the Commission after seeing the self-appraisal and evaluation reports and related material.

The Accreditation association will eventually be encouraged to function on a zonal basis, for reasons of tractability and economy.

(3) The following are some of the major points on which an institution will face scrutiny in the process of accreditation, and which it will address in its self-appraisal :

(a) **Institutional Mission and Objectives**

These should be practical, appropriate to the university/collegiate level, and socially responsible.

(b) **Evaluation and Planning**

There should be sharply defined institutional goals and effective mechanisms for periodic, systematic self-evaluation, planning and review of objectives. The process should take into account state and central plans.

(c) **Organisation and Governance**

There should be published a clear statement based on the acts and statutes defining the respective powers, functions, responsibilities of each organisational component (Senate, Executive Council, Academic Council, governing board, administrative officers, faculty, departments, students and other constituencies) and their inter-relationships. Provisions for the distribution of authority and responsibility should be depicted in an organisational chart that represents the actual working of the institution. The faculty must have a major role in shaping and conducting academic policy. There should be provision for the consideration of student views in matters of direct and reasonable interest to them. The public interest should be adequately represented in the determination of the overall policies of the institutions.

(d) **Programmes and Instruction**

Every undergraduate programme whether professional, specialised or general ought to show an appropriate regard for the humanities, natural sciences and social sciences. Usually, at least a quarter of each student's programme should consist of courses in these areas, but experimentation with other ways of meeting the end of well-roundedness should be encouraged. Courses should adhere to clearly defined institutional standards of scholarship. There ought to be appropriate means for monitoring the effectiveness of the educational programmes. (The development of some of these, such as a National Testing Service, will be the job of educational bodies and authorities outside the institution). There should be some systematic procedures that tend to assure that assessments are fairly awarded while at the same time preserving the integrity of the educational process. There should be some means of assuring that the number of sessions planned for a course are actually held, and that the students and teachers are fulfilling their responsibilities in respect of the course.

(e) **Faculty**

The qualifications and numbers of the faculty should be adequate to discharge their academic responsibilities. Their recruitment, promotion, retention and security of tenure and other conditions of service, particularly the teacher's academic autonomy, in determining the content of the course, the teaching method and the method of evaluation, should be at a level consonant with the dignity of the academic profession. There ought to be formal of informal forums for open communication amongst the faculty and between faculty and administrative officers.

(f) **Student Services**

There should be an orderly and ethical admissions procedure, and compliance in spirit as well as law with special provisions for disadvantaged groups. Academic, personal and career counselling services, grievance-redressal services, health services and services for foreign students and the handicapped should be available. There should be clear published statements on student rights and responsibilities. Current information about graduates and their progress in careers should be maintained, and the interest of alumni in the development of the institution encouraged.

(g) **Library and Learning Resources**

Books and non-print materials and library services, study space and staff should be adequate to the educational programme and there should be systematic planning for future needs.

(h) Physical Facilities

Buildings, grounds and equipment should be adequate to meet the needs of the institution. They should be well-maintained and aesthetically pleasing. Classrooms and laboratories ought to be properly equipped and adequate in number and size.

(i) Financial Resources

The institution should be financially stable, with sufficient resources to carry out its objectives into the foreseeable future. It should have control of its financial resources and budgetary procedures, and be free from undue influence or pressure from external funding sources. There should be a clearly defined and consistently implemented process by which the budget is established and resources are allocated. There should be a yearly external audit, reviewed by the appropriate individuals or groups in the institution.

(j) Ethical Practices

In all its dealings the institution should show concern for basic values and observe the spirit as well as the letter of legal requirements.

(k) Publications and Advertising

The institution should publish a catalogue or handbook describing clearly and accurately its objectives, its admission policies, each academic programme or course of study, the requirements for a degree or other recognition, the members of the faculty with their academic qualifications, the fees and charges, the refund policy, the learning and physical resources, and other information the institution considers significant.

(4) The Accreditation Agency should be a self-financing institution. Its recurring expenditure should be met entirely from the membership fees paid by member institutions. The fees paid by the institutions should be accepted as an admissible item of expenditure for purposes of grants-in-aid to them. The initial expenditure on setting up the Accreditation Council should be met by the UGC for a period of three years.

(5) Within five years of the setting up of the Accreditation Council, only accredited institutions will be eligible for Central funding. Some painful decisions will have to be made, but if there is to be any point to an accreditation system, it must be operated with great integrity, and therefore there must be no exceptions.

State governments will be free, as before, to found, charter or recognise, and to fund, new institutions, but those institutions will not receive any Central funds until they become accredited. Funding, development or support of as yet unaccredited state institutions will be entirely the concern of the states.

For the founding of a new Central institution, separate funds will be allocated to sustain it until it wins accreditation, and planning for the new institution will be undertaken with the Requirements of Candidature in mind. If a central institution fails to win accreditation even after a reasonable period of time and investment of funds, the Accreditation Council will recommend its closure.

6. The implications of non-accreditation and loss of accreditation, including the consequences for faculty and past and present students, must be spelled out in advance and publicised.

Denial or loss of accreditation must not come as a surprise. Consultancy services recognised by the Association should be also be available to provide an early warning of deficiencies and advice in dealing with them.

7. The right to academic self-determination of the individual academic, the department, and the college or university is fundamental. The prima facie satisfaction of it (as evidenced, for example, by the rules and composition of the statutory bodies of the institution) will be a Requirement of Candidature.

8. Autonomy is not a prize for the deserving. It is a precondition for any worthwhile work. So it cannot be made a consequent to accreditation or even to candidature, but must precede them.

The accreditation system is designed, above all, to make college (and university) autonomy possible by shifting to a mode of accountability that is horizontally rather than vertically organised, and which therefore does not stifle local initiative.

The current UGC guidelines on autonomy envision two degrees of autonomy for colleges. The first, more properly designated "semi-autonomy", is under the aegis of the erstwhile affiliating university, which, along with other external agencies, has its representation on all the college's statutory bodies. Semiautonomy does not go far enough in enabling teachers to determine their work situation, alienating them from their jobs. And it makes the statutory bodies cumbersome and open to manipulation by persons without a legitimate stake in them. Semi-autonomy, then, though it is a great improvement over affiliation should be seen as a stop-gap arrangement.

After the accreditation system is in place, colleges should be in a position to avail of the second, more complete degree of autonomy, under conferment of "deemed university" status from the UGC, a possibility envisioned by the UGC guidelines and also by the National Policy on Education, 1986.

As for affiliated colleges proper, as distinct from semi-autonomous ones, none of them can be granted candidature by the accreditation system because their set-up is by its nature too violative of individual and departmental academic autonomy. Since accreditation involves a "yes" or "no" to the institution as a whole, no matter how complex it is, affiliating universities will themselves not be eligible for candidature until they have divested themselves of these colleges at least to the extent of semi-autonomy.

Since, within five years of the setting up of the Accreditation Council, only accredited institutions will be eligible for Central funds, the goal of autonomy (or semi-autonomy) is envisioned for all colleges by then.

The UGC has decided to grant autonomous status to 500 colleges by the end of the current five-year plan (1990). Special funds will have to be made available by the UGC during the intervening period to facilitate the transition of the remaining colleges, so that they may all have a fair chance to qualify for accreditation before the deadline.

Some of the conditions for the granting of autonomous status by the UGC will be similar to the conditions for the granting of candidature by the Accreditation Council. Nevertheless, these conferments by two distinct bodies should be kept distinct.

(9) There are a variety of causes which will keep an institution from accreditation, and the appropriate response of the concerned authority will vary accordingly. In most cases what is called for will be a matter of reorganisation and some additional finances, but not very substantial expansion of faculty and facilities. But some present institutions are simply too small to be able to offer a satisfactory educational programme particularly in light of the claims of general education. In such cases, consolidation with other institutions would be called for.

(10) An emphasis on general education will be a primary concern of the accreditation system and will be enforced as a Requirement of Candidature. There is no other way to realize a large number of the curricular goals enunciated in the National Policy on Education, 1986. Every college must make the student aware of the range of human knowledge; it must increase the student's capacity for the organisation and expression of thought; it should provide an opportunity for the development of basic learning skills and foundations necessary for success in mastering advanced specialised subject matter; it should develop within students the capabilities of forming independent judgments, weighing values, and understanding fundamental theory and it should encourage the pursuit of lifelong learning.

The value of elective courses, within the field of specialisation but more especially outside of it, should be emphasized, as this is the primary foundation of interdisciplinary study, which the new education policy is committed to, It will also give new life to some of the fields of study that few would like to specialize in but many would like to study, which are presently wasting away.

The mode of implementing general education, whether through distribution requirements, foundation courses or some other modality, will be left up to the institution.

The system of credits and internal evaluation (not necessarily examination based), modularity of courses of study, and admission to the college as a whole rather than to a department, will be included in the Requirements of Candidature.

VI. Linkages

(1) The Association of accredited institutions of higher education can exert a positive influence on the standards of secondary education, through recognition of the certificates of various boards. They can also recognise independent schools, and help them to establish an accrediting Association of Secondary Schools with strong linkages to the higher education Association.

(2) Professional institutions in fields such as engineering, medicine, architecture, management and law should be brought under the scope of institutional accreditation through the aegis of the proposed National Apex Body for Higher Education. Institutional accreditation should be made a prerequisite to professional accreditation.

(3) In assessing the educational effectiveness of an institution, evaluators will want to have some concrete measure of educational outcomes. For this the development of the National Testing Services, providing objective and up-to-date certification in a wide variety of subjects, will be extremely helpful.

VII. Financial Implications

The financial (and political) implications of bringing most of the nation's institutions of higher education upto the level necessary for accreditation must be squarely faced. Even though the implementation of accreditation is in itself bound to improve the cost-benefit ratio, effective education cannot possibly come so cheaply as what is now prevalent.

VIII. Recommendations

This report should be widely circulated in the academic community for a full scale discussion on the idea of an Accreditation & Assessment Council.

Seminars on Accreditation and Assessment Council

While considering the Gowariker Committee Report on Accreditation and Assessment Council, the University Grants Commission (UGC) at its meeting on 21st January, 1988 accepted the recommendations of the Committee that "this report should be widely circulated in the academic community for a full scale discussion on the idea of an Accreditation and Assessment Council." As a follow up action, the UGC proposes to hold four regional seminars and a national seminar to discuss the Report as per details below :

Region	State/Union Territories*	Venue & Date of the Seminar (Tentative)
North	Punjab (3) Himachal Pradesh (2) Jammu & Kashmir (2) Delhi (5) Haryana (2) Rajasthan (5) Western Uttar Pradesh (14)	University of Jammu, Jammu 21st April, 1988
West	Gujarat (7) Madhya Pradesh (10) Maharashtra (9)	Gujarat University, Ahmedabad 28th April, 1988
South	Andhra Pradesh (12) Karnataka (6) Kerala (4) Tamil Nadu (9)	Bangalore University, Bangalore 4th April, 1988
East	Assam (2), Bihar (8) Manipur, Meghalaya & Orissa (6) West Bengal (9) Arunachal (1) Eastern Uttar Pradesh (4)	Jadavpur University, Calcutta 11th April, 1988
National Seminar	Convenors of Regional Seminars, Representatives from Ministry of Human Resource Development, Eminent Educationists & others.	To be announced

*Figures given in brackets indicate the number of Universities in a State excluding Agriculture Universities.

AIU SEMINAR SERIES

IMPLEMENTATION & MONITORING OF NATIONAL POLICY ON EDUCATION

(HIGHER & TECHNICAL)

Objectives

The National Policy on Education (NEP) and its Programme of Action clearly identified certain parameters of Technical and Higher Education which need to be strengthened and a major share of responsibilities for its implementation rests with universities and other educational institutions. The Department of Education, MHRD, the UGC and several individual universities have taken up implementation of these programmes in their own ways. In the recently concluded National Conference on "Role of Universities in Implementation of New Education Policy" held at Osmania University on Dec. 18-19, 1987 as a part of Association of Indian Universities' Annual Meeting, several Vice-Chancellors, educationists and experts deliberated on several identified issues namely :

1. Human Resource Development,
2. Consolidation and Expansion of Institutions,
3. Academic Staff Colleges,
4. Distance Teaching/Learning,
5. Youth Services; Sports and Physical Fitness Programmes,
6. Teachers Training,
7. Restructuring of Courses,
8. Research and Extension,
9. Education in Human Values,
10. Autonomous Colleges and Deptts.
11. Evaluation and Accreditation of Institutions,
12. State Councils for Higher Education, and
13. Rural Universities,

and after detailed discussions have come out with recommendations for future action. Also, several universities have sent a status report on their own implementation in the following areas :

A. Consolidation and expansion of institutions
B. Autonomous colleges and/or autonomous departments;
C. Restructuring of courses;
D. Teachers Training and Recruitment;
E. Strengthening of Research;
F. Improvement in Efficiency;
G. Mobility of Teachers and Students,
H. Making the system work;
I. Research and Development;
J. Education for women, SC & ST, Backward minorities and handicapped;
K. Evaluation Process and Examination Reforms;
L. Youth & Sports;
M. Language, Development and Cultural Perspective; and
N. Media and Educational Technology.

In the backdrop of the above, the Association of Indian Universities in collaboration with the UGC and a local host university in every region, proposes to hold four of these 3-day National Seminars on :

(i) monitoring and evaluating the status of implementation in the four area groups,
(ii) drawing up further plan of action for the remaining period of 7th plan,
(iii) devising and developing methodologies for monitoring and formats for assessing the progress of implementation, and
(iv) considering possible alternative strategies of implementation particularly with reference to problems faced.

Seminar I

Venue & Host University

New Delhi, Indian Institute of Technology

Topics for Discussion

1, 2, 3, 4 & 5

Dates

April 14—16, 1988

Seminar II

Proposed Venue & Host University

Imphal, Manipur University

Proposed Dates

May 19—21, 1988

Topics for Discussion

F G H & M

Seminar III

Proposed Venue & Host University

University of Poona

Proposed Dates

June 27—29, 1988

Topics for Discussion

6, 7, 8 & J

Seminar IV

Proposed Venue & Host University

Bangalore, Bangalore University

Proposed Dates

July 25—27, 1988

Topics for Discussion

9, 10, 11, 12

Participation. The participation to the Seminar can be either in the form of presentation of a paper or through discussions. A university can sponsor two delegates to one of these Seminars, Dean or Professor involved with actual implementation of the programmes besides the Vice-Chancellor representing the University. The participants thus sponsored will be paid TA/DA from the Association of Indian Universities and the boarding/lodging will be provided free of cost.

Receipt of Papers. The papers (type-written and in duplicate) should reach the Convenor latest by the dates mentioned :

SEMINAR I	April 1, 1988
SEMINAR II	May 1, 1988
SEMINAR III	June 1, 1988
SEMINAR IV	July 1, 1988

Seminars Chairman

Prof. S.K. Agrawala
Secretary, AIU

Seminars Convenor

Dr. V. Natarajan

HAVE YOU ACQUIRED A COPY OF

UNIVERSITIES HANDBOOK—1985-86

Salient Features

—Contains information covering all the Indian Universities including agricultural universities, institutes of national importance (including IITs) and deemed to be universities on following heads of information :

- Officers & Deans of Faculties;
- Library & Research Facilities;
- Scholarships and Fellowships;
- Academic year—last date for admissions and the approximate dates of examinations;
- Courses of Studies;
- Minimum requirements for admission to each course, duration and the subjects of study for each course;
- Names of Professors and Readers/Assistant Professors together with their academic titles department-wise;
- Names of Colleges together with names of Principals and Heads of Postgraduate Departments in Colleges;
- Statistics on examination results.

—Introductory chapter on overview of the University System in India.

—Map showing location of universities.

Price : (Indian Edition) Rs. 450.00

Madurai Kamaraj University

Notification No. 8/R/88

Applications in EIGHT COPIES on plain paper are invited for the following posts with full particulars in the PROFORMA given below and copies of testimonials and such other additional information as the applicants may wish to give.

1. Director, Academic Staff College
2. Director, Institute of Correspondence Course and Continuing Education
3. Controller of Examinations

Essential Qualifications

Director (Academic Staff College)

Applicants should possess a Doctorate Degree in Education/Educational Psychology with ten years of UG/PG teaching and research experience in the age group of 45 to 50 (subject to relaxation in the case of deserving candidates).

Director (Institute of Correspondence Course and Continuing Education)

Applicants should possess a Doctorate Degree either in any discipline with ten years of UG/PG teaching and research experience with wide knowledge in the administration of non-formal educational institutions.

Controller of Examinations

Applicants should possess high academic qualifications and administrative experience, preferably knowledge pertaining to University administration and conduct of examinations.

Scale of Pay : (for the three posts)

Rs. 1500-60-1800-100-2000-125/2-2500 with usual allowances.

Age Limit : 55 years.

1. Name of the applicant
2. Address (To which communication may be sent)
3. Age/Date of Birth
4. Community (FC/BC/SC/ST)
5. Present Position
6. Academic Qualifications (with dates on which degrees were taken)
7. Experience
    (a) Teaching : 1. Degree level
    2. P.G. level
    (b) Research (with publications, if any)
    (c) Administration
8. Distinctions/honours
9. Membership of professional, academic or scientific bodies.
10. References (with names & addresses)
11. Testimonials
12. Any other information
13. Signature of the Applicant

Selected persons will be appointed on contract basis for a period of three years.

Candidates desiring to apply for one or more posts should send separate applications for each (in 8 copies).

The applications may be sent in a sealed cover addressed to Dr. T. Sivasankaran, Registrar, Madurai Kamaraj University, Madurai-625021 on or before **4th April, 1988** by Registered Post. The name of the post for which the candidate is applying may be superscribed on the cover.

Madurai-625021.
Date : 11.3.1988.

Dr. T. Sivasankaran
REGISTRAR

Science Education and Communication

A Centre for Science Education and Communication has been constituted in the University of Delhi to serve as an institution in which studies can be carried out by teachers and students and other interested individuals, for the generation of ideas and materials for the improvement of science education at university and school levels; and for the promotion of a wider interest in science and scientific issues, through all means of communications. The Centre has a governing council, programme advisory council, programme implementation committee and a council of associates.

The Programme Advisory Council shall perform the following functions :

(i) Monitor and evaluate the ongoing programmes of the Centre and examine fresh proposals,

(ii) Formulate long term plans for the activities of the Centre,

(iii) Constitute panels of experts for scrutinising various project proposals,

(iv) (a) Constitute Resource Groups working in various Colleges and University Departments to carry out the programmes of the Centre at the respective institutions,

(b) Form working groups based at the Centre for specific purposes,

(c) Affiliate those groups, clubs, and organizations involving students and teachers of the University who are engaged in the activities which are of interest to the Centre. Such groups will be eligible for financial and other assistance from the Centre, subject to the approval of the Governing Council on a case to case basis,

(v) Formulate collaborative programmes in association with groups or Institutions working in areas within the Centre's areas of interest, and

(vi) Perform such other functions, as may be assigned to it by the Governing Council from time to time.

Biographical Dictionary of South Indian Women

The Mother Teresa Women's University proposes to bring out a Biographical Dictionary on South Indian Women. To be the first attempt of its kind in India, the university feels that the Dictionary will help eradicate inequalities and promote national integration which are the principal factors for the promotion of international understanding.

The Dictionary will include biographies of women from all walks of life—politics, religion, social work, education, journalism, science, law, business, industry and also writers poetesses, musicians, dancers, actresses and sports women who made tangible contribution either directly or indirectly to the growth of the Nation.

The Dictionary will not only be of use to the students of history but also to the general public. Apart from being used as a standard reference book, it is intended to serve as a light and pleasant informative reading material even for those who are not interested in any serious study of history, politics and social development of South India. In addition to this, it will help unveil the various contributions of women which are either kept in the dark annals of books or are unaccountable.

It is also intended as a manual for students of women's studies, who are prepared to venture into attics, old people's parlours, art galleries, museums, libraries and record offices in their quest for the history of women and it will prove helpful both to individuals and to those who work on women's studies. This study will widen the field for the easy inclusion of needed biographies into the curriculum, which have been absolutely forgotten in the annals of history.

Further details about the project can be had from Dr. A Suryakumari Prof. & Head, Department of Historical Studies, Mother Teresa Women's University, Kodaikanal-624102.

Orientation Programmes for Academic Counsellors

Hyderabad Regional Centre of Indira Gandhi National Open University has commenced a series of Orientation Programmes for Academic Counsellors for Preparatory Courses of Bachelor's Degree Programme and other programmes. The first Programme was conducted on 12-13 March, 1988. 35 Academic Counsellors drawn from colleges, universities and institutes of higher learning in South India participated in the Programme. The Orientation Programme comprised lectures, discussions and audio video presentations on open university and distance education systems, multimedia instructional system, face-to-face and correspondence tuition, an overview of university's modular academic programmes, etc.

Academic Counsellors would provide tutoring and counselling to University's students through University's network of 6 Regional Centres and 100 Study Centres spread over the entire country. Study Centres function on the premises of existing higher educational institutes and draw spare infrastructural and human resources of those institutions.

National Open University is currently running Diploma Programmes in Management, Distance Education, and Creative Writing in English besides Bachelor's Degree Programme. Preparation is on for courses in Food and Nutrition, Library Science, Rural Development, Higher Education, Aeronautical Engineering, etc. The teaching system of University which is cost effective and cost efficient includes print materials, broadcast audio visuals, non-broadcast audio visuals, practical work and inter-personal communication.

Professional Development in Higher Education

A Centre of Professional Development in Higher Education has been established at the University of Delhi. The Centre would organise orientation programmes as well as refresher courses of varying durations based on a discipline or within an interdisciplinary framework or on selected techniques and methodologies. Registration in any of these programmes or courses would be done on the sponsorship by the colleges and departments. The courses would comprise intensive learning exercises wherein an adequate amount of teaching would be complemented by a large amount of guided self-learning through such instrumentalities as seminars or term papers.

With a number of advanced Centre of Studies in various subjects in the University, Centres of Special Assistance and a large number of research projects being undertaken in various departments in subjects along the frontiers of knowledge, this centre for professional development would be in a position not only to look after the development programmes for the faculty of the University and its colleges, but would be in a position to provide such facilities for faculty member from other Universities. Prof. N.K. Ray, a distinguished scientist has been appointed as Director of this Centre.

News from Agril. Varsities

Varsity Status for NDRI

A four-member Committee of the UGC is reported to have recommended a deemed university status for the National Dairy Research Institute (NDRI), Karnal (Haryana), in view of its immense contribution in the field of milk production and selective conservation of breeds and its being the only institute of its kind in the whole of South-East Asia and West Asia. The institute runs several undergraduate, postgraduate and Ph.D. programmes in dairying on trimester basis.

NDRI plans to add master's degree programme in bio-technology and a Ph D. programme in the same discipline once the deemed university status is granted to it. At present, it is running Ph.D. programme in 10 disciplines including animal genetics and breeding, animal physiology, animal nutrition, dairy chemistry, diary bacteriology, animal biochemistry, dairy technology, dairy engineering, dairy economics and dairy extension.

It also runs master's programme in 12 disciplines of dairying, bachelor's programme in dairy technology and postgraduate diploma in analytical research techniques, quality control in dairy processing and management of dairy enterprises.

Scientists from Nepal, Tanzania, Vietnam. Iraq, Afghanistan, Philippines, Egypt, Ethiopia and Bangladesh are being trained by the institute on regular basis.

Dairy Science Centres

The Indian Council of Agricultural Research (ICAR) is reported to be considering a proposal to set up four regional dairy science centres to impart dairy education in the country. One centre each is likely to be set up in north, south, east and west parts of the country. The centres would have uniform syllabi and a common entrance test on all-India basis.

Another major proposal recommended by a joint panel of the National Dairy Development Board (NDDB) and ICAR is to increase the duration of dairying course by one year. The addition of one year to the existing four-year course would be utilised for in job training for which the scientists would be paid.

Workshop on Renewable Energy Sources

A four-day workshop of the All India Coordinated Project on renewable sources of energy for agriculture and agro-based industries was held at Dharwad recently. Jointly organised by the Indian Council of Agricultural Research and the University of Agricultural Sciences (UAS), Dharwad, the workshop was inaugurated by Dr. J.V. Goud, Vice-Chancellor. In his address Dr. Goud called for developing cheap and reliable technologies with locally available materials in order to popularise renewable sources of energy in rural areas. He said he was happy that groups of Agricultural Engineers and Microbiologists were actively engaged in exploring energy from renewable sources and also economising its use for maximum benefit.

Dr. Goud wanted that the dissemination of information on use of renewable sources of energy must be carried out at acceptable time-tested levels. The progress achieved by China in the sphere of biogas was entirely due to better techniques of dissemination of successful field-testing, he said. He also suggested that the new energy sources should facilitate a link between biomass and quality of soil so as to intergrade livestock as waste producers and providers of mechanical energy.

Dr. T.P. Ojha, Director, Central Institute of Agricultural Engineering, (CIAE), Bhopal presided over the function. About 50 scientists from various universities participated in the workshop.

Combating Heliothis

A National Workshop on the Management of the American cotton bollworm, *Heliothis* was held at Tamil Nadu Agricultural University (TNAU), Coimbatore recently. Dr. V. Rajagopalan, Vice-Chancellor, TNAU, in his presidential address emphasised the need for an organised surveillance system on *Heliothis* and also integrated pest management to avoid loss in yield. He also released a book entitled "Resurgence of sucking pests" and the first issue of the "Journal of Biological Control".

Dr. M.V. Rao, Special Director General, ICAR, New Delhi appreciated the collaborative efforts of TNAU and the State Development Departments in implementing the pest surveillance and integrated management strategies to control *Heliothis* as well as other pests on major crops and desired other States to emulate these efforts. Mr. A. Viswanathan, Director of Agriculture, Madras pointed out the role played by the State Department of Agriculture in pest monitoring from 7,250 points of the State. Dr. S. Jayaraj, Director, Centre for Plant Protection Studies, TNAU in his key note address outlined the future thrust of research on the management of *Heliothis* by the University.

Waste Land Development in Marathwada

The Marathwada Agricultural University in collaboration with the Vanrai Institute for Integrated Forestry Systems, Pune organised a seminar on waste land development at Parbhani recently. Shri Mohan Dharia, former Minister, Government of India, who inaugurated the seminar, stressed the need for afforestation in Maharashtra State in general and in the Marathwada region in particular. He pointed out that the objective of the seminar was to study the waste land development problems and work out integrated forestry programmes for the Marathwada region.

Dr. P.V. Salvi, President, Association of Indian Universities and Vice-Chancellor, Marathwada Agricultural University, who presided, stressed the need to strengthen research on social forestry. He

Professor Mukherji Passes Away

Prof. Sunil Kumar Mukherji, Former Vice-Chancellor, Rajendra Agricultural University, Pusa passed away on 5th March, 1988 at Delhi. An eminent Agricultural Scientist, he successfully combined teaching, research and administration during his eventful career. He joined Agricultural Department, Bihar in 1944, taught Agronomy at Bihar Agricultural College 1950-55 and Ranchi Agricultural College 1955-59. Before joining Indian Council of Agricultural Research in 1962, he also served as Principal, Tirhut Agricultural College, Dholi and also Director, Regional Research Institute, Pusa. He served ICAR with distinction where he rose to the position of Deputy Director-General. He returned to his home state to serve as the Vice-Chancellor, Rajendra Agricultural University for two years. Prof. Mukherji published a number of scientific papers on Agronomy. His major research contribution has been evolution of three promising strains (T3, T10 and T15) of **Pennisetum Pedicellatum** grasses as outstanding forage crops far superior to Sorghum or Sudan grass.

In his death the country has lost an eminent agricultural scientist and educationist who was a source of inspiration to his innumerable students and admirers.

emphasised the necessity to identify species of fruit and forestry plants which can be grown in the Marathwada region. He said that a large number of plants preferably in polythene bags should be made available to farmers at places convenient to them and at reasonable prices.

Shri Balasaheb Bharde, former Speaker of the Maharashtra Legislative Assembly also addressed the seminar. He said that the future of the country was dependent on the development of waste lands and emphasised the need for financing from banks and involvement of T&V system in Agro-forestry work.

News from Abroad

Open University Expansion Plans

European distance teaching universities could be linked in an association within five years. This was stated by Dr. John Horlock, Vice-Chancellor of Britain's Open University (OU) while addressing the graduates in Brussels. The new arrangements would facilitate course and credit transfers across national boundaries.

Dr. Horlock was outlining the university's plans for expansion in Europe. Advanced technologies feature strongly with the development of Saturn (Scientific and Technological Updating by Remote Networks) which has enabled the OU to feature in three projects funded by the EEC's Comett programmes.

The only outlet for students to take OU courses outside Britain (except for forces posted overseas), the scheme started experimentally in 1982 offering five courses through the British Council in Brussels, for Britons only. It later expanded the number of courses on offer, and opened up to people of other nationalities living in Belgium and Luxembourg.

Over 100 courses are now on offer, including four of the five foundation study programmes—arts, mathematics, social sciences and technology. The fifth, science, remains unavailable, mainly because of problems sending chemical kits through the international mail.

Belgain, French, German and Italian nationals, as well as British, were among new OU graduates who received their degrees from Dr. Horlock. The graduates—most of them qualifying for bachelors degrees, but including one M.A. awarded to retired German Dieter Stumpp—have all been studying through the OU's Belgium and Luxembourg Scheme.

Taxing Graduates

Australia may become the first developed country to introduce a graduate tax. According to the Federal Minister for Employment, Education and Training, Mr. John Dawkins, a committee has been set up, under the Chairmanship of Mr. Neville Wran, to examine alternative forms of financing higher education, including re-introducing tertiary fees and a graduate tax for funding the government's plans for a huge expansion of higher education over the next 12 years.

Under a proposal before a federal government committee future graduates would pay a 1 per cent tax levy on their salaries for 10 years. The tax could raise more than A $ 350 million over a 10 year period.

According to a green paper on higher education, proposals to increase the number of graduates from 88,000 in 1986 to 125,000 by 2001 could lead to a budget shortfall of up to A $ 1200 million.

In a submission to Mr. Dawkins and the Wran Committee, a Melbourne academic has argued strongly that a 1 per cent tax surcharge on the salaries earned by graduates would be a fairer and more economical way of implementing a "user-pays" system than tertiary fees.

In the submission, the head of the urban studies unit at the Footscray Institute of Technology, Mr. Rodger Eade, points out that the average salaries of Australian males with bachelor degrees are more than 50 per cent higher than those with no qualifications.

Sports News

Varsities Team for Rowing Championship

An 11 member Indian Universities Team has been selected for participation in the Senior National Rowing Championship for men. The team is at present attending the coaching camp at Calcutta University under the supervision of Dr. Anirudha Ray. The Nationals will be held at Calcutta from March 31 to April 3, 1988. The members of the team are: Ajay Gupta, Amit Chatterjee, Manoj Menon, Bimla Ghosh (Calcutta Univ.); K.M. Sridhar, S. Narasimhan (Capt.), Shiv Kumar, Sanjay Raghurao, (Madras Univ.); Asif Rehan, A. F. Khan, and Arif Irfan (Osmania Univ.).

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

Advertisement No. Affl/1946. **Dated : 14.3.1988**

Applications for the following posts are invited by **30th April, 1988** on prescribed form obtainable from the Office of the Registrar, Kumaun University, Nainital-263 001 (U.P.) by sending self addressed 9" x 6" envelope and crossed postal order/Bank draft for Rs. 8/- payable to the Finance Officer, Kumaun University, Nainital. Money orders are not acceptable.

Name of Post	Pay Scale	No. of Post	Specialization
1. Reader Geology	1200 — 1900	1 Lv	Petrology
2. Lecturer Geology	700 — 1600	1 R	Palaeontology

Note : R, implies regular; Lv, implies leave vacancy.

Qualifications

1. **For the Post of Reader**
   - (i) Good academic record with a doctorate degree or equivalent published work and active engagement in research or innovation in teaching methods or production of teaching materials; **and**
   - (ii) Five years experience of teaching or research including at least three years as lecturer or in equivalent position.
2. **For the Post of Lecturer**
   - (a) A doctorate degree or research work of an equally high standard in relevant subject;
   - (b) Consistently good academic record with first or high second class master's degree or an equivalent degree of a foreign University in relevants subject.

Further details regarding qualifications, service terms and permissible relaxations in qualifications will be provided with application form. Preference will be given to SC/ST candidates if otherwise considered suitable by the Selection Committee. Application form will not be sent by post after 25 April, 1988 and application on plain papers and received after due date are not acceptable.

MANGALORE UNIVERSITY

A PROFILE

For the outstation, particularly the international traveller, Mangalore University presents a beguiling combination of the old and the new; a breath-taking panorama of scenic beauty, and interesting academic experimentation, somewhat off the beaten track.

The old and the new are juxtaposed, because Mangalore University is one of newer universities in Karnataka and the country (its Postgraduate Centre at Mangala Gangothri having come up in the year 1968, and its Charter as a full fledged University having been obtained in the year 1980). Nonetheless, it contains within its jurisdiction, some of the oldest and most prestigious institutions involved in higher education. One of these is undoubtedly St. Aloysius College, founded a century ago, its architecture reminescent of ivy-covered Oxford Colleges. Another is St. Agnes College, the first Women's College under private mangement in India. The Manipal educational complex, with its Kasturba Medical College at Manipal started in the year 1953, is the product of the vision, perseverance and dynamism of Dr. T. Madhava Anantha Pai, and today it is rated as one of the best Medical Colleges in the country and is recognised by the Medical Council of India (MCI) and General Medical Council of Great Britain, and the Surathkal Regional Engineering College, on the other hand, represent the University's thrust into the future, dealing as they do with professional disciplines at an advanced level including computers.

Few universities can boast of a more exquisite physical terrain. The University covers two districts : the coastal strip of Dakshina Kannada and the hilly district of Kodagu. The coastal plain itself, bounded by golden beaches; criss crossed by major rivers, and undulating into a chain of rolling hills, offers kaleidoscopic visual delights to the traveller. Mangala Gangothri, the site of the Postgraduate Campus, is an impressive expanse of wind swept hills, with a panoramic view of the rolling ocean. Kodagu has both the clime, and the charm of an unspoilt hill station.

Both sections also offer a piquant amalgam of cultures and an interesting ethnic mix, the people of Kodagu, being among the martial races of India, from among whom came India's most decorated soldiers : Field Marshall Cariappa, and General Thimmayya. Dakshina Kannada, the larger segment, vies with Kerala as the origin of the one of the world's oldest Christian communities in India. It has a sizeable Muslim presence. Furthermore, it is also regarded as the Benares of the South, with the eight Maths of Udipi drawing Hindus from every part of the country to Temple square, and the shrine of the Goddess Mookambika, in Kollur. Jainism, also flourished here, its ancient monuments still extant in the Temple of a thousand Pillars, Moodabidri, and the Gomateshwara of Karkal. Living Jainism survives in Dharmasthala, where the "Heggade", is something of a Sovereign Pontiff to his followers.

Academically, the University covers the total spectrum of students' needs in higher education, offering graduate and postgraduate courses in

Arts, Science and Commerce; Graduate-level studies in professional courses like Medicine, Engineering, Law, Business Management, Education; Postgraduate Courses in these professional disciplines are also offered. For the most part, graduate studies are carried out through affiliated colleges, and (except in some of the Technical disciplines) directly by the University at Postgraduate and doctoral level in the other major branches. At the undergraduate level the University has more than fifty colleges which are affiliated to it. To maintain a calibre of educational level, standards are strictly enforced by making colleges apply freshly for affiliation, every year. A check is thus available, on the maintenance, improvement and development of institutions which seek affiliation. An effort is now being made to diversify the courses and combinations available to students at graduate level. Some of the new courses are, a subsidiary in Journalism, a degree in Physical Education and Catering.

At the Postgraduate level, Mangalore University is one of the few in the South, to frame rules and regulations with an eye on the regional requirements and blending them harmoniously with a more broader spectrum of the national advancement. Hence the University offers a syllabi which is abreast with the national and international research, progress, debates and developments, being in part with the best and most progressive universities in the country and abroad. Many a subject have been structured to suit the needs of the hinterland. The Postgraduate Departments of Marine Geology and Biosciences are executing the prestigious Western Ghat Projects. Various other departments are working in close association with highly advanced national and international institutes and laboratories, to name a few, the CSIR, ASTRA, IISc. BARC, CFTRI, Institute of Oceanography, ICHR and others.

The University's Postgraduate Campus at Mangala Gangothri has fifteen departments catering to Postgraduate Studies and Research, covering Literature, Social Sciences, Commeree, Management and various branches of sciences.

Where the more older and established universities in the State are still hesitant in introducing the M.Phil. Course, the Mangalore University has taken a bold step forward in this matter by introducing the M Phil. programme from the academic year 1986-87 which is completely a research oriented programme, with emphasis on enhancing the students' aptitude and intention towards independent research.

As all the Postgraduate Departments of the University are also research departments, much emphasis is laid on research leading to Doctoral degree and the University has already awarded 20 Ph. D. degrees from the time of its inception.

The Mangalore University has not spared any effort in stimulating all possible areas which could be of help in the progress and development of the University and in persuance of academic excellence. Thus the University has succeded in approaching and getting positive support from various institutions, Trusts and Banks in the establishment of endowment Chairs in pertinent area studies. As a result the Mangalore University, presently has as many as twelve endowment Chairs, covering areas like Rural Development, Yoga, Ayurveda and Sanskrit, Management Courses, Rural Banking, A Chair in Christianity in Bank Management, in Thulu, in Konkani, Higher Studies in Cooperative Management, in Environmental Studies and a Chair in Kodava. The University is embarking upon more ambitious programmes in introducing some more new Chairs which would study some of the most important issues of our society and region like a Chair in Youth Affairs, and a Chair in Environment and Ecology. And shortly a Chair in Women and Child Development is also expected. A novel aspect of many of these Chairs is that they are first of their kind in the State.

The University's medical, technical and Postgraduate Courses have more than five hundred students from abroad as well, who are involved in degree, Postgraduate Studies and Research.

Policy making in the University vests in its three main representational bodies.—the Academic Council, Senate, Syndicate, day-to-day running and implementation are carried out by the three main officers of the University: the Vice-Chancellor, Registrarand Controller of Examinations.

Professor B. Sheik Ali was the first Vice-Chancellor of the University who held the office during 1980-1985. The present Vice-Chancellor, Professor K.M. Safeeulla, has elaborate plans to expand on the foundations laid by his predecessor. He has conceived the idea of a Regional Institute, which will specialise in analysis, and popular public projection, of area studies. He has also empanelled a number of distinguished people to serve as advisers. These include such luminaries as Dr. Raja Ramanna, Professor Chandrashekhar, Dr. Amla, Dr. Parpia, Dr. C.N.R. Rao, and Dr. D.P. Pattanayak.

Accolades have come to the University in the acceptance by such people, of a advisory role in the shaping of the University. The UGC recognition and assistance to the University, which has been announced, will be of a great advantage in development of research and collaboration with national and international research centres. This would also help in a major developmental grant for research into "pigeon milk", and the participation of scholars from Mangalore University in seminars and exchange programmes abroad.

Such a promising beginning augurs well for a trail blazing future.

VAIKUNTA BALIGA COLLEGE OF LAW
(A UNIT OF Dr T.M.A PAI FOUNDATION)

Vaikunta Baliga College of Law, Manipal

THE SAGA OF MANIPAL

Ramdas M. Pai*

Not long ago, just when the country was recovering from the clutches of the British rule and the world war ravages, in the Southern part of the country a sleepy little village was on the threshold of an unthinkable development under the vision of Dr. T.M.A. Pai, a country doctor and a banker. Manipal as it is now known, not just in India but throughout the world, has attained the status of India's answer to Harvard or Yale.

Of course, it was not easy for one man supported not by the government or by any quasi-government or missionery agency but by his own kith and kin and family friends to raise such a mammoth empire of education and health based institutions on a small rock hillock of which features were most discouraging for any kind of growth let alone groom doctors and engineers. But today over 5,800 doctors and 5,064 engineers throughout the world owe their livelihood to this educational complex and its founder Dr. T.M.A. Pai.

Manipal shelters under its sprawling five kilometre square plateau, a number of educational, health and engineering based institutions. A medical college named after the life partner of Mahatma Gandhi-Kasturba, and attached to it are a College of Pharmacy, College of Dental Sciences, School of Nursing, Artificial Limb Centre and Kasturba Hospital.

What started as a saga of education and health turned into an epic of social service as the Manipal miracle started covering downhill into Udupi, Karkala, Moodabidri, Kundapur, Mulki and Sringeri. On every major highway reaching Manipal from mofussil places there arose a college, either sponsored by the Academy of General Education or directly under its administration.

The Academy of General Education which today stands as a harbinger of education and health services in the district is the supreme governing body of over 40 educational institutions having a student strength of over 22,000 in South Kanara disttict. The Academy established in 1942 by Dr. T.M A. Pai has today acquired the status and facilities worth to be present in a full fledged University town; in fact an expert committee from the University Grants Commission (UGC) has already examined the facilities available in the educational complex and placed before the UGC a report reportedly pressing the Commission and the Union Government to grant a 'deemed to be University' status to the Manipal—Udupi educational complex.

The 40 institutions include 8 high schools, 6 first grade colleges, 12 primay schools, 10 professional colleges including two Kasturba Medical Colleges, one each at Manipal and Mangalore, one College of Pharmacy, two Colleges of Dental Surgery, Manipal Institute of Technology, a College of Education, Vaikunta Baliga College of Law, T.A. Pai Management Institute and country's first ever College of Hotel and Restaurant Management, and Dr. T.M.A. Pai Polytechnic.

Apart from these colleges the Manipal Group of Institutions also has School of Music and Fine Arts, School of Nursing, School of Crafts and an Institute of Languages.

As a unique feature of Manipal group of Institutions there is an Educational Extension Centre specially meant for upgrading the teaching techniques of the teachers in the various schools, colleges, and institutes of the Academy. In addition, there is a Department of Medical Education which continuously finds out innovations in teaching, evaluation and communication skills of the faculty.

The first to appear among the Academy's fleet of colleges was the Mahatma Gandhi Memorial College (M.G.M.) in Udupi which is generally referred to as the 'starship' of Dr. T.M.A. Pai's fleet. It came as early as 1949. Currently it offers bachelors degrees in Arts, Commerce and Science with an enrolment rate of over 2200. The M.G.M. College also has an Institute for folk and Performing Arts attached to it, which trains youngsters in yakshagana and other forms of folk arts.

Next to be established in 1953 was Kasturba Medical College, Manipal and followed by Kasturba Medical College, Mangalore, 60 Kms. away from Manipal in 1955. Between them, these medical Colleges admit 1,400 students with an annual intake of 220 students each. Over 125 medical graduates and an equal number of postgraduates emerge from these colleges annually. Over 50% intake of the medical colleges at Manipal and Mangalore is comprised of foreign students from United States, United Kingdom, Gulf countries, Malaysia, Indonesia, Sri Lanka, Philippines, Singapore and a few African countries.

**Medical Director, Kasturba Medical College, Manipal, Karnataka.*

The year 1957 witnessed the induction of two more professional colleges viz., Manipal Institute of Technology (MIT) and Udupi Law College at Udupi now renamed as Vaikunta Baliga College of Law.

MIT has till now turned over nearly 5,064 engineers. With an annual intake of 665 students, MIT has an output of 335 engineering graduates every year. Currently, MIT has 8 branches namely : Civil, Mechanical, Chemical, Industrial Production, Computer Science, Electrical, Electronics and Communication Engineering, and Architecture. The institute during the next few years plans to introduce printing technology as a full fledged degree course.

The Vaikunta Baliga College of Law runs two academic circuits, namely : 3 years and 5 years course. The annual intake is 250 students and the output currently stands at 40 students per annum.

The year 1965 was a golden era at Manipal, a dream-come-true-year for Dr. T.M.A. Pai as three professional colleges were pressed into service. They are : College of Dental Surgery (CODS), College of Pharmacy (COPS) and Dr. T.M.A. Pai College of Education, Udupi. The former two colleges were built on the Manipal plateau and the College of Education in Udupi adjacent to M.G.M. College.

College of Dental Surgery offers both Bachelor's and Master's degree in Dental Surgery. The college attracts an independent faculty, over 435 students at an an annual intake of 100 undergraduates and 18 postgraduates. The annual output of the college is 45 students. The College of Dental Surgery is acclaimed to be one of the best equipped colleges in the entire South East Asia and draws 40% of its students from oriental countries.

The College of Pharmacy, today stands as one of the best institutions for pharmacy in the sub-continent and has an intake of 270 students with an output of 80 students each for B. Pharma and M. Pharma courses.

As a staunch educationist himself, Dr. T.M.A. Pai wanted the faculty which trains the students to be perfectly in tune with the teaching tools. Dr. Pai tried and successfully launched the College of Education to realise his dreams of a harmonious taacher training institute. The College of Education either has not let down Dr. Pai's aspirations. The college since its inception has grown from its own virtues and today it draws students from the South Indian States such as Tamil Nadu, Kerala, Andhra Pradesh besides Karnataka and Maharashtra. It has an intake of 125 students and an output of 95 B.Ed. graduates yearly.

In the year 1984 the Manipal hierarchy of administration felt the need for a Management Institute in the region. Through setting up the T.A. Pai Management Institute, the void was filled.

Yet another feather for the Academy arrived in shape of the country's first college of Hotel and Restaurant Management in 1986. This college is housed under the Valley View International Health Club at Manipal. The Welcome Group of ITC Management has vowed to develop this college into one of the best of its kind in the world as they took over the overall management of the Hotel and the Restaurant Management Institute recently. It would certainly be an easy task for them as the college already has faculty and equipement of international standards.

Apart from these institutions, the Academy also runs a numder of nursery, primary, middle and high schools which total upto 19 in all.

A Polytechnic, School of Nursing, School of Crafts School of Music and Fine Arts are flourishing under the Academy, set up by the great visionary.

In 1987, a school of languages—Manipal Institute of Languages came into existence. This school still in its infancy has already started courses in German, French, Effective English and Russian. The Institute also inducted recently teacher education (languages), language instruction, and research and development training into its programme. In future, the Institute plans to introduce courses in Journalism, Platform Speech, Public Relations and Mass Communication.

The Academy of General Education has laid out elaborate plans to establish and devlelop a Residential School. The blue-prints of "Sharada Residential School" have been drawn and plots have been laid out for this prestigeous school. The school when completed will have an intake of 30 students in the beginning and will follow the CBSC Syllabus pattern. The seats will be alloted on the basis of an entrance test. Besides the routine subjects of Mathematics, Science, Social Studies, Social Work and Physical Education, the School plans to introduce Art Work, Computer Science, Moral and Spiritual education.

Apart from the educational facilities each of the institutions have their own libraries, playgrounds and athletic tracks. The Manipal plateau has two swimming pools, one fully equipped gymnassium and over 20 acres of playground facilities.

The Kasturba Medical College has been the first in the country to open a separate department for Radiobiology as a subject. It was inaugurated by Dr. Raja Ramanna, the then Chairman, Atomic Energy Commission.

With all these features in this Mandal Panchayat one wonders if there existed a 'metropolis mandal panchayat' in India.

HIGHER EDUCATION IN INDIA
The Shifting Perspectives-III

K.K. Balachander*

III

Human Values and Higher Education

There has been so much talk recently about the an all-pervasive crisis of values in colleges/universities. Any meaningful effort at remedying the present situation presumes a correct diagnosis of the problem.

Higher education at one time was not an instrument of achieving 'material' affluence; 'non-material' values which even though are hard to measure, were considered no less important than material values. Higher educational institutions were established with the above end in view and were nursed well by dedicated voluntary bodies and some individuals. They were not to be just professional institutions to fit people for some special mode of gaining a livelihood. When the age of specialisation was forced on the society, greater stress was however laid on the material aspects of higher education than on 'humanism' and 'values' which dominated this field earlier.

The important question is : should we look at higher education solely from the manpower angle, or, in other words, should it be just job-oriented ? Looking at the higher educational scene today, it appears that it is the need for educated **manpower** rather than the concern for **manhood** that has gained more and more prominence. After economic thought brought into the focus the **investment** aspect of education, higher education has come to be considered as a 'knowledge/skill industry', just as "if producing educated people is the same as producing steel or fertiliser" (Philip Coombs). A depersonalised way of imparting knowledge cannot be deemed as education in its true sense. "Surely education should be judged by its contribution to the quality of civilization and to the happiness and self-fulfilment of human beings" (McConnell). Or, as Carter rightly put it, "it is poor, silly doctrine which looks at it (education) only as an ancillary in the production of material wealth". Besides the acquisition of knowledge/skill for jobs, there are other equally important objectives such as cultivation of the mind, character-moulding, social awareness, dignity of work, development of new ideas and insights, self-discipline and self-confidence, a happy confluence between rights/privileges and duties/responsibilities, fostering a national outlook, etc. All these aspects are not given due importance in the existing higher educational curricula or have in fact been sadly neglected. That may be the reason why we have failed in our attempts to give higher education a meaningful direction.

The craze for quick results, irrespective of merit, has coloured the outlook of majority of students—and parents too—when planning higher education for their wards. The youth is getting enamoured of the more trashy Western values, life styles and 'quick-buck' culture. They are not interested in raising themselves above selfish interests. The higher education system itself is not equipping the students to comprehend the limits of economic possibilities. The country cannot, even by 2000 A.D., hope for very high levels of material affluence (as in the West) for the mass of the people. If the educated elites start demanding too much out of the pool of (scarce) national resources for themselves, it could generate attitudes based on unlimited material possibilities. **The process of want-generation should not exceed the rate of material advancement.** If it does, either only a small section can reach high levels of affluence (the rest being in relative penury), or the system prepares itself for periodic chaos. In Western societies, higher education is considered as widening the range of **choice** and extending its frontiers. In India, on the contrary, it has to make the youth aware of the 'limits of choice'. If such limits are not to come from the coercive role of the State, they have to come from the thinking process. Unfortunately, an awareness of this problem has not been built into the Indian higher educational system. Instead, there is a blind imitation among the youth of Western ideas and prescriptions based on crass consumerist, materialistic and competitive outlook of life which are unsuited to this country. Huxley was perhaps right in stating that the modern education system in many countries turns out 'modern intelligent barbarians'. An education which concentrates more on manpower **material** would naturally look at man as essentially a labouring animal. Today,

---

Secretary-Technical Coordinator, Department of Economics, University of Bombay, Bombay.

majority of the students come out of higher educational institutions with a degree but untouched by education in the true sense as is evidenced by their attitudes and life-styles.

All this has led to a lopsided development of the minds of the students. A general atmosphere of cynicism prevails among the youth of the country. There is acute degeneration of value-base, and an all pervasive insensitivity of the educated to social responsibilities, thus alienating them from the mainstream of Indian life. On what constitutes true education, Gandhiji had this to say :

> "A man is neither mere intellect, nor the gross animal body, nor the heart or soul alone. A proper and harmonious combination of all the three is required for the making of the whole man, and this constitutes the true essence of education".

This was what was emphasised in institutions of higher learning in the ancient period. It is a pity that we have no 20th century Nalanda or Takshashila to boast of.

Irrelevant Curricula

This brings us to the question of the existing curricula and the methodology of instruction in Indian Universities. The huge investment in higher education can be fruitful, or give proper returns in socio-economic terms or in terms of human resources development, only if the curricula are relevant to the needs and aspirations of the community and responsive to real-life situations and environment. Unfortunately, the existing curricula do not satisfy these criteria. It still continues to be mostly irrelevant outmoded and outdated; many institutions are reluctant to change them. The country has reached a stage when some fresh thinking is needed in this regard.

The curricula as they exist in many universities today, are (i) mind-boggling and designed in such a way as to make the students learn by rote rather than building personality traits, (ii) far too elaborate and cumbersome, (iii) putting maximum premium on book-knowledge and information/facts of rather questionable relevance, (iv) examination-oriented, and (v) discouraging self-study habits. In this context, what Swami Vivekananda had observed is relevant :

> "Education is not the amount of information that is put into your brain and runs riot there, undigested all your life. We must have life-building, man-making, character-making assimilation of ideas...... If education is identical with information, the libraries would be the great sages in the world and encyclopaedias the Rishis......We want that education by which character is formed, strength of mind is increased, and intellect is expanded, **and by which one can stand on his own feet."**

The curricula at present followed in higher educational institutions do not bring about the desired fundamental changes in the thinking and attitude of our youth; in fact they discourage this by putting greater emphasis on passive assimilation of factual knowledge/information with unquestioning conformity. The examinations test only the memory of the students or to the ability to reproduce what is taught in the class or what the teacher expects him to answer. This is unfortunate particularly when there isa knowledge explosion in practically all field.

Some important questions that arise with regard to formulation of the curricula are : (i) what sort of a society the youth should be groomed and educated for ? (ii) Should it be a 'consumer-oriented' society? (iii) Should the system have a different set of values, one that does not see **acquisition** as the be-all and end-all, but sets store by social, cultural and ethical values? In the broadest sense, we must ask ourselves whether the higher education system should serve only economic objectives or whether it should serve other objectives as well—social, cultural, political and ethical. We would certainly want it to be the latter. For this reason, it seems right to seek gains from expenditure on higher education in the totality of these effects, and not just vocational/career success. Such an education would prove to be really productive rater than be an unproductive consumer of scarce national resources.

Without an elaborate critique of the **content** of ou higher educational process, no meaningful highe educational reform is possible. Though the need fo socially relevant courses is being repeatedly emphasised in many Government documents/reports, pretty little has so far been achieved in this direction. We hav yet to work out a teaching-learning process which besides taking into account job-orientation, also pro vides strong motivation, a spirit of enquiry or intellec tual curiosity and wholesome development of the individual. What Jawaharlal Nehru had observed i this context is interesting :

> "Education has two aspects : the **cultural** aspec which makes a person grow, and the **productiv**

aspect which makes a person do things. Both are essential. Everybody should be a producer as well as a good citizen......If the universities do not teach some kind of basic wisdom, if they think in terms of producing people with degrees who want certain jobs, then the universities may have, perhaps, solved to a very minor extent the problem of unemployment or provided some technical help or other, but they will not have produced men who can understand or solve the problems of today."

Teachers' Role—The Neglected Aspect

For a rapidly growing higher education system, the need for additional teachers is large, and they have to come from among the products of the system itself. Unfortunately, only a smaller proportion of the talented persons become available to branch into teaching. There are not enough teachers to meet the urgent pressing demands. The teaching profession is fast becoming the last resort of the unemployed, or they join the profession simply because at that time they do not find a suitable opening elsewhere; as soon as they find one, they quit. There has been a steady diminution of quality of teachers during the last few years.

With unlimited class-strength, the teacher-student-subject interaction has become very weak. **The spirit of sacrifice on the part of the teacher, that of service on the part of the taught and that of cooperation and duty on the part of the parents/community/Government have all receded to the background over the years.** Perhaps the teachers have come to believe that nothing worth-while could possibly be achieved by just talk (and chalk)! They desperately try to spend an hour in the class. Moreover, the inevitable repetitiveness of a teacher's work blunts the student's mind, and the latter finds it difficult to keep his mind's edge sharp enough in order to use it for creative work. Under the existing conventional instructional method—mainly lectures and class notes—the students do not respond. As Paulo Freire remarks, the system suffers from "narration sickness," There is very little planned communication or dialogue or interaction between the speaker and the listener. It is becoming a one-way experience. The students are looked upon as "containers" or "receptacles" to be filled—an object that cannot do anything out of its own resources but needs stimulation, guidance and control. Freire calls this as the "banking concept of education ". Knowledge is deposited into the students in the same way as one deposits one's capital into a bank. In due course when capital gets ripened, one expects enough interest to buy something else, i.e. material privileges, status career, prestige, influence, etc. Also if what is presented does not interest the students, or if its relevance is doubtful, they will naturally switch off their mind and thus learning will get thwarted. The fault may not be only on the part of the teachers, but with the curricula. Besides, the number of trainees has now become too large. Unlimited class-strength means limited strength to the teacher to survey the entire class from time to time and see that everyone is attended to properly. The teacher remains a helpless spectator to the systematic carnage of standards.

How can we expect a teacher to give quality education under the above circumstances ? He finds it difficult to do justice to the profession he serves—which was onee considered as the **noblest** one and enjoyed the highest esteem from the community. Do we consider it the same way now ? Even then, some teachers like to work against all odds. As the Government of India document **Challenge of Education** had rightly stated, whatever merit there is in the present system flows essentially from the commitment, hard work and innovative capacity of a sizeable number of teachers who have become deeply involved in the welfare of their pupils **despite heartaches and poor rewards**. Only when adequate salary and congenial/conducive working conditions are assured, one can demand that the teachers must give some dedication and creativeness to their task, instead of becoming a kind of impersonal conveyor of a narrow stream of knowledge, **and communicating in the time at his disposal only what he has to communicate—and ignoring everything else.**

Funding and Autonomy

During the British period, higher educational institutions had sought funds from a variety of sources—student-fees, donations, gifts, etc.—which met about 60 per cent of the recurring expenditure of these institutions; the rest was covered by Government grants. The financial support extended then by students/parents, donors and philanthropic organisations enabled universities/colleges to retain their autonomy to a great extent. In fact one of the distinguishing features at that time was the remarkable freedom that our colleges and universities enjoyed from Government control.

Since Independence, there has been a stready decline in contributions by way of fees and private munificence; at the same time, the cost of higher education has escalated. The major responsibility of financing higher education, as a consequence, has fallen on the public exchequer. Instead of a mixed public-private system, as originally planned, almost a totally 'publicly-financed' system has emerged with universities/

colleges obtaining about 80 per cent of their funds from the State and little support from private sources. The percentage share of Government contribution towards expenditure has doubled over the last last four decades. It is therefore not surprising–though undesirable—that the higher educational institutions are subjected to more Government surveillance of finances and programmes than they would like to be. To surrender independence because of financial need is rarely a happy experience.

At the same time, the Government is becoming extremely niggardly in their approach to the basic needs of the expanding system. Government officials decide how much money should be appropriated to universities/colleges and how the latter should allocate these funds. In short, there appears to be a total lack of appreciation of the real role of higher education and this has an adverse effect not only on the implementation of academic programmes but also on the quality of the programmes themselves. The financial administration in the institution is being gradually geared towards the impersonal and highly unimaginative practices and requirements of State Governments forgetting the fact that this affects the hopes and aspirations (and careers) of thousands of students as well as over two lakh teachers. The controlling influence of state authority is felt in the smallest administrative/financial details, involving teaching/non-teaching staff, infrastructural facilities, premises and organization of various academic programmes such as Seminars, Workshops, teacher training programmes, etc. All efforts to innovate, to be distinctive, quality-wise, are inhibited. The University Acts passed in some States bear testimony to this tendency. Most of the (state) uniuersities hardly have the freedom to function without being fettered by bureaucratic (and political) pressures. The present scenario is far from assuring. With non-educationists—who do not understand academic needs–having remote control over the system, the administration in universities is in real doldrums. The Vice-Chancellors today are required to spend more time on managing than leading. They have to contend with competing interests inside as well as outside. Many educationists and well wishers of the system are viewing this crisis with considerable dismay, and speak nostalgically of the situation of yesteryears when funds were adequate, institutional autonomy was assured, academic values were respected, and the academic profession itself enjoyed a prestige. If the institutions, as well as the faculty, had made sustained efforts to mobilise non-governmental private resources, it would have helped them not only to scale down the overdependence on Government for funds but also to preserve their autonomy. The deep-rooted financial crisis that is fast engulfing the higher education sector, it appears, has evoked only resigned indifference from faculty and students alike. Even the very few teachers who are broadly aware of the situation, have failed to notice its seriousness. Perhaps they have got used to such a condition ! While complaining about Government control and interference, **they seldom ask the question as to how such a situation has arisen.** The teachers could do much more than they are at present doing. Politicians and bureaucrats cannot be expected to respect the autonomy of the university system if the academics themselves allow it to be debased.

IV

Conclusions

The preceding diagnostic review of some of the crucial issues facing the higher education system in India leads one to conclude that vast is the gap and challenging is the task ahead. The problems are more or less the same as the system faced during the long period of colonial rule. Most of the distortions that began with Macaulay still persist. The tendency has been to maintain the same design with slight, superficial modifications and inconsequential reorganisation. It is not going in for change or innovativeness. Particularly, the existing course-curricula make one either a jobseeker or a frustrated rebel. They are not based on the realities of the country. There has been little concerted effort to give higher education a meaningful direction or develop any **Excellence** therein. Recently our Prime Minister had remarked that "most of our universities have degenerated into mere factories churning out degrees." According to him, the present higher education system stifled excellence, and mediocrity is the order of the day. He called upon educational institutions in the country to do some introspection and to assess their contribution from the points of view of both excellence and utility.

Excellence implies more than competence; **it means a striving for highest standards in all walks of life.** As John Gardner says : "Many more can achieve it (excellence) than now do. Many, many more can try to achieve it than now do. **And the society is bettered not only by those who achieve it but by those who are trying.**" This may require a new way of thinking about excellence in higher education. If higher education has to become "dynamic as never before", or if we have to ensure that "those at the top of the pyramid are among the **Best** in the world," high priority should be given to changing the very ethos of the system so that hard and dedicated work and pursuit of excellence could become a way of life among institutions. teachers and students.

The maladies of the higher education system have been investigated by a multitude of commissions, committees, task forces and working groups set up by the Government, both during the British period and after Independence. Most of the recommendations made by these bodies were either abandoned or watered down. In fact there has been no other field in India than that of education that has been much talked about and so little done to change the prevailing situation. The shortcomings have become more glaring as the system has grown at a faster rate.

The final irony of the situation is that with limited financial and material resources available now, the system has got itself engulfed into a serious crisis. Finance is the most crucial factor in the development of higher education. Many good reforms and programmes suggested by various committees/commissions, and the University Grants Commission, have floundered due to lack of finance. "Neither quantitative nor qualitative improvement", as the Challenge of Education document states, "can be effected without provision of resources. In fact the resource implications of qualitative changes in education would be far greater than that of mere quantitative expansion because in such an initiative additional per unit requirement for quality upgradation will be needed for new as well as existing institutions". This makes inevitable a reappraisal of the policy of the present pattern of financing higher education, and developing some alternative strategies. It is, however, clear that an increasing support from private non-governmental sources will have to be sought in the years to come if the system has to survive. **The overdependence on the Government is neither feasible nor desirable.**

The Challenge Ahead

The need of the hour apparently is a comprehensive strategy that can tackle simultaneously all the problems bedevilling the system. The crisis is too deep and cannot be handled through a series of **ad hoc** measures, or a 'fire-fighting' approach. It demands long term, permanent measures **with a definite direction**. The recent Government of India document **Challenge of Education—A Policy Perspective** (1985) and the AIU Recommendations on New Education Policy (April 1985) have high-lighted the maladies of the prevailing system, identified the thrust areas of action and spelt out the directions of change. Later a **National Policy on Education** (1986) has also been adopted by the Government of India. The document has recognised the need for an all round improvement of the system and has assured that "urgent steps will be taken to protect it from degradation." The enormous exercise involved in the finalisation of the New Policy (and the subsequent **Programme of Action** Document) would have been worthwhile if it brings about in actuality the desired results. In India, the chasm between policy formulation and implementation has been too wide, especially in the field of education. The New Policy has however aroused some optimism among those who had closed their doors to hopes of resurrection. With some serious efforts things can be reasonably set right. We have to make good fast the years that have been lost.

There has also to be a deep sense of involvement and commitment on the part of teachers, students, parents and educational administrators. It is high time that the academic community, especially, rose to the challenge, ceased to live in ivory towers and took up the task earnestly. If we have to succeed in this, the teaching profession has to be made again a respected (and economically rewarding) one. Before expecting the flowers (students) to blossom and spread fragrance, the plant (teacher) has to be nursed well. It is the society that stands to gain by this. ☐

YOUTH HOSTELS MOVEMENT

Y. K. Ahluwalia*

The Youth Hostels Movement had its birth in Germany where Mr. Richard Schirrmann (1874-1961) a school teacher in Gelsen Kirchen in the heart of Ruhr District began with his first step in 1901 to take his class out for excursions into the Westphalian hill countryside which still lay only a few miles from the town, to study geography, history and nature with a hope to try out new teaching methods. He took his young students out on weekend trails.

It was during one such trail on 26th August, 1909 when faced with acute accommodation problem in the Brol Valley that he first conceived the idea of a youth hostel and this marked the birth of the Youth Hostels Movement in Germany and throughout the world. Mr. Richard Schirrmann is the founding father of youth hostels movement in the world and 26th August is celebrated as Founder's Day by Youth Hostels Associations all over the world.

First Youth Hostel

The first youth hostel was started by Mr. Richard Schirrmann, the pioneer of the movement in 1912 at Altena Castle on the river Rhine in Germany. In 1919 Youth Hostels Association was established in Germany and the movement spread rapidly in Europe and elsewhere in the globe and hundreds of youth hostels came into being. Before Richard passed away on 14 December, 1961, the youth hostels movement had already made rapid strides and a few thousand youth hostels had begun operating all over the world.

The best and most fascinating feature of youth hostels was their variety and touch of local heritage as all kinds of buildings were utilised for this purpose from castles, palaces and manor houses to simple farm houses and cottages but everywhere there was striking cleanliness and harmonious atmosphere. Some old ruins and archaeological places also served as Youth Hostels as we once had Bholi Bhatiyari Ka Mahel—a monument on the Ridge—which served s a youth hostel in Delhi for several years.

"Wandering One Gathers Honey"

The Youth Hostels are built to generate youth travel both from within the country and abroad. They are meant for providing cheap hostelling facilities to young people when they go on educational tours, excursions and visits to historical and cultural centres, and are intended to foster feeling of national integration and better understanding through such cultural contacts. "Wandering one gethers Honey"—Youth Hostels should provide a nucleus for youth activities in the region, helping youth to imbibe a certain sense of discipline and fellow feeling which comes from a sharing of common duties and cultural get-togethers in the evenings while staying in these hostels. It is imperative that the character of Youth Hostels should be maintained in conformity with international practices and the amenities provided should conform to international standards.

Hostelling offers a wholesome rejuvenating opportunity for the fulfilment of the natural desire to go around and see the people and places both at home and abroad. Youth hostelling is, therefore, a way of inexpensive travelling. It may be by way of biking, trekking, hiking or canoeing.

Youth Hostels Association of India (YHAI)

The youth hostel idea in India started in a humble way in Mysore where Prof. Eagleton, a professor of English at the University formed a committee in 1949 with some eminent men to organise Youth Hoslel Movement. It made some impact in University circles.

A grant of Rs. 500/- was given by the University and 3 years later it received an Associate Membership of International Youth Hostel Federation (IYHF) and the National Secretary was awarded the first UNESCO travel grant from IYHF for study of youth hostel movement in Europe. In the meantime the organisation of the Youth Hostels and the Regional Committees which were necessary for a Youth Hostel Movement was initiated. On the arrival of Mr. Catchpool in India, he made a study of the whole situation and came to the conclusion that the headquarters of the organisation should be moved to Delhi as he visualised great possibilities for the movement in India. Mr. Catchpool, a friend and well wisher of the movement, toured many places, discussed his plans and ideas with people in public life, educationists' planners and businessmen and finally drew up his plans. He secured a most beautiful and picturesque spot in

keeping with the Youth Hostel idea among the old ruins in Mehrauli near the Qutab Minar which was a joy to visit at any time. Shri Mahathera Dhammavira an old Cambodian monk, had set up a small Buddhist temple there with the help of the villagers living around with whom he had made friends with his nature cure medicines. This whole place had at one time, more than three hundred years ago, been a Garden house of a nobleman in the court of the Mughal Emperor, Shah Jehan. There were three buildings separated from each other within a very large compound enclosed by surrounding high walls with two very big gateways on either side with watch towers on the top. The Buddhist monk who appreciated and admired the ideals of Youth Hostel Movement, when approached by Mr. Catchpool, accepted readily the proposal for a Youth Hostel there and handed over the central building for the purpose. Thus was created the Youth Hostel (YH) centre in Delhi comprising a Youth Hostel, the office of the YHAI and also a dwelling place for the National Secretary and his family who had come over all the way from Mysore. With appreciable economy and forethought the whole thing was managed as the question of funds was a challenging one, though Mr. Catchpool had approached the House of Tatas, the Ministry of Education and others and some funds had come, they were not enough.

Meanwhile more restoration work for the building was necessary. The word had gone around and it became a common practice in those days for students from St. Stephen's College, Miranda House, Nursing College and others to have a camp there on week-ends and join in the repair work of the Youth Hostel. Members of the Service Civil International and other social workers and Mrs. Chester Bowles who was the American Ambassador's wife at that time, also used to join. The whole idea of building up something for a cause was attractive and the place was so beautiful.

In the midst of a cosmopolitan gathering of citizens of Delhi assembled at the new YH centre in Mehrauli in May 1955, Shri G.V. Mavalankar, the renowned Speaker of Parliament those days declared this new Youth Hostel centre open. Sadly enough, it also turned out to be a farewell party for Mr. Catchpool who was to leave the country soon after.

Before he left, however, a small Committee was formed with Mrs. Shanti Kabir as the Chairperson, the Late Shri G.D. Sondhi as the Treasurer, Shri S.S. Khera, I.C.S. and Prof. M. Mujeeb as members and Shri R.G. Padki as the National Secretary.

The latter half of 1956 saw the planning for the foundation of the movement in India on a national scale for which work had already begun. The first national Y.H. Conference was held in Delhi that year. A number of active and interested delegates came from the Adhoc Committees that had been formed in some of the States such as Gujarat, Maharashtra, Rajasthan, Andhra Pradesh, Mysore, West Bengal and Delhi.

The discussions were lively and practical and most of them were enthused with the idea of exploring the possibilities of a membership drive by getting the educational institutions in their respective areas affiliated to the movement and also try to get some schools and colleges offer some accommodation in their buildings during the holidays for youth hostellers. These were the genesis of Accommodation Hostels with a Warden and other necessary amenities of a Youth Hostel. Thereafter the organisation of an annual all India Conference in different states became a regular feature contributing substantially to the strengthening and expansion of the Movement.

The publication of the "Youth Hostellers" the Quarterly Journal (now monthly) and mouthpiece of YHAI was also started the same year and is continuing to serve the movement till today.

The crowning piece of the year was when the then Prime Minister, Pt. Jawaharlal Nehru on being invited to be the Chief Patron of the Movement in India, greeted it in the following terms : "I welcome the growth of the Youth Hostels Movement in India; apart from the obvious advantages of travel in various parts of the country, there is a basic significance in young men and women doing so in the impressionable years of their lives.

We have to do this not as tourists looking at strange objects but rather as children of India discovering our own country with reverence and with the desire to participate ourselves in the fashioning of a new India."

These were touching and inspiring words from a great leader for the Youth of India to be treasured in letters of gold for all time.

In 1959 was held the 2nd Asian Youth Hostels Conference in Delhi which was inaugurated by Dr. S. Radhakrishnan, the then Vice-President of India. It was a most successful conference attended by the President of the International Youth Hostels Federation and a large number of important delegates from the Asian countries.

YHAI'S First Youth Hostel

The plan for building some of the youth hostels by the YHAI was also taken up. The first youth hostel that was built with our own resources of funds and labour was a small one in the Shimla Hills near Kasauli which could accommodated 35 persons. It has a beautiful location commanding a view of many of the mountain tops and other neighbouring hill stations like Shimla, Tara Devi, Dagshai Dharampur and Kasauli. The plot of land had been donated by a friend of the movement and an International camp of volunteers helped to construct the foundations. Gopalpur on Sea, Ganjam, Orissa was the next one built by the YHAI in 1961. The land was donated by the Orissa Govt. and here also an International camp of volunteers worked for a month to lay the foundations.

In the initial stages, the building of these two hostels situated at the two opposite ends of India, by the youth hostellers themselves helped to create a lot of public opinion in favour of the Movement.

Building the Youth Hostel Complex in Chanakyapuri in Delhi was no doubt, a long and arduous process, but it also had its thrills the way it brought both national and international friendship, support and cooperation into focus which is the keynote of the message of the Youth Hostels Movement.

The Present Scheme

The construction of Youth Hostels (YH) by the Government is conceived as a joint venture between the central and the state governments. While the Central Government bears the cost of construction of the Youth Hostel, the State Governments, provide developed piece of land free of cost. Standard design has been prepared for being adopted for construction of Youth Hostel at all places with minor modifications to suit the topographical requirements of the respective areas. The Warden & Asst. Warden of Youth Hostels will be appointed by Deptt. of Youth Affairs & Sports (YA & S) and their salaries paid by Central Government.

The subject of Youth Hostels is being dealt with by Deptt. of Youth Affairs & Sports, Government of India, Ministry of Human Resource Development, New Delhi. A Central Policy Committee (CPC) has been constituted with the Minister for Youth Affairs, Sports, Women and Child Development as its Chairperson with Secretary (YA & S), Financial Adviser (YA & S), Director General Tourism, Chairman, Youth Hostels Association of India and other representatives of State governments, Youth Hostels Wardens and a few other organisations. The purpose of setting up this apex body on Youth Hostels is :

(i) to lay down broad outlines regarding youth travel from one part of the country to another;

(ii) to suggest ways and means for implementation of youth travel programme. package tours, etc., in coordination with the Ministry of Railways, State Governments, Youth Hostels Association of India, and similar other organisations;

(iii) to suggest measures for augmenting/organising accommodation and ancilliary facilities; and

(iv) to lay down policy/plans for management of youth hostels constructed by the Central Government. The Committee would also assess and review periodically the management activities of the youth hostels constructed by the Central Government.

Youth Hostels are already functioning at Amritsar, Aurangabad, Bhopal, Dalhousie. Darjeeling, Gandhinagar, Hyderabad, Jaipur, Madras, Mysore, Nainital, Panaji, Panchkula, Pondicherry, Patni Top, Port Blair, Puri, Trivandrum, Shillong, Agra, Imphal, Namchi (Sikkim).

The Youth Hostel at Dimapur has been completed and is expected to be commissioned soon.

Construction of 60 new Youth Hostels has been planned by the end of Seventh Five Year Plan at Nagarjunasagar, Ranchi, Bodhgaya, Shimla, Chandigarh, Srinagar, Gulmarg, Bangalore, Khajuraho, Bombay, Gopalpur-on-sea, Bikaner, Jaisalmer, Chittorgarh, Mussoorie, Uttarkashi, Barkul (Chilka Lake), Cherrapunji, Tura, Vishakhapatnam, Vijayawada, Tawang, Junagarh, Kulu, Pahalgam, Kishtwar, Mangalore, Gulbarga, Jammu, Merara, Balur-Halebid, Mannar, Indore, Pachmahri, Pune, Bhubaneshwar, Udaipur, Gangtok, Kodaikanal, Ooty, Varanasi, Ranikhet, Lucknow, Howrah/Calcutta, Tezpur, Delhi, Calangute, Beach (goa), Seputara, Dharamsala, Kergil, Verkalai, Ukhrul, Sibsagar, Kolasib/Lunglei, Kohima, Kailasher, Rubha, Jodhpur, Maghar.

A dozen youth hostels all over the country are at various stages of completion.

Membership

There are presently nearly 40,000 members of YHAI all over the country. The minimum age for membership is 10 years but there is no upper age limit. The annual membership fee is only Rs. 15/- for those above 18 years and only Rs. 10/- for students and those below 18 years. Fee for Life Membership is Rs. 150/-. The Membership Card issued by YHAI is valid internationally for stay in Youth Hostels all over the world.

Youth Activity Programmes

YHAI is an all India organisation with its National Office at 5, Nyaya Marg, Chanakyapuri, New Delhi-110021. There are state branches and regional units in nearly all the States.

The member States in India are engaged in their own way to make inexpensive travelling a habit, to promote understanding and friendship, to help the youth to acquire greater knowledge, care and love for the countryside through activities, such as trekking, cycle trails, scrambles, rambles, nature clubs, explorers' clubs and Millions of Trees Clubs.

National Trekking Programme

The YHAI has successfully carried out exploratory ventures in regions which are far-flung, such as Kishtwar in Northern Himalayas, Namchi in North-Eastern Himalayas, Goa in Western Ghats, Kulu Manali in Himachal Pradesh etc. Great success has also been achieved in organising International Himalayan Trekking Programme which has attracted participation and received commendation from a number of countries.

National Cycle Rally & Integration Camp

YHAI in collaboration with the Deptt. of Youth Affairs & Sports, Govt. of India every year holds National Cycle Rally and Integration Camps in Delhi in which hundreds of young boys and girls cycle from their homes in various parts of the country and converge at the camp established in Delhi for this purpose. Their week-long stay in Delhi together in the same place gives them a unique opportunity of interaction and brings them closer socially and culturally thereby helping the national integration effort.

Republic Day Camp

This year a special YHAI Republic Day Camp was organised in Delhi from 23–28 January, 1988 in collaboration with the Deptt. of Youth Affairs & Sports, in which 650 young boys and girls from border areas of the country participated. They were shown glimpses of progress made by the country in different fields. They watched the Republic Day Parade on 26th January from a special enclosure. Besides, they visited [illegible] of cultural heritage in Delhi. The programme helped a good bringing them closer to national mainstream.

All this is done by dedicated voluntary sider, the movement a great and strong vehicle ing together their feelings and aspirations wh them closer on a common platform.

In spite of tremendous efforts being made the movement, it is felt that in a vast cou India with a population of more than 80 mostly residing in villages, nothing significant achieved. The movement has not yet rea rural areas. There is a dire necessity of brid gap between the rural and the urban youth.

Ordinarily, in India, people undertake tra as a social necessity or to visit places on p This assures the belief that youth hostelling to connect the rural and the urban youth th accepted principles of hiking, biking, etc. For this aim sufficient financial resources are requi is not possible to get through YH organisatio

In other developing countries, things are Their modes of travel are also in the format The youth from different areas feel the di coming closer to each other. It is our earne that if more youth hostels are established, individual membership and the overnigh hostels will get a fillip which in turn will it movement.

The developing countries have vast lands tify themselves with their customs and syst study of their history if done judiciously, ment of a detective story as most of them with past heritage of cultural values.

The idea of Richard Schirrmann invol boys and girls and also the grown-ups, in scrambles and rambles in the countryside a around historical monuments and wilderne view to study nature and make it easy fo understand their historical background, st their interest in new knowledge. Discussio finds of the past and visits to places of varied are of great educative value and positively students and non-students to a growing und of how the past helps in shaping the present their knowledge thus acquired to what they in their own lives.

It is, therefore, desirable that to stre movement and achieve its goal, the YHAI for :

(a) mobilisation of resources at all leve
(b) building up a cadre of dedicated vo
(c) programme formulation and imple giving due regard to culture and he
(d) membership enrolment drives, and
(e) building of more Youth Hostels.

Charter for Nature

Dr. M. S. Swaminathan, Director General, International ice Research Institute and President, International Union for the onservation of Nature and Natural Resources, suggested drawing p a charter for nature that should indicate how to conserve, anage and utilise the soil, water, flora, fauna, minerals and atmos- here in an ecologically sustainable manner. Dr. Swaminathan as delivering the Convocation Address at the 6th Annual Convo- ation of the Mangalore University. He said, "It will not be nough if the University with the help of all concerned including illage schools prepares a Charter for Nature for this area. The harter will have to be converted into practical implementation uidelines. For this purpose it will be necessary to organize in illages and towns People's Associations for Sustainable Develop- nent."...Excerpts.

Convocation

Ours is a land of the youth. e than half of our population is w the age of 21. Even the popu- n of children in the age group 14, now exceeds 230 million. y of them live in our villages re they are confronted on the hand with problems relating to h care, education and even h drinking water, and on the r, with inadequate oppor- es for skilled employment.

he famine of jobs and thereby urchasing power has now be- e the most serious cause of nutrition. Without access to nced diet and clean drinking r a child will not have the ortunity for the full expression s innate genetic potential for sical and mental development. General President of the Indian nce Congress Prof. C.N.R. Rao lamented at the falling stan- ds in our Universities. He stressed that the quality of research and teaching in our universities is far from satisfactory. Such sentiments have been expressed before by several eminent political leaders, administrators and scientists. Their prescription has always been further investment in university infrastructure. While the malady is articulated clearly, the remedy prescribed applied has unfortunately not been effective. Why ?

I feel that the neglect of education at the pre-school, primary and secondary school levels is the primary cause for the decline in standards in our universities. I am an agriculturist. If I sow rice seeds in a field, watch them sprout and then neglect them until harvest time, my yield will be low irrespective of whatever chemicals and other stimulants I may apply at a later stage in the growth of the plant. Similarly, if we neglect the education of the child until the time when the youth enters the university, we will not be able to derive full benefit from our investment on university education. There is no use in blaming the students or teachers. The fault lies in our unidimensional approach to a multi-dimensional problem.

All those taking to teaching as a career will have to bear this in mind. We should work for achieving **nutrition security for our children** and for developing a **learning environment** which stimulates learning by questioning as well as by doing.

Rabindranath Tagore wrote in *Gitanjali :*

> *"A candle which is not lit cannot light others;*
>
> *A teacher who is also not learning cannot teach others".*

It is important for teachers to consider their profession as a life-long learning and sharing experience.

While we struggle to improve the learning environment for all children, irrespective of their social and economic status at birth, what can universities do to help the students who are already in the universities ?

I would like to offer two suggestions for achieving a learning revolution at the level of University education.

First, we should end as soon as possible the prevailing mis-match between admission policies and teaching methodology. Our college admission policies have rightly incorporated equity considerations and socially relevant criteria while assessing the suitability of candidates for admission. The training technology is however oriented towards youth from the middle classes and socially advantaged sections of the community. First-generation learners will remain greatly handicapped under such a system. Fortunately, the course-credit and trimester systems of organizing the teaching programmes provide excellent opportunities to help a student to both overcome the handicaps arising from inadequacies in his or her earlier school education and achieve future aspirations. We have not carefully assessed and utilised the power of this system for achieving a proper match between admission policies and educational techniques.

A second suggestion, I would like to make is a properly planned increase in the "**learning by doing**" component of university education. We know from real life experience that many illiterate persons are able to master sophisticated new skills with ease and competence provided they get opportunities to learn them through work experience. Each university can take up projects relevant to their educational thrusts and ecological setting where the faculty and students can jointly learn.

Mangalore University, for example, can work on a **Charter for Nature for the South Kanara and Kodagu Districts**". Such a charter should indicate how to conserve, manage and utilize the soil, water, flora, fauna, minerals and atmosphere of this region in an ecologically sustainable manner. The sustainable and equitable use of environmental systems involves considerable inter-disciplinary research and cooperation. Sustainable development is the 20th century passport to enduring happiness. It is a passport which should be issued to everyone in the South Kanara and Kodagu districts by this university. If similar charters for Nature are prepared for all parts of the country, we would have laid the foundation for a national ecological security system.

Jawaharlal Nehru, whose birth centenary falls next year once remarked "We are a poor people inhabiting a rich country". Why are we finding it difficult to convert our natural endowments into wealth meaningful to our people on a sustainable basis? The answer lies in our inability to convert know-how into do-how. This is where the Mangalore University can show the way.

It will not be enough if the University with the help of all concerned including village schools prepares a Charter for Nature for this area. The Charter will have to be converted into practical implementation guidelines. For this purpose it will be necessary to

MANGALORE UNIVERSITY
Highlights

1. **Offers M.Phil programme in all the 13 postgraduate departments and has introduced Postgraduate Diploma in Business Management, Production Management, Computer Applications and Certificate programme in Kannada Language.**
2. **Proposes to introduce Masters Degree Programmes in Applied Botany, Applied Zoology, Material Science and Mass Communication and Journalism from the academic year 1988-89.**
3. **Has introduced optional subjects like Electronics, Computer Science, Hotel Management, Nursing, Physical Education, Journalism etc. at the undergraduate level to strengthen the vocational element in the programmes.**
4. **Endowment Chairs have been instituted in the subjects of Rural Development, Ayurveda, Yoga, Bank Management, Small Business Management, Rural Banking, Ecology and Environment, Christianity, Tulu, and Konkani.**
5. **One seat in each of the Masters Degree Programme is reserved for outstanding NCC cadets.**
6. **Organises programmes in Community Health, Social Forestry, Leadership Training, Literacy, etc. under the NSS programme.**
7. **A Rs. 1 crore Sports Complex comprising an Indoor Stadium, Swimming Pool, Sports Fields etc. is planned.**
8. **Enjoys active collaboration with premier institutions such as Indian Institute of Science, Central Plantation Crop Research Institute, Central Food Technological Research Institute, Central Institute of Indian Languages, National Institute of Oceanography, Indian Space Research Organization and National Aeronautical Laboratory, etc.**

organize in villages and towns **People's Associations for Sustainable Development.**

Former alumni of this University could become catalysts in organizing such Associations, which could discuss and develop methods of using the land, water, flora, fauna, atmosphere and other resources of the area in a manner that both nutrition security and livelihood security for the poor can be achieved. There is a great opportunity for reversing the drain of brains and money from the village to the city. I hope the Mangalore University can take up the twin tasks of preparing a charter of Nature and for developing a mechanism for implementing the charter as its tribute to Jawaharlal Nehru during his birth centenary

Although such a project will bring the university and the people into a symbiotic partnership, the project approach I have suggested is essentially a pedagogic method for overcoming the academic shortcomings experienced by students coming from socially and economically handicapped sections of our community.

Thus, two-pronged strategy consisting of an effective use of the course-credit system of curriculum organization and involvement of students and staff in intellectually stimulating and economically and environmentally rewarding projects, will render continued criticism of declining standards in universities unnecessary and uncalled for.

Mangalore University is fortunately situated in an area rich in natural beauty, cultural heritage and enterpreneurial genius. It can become a pace setter in our country in showing how a university can in addition to combining excellence and relevance in its academic work, also focus as much attention on people as on technology, and as much on the long term as on the short term. This University can then teach the rest of the country on how to integrate environmental protection and economic growth in a mutually reinforcing manner. The Mangalore University can thus pave the way for National University level Programme of Research, Training and Action on Sustainable Development.

We Congratulate......

1. **Dr. A.P. Mitra, Director-General, Council of Scientific and Industrial Research who has been elected Fellow of the Royal Society of U.K. in recognition of his contribution in the area of radio science, especially in ionospheric physics.**

2. **Dr. (Mrs) Kanta K. Sharma, Professor and Head of the Department of Foods and Nutrition of the Home Science College of the Punjab Agricultural University who has been elected Fellow of the International College of Nutrition (ICN) in recognition of her significant contribution for the advancement of nutrition.**

JUST RELEASED
Studies in Distance Education

Besides being a very strong tool for meeting the current and future demands on the systems of education the world over, Distance Education is emerging as a discipline in its own right. These two claims are amply vouched for by this volume, which should be of as much interest to academics as to non-academics.

For the academics, the themes presented herein unfold the crucial issues, concerns, lines of thought and approaches to problems under the various aspects of Distance Education—theory, methodology and techniques, economics and research. For the non-academics, the volume outlines the utility and potential of the distance mode of education in terms of its pervasive influence on democratic revolutions by democratizing education with the help of available communication technologies.

Besides, the volume reflects the state of art as it obtains in India today. Thus, it should be of interest to readers outside India also.

Deluxe edition	**Rs. 60/-**
Students edition	**Rs. 20/-**

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
May 9-June 4, 1988	Summer Course in Analysis and Probability	Topics to be covered are Probability Theory and Stochastic Processes, Fourier Analysis & Functional Analysis.	Indian Statistical Institute, Bangalore Centre.	T.S.S.R.K. Rao, In-charge, Summer School 1988, Stat-Math. Division, Indian Statistical Institute, R.V. College (P.O.) Bangalore 560 059
May 18-20, 1988	Conference on Recent Advances in Mathematical Techniques and Applications	Topics proposed to be discussed include Mathematical Physics, Mathematical Methods, Biofluid Dynamics, Chaos, Stability and Turbulence.	Dr. Y.S. Parmar Institute of Mathematical Sciences, Shimla.	Dr. J.R. Gupta, Organising Secretary, Dr. Y.S. Parmar Institute of Mathematical Sciences, Hainault, Shimla-171002
June 27-July 8, 1988	Short-term Intensive Training Programme on Abstracting & Indexing	To train the participants in the application of abstracting and Indexing methods and construction of an indexing language (Thesaurus).	National Institute of Small Industry Extension Training, Hyderabad.	Mrs. K. Subhashini, Course Director, NISIET, Yousufguda, Hyderabad-500045
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis.**	**University of Hyderabad in collaboration with the Indian Society of Andrology.**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667**
October 27-29, 1988	National Seminar on Statistics in Medicine, Health and Nutrition.	To discuss Data-Base and Analysis in Health and Nutrition—Present and Future.	Department of Statistics National Institute of Nutrition, Hyderabad.	Dr. K. Visweswara Rao, Organising Secretary, National Seminar on Statistics in Medicine, Health and Nutrition, Department of Statistics, National Institute of Nutrition, Indian Council of Medical Research, Jamai Osmania, Hyderabad-500 007
Dec. 15-17, 1988	National Conference on Fluid Mechanics and Fluid Power	To provide a forum for exchange of information on topics in flcid mechanics and design, research and development activities in areas like power generation, aerodynamics, fluidics, biomechanics, etc.	Harcourt Butler Technological Institute, Kanpur.	Dr. N.L. Kachhara, Organising Secretary, 16th National Conference on Fluid Mechanics and Fluid Power, Mechanical Engineering Department, Harcourt Butler Technological Institute, Kanpur-208002

Workshop on Autonomous Colleges

The College Development Council of Madurai Kamaraj University organised a five-day National Level Workshop on "Autonomous Colleges" with the aim of reviewing the working of the autonomous colleges in the country.

The UGC-sponsored Workshop was inaugurated on 18th February, 1988 by Dr. S.V. Chittibabu, former Vice-Chancellor of Madurai Kamaraj and Annamalai Universities.

In his inaugural address, he said, that Autonomy would confer academic freedom to institutions and teachers to design and implement new academic programmes.

Presiding over the function, Dr. S. Krishnaswamy, Vice-Chancellor of the University said that autonomy stands for accountability and it is a process of self-searching and self-analysis.

Representatives from as many as 46 autonomous colleges from all over the country participated in the workshop which made the following recommendations :

On Governance-Organisational Structures

The functions of the governing body relating to the ownership (IV d & e) need to be redefined

The provisions which refer to the service conditions and recruitment of the staff are superfluous, therefore need to be revised.

Regarding the composition of the Governing Body, the Office Superintendant/Bursar may be included as an ex-officio member.

On Financial Implications

Both teaching & non-teaching staff should be governed by the same terms and conditions of service at the time of their appointment.

If Finance Committee is to be formed in Government Colleges, the State Government nominee, preferably local may be nominated.

On Curriculum Development

Introduction of project work where students may work in small groups should be encouraged.

The number of students in a class is to be reduced.

Each college may evolve books according to its prescribed course. For this the UGC may organise courses on material production.

On Evaluation

The institutions must devise ways by which they will be able to respond to the outside world and make it responsive to its work also.

All care should be taken to protect the interests of students. The Universities and the Government should assure autonomous institutions that their students will face no discrimination.

English as Second Language

The ELT Study Group of the Central Institute of English and Foreign Languages (CIEFL), Hyderabad, recently organised an International ELT Seminar on **Theory and Practice of ESL : Reconceptualising Issues for India**. The seminar was inaugurated by Dr. V.K. Gaur, Director, NGRI, Hyderabad. Funded by the UGC, the seminar was attended by 53 delegates from India, Pakistan, Singapore and United Kingdom. About 60 observers were also present. The British Council extended its support by actively participating in discussions and by sponsoring Mr. Alan Tonkyn from the University of Reading, U.K. for the Seminar.

The 4-day seminar had 8 plenary sessions and 12 parallel sessions where 49 papers were presented and discussed. The topics discussed included Curriculum and Innovation; Materials Production and Testing; The learner as Resource Input in Language Teaching; Teacher Education (2 sessions); Language Teaching Methodology—a Reassessment; Theoretical Models in Language Teaching—Reading Theory; Theoretical Models in Language Teaching—Linguistics. Each paper presented at the Plenary Session had a discussant who highlighted issues from the specific paper for an open discussion among the participants. Each plenary-theme was picked up in the respective parallel session where papers on the same theme were presented and discussed. The final session was devoted to an evaluation of the seminar by the delegates and their suggestions for further ELT projects.

Conference on Ecology and Environment

Mugara — Gagan, Hingoli (MCH)—the Science Academy—recently organised a National Conference on Ecology and Environment at Hingoli (Maharashtra). Jointly sponsored by the Department of Science and Technology, Government of India, and the Marathwada University, the conference discussed various problems of dimensions and causes of Ecological balance, Environmental pollution, and Atmosphere and Climatic disturbances. Inaugurating the conference Dr. Ved Prakash Patil, Dean and Principal, Marathwada Agricultural University, Parbhani stressed the importance of the eco-balance and urged the participants to put forth boldly the immediate remedies to protect the environment. He exhorted them to study land implement carefully the waste and development in the country and particularly in Marathwada Region as the land under forests was only 3%.

Dr. Liyakat Ali Pathan, President, MCH in his keynote address requested the scholars to deliberate freely as the issues involved needed deeper understanding of the present and the future in their overall complexities by every individual, society and nation. He added that the truth, no doubt, had been perceived by the higher intelligentsia but to turn it into reality it should percolate to the grassroots and common people.

Over 60 teachers and scientists from diverse fields participated in the conference at which 19 research papers were discussed.

Value Orientation in Education

A UGC sponsored symposium on Value Orientation in Education was held at the Aditanar College of Art and Science, Tiruchendur (Tamil Nadu). During the course of 4-day deliberations the symposium identified values for inculcation in the student community through a meaningful dialogue and a fruitful discussion. These included, amongst others, (i) Personal Values, (ii) Social Values, (iii) Moral Values, and (iv) Spiritual Values.

It was also felt that a certificate course in Value Education be introduced in all the affiliated colleges of the universities in India with the aim to inculcate in the minds of the students an awareness of the need for moral, ethical, spiritual, social, cultural and fundamentally personal values in life to make them worthy citizens of India. A syllabus for the course was also suggested. The other recommendations made at the symposium included implementation of value education programme in autonomous colleges and suggestions for an effective methodology; various modes through which value education could be imparted; feasibility of introducing values through co-curricular and extra curricular activities, etc.

Utkal Varsity Forges Ahead

There are a number of research and development programmes in operation in Utkal University. The Department of Psychology of the university has been functioning as a Centre of Advanced Study with a view to promoting research and academic development of high standard under the DSA scheme, the University Grants Commission (UGC) has sanctioned research support to the Departments of Anthropology and Philosophy. Details are being worked out for the implementation of the scheme. The UGC has also sanctioned a sum of Rs. one lakh to the university to pursue research on superconductivity.

The university has already established Academic Staff College for the training of university and college teachers. The College is expected to become functional from May this year. The university also have English Language Teaching Centre, Population Research Centre, Centre for Regional Studies, Curriculum Development Centre which are fully operational.

A post-B.Sc. Diploma Course in Computer Science of one year duration has recently been introduced in the university. The MBA course offered by the University is also being strengthened by funds made available by the UGC.

ASSOCIATION OF INDIAN UNIVERSITIES

CORRESPONDENCE COURSE IN EVALUATION METHODOLOGY & EXAMINATIONS

Applications are invited from College/University teachers for admission to Correspondence Courses in Evaluation Methodology and Examinations at Basic Level, Intermediate Level and Advanced Level/Special Professional Course. The duration of each of the three courses is six months. A personal 'Contact Programme' for three days is planned for each of the three courses. Universities/Institutions sponsoring candidates can meet the registration/course fees from out of unassigned grants by UGC.

Request for prospectus and application form accompanied by crossed Indian Postal Order for Rs. 10/- drawn in favour of the Secretary, Association of Indian Universities and a self-addressed stamped envelope (Rs. 2) should be sent to the Project Director (Exams), Association of Indian Universities, 16 Kotla Marg, New Delhi 110002. Last date for receipt of applications is extended to **25th April, 1988** for both sponsored and non-sponsored candidates

Language and Peace

The Department of Russian of the Central Institute of English and Foreign Languages (CIEFL), Hyderabad conducted a three-day seminar on "Russian Language : Language of Peace, Friendship and Cooperation" in connection with Festival of USSR in India at Hyderabad recently. The Governor of Andhra Pradesh, Hon. Smt. Kumudben Joshi, inaugurated the seminar while Prof. S.K. Verma, Director, CIEFL presided. Prof. E.I. Motina, the leader of the Soviet delegation, also addressed the gathering. Prof. T. Navaneeth Rao, Vice-Chancellor, Osmania University, delivered the valedictory address.

The seminar discussed the following topics at its 5 sessions : (a) Russian Language and World Peace; (b) Teaching of Russian; (c) Indian perception of USSR and Indo-USSR Friendship; (d) Indo-USSR Cooperation; and (e) Russian Literature and World Peace.

In addition to the paper presentations, two one-hour sessions were conducted as open discussion forums at which prospects of Russian Language Teaching in India and Multi-lingualism were discussed.

Narcotics Consultative Committee

Shri M.L. Jain, Vice-Chancellor, Bhopal University, has been nominated as Member of the Narcotic Drugs and Psychotropic Substances Consultative Committee constituted by the Government of India under the chairmanship of the Union Finance Minister. The committee has been entrusted with the task of suggesting ways and means to achieve drug abuse control, treatment, rehabilitation of addicts and also take up periodic review of the working of Narcotic Drugs and Psychotropic Substances Act and the rules framed thereunder.

News from Agril. Varsities

National Workshop on Lab-to-Land Programme

A National Workshop on Lab-to-Land Programme was recently held at Anand. Jointly organised by Indian Council of Agricultural Research (ICAR) and the Gujarat Agricultural University, the workshop was inaugurated by Shri Yogendra Makwana, Hon'ble Minister of State for Steel, Government of India. In his address Mr. Makwana emphasised the need for improvement in productivity of oilseeds, pulses and rice in Eastern part of the country. He said that the dryland farming had become one of the most important components of agricultural scenario and it was essential to develop most appropriate technologies to mitigate unexpected calamities caused by unprecedented drought. In this context, he said, the role of scientists had become all the more vital to develop alternate technologies and cropping patterns. The role of development agencies was even more crucial to extend these technologies to the farmers who are by and large small, marginal and poor in such areas, he added.

Shri R. Parthasarathy, Vice-Chancellor of Gujarat Agricultural University who presided, emphasised the importance of Lab-to-Land Programme and highlighted the different ways to boost-up the agriculture production in the State.

Dr. C. Prasad, Deputy Director General (Agril. Extension), ICAR differentiated the working pattern of Lab-to-Land Programme from the other extension programme. He said each category of farming community like farmers, farm women, farm youths and school drop-outs required both specific technologies and specific extension methodologies to promote agricultural development. Further, he clarified that Lab-to-Land Programme was specifically designed to educate and train small and marginal farmers and landless agricultural labourers and to promote agricultural and allied programmes for increasing production, improving working conditions, generating more employment and creating more wealth. Moreover, this programme also helps in verifying and identifying appropriate agicultural technologies by providing the scientists an opportunity to work directly in the farmer's fields. The improved technologies have helped the farmers in achieving atleast 50 to 250 per cent increase in production of different crops including vegetable and fruit crops. There has been more than 60% increase in milk, egg & meat production, due to improved feeding & management practices.

The Workshop, which was attended by over 100 delegates from all over the country, further emphasised the need to adopt both short-term and long-term extension approaches vis-a vis the short-term approach currently being adopted under the general extension system in the country. The ICAR is promoting schemes of both appropriate technologies for farms women as well as studying the impact of modernization on farm women.

The Lab-to-Land Programme of ICAR has assumed a leading role in transferring proven and most viable agricultural technologies from Laboratories to the farmers' fields with the active participation of the research scientists. The programme has already completed 8 years with considerable achievements in the field of crop production, livestock production, piggery, poultry, fisheries, bee-keeping, mushroom culture, lac culture, sericulture, home science, etc.

Inter-face of Biological & Social Sciences

A nine-day workshop-cum-training programme sponsored by the Ford Foundation was recently organised by the Directorate of Extension Education of the Birsa Agricultural University (B.A.U.) to investigate the inter-face of biological and social sciences in farming systems research. The three-fold objectives of the workshop-cum-training programme were to (1) evperience and understand the inter-face between social and biological scientists in farming systems reserch; (2) gain awareness of the role of farm women in farming systems; and (3) work with case studies on the above two points.

The Workshop, which was inaugurated by Dr. (Mrs) Aruna Bagchee, Joint Commissioner, Ministry of Agriculture, Govt. of India, was attended by 13 Research personnel drawn from India and abroad, 14 delegates from different Agricultural Universities in India and 23 participants from different schemes and institutions. The research personnel included experts from Cornell University, Florida University and Thailand.

The Workshop also organised field trips. During the course of the field visits, the participants visited Murma, Tilta, Chutu and Dahutola where work is being done by the B.A.U. under the women's development programme of the Ford Foundation.

New Tomato Cultivars

Scientists of Fruit Research Station, Marathwada Agricultural University, Parbhani have evolved new Tomato hybrid ATH-1, of 110-120 days duration having yield potential of 300 to 310 qtls/ha. The Tomatoes possess good transpost and keeping quality having red colour, moderately resistant to early blight and virus. University Scientists have also evolved a Tomato variety, ATV-1 of 100-110 days duration yielding 300 qtls/ha. The fruits are having blood red colour and less seed than Pusa Rubi. This variety is moderately resistant to early blight and leaf curl virus. Both tomato hybrid and variety are giving 27 per cent higher yield than Pusa Rubi. State Release Committee has approved these tomato cultivars for cultivation in Marathwada.

Transfer of Technology to Farmers

The Directorate of Extension Education of the Punjab Agricultural University has developed new techniques for the transfer of technology to the farmers. The new farming techniques developed by the University are disseminated through its three wings, i.e., Farm Advisory Service, Communication Centre and Extension Training Unit. While the Communication Centre educates the farmers through its publications, radio and television programmes and exhibitions, the Farm Advisory Service takes the new farming techniques at the door-steps of the farmers by organising demonstrations, conducting adaptive trials, field days, etc. The Extension Training Unit organises various training programmes of short and long duration in poultry farming, dairying, mushroom growing, bee-keeping, etc. With these efforts, the Directorate of Extension Education has proved instrumental in enhancing the agricultural produduction in the State manifold. The Extension Education experts of the University carry farm technology to small and big farmers who are equally treated and benefited with the new research findings of the University.

Standing Committee to Meet at Mangalore

216th Meeting of the Standing Committee of the Association of Indian Universities will be held at Mangalore University on April 9, 1988. Dr. P.V. Salvi, Vice-Chancellor, Marathwada Agricultural University, Parbhani and President, Association of Indian Universities will preside. A number of important issues like procedure for nomination of the members on the ACU Council, Use of Hindi language in teaching in primary, secondary and college level and in research work, Ways and means for making the university system work effectively as envisaged in the New Education Policy, and collaboration of AIU with other international university organizations are likely to come up for discussion.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through inter library loan for which requisition must be made through your Librarian.

TATA INSTITUTE OF FUNDAMENTAL RESEARCH
HOMI BHABHA ROAD,
BOMBAY-400 005

Advertisement No. 10/88

Applications are invited for Research Scholarships in the School of Mathematics of the Institute from bright young students aspiring for a career of research in mathematics. The Institute provides facilities for active research in Pure Mathematics in an atmosphere of academic excellence.

Qualifications : A good Master's degree in Mathematics. However, B.Sc. graduates of exceptional merit will also be considered. Students who have just appeared for a degree examination this year may also apply.

Final selection will be made on the basis of an interview to assess the aptitude for research.

Selected students will be paid an honorarium of Rs. 1800/- per month. The admission will be initially for a period of one year during which introductory courses on basic areas of mathematics will be given. The continuation of the research scholarships beyond one year **will depend on the assessment of the student's performance during the year.** A second assessment will be made at the end of the second year based on which the student may be offered a further extension of his scholarship at a possibly enhanced level or a Research position for 3-5 years. There are possibilities of research appointments at higher levels for outstanding students after completion of their Ph.D's.

Applications in the form of a resume giving the particulars listed below accompanied by attested copies of testimonials pertaining to the mathematical ability of the candidate from two teachers closely acquainted with the work of the candidate and a recent passport size photograph should reach the Administrative Officer (Establishment), Tata Institute of Fundamental Research, Homi Bhabha Road, Bombay-5 not later than June 1, 1988.

1. Name
2. Date and Place of Birth
3. Addrass
4. Nationality
5. Academic qualifications with year of passing, division/class and names of institutions attended (Attested copies of mark lists should be enclosed).
6. Previous experience, if any, giving designation and the scale of pay, posts held, names and addresses of previous and present employers, number of years served and present emoluments, in chronological order.
7. Details of published research work, if any.

A candidate called for interview will be paid $1\frac{1}{3}$ railway fare each way by the lowest class as also a sum of Rs. 35/- as halting allowance for the day on which he/she is interviewed. Applicants already in Govt./Semi-Govt./Public Sector Undertaking services must apply through proper channel. Only the candidates who are called for interview will be informed of the results and no correspondence of any kind will be entertained.

Excellence is the watch word of Credit Syndicate in all its endeavours Figures are here as a testimony

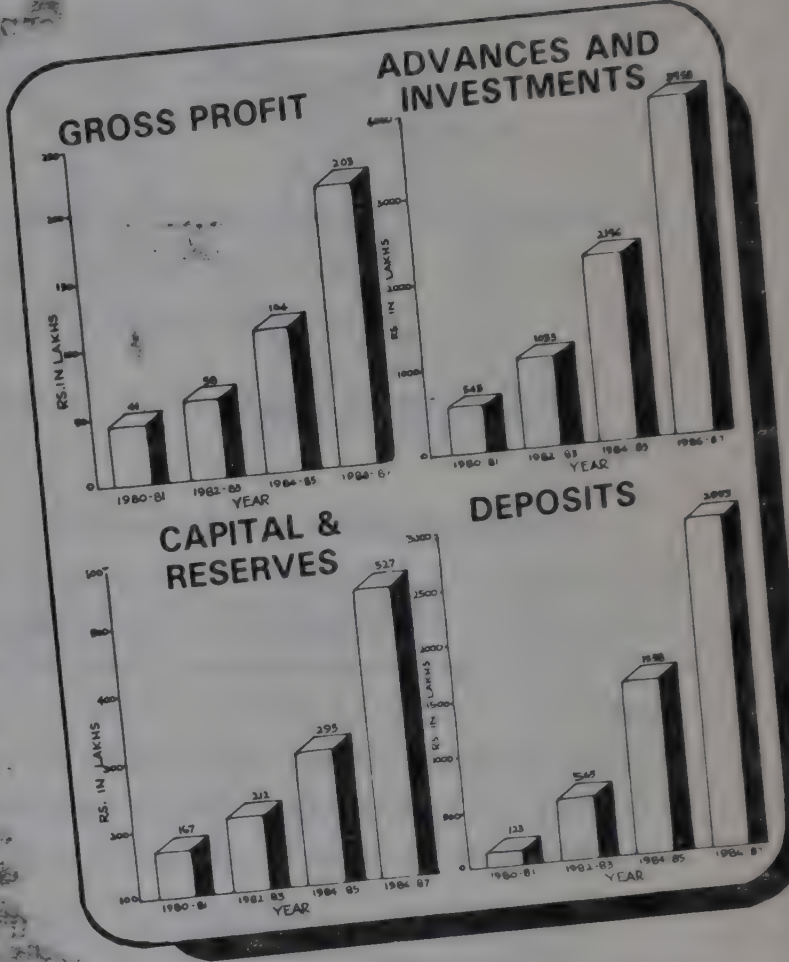
FINANCIAL HIGHLIGHTS IN LAST SEVEN YEARS

- Capital & Reserves rose by 215%
- Deposits gone up by 2284%
- Advances increased by 629%
- Gross Profits went up by 384%

- Dividend paid ever since inception
- Dividend in last two years @ 20% and for 1987, 25%
- 40,000 share holders, depositors & borrowers associated with Credit Syndicate
- Deposits as of date – Rs. 3,348 lakhs

- Financial Highlights – 1986-87

Capital and Reserves	Rs. 527.35 lakhs
Deposits	Rs. 2,933.35 lakhs
Gross Profits	Rs. 203.36 lakhs
Advances & Investments	Rs. 3,958.03 lakhs



Credit Syndicate is among the top ranking Companies in the Hire Purchase and Leasing Industry in the country. A name to be watched and growth to be shared.

(2)	Principal Scientific Officer	Rs. 1500-60-1800-100-2000
(3)	Industrial Liaison Officer (T&P)	Rs. 1500-60-1800-100-2000-125/2-2500

N.B. (i) Pay Scales in respect of the above posts are under revision.

(ii) Candidates for the post of Professor may be considered for appointment as Associate Professor in the segment of Rs. 1500-2000 of Professor's pay scale in the same Department/Centre.

(iii) Candidates for the post of ILO (T&P) may be considered for appointment in the scale of Rs. 1500-2000 depending on the merit.

(b) DEPARTMENT/CENTRE/PROGRAMME WHERE POSITIONS WILL BE FILLED UP.

DEPARTMENT/CENTRE/ PROGRAME	POSITION	SPECIALISATIONS
(1) Deptt. of Electrical Engineering	Professor	Fibre Optics & Optical Communications.
(2) Department of Computer Science and Engineering	Professor	Computer Communication; Computer Vision: Computer Architecture, New Generation Computing; Software Engineering; Theoretical Computer Science.
(3) Department of Chemical Engineering	Professor	Fluid Mechanics; Heat Transfer; Mass Transfer; Thermodynamics, Chemical Reaction Engineering; Process Dynamics and Control; Environmental engineering; Computer Aided Design; Mathematical Modelling and Simulation; Chemical Engineering Plant Design.
(4) Centre for Bio-Chemical Engg. Research	(i) Professor	(a) Molecular biology of plant, Animal & Microbial Cell. (b) r-DNA technology/hybridoma and Vector Construction.
Bio-Conversion Programme in the Centre	(ii) **Principal Scientific Officer (Temp.)	Bioprocess Kinetics & Dynamics and process anylysis. Bio-process simulation and control with experience in software development.
(5) Centre for Applied Research in Electronics	(i) Professor	(a) Digital Signal Processing/Sonar Signal Processing. (b) Millimeter Wave Integrated Circuits.
	(ii) Principal Scientific Officer	Integrated Circuit Design and Technology.
(6) Centre for Materials Science & Technology	Professor	Physical Metallurgy/Ceramics; Fracture Toughness of Materials.
(7) Centre for Rural Development & Technology	Principal Scientific Officer	Expertise in the disciplines of Chemical Engineering. Mechanical Engineering, Chemistry and Biology with experience in rural development & appropriate technology.
(8) Centre for Management Studies	Professor	Management Information Systems/Management of Production Systems/Financial Management.
(9) Training & Phacement Unit	Industrial Liaison Officer	Organisation of training & placement activity.

**If a suitable candidate appropriate to this senior position is not found, the post can be filled at the level of Senior Scientific Officer Grade-I in the scale of Rs. 1200-50-1300-60-1900.

(C) MINIMUM QUALIFICATIONS/ EXPERIENCE PRESCRIBED FOR APPOINTMENT

(a) For the Posts of Professor

An eminent scholar with published work of high quality, actively engaged in research. Ten years experience of teaching and/or research. Experience of guiding research at doctoral level.

OR

An outstanding Engineer/Technologist with established reputation who has made significant contributions to knowledge.

(b) For the Posts of Principal Scientific Officer

Bachelor's degree in an appropriate field of Technology/Engineering or a Master's Degree in an appropriate field of Science with 12 years' experience in research and development.

OR

Master's Degree in an appropriate field of Technology/Engineering or Ph.D. with 10 years experience in Research and Development.

Experience

(i) For the posts in Bio-chemical Engg. Research

Adequate research/process experience with at least two years in the design and management of integrated chemical/Bio-chemical process facilities. Sufficient experience of modern biological processes and bio-conversion of biomass. Basic knowledge in CAD, Optimization and Process Simulation.

(ii) For the posts in Applied Research in Electronics

Distinguished experience in teaching/research including design, planning, development and production of instruments in Establishments of repute/Institutions of University standard. Specialised knowledge in one or more specified fields. Professional/Scientific work of outstanding merit preferred.

(c) For the post of Industrial Liaison Officer (Training & Placement)

A Good Degree in Science, Engineering, Technology or Management or equivalent with a minimum 10 years experience in teaching, research, training of engineering personnel, industry or academic administration.

Prescribed application forms may be obtained from Deputy Registrar (Estt. I), Indian Institute of Technology, Delhi, Hauz Khas, New Delhi-110016 either in person or sending by post a self addressed stamped envelope (size 10 x 23 cms) bearing postage stamps of Re. 1.10 latest by 30.4.1988. Last date for submission of application forms alongwith crossed Indian Postal Orders worth Rs. 7.50 (No fee for SC/ST candidates) is **7-5-1988** for candidates in India and **14-5-1988** for candidates from abroad.

Persons employed in Government/Semi Government Organisations/Autonomous bodies must submit their applications through their employers.

BANASTHALI VIDYAPITH

(Deemed to be University)

NATIONAL INSTITUTION FOR EDUCATION OF WOMEN

FACULTY POSITIONS

Applications are invited for the following posts ;

Department	Post	No. of Vacancies	Specialization
Faculty of Science			
1. Computer Science	Professor	1	
	Reader	1	
	Lecturers	5	
2. Electronics	Reader	1	
	Lecturer	1	
Faculty of Home Science			
1. Child Development	Professor	1	
	Reader	1	
	Lecturer (Temp).	1	
2. Foods and Nutrition	Professor	1	
	Reader	1	
	Lecturer (Temp).	1	
3. Clothing and Textile	Professor	1	
	Reader	1	
	Lecturer (Temp).	1	
Faculty of Social Sciences			
1. Economics	Professors	2	Micro Economic Theory/ Theory of Economics Growth Research Methodology.
	Reader	1	Micro Economic Theory/ Theory of Economic Growth/ Research Methodology.
2. Political Science	Professor	1	Modern Political Theory/ Political Analysis/International Politics.
3. Sociology	Professor	1	Advanced Sociological Theories/Research Methdology Studies of Indian Societies Sociology of Organisation.
	Reader	1	Advanced Sociological Theo ries/Research Methodology Studies of Indian Societies Sociology of Organisation.
Faculty of Humanities			
1. English	Professor	1	Teaching Methods/Evaluatio and Course Development Criticism/Modern Poetry.

	Reader	1	Teaching Methods/Evaluation and Course Development/ Criticism/Modern Poetry.
	Lecturer	1	
2. Sanskrit	Professor	1	
Faculty of Fine Arts			
1. Visual Art	Professor	1	Aesthetics/Painting
	Reader	1	Aesthetics/Painting
2. Music	Professor	1	Hindustani Music Vocal/Instrumental
3. Dance & Dramatics	Reader	1	Kathak/Manipuri/Bharat Natyam
	Lecturer	1	Kathak/Manipuri/Bharat Natyam
4. Textile Designing	Reader	1	Weaving/Printing
	Lecturer	1	Weaving/Printing
Faculty of Education			
1. Education	Professor	1	Educational Psychology/ Educational Technology/ Educational Philosophy.
	Readers	4	English 1. Home Science 1, In-Service Education 1, Educational Technology 1.
	Lecturers	2	Foundations of Education 1, Teaching of Economics 1.
2. Physical Education	Lecturer	1	
Foundation Courses	Lecturer	1	M.A. Psychology/Philosophy/ Sociology/M.Sc. Home Science (Child Development) Desirable degree in Education.

Qualifications—As Recommended by U.G.C. (Will be supplied with application forms).

Pay Scales : Professors 4500-150-5700-200-7300.

Readers : 3700-125-4700-150-5300.

Lecturers : 2200-75-2800-100-4000.

Dearness Allowance, Contributory Provident Fund, Gratuity-cum-Insurance as per Vidyapith Rules. Residential Accommodation at Subsidized rates.

Notes :
1. Teachers must become habitual wearer of KHADI on appointment.
2. Selection Committee may recommend higher start in exceptional cases on merit.
3. The Vidyapith reserves the right to reduce or increase the number of vacancies or not to fill-up any post advertised.
4. First class return journey rail fare (shortest route) for Professors and Second class for others payable to persons appearing at interview.

Applications on prescribed forms (seven copies) must reach the Secretary, Banasthali Vidyapith, P.O. Banasthali Vidyapith (Rajasthan) 304022 by **9th May, 1988.** Forms can be obtained by sending self addressed stamped envelope of 16 x 23 cm. size with Rs. 3.40 stamps or 8.40 stamps for registered post in favour of Secretary, Banasthali Vidyapith. However, for Professor's post Bio-data on plain paper (seven copies) may be sent to the Secretary in confidence. No. 1/88.

BANASTHALI VIDYAPITH

(ADULT EDUCATION PROGRAMME)

Requires the following :

1. CO-ORDINATOR—1.

1. Essential—

(i) Good academic record in the subject of Adult / Continuing/ Community/Extension Education/ Community Development from a recognised Indian University or an equivalent degree from a foreign University.

(ii) M.Phil. or Ph.D. in a subject related to adult learning or a Ph.D. in a subject under Social Sciences or Education/Evidence of published learning meterials and learning resources on areas listed in—(i) above or published research in any of the relevant area/areas indicated above.

OR

(i) Good academic record with Master's Degree in the subject of Social Sciences/Social Work / Humanities / Education/ Sciences/Home Science.

(ii) Post Master's Diploma in Adult & Continuing Education from a recognised Indian University or an aquivalent diploma/degree from a foreign University.

(iii) M.Phil. or a Ph.D. in a subject related to adult learning or a Ph.D. in a subject under Social Science or Education or published learning materials and learning resources in Adult/Continuing/ Community/Extension education/ Community Development or published research in any of these area/areas.

2. Desirable

About 5 years experience of field work/teaching or research in a subject having bearing on Adult/Continuing/ Extension / Community / Non-Formal Education or Community Development. This condition may be relaxed on the recommendation of the Selection Committee.

Grade—1200-60-1900. (U.G.C. Scale, under revision)

2. PROJECT OFFICER—1.
Population Education

1. Essential

(a) Good academic record with at least 2nd class Master's Degree (C in seven point scale) in the subject of Population Education/ Demography or Social Science with specialization in Demography from a recognized Indian University or an equivalent degree from a foreign University.

(b) M. Phil. or Ph D. in a related subject or evidence of published learning materials and learning resources or published research in any of the relevant area/areas indicated above.

OR

Good academic record with Master's Degree in Social Science/Social Work / Humanities/ Education/Sciences/Home Science with Post Master's Diploma in Population Education / Demography.

2. **Desirable**

Two years experience of Field work or 2 yrs. teaching experience in the areas of Population Education/Demography or Social Science with specialisation in Demography.

Provided that if the Selection Committee is of the view that Research work of a candidate is of a very high standard it may relax any of the qualifications mentioned above. Provided further that if a candidate possessing Ph.D. degree/ M.Phil. is not available or not found suitable, a person possessing Master's Degree with good academic record may be appointed on the condition that he will obtain the required qualifications later on.

Grade—700-40-1100-50-1600. (U.G.C. scale, under revision)

Dearness allowance at Rajasthan Government rates. Provident Fund, Gratuity-cum-Insurance, Group Insurance benefits on confirmation.

Notes : (i) Teachers must become habitual wearer of KHADI on appointment.

(ii) Second class return jorney rail fare will be paid to persons appearing at interview.

(iii) The posts are temporary to be continued up to 31.3.90.

Applications on plain paper giving full details of qualifications and experience (duly supported with necessary documents) must reach the Secretary, Banasthali Vidyapith, P.O. Banasthali Vidyapith (Rajasthan) 304022 by **30th April, 1988. No. 20/87.**

INDIAN INSTITUTE OF TECHNOLOGY, DELHI

HAUZ KHAS : NEW DELHI—110016

ADVERTISEMENT NO. 3/88(E.I)

ANNOUNCEMENT FOR RECRUITMENT TO THE ACADEMIC STAFF

(A)	POSITION	PAY SCALE
(1)	Assistant Professor/ Senior Scientific Officer Grade-I/Senior Design Engineer	Rs. 1200-50-1300-60-1900
(2)	Lecturer/Senior Scientific Officer Grade-II/Design Engineer	Rs. 700-40-1100-50-1600
(3)	Senior Research Assistant (SRA)	Rs. 2000-60-2300-EB-75-3200 (Revised).

N.B. (i) Pay scales in respect of posts at serial No. 1 & 2 are under revision.
(ii) Appointments to the posts of SRA will be made on contract basis for a period ranging between 1 and 3 years.

(B) DEPARTMENT/CENTRE/PROGRAMME WHERE POSITIONS WILL BE FILLED UP.

(1) DEPARTMENT/CENTRE/ PROGRAMME	POSITIONS	SPECIALISATIONS
Department of Electrical Engineering	(i) Assistant Professor (ii) Lecturer	Communication, Microwave Systems, Image Processing and Pattern Recognition, Opto-electronics and Optical Communications, Digital Signal Processing, Micro-electronics and VLSI Systems, Digital and Linear Circuit Design, Control Theory, Large Scale Systems Theory, Computer Control, Expert Systems and Robotics, Computer Aided Design, Data Communication Networks, Microprocessor Applications, Computer Engineering, Software System Design, Distributed Computer Systems, Artificial Intelligence, Power Electronics and Industrial Drives, Electromagnetic Energy Conversion, Power Systems.
(i) Microprocessor Applications Programme	Senior Scientific Officer Grade-I/II	(a) Distributed Computer Control (b) Industrial Drives (c) Numerical Control of Machine Tools (d) Image Processing (e) Robotics (f) Biomedical Techniques

	(ii) Troposcatter Laboratory	Senior Research Assistant	Microwaves, Communication, Computers or Digital and Analog circuits.
(2)	Department of Computer Science & Engineering	Assistant Professor/ Lecturer	Computer Communication; Computer Vision; Computer Archietecture; New Generation Computing; Software Engineering; Theoretical Computer Science.
	E&R Network Programme in the Department	Senior Research Assistant	
(3)	Department of Mechanical Engineering	Assistant Professor	Thermal Engineering/Production Engineering.
(4)	Centre for Energy Studies (Energy Convervation)	Senior Research Assistant	Energy Convervation Solar Passive Architecture
(5)	Department of Chemical Engineering	Assistant Professor	Fluid Mechanics; Heat Transfer; Mass Transfer; Thermodynamics, Chemical Reaction Engineering; Process Dynamics and Control; Environmental engineering; Computer Aided Design; Mathematical Modelling and Simulation; Chemical Engineering Plant Design.
(6)	Department of Textile Technology	Senior Research Assistant	
(7)	Department of Chemistry (Photo chemistry Loboratory)	Senior Scientific Officer Grade-I/II	Organic Photo-chemisty, Synthesis, Spectroscopic Techniques.
(8)	Centre for Applied Research in Electronics	Senior Scientific Officer Grade I	Integrated Circuits Design, Computer Aided Measurement and Device Modelling.
		Senior Scientific Officer Gr. II (Temporary)	Micro-electronics Mathematics/Mathematical Micro-electronics
(9)	ITMME Centre	Senior Scientific Officer Grade I/II Design Engineer	Computer Applications
(10)	Centre for Management Studies	(i) Assistant Professor/ Lecturer	Management with experience in Management of Medium and Small Scale Industrial enterprises.
		(ii) Senior Research Assistant	
(11)	Centre for Materials Science & Technology	Assistant Professor/Senior Scientific Officer Grade-I	(a) Physical Metallurgy/ceramics, Fracture Toughness of Materials (b) Physical Metallurgy/ceramics Substructural Studies of Materials using TEM.
(12)	Centre for Biomedical Engineering Research (Preventive Cardiac Unit)	Senior Scientific Officer Grade-II	Bio-medical Engineering.
(13)	Centre for Rural Development & Technology	(i) Senior Scientific Officer Gr. I	Expertise it the disciplines of Mech. Engg., Chemistry and Social Sciences with experience in rural development and appropriate technology.
		(ii) Senior Research Assistant	
(14)	Industrial Design & Development Centre	Senior Research Assistant (Temporary)	Industrial Design
(15)	Centre for Atmospheric Sciences	(i) Senior Scientific Officer Gr. II (Temporary)	Biomechanics with experience in experimental techniques related to Cardio-Vascular Flows.
		(ii) Senior Research Assistant	
(16)	Educational Technology	(i) Assistant Professor	Curriculum Development/Educational media & methods/Evaluation & Assessment Techniques in teaching learning with a basic Engineering/Science background.
		(ii) Senior Scientific Officer Gr. I	Production & Planning of Video Films and other A-V material for engineering education.
		(iii) Senior Design Engineer	Electronic Engineering/Video Systems Engineering/Television Engineering. Thorough familiarity with Video Studio equipment.
		(iv) Senior Research Assistant	

(C) MINIMUM QUALIFICATIONS/ EXPERIENCE PRESCRIBED FOR APPOINTMENT

(a) **For the posts of Assistant Professor**

(i) Departments of Electrical Engineering, Mechanical Engineering, Chemical Engineering, Computer Science & Engineering and Centre **for Materials/ Science & Technology**.

Good academic record with a Doctor's degree in a relevant field. About 5 years evperience of teaching and/or research and development.

Provided further that candidates not possessing Ph.D. may be considered if they have to their credit equivalent research published work or design/ development work of a high order either in the Institution or in an Industry.

OR

In the case of persons to be recruited from Industry or Professional fields, candidates should possess good academic record with recognised professional work of about 7 years which should include innovation and/or research and development.

(ii) **Centre for Management Studies**

Good Master's degree in Management & Systems/Business Administration/Industrial Engineering, Operational Research and Management Science preceded by a Bachelor's degree preferably in any branch of engineering. About 5 years relevant experience.

(b) **For the posts of Lecturer**

(i) **Departments of Electrical Engineering and Computer Science & Engineering.**

(a) Master's degree in appropriate field of Engineering/Technology.

(b) Consistently good academic record with a Bachelor's degree in Engineering/Technology. First class at Bachelor's degree and/or Master's degree level.

(c) One year's relevant professional experience outside academic/ research institutions

Provided further that if a candidate does not possess professional experience or a person possessing such experience is not found suitable, the persons appointed will be required to obtain desired professional experience within a period of five years of his appointment failing which he will not be able to earn future increment, until he fulfils this requirement.

(ii) **Centre for Management Studies**

Good Master's degree in Management & Systems/Business Administration/ Industrial Engineering, Operational Research and Management Science preceded by a Bachelor's degree preferably in any branch of engineering. One year's relevant experience.

(c) **For the posts of Senior Scientific Officer Grade I**

Bachelor's Degree in an appropriate field of Technology/Engineering or Master's Degree in an appropriate field of Science with 7 years' experience in research & development.

OR

Master's degree in an appropriate field of Technology/Engineering or Ph.D. with 5 years' experience in research and development.

Experience

(i) **For the posts in ITMME Centre**

Experience of handling and using Mini Computers Systems for Industrial Applications particularly in the area of Maintenance, Tribology and Dynamics.

(ii) **For the posts in Educational Technology**

Experience of producing/script writing/editing of video films in Science/ Engineering subjects.

(d) **For the posts of Senior Scientific Officer Grade-II**

(i) **Department of Computer Science & Engineering, Centre for Applied Research in Electronics, Microprocess or Applications Programme and ITMME Centre**

Bachelor's Degree in an appropriate field of Technology/Engineering or a Master's Degree in an appropriate field of Science with 2 years experience in Research and Development.

OR

Master's degree in an appropriate field of Technology/Engineering or Ph.D. degree.

(ii) **Centre for Bio-medical Engineering & Research.**

M.B.B.S. degree with good academic record and one year experience in Research and Development or one year's experience in a recognised Hospital of which at least 6 months must be in general medicines. Candidates with experience in Cardiology/ICCU and having interest and aptitude in handling applications of physical sciences and engineering to Bio-medical problems preferred.

OR

Bachelor's degree in Electrical (Electronics) Engineering with 2 years experience in Research and Development. Candidates with work experience in Bio-medical Data Management preferred.

(e) **For the posts of Senior Design Engineer**

Bachelor's Degree in an appropriate field of Technology/Engineering or a Master's degree in an appropriate field of Science with 7 years experience in Research and Development.

OR

~~Master's~~ Degree in an appropriate field of Technology/Engineering or Ph.D. degree with 5 years experience in Research and Development.

(f) **For the posts of Design Engineer**

Bachelor's Degree in an appropriate field of Technology/Engineering or a Master's degree in an appropriate field of Science with 2 years' experience in Research and Development.

OR

Master's Degree in an appropriate field of Technology/Engineering or Ph.D. degree.

(g) **For the posts of Senior Research Assistant**

(i) Microprocessor Applications Programme, Centre for Energy Studies, Textile Technology, Centre for Atmospheric Sciences, **E & R Network Programme, Troposcatter Laboratory, and Centre for Management Studiets.**

Bachelor's Degree in an appropriate field of Technology/Engineering for posts in Engineering disciplines; Master's Degree in an appropriate field of Science/Mathematics in the case of other disciplines.

(ii) Educational Technology Facility

Post-graduate degree in Mass Communication / Education with first class Bachelor's Degree in any subject.

(iii) Rural Development & Technology

Post-graduate Degree in Social Sciences/Chemistry/Agriculture/ Biology or Bachelor's Degree in Technology/ Engineering.

(iv) IDD Centre (Industrial Design)

(a) Master's Degree in Industrial Design/Interior Design/Graphic Design or Graduate Degree in Engineering with Diploma in Industrial Design/Interior, Design/Graphic Design/Arts.

(b) Master's Degree in Computer Management / Computer Programming/ Marketing Management or a Graduate Degree in Engineering with Diploma in Computer Programming / Marketing Management.

Experience

(i) For posts in Educational Technology

Experience in media production/ educational research.

(ii) For posts in Rural Development & Technology

Experience in the field of Rural Development and willingness to work in villages.

(iii) For posts in Management Studies

Experience in Management Laboratory, Computer Room, Public Sector enterprises and entrepreneurial development.

(iv) For the posts in IDD Centre

(a) Experience in Professional dealing with Entrepreneurs/Clients.

(b) Experience in Consumer product survey, product statistical analysis and working knowledge of IBM PC Compatible Computer Systems.

Prescribed application forms may be obtained from Deputy Registrar (Estt. I), Indian Institute of Technology, Delhi, Hauz Khas, New Delhi-110016 either in person or sending by post a self-addressed stamped envelope (size 10 x 23 cms) bearing postage stamps of Re. 1.10 latest by 30.4.1988. Last date for submission of application forms alongwith crossed Indian Postal Orders worth Rs. 7.50 (No fee for SC/ST candidates) is **7.5.1988** for candidates in India and **14.5.1988** for candidates from abroad.

Persons employed in Government/ Semi Government Organisations/Autonomous bodies must submit their applications through their employers.

NORTH EASTERN REGIONAL INSTITUTE OF SCIENCE AND TECHNOLOGY

NAHARLAGUN : ARUNACHAL PRADESH

Advertisement No. 1/88

Dated : 21.3.88

The North Eastern Regional Institute of Science and Technology is an autonomous Institute sponsored by the Government of India. The Institute offers courses in Applied Science, Engineering and Technology at all levels particularly for the benefits of the students of the North Eastern Region.

Applications are invited for the following vacancies in the Institute :

1. Lecturer in Agricultural Economics.

Scale of Pay Rs. 700-40-900-EB-40 1100-50-1250-EB-50-1600/- (pre-revised).

Minimum Qualification and Experience

1. A First or Second Class Master's Degree in Agricultural Economics from any recognised University.
2. Teaching experience at degree level preferable.

Desirable : A Doctorate Degree in Agricultural Economics.

Age : preferably below 40 years.

2. Lecturer in Physics

Scale of Pay Rs. 700-40-900-EB-40-1100-50-1250-EB-50-1600/- (prerevised).

Minimum Qualification and Experience

1. A Doctorate Degree in Physics or research work of equally high standard with consistently good academic record with first or high second class Master's Degree in the subject. Teaching experience at IIT's or Universities preferred.

Age : Preferably below 40 years.

3. Lecturer in Mathematics

Scale of Pay : Rs. 700-40-900-EB-40-1100-50-1250-EB-50-1600/- (prerevised).

Minimum Qualification and Experience

1. A Doctorate Degree in Mathematics or research work of equally high standard with consistently good academic record with first or high second class Master's degree in the subject. Teaching experience IIT's or Universities preferred.

Age : preferably below 40 years.

4. Lecturer in English

Scale of Pay : Rs. 700-40-900-EB-40-1100-50-1250-EB-50-1600/- (Prerevised).

Minimum Qualification and Experience

1. A Doctorate Degree in English or research work of equally high standard with consistently good academic record with first or high second class Master's Degree in the subject. Teaching experience at IIT's or Universities preferred.

Age : Preferably below 40 years.

5. Lecturer in Chemistry

Scale of Pay : Rs. 700-40-900-EB-40-1100-50-1250-EB-50-1600/- (pre-revised).

Minimum Qualification and Experience

1. A Doctorate Degree in Chemistry research work of equally high standard with consistently good academic record with first or high second class Master's degree in the subject. Teaching experience at IIT's or Universities preferred.

Age : Preferably below 40 years.

6. Lecturer in Mechanical Engineering Scale of Pay : Rs. 700-40-900-EB-40-1100-50-1250-EB-50-1600/- (Prerevised).

Minimum Qualification and Experience

1. Master's degree in Mechanical Engineering/with consistently good academic record and a good Bachelor's degree in Mechanical Engineering.

2. Ist Class at Bachelor's or Master's degree and some teaching experience preferred.

Age : Preferably below 40 years.

7. Librarian

Scale of Pay : Rs. 2200-75-2800-EB-100-4000 (Revised scale).

Minimum Qualification and Experience

1. Ist Class Degree in Library Science/with Masters Degree in any

subject/M.Lib. Science or 10 years experience in any reputed technical institute library. Experience in documentation abstracting, indexing is essential.

Age : Preferably below 40 years.

8. Technician Carpentry

Scale of Pay : Rs. 1200-30-1560-EB-40-2040/- (Revised scale).

Minimum Qualification and Experience

1. Class X pass in Science Stream with at least 5 years experience in a reputed workshop as Technician or National Certificate in appropriate trade with at least two years experience in the trade in reputed workshop or technical Institute.

Age : Preferably below 30 years

9. Computer Operator

Scale of Pay : Rs. 1400-40-1800-EB-50-2300 (Revised Scale).

Minimum Qualification and Experience

1. Three years diploma in Electronics/Electrical from a recognised polytechnic or Institution.

2. Minimum one year working experience (in any Computer Centre after passing the Diploma)

3. Must know how to operate Mini/Micro computer systems of standard manufactures.

Age Limit 35 years.

10. Lathe Machine Operator

Scale of Pay : Rs. 950-20-1150-EB-25-1500/-(revised scale)

Minimum Qualification and Experience

I. Class X or Matriculation from a recognised board.

2. Trade certificate in Turner/Machinist from a recognised I.T.I. (Industrial Training Institute)

3. Minimum One year experience (Practical) after passing from I.T.I.

Age Limit 35 years.

11. Library Sorter

Scale of Pay : Rs. 950-20-1150-EB-25-1500/-(revised scale)

Minimum Qualification and Experience

1. 10/10+2 with certificate in Library Science working Experience and knowledge in typing.

Age : Preferably below 30 years.

N.B. :—Pay scale for the post of Lecturers are likely to be revised shortly.

All posts carry dearness allowances and other admissible facilities as admissible to the Central Govt. Employees posted at Arunachal Pradesh including rent free residential accommodation Govt./Semi Govt. employees should send their applications through proper channel with an advance copy to the Institute in time. The candidates called for interview will be reimbursed to and fro 2nd class fare by rail or by Bus.

Applications containing following information accompanied with a non-refundable application fee of Rs. 7.50 (Rs. 2.00 in case of SC/ST candidates) only, payable by crossed Indian postal orders and attestd copies of testmonials of details of educational qualifications, age, experience, etc, should be sent to the Deputy Registrar (Admin.) NERIST, D-Sector, P.O. Naharlagun Pin No. 791 110 so as to reach him within 30 days from the date of publication.

Applications on plain paper should specifically include :

1. Name of post applied for.
2. Name and address for communication.
3. Date of Birth.
4. Educational Qualifications giving divisions, and percentage of marks obtained in high school and above.
5. Experience.
6. Post in which engaged at present with scale of pay.
7. Present pay and total emolument.
8. Basic pay demanded.
9. Signature of the candidate.

The Institute reserves the right to increase or decrease the number of posts and also the right not to fill any of the posts.

P.G. Nair
DEPUTY REGISTRAR (ADMIN.)

JOINT ADMISSION TO THREE SEMESTER M.TECH. PROGRAMME, JULY 1988

(with Scholarship)
OF
INDIAN INSTITUTE OF TECHNOLOGY
BOMBAY, KHARAGPUR & MADARS

INFORMATION BROCHURE, APPLICATION FORM AND BASIC DATA-CUM-CHOICE SHEET can be obtained by sending

(i) the application-cum-registration fee of Rs. 50/- by a Crossed Bank Draft in favour of the IIT to which the request is made, drawn on the State Bank of India of the same place;
(ii) a letter of request mentioning the details of the Bank Draft, and
(iii) two slips of size 5 cm x 10 cm indicating the applicant's postal address in capital letters to any of the following :

The Chairman, GATE
INDIAN INSTITUTE OF TECHNOLOGY
Bombay 400 076 or Kharagpur 721 302 or Madras 600 036

SAHA INSTITUTE OF NUCLEAR PHYSICS

Sector-I, Block 'AF', Bidhannagar
Calcutta - 700 064.

36th Post M.Sc. Associateship Course
(1988-89 Session)

Applications are invited for admission to the one-year post M.Sc. Associateship Course of the Saha Institute of Nuclear Physics in two streams : (1) Physics and (2) Bio-Sciences.

Eligibility

(a) **Physics** : Master's degree in Physics/Applied Mathematics with background in Physics.

(b) **Bio-Sciences**: Master's degree in Physics/Chemistry with specialisation in any of the following subjects:
Bio-Physics, Bio-Chemistry, Crystallography, Molecular Biology, Physical Chemistry.

Candidates just appearing in their final examination may also apply.

Admission Test

Admission will be on the basis of academic records and performance in the admission test consisting of a written examination and interview which will be held in the second week of July 1988. The session is likely to commence in August, 1988.

Travelling Allowance

Candidates called for the admission test will be reimbursed return second-class Railway fare from their normal place of residence and will be paid DA for one day only as per the rules of the Institute.

Scholarship & Hostel Accommodation

Selected students will be paid a scholarship of Rs. 1800/- per month for the duration of the course. Hostel accommodation will be available.

Future Prospects

Likely absorption as Research Fellows at Rs. 1900/- per month after satisfactory completion of the course.

How to apply

For application forms and prospectus, write to :

The Registrar
Saha Institute of Nuclear Physics
Sector I, Block 'AF', Bidhannagar
Calcutta-700 064.

before 13th May, 1988. Completed application forms must reach **the Registrar, SINP by May 27, 1988.**

SCHOOL OF CORRESPONDENCE COURSES

ANDHRA UNIVERSITY : WALTAIR

ENTRANCE EXAMINATION NOTIFICATION—JUNE, 1988

ENTRANCE EXAMINATION UNDER MODIFIED SCHEME FOR LIBERALISED ADMISSION INTO B.A./B.Com. COURSES WITHOUT ANY FORMAL ACADEMIC QUALIFICATION.

Applications are invited from the candidates residing in India for Entrance Examination for admission into Ist year B.A./B.Com. Degree courses for the academic year 1988-89 through the School of Correspondence Courses.

No minimum qualification is required to appear for the Entrance Examination, except that candidates should have completed 21 years of age by 1-7-1988. Candidates who pass the Entrance Examination are eligible for admission into Ist year B.A./B.Com. courses in the School of Correspondence Courses only.

Applications will be issued from 4th April, 1988. Duly filled in applications should reach this office on or before **10-5-1988**. Applications received after the due date of 10-5-1988 will be accepted on payment of the penal fee at the following rates :

Upto 12-5-1988 (for first two days)	Rs. 2/-
Upto 20-5-1988 (between third and tenth day)...........	Rs. 10/-
Upto 30-5-1988 (between eleventh and twentieth day) ...	Rs. 50/-

Applications received after 30-5-1988 will not be accepted even with maximum penal fee.

Date of B.A. and B.Com. Entrance Examination is 19-6-1988.

Under Modified Scheme of Entrance Examination, there will be four papers of 'one hour duration each and the examination will be conducted in two sessions on Sunday, the **19th June, 1988** from 9.00 a.m. to 11.00 a.m. and from 2.00 p.m. to 4.00 p.m. Examination will be conducted in one centre in each district in Andhra Pradesh besides the existing centres in Andhra and Nagarjuna University jurisdiction.

Intending candidates may write to the undersigned by DESIGNATION for application form, syllabus and model question papers by sending Rs. 10/- by demand draft drawn in favour of the Director, School of Correspondence Courses, Andhra University, Waltair alongwith one self-addressed envelope of 9"x6" size (Without affixing postal stamps). The candidates may also remit cash at the cash-counter in the School towards application form. **Postal Orders and Cheques will not be accepted.**

The students of Introductory Course of this School need not pay Rs. 10/- towards the cost of application form, syllabus etc., and also need not send the requisition letter for the Entrance Examination application form. The School will send the necessary application form to the students of Introductory Course. However, the duly filled-in application form should be returned to the School will all the necessary enclosures on or before 10-5-1988.

The prescribed application forms, syllabus and model question papers are also available at our following Study Centres on payment of Rs. 10/- through Demand Draft: 1. Government College, Srikakulam: 2. M.R. College, Vizianagaram; 3. Mrs. A.V.N. College, Visakhapatnam; 4. Govt. College, Rajahmundry; 5. P.R. Govt. College, Kakinada; 6. Sir C.R. Reddy College, Eluru; 7. SRR & CVR Govt. College, Vijayawada and 8. A.C. College, Guntur.

The School has no agents and takes no responsibility for the prospectus issued and promises made for admission by any other institution.

Note : The applicants should clearly mention whether they require Entrance Examination application form either for B.A. or B. Com.

Student Services Programme for Higher Education

Dawoodbhai A. Ghanchi*

The Overview

Higher education in modern India has the conceptual and philosophical legacy of the British system of university education because of historical reasons. The two distinguishing features of the Indian higher education system are the predominantly scholastic contents of the curriculum and the formality of its operations. Whatever the Faculty, be it Arts or Commerce or Science or Engineering or any other, these two features pervade the thinking and the actions of all—the teachers, the administrators, the students and even the community. As a result, it is found that the system has developed many an ailment like :

* The curriculum is information loaded, and is much less related to the contemporary and future needs of society.
* The curriculum is lopsided, and caters to only a limited segment of the student's personality.
* There is very little meaningful participation of the learner in the adventure of learning at any stage, whether it be planning, learn-teaching, evaluating or monitoring.
* Teaching, both at the undergraduate level and the postgraduate level, is devoid of excitement, challenge and delight.
* Institutions of higher education, whether a college or a university, have very largely ceased to be organic centres of growth of human resource in its multifaceted forms.

The Diagnosis

There are several reasons that have contributed to these ailments of the system. First, there is an exponential expansion of higher education in the country in the wake of the development of the primary and the secondary stage. This has not allowed us to attend to the needs of quality. Secondly, because of historical reasons, the system has remained too static and allergic to change and innovation. Thirdly, we have had to make do with limited resources which have been utilised primarily for the bare survival needs of the system. Finally, and consequently, we have tried to tread the easiest path, namely, the pursuit of the degree sans knowledge, sans expertise, sans sensitivity to social needs, and sans an urge to excel.

The Approach

In spite of so many shortcomings, the Indian system of higher education has managed to survive, thanks to the tremendous resilience it has developed over the years. However, looking to the needs of national development in the years to come, we must adopt a selective approach to the problems of the system. We must attack the most crucial spot, namely, the curriculum because it is the perception of the curriculum that will provide the ethos to reinvigorate the system by mobilising all the resources that go to make the system work in

---

**Pro-Vice-Chancellor, North Gujarat University, Patan-384265.*

accordance with our goals. This approach would require us to take care of three things namely :

- Adoption of an appropriate model of higher education;
- Articulation of specific goals of higher education;
- Development of a comprehensive programme of student services as an inevitable component of the curriculum.

The Model

The system of higher education in a community may be structured on anyone of the following models, or it may be a combination of several of them.

- *The godown model* which serves the purpose of storing the educands to keep them as they are at the best or to save them from the possible damage caused by ignorance or moral corruption.
- *The bank model* which is slightly better than the godown model inasmuch as it does not merely store but tries to make it earn an interest when invested.
- *The factory model* which processes the material in order to refine it or give it a new shape, and market it, mostly at a profit.
- *The human resource development model* which involves the educand in the adventure of life-making, of changing the self through volition, and of constantly moving towards higher excellence.

The Indian system of higher education has, for long, remained wedded to the first three models entailing a terrible cost in the form of human quality and worth. It needs to be given a new direction by changing into a life-generating model based on participation and involvement by all. The document of the new Education Policy of India emphasises the urgent need of developing the human resource development model for the system of our higher education. The advocacy of autonomous institutions is a pointer in that direction.

The Goals

The system of higher education obtaining in a community may have at its roots a hierarchy of goals like the following :

- *Survival goals* which seek to preserve the existing modes of life, of thinking, of production and of social interaction without undertaking the risks of change, of redefinition and of innovation.
- *Development goals* which seek to take a step forward from the mere preservational needs. They aim at developing selected potentials of the educand, maybe mental, emotional and so on.
- *Enrichmental goals* which combine development with experimentation, with innovation, with excellence, with creativity. In short, it aims at maximising the flowering of the human potential that has always been the dream of the humankind.

The present scenario of higher education in India is characterised by the existence of a large number of nonviable institutions that barely scrape through and have, therefore, a very limited scheme of educational goals to offer. This is why the document on the New Education policy rightly emphasises the need of strengthening the weak institutions and making them instruments of a drive for educational excellence. It's going to be an ongoing movement for realising enrichmental goals in the years to come.

The Student Services Programme

The modern concept of curriculum pertains to a comprehensive offering of activities and experience of a range ministering to the variety of needs of the young persons pursuing higher education. The scholastic component provides, not merely bits of information of a relevant discipline, but challenges the entire cognitive domain of the learner's personality. The proposed scheme of restructuring the undergraduate curriculum into a three tier scheme is supposed to challenge the mental faculties of the young learner at the college.

The non-scholastic domain of the curriculum, much of which is usually the hidden part of the scheme, is as wide as life itself. It needs to be spelt out, and an appropriate strategy of operation to be laid out. This part of the curriculum has hitherto remained completely neglected. If at all it has been given a place in the scheme of work, it has been either spasmodic or ad hoc, and even in either case much of its educational significance has been lost sight of. The NCC, the NSS, the NSO, the extra-curricular activities and the umpteen number of activities that are found in the calendars of institutions of higher education have long been ritualistic in performance and anaemic in their impact on the psyche of the student world.

Fortunately, the document on the New Education Policy has made a positive case for developing an integrated dish of learning experiences for the students at the institutions of higher education in India. It has been left to the imagination of the planners, the teachers, and the administrators of education to design a comprehensive programme of student services as a part of the curriculum so that the student at the college and university :

- * develops cognitive abilities to his full capacity,
- * learns to take decisions about issues of life,
- * communicates effectively his ideas, views and commitments,
- * relates himself meaningfully with other members of specific social groups, and evinces social sensitivity to the problems of life in the contemporary world,
- * possesses a scale of values that go to distinguish him as a responsible member of a civilized society wedded to human dignity and worth,
- * exhibits a fine sense of aesthetics and preferences in the midst of a world flooded by cheap commercial stuff,
- * strives to constantly excel in personal as well as professional pursuits, and
- * specialises in more than one productive skill, cognitive or manual or technological, and tries continually to update his equipment in order to cope with emerging challenges in the world of knowledge and work.

Viewed in this light, the corpus of student services to be offered by an institution of higher learning must comprise a large variety and range of activities and programmes.

The Corpus

The student services programme can be conceived of as a ten pronged scheme of various activities and experiences to be offered to all the students of a college or of a university as a matter of right for every student throughout his stay at the respective institution.

1. Plant services
2. Basic needs services
3. Housing services
4. Personality development services
5. Social stitching services
6. Study support services
7. Learning facilitating services
8. Career development services
9. Ameliorating services
10. Recreation services.

29 APR 1988
C. F. T. R. I., MYS

Each of the above services consists of a number of specific activities as enumerated hereunder.

1. *Plant Services*

An institution of higher education meant for the youth of the country must provide for essential plant facilities like classrooms of adequate size with sufficient furniture and learning equipment, special rooms like laboratories of all types (e g. a maths lab or a computer room or an audio-visual studio, etc) a library, a workshop, study halls, seminar rooms, cubicles, etc. The plant services must take care of the proper maintenance of the facilities, their cleanliness, aesthetics and upkeep. They must conform to the highest norms required to build up a wholesome climate in the institution to promote a healthy growth of the physique, of the mind and of the spirit of the youth of the country. In fact, it must be our endeavour to develop alternative models of plant facilities for our institutions of higher education.

2. *Basic Needs Services*

These services are intended to serve the basic survival needs of the age group studying in our colleges and universities. They must take special care of the verious vulnerable groups like girls, backward class students, tribals and economically deprived sections of society. The services must comprise the following :

- * Drinking water facilities with an assured supply of adequate, clean, fresh potable water.
- * Food services which should include canteens run efficiently with due provision of quality food at reasonable price served in the most hygienic way; hostel mess facility under the supervision of the students; and provision of subsidy to the needy students on the price of the food supplied.
- * Toilet facilities in adequate number and of a high standard of cleanliness. Due care must be taken for the needs of women students.
- * Relaxation facilities which should include parks, gardens, fountains, outdoor seating places, and centres for rest and ease.
- * Health services which must include a first aid centre or centres depending upon the number of students and buildings; preventive, curative and promotional facilities for health, referral

services, medical checkup on a regular basis, subsidised medicare for the needy; institution of a health centre with facilities for infirmaries and temporary hospitalisation; information services on age-specific diseases, drug deaddiction and rehabilitation; and programmes of physical fitness, sports and health education.

* Provision of articles of daily needs like snacks, milk, fruits etc. For this vending machines can be installed and cooperative stores can be started. Students must be protected from exploitation through vigilance committees formed of faculty and students.

3. *Housing Services*

Every institution of higher education must have a hostel or a hall or halls of residence as an essential condition of recognition or affiliation. There must be a separate residential facility for girls. In addition to its own facility on the campus, the institution must arrange with voluntary agencies as well as individuals for residential facilities at reasonable rent. Such facility must be approved by the institution and periodically checked for cleanliness and healthful surroundings.

The residences must have adequate furniture and provision for protection against climatic rigours. There must also be a provision of personnel services including rectors, wardens, servants and so on for due care of the residential needs of the students.

There should be reception and guidance service in the hostel for the new students. There should also be a regular programme of orientation to facilitate adjustment to hostel life and to eliminate the possibilities of evil practice of ragging by seniors. There should be programmes like homestay, social celebrations, cultural programmes and parents' days to make hostel life livable and relevant to academic needs.

The students' health problems in hostels need special attention. There should be due provision for the treatment of the sick. Emergencies and accidents must be specially taken care of. A close liaison be established among hostel inmates, their parents, teachers, administrators and management bodies to diffuse crises and solve problems.

4. *Personality Development Services*

The normal scholastic curriculum of higher education does not cater to the multifarious needs of the complex personality of the youth as it is limited to the narrow domain of information gathering to pass the public examination. Hence, the need to provide services to enrich the other domains of the personality, namely the affective domain, the aesthetic domain, the social domain, the creative domain and so on. This would need careful nurturing by a sympathetic agent, maybe the teacher, the counsellor, the proctor or even a senior student. The activities would include :

* Training in intellectual skills like speech skill, debate skill, declamation skill, oratory and rhetorics.
* Training in social skills of friendship, leadership, group formation, conflict resolution, negotiation, resistance techniques etc.
* Training in performing arts like drama, dance, miming, role playing etc.
* Training in arts of drawing, painting, sculpturing etc.
* Training in creative writing, journalism, playwriting etc.
* Training in the use of the media, specially the radio, the TV, the film, and the press.
* Training in aesthetics with reference to hobbies, tastes, preferences and habits of food, drink and entertainment.

In fact, this is a vital dimension of the man-making enterprise called education which would require an ongoing, deliberate plan of action in the institutions of higher education in the country.

5. *Social Stitching Services*

These services are intended to make education society-oriented so that it turns out young men and women who have sensitivity to social needs. The society owns the educational institution and tries to interact with it meaningfully so as to enhance its value by increasing its relevance and utility through a deliberate participation in the process of regeneration and change in response to the newer needs of the age. The services that must be rendered to the students are :

* Parent liaison with the institution through various means like newsletters, reports, meetings, open house, advisory cells etc.
* Community liaison through the programmes of celebrations, social service, camps, extension lectures, film shows, drives for specific purposes etc.

- * Training to the students in the skills of social service through workshops, field studies, placement in social service projects, etc.
- * Involvement of student representatives in social service bodies by being nominated on them say on youth clubs, womens' clubs, etc.
- * Sensitisation programmes on specific issues like social reforms, superstitions, evil customs like dowry, sati, child marriage, etc.

In short, it is the broad concept of socialisation of the youth that is sought to be put into practice through the social stitching services. It is through these services that the young men and women will discover themselves and acquire confidence in themselves to influence the society they live in.

6. *Study Support Services*

The student needs materials like books, journals, stationery, etc., to study efficiently. These should be available at the right moment and that too at a reasonable price. If need be, the price should be subsidised. Materials' banks should be established in every institution and should be well stocked. Only the right type of material should be used by them, and for this they should be guided properly. Materials like notes, guides, probable questions, etc. should be discouraged. The University Texbook Boards, the National Book Trust and similar agencies should be approached for quality books and ancillary materials for study. The state civil supplies corporations can be approached for the supply of stationery and other support material at controlled prices.

7. *Learning Facilitating Services*

Students joining institutions of higher education bring with them a hangover of dependent study habits and work style from their school days, whereas higher education demands a different set of learning styles for which they must be systematically trained. The following types of services should be provided for the purpose :

- * Efficient study habits including attending lectures, taking notes, participating in discussions etc., should be formed through training.
- * Library skills be similarly developed and training be imparted in using various library facilities and resources of learning.
- * Training for self-study skills should be provided so that participatory learning techniques are maximally taken advantage of.
- * Use of Educational technology like computers, VCR, microfilms etc , should be bought for use by the students in their daily learning chores.
- * Examination-taking skills should be developed for different types of tests and techniques for both internal and external examinations.
- * Special education aid for remedial and accelerated learning be provided to the students as per their needs.
- * Guidance-cum-counselling centres should be established for helping students in all their problems pertaining to their study; maybe for the selection of subjects, for the choice of electives,

for solving learning problems, and for meeting the crises generated by failures.

* Night study centres and reading booths should be established for the use of those students who have inadequate facility for study at home.
* Distance learning advisement should be provided along with regular study in order that students can take advantage of alternative modes of learning.
* A system of home-room periods be instituted as a regular weekly feature of the schedule to freely discuss the learning experiences of the students in the college/university itself, and a positive, encouraging attitude be developed among the students in cooperation with their peer-learners.

Thus, the present unipolar approach of 'take it or leave it' shall have to give way to a cooperative and interactive one to make learning an exciting pursuit for our students at institutions of higher education.

8. *Career Development Services*

In order to make higher education meaningful to the learner, and to relate education to the world of work, students must be provided with a variety of career development services on the campus itself as well as in the community. These should include :

* Running guidance and counselling centres with equipment for psychological testing, latest information about jobs and careers, literature related to various openings and records of longitudinal studies on the impact of guidance on students.
* Training programmes for entering the world of work, like reading advertisements, getting application forms, filling in the said forms, procuring testimonials, preparing for interviews, taking a competitive examination, joining a job, following office protocols etc.
* Placement services whereby the institution establishes contacts with employers-individuals as well as corporations and arranges for timebound placement.
* Training for entrepreneurship so as to launch one's own business or industry, and for that purpose marshal resources and use skills to succeed in the enterprise.
* Training facilities on the campus as well as in establishments off the campus in various gainful occupations and skills. For this purpose present courses may have to be restructured and new ones may have to be devised, workplaces and workshops may have to be established. The whole gamut of vocational education will have to be explored for the purpose.

9. *Ameliorating Services*

With the expansion of higher education in India, we find a rush of first generation learners who are economically, socially and culturally deprived, and hence, are handicapped in taking advantage of the facility of higher education. To give them a head-start, ameliorating services should be offered not as a matter of charity but as a compensatory component of formal education. This would consist of the following :

* Free studentships on a liberal scale.
* Merit as well as means scholarships.
* Loans and subsidies for specific purposes.
* Offers of paid work of a large variety—teaching assistantship, library aid, manual work, etc.
* Recommendations for external help and supplementary income.
* Student-adoption schemes by Faculty and citizens.
* Guidance and help in emergencies like drought, famine, death in the family, economic distress, etc.

It is the warmth and sympathy in the approach and dealings with the students that will ultimately lead to the amelioration of hardship and catastrophe.

10. *Recreation Services*

Learning sans delight is sterile and transient, for learning is a dynamic, creative and exciting human adventure wherein the living interact with the living. Hence, the due place of recreational services in the scheme of education, whatever the stage might be. The educands at the higher education stage being effervescent youth of the community, there is a pressing need of providing deliberately a rich net work of recreational services. The following types should be offered :

* Establishment of different centres of recreation, creative and healthy like, an NRS centre, a hobby centre, an assembly hall, a theatre, a music hall, a do-it-yourself centre etc., all equipped suitably,
* Training for hobbies, performing arts, graphic arts and production crafts, both manual and mechanical,

- Training in creative literature, art appreciation, production of films, both movie and video, folk arts, etc.,
- Formation of itinerant artists' groups and their exchange with similar groups in other institutions,
- Organisation of regular recreational programmes, outdoor and indoor, of a large variety and encouragement for wide participation by students, faculty and the community, and
- Establishment of liaison with agencies like the Lalit Kala Akademi, Sahitya Akademi, and Sangeet and Natak Akademi etc., for exchange, of artists, organisation of training programmes, holding of demonstrations etc., and getting their financial and technical help for building up counterpart programmes in the institutions of higher education.

The corpus of services is, thus, vast and varied. Our students have been virtually starved of these essential educational inputs so far, and have been fed upon a timid and anaemic examination-oriented programme. Now is the time to redeem ourselves by providing an exciting avenue in the form of student services.

The Organisational Framework

The student services programme shall need a well-knit organisational framework at the university and every affiliated or constituent college consisting of the following personnel :

- A dean of students.
- An assistant dean of students at the university.
- A student counsellor assisted by a required number of assistant counsellors for specific roles like psychological testing
- Student advisors

The said personnel shall be duly qualified and shall have personality traits and expertise to instil faith, in the students and win their confidence. They shall have a suitable cadre position and shall be paid as per their assignments. They shall be provided with the services of supporting staff, technical and menial, and shall have adequate resources with necessary powers to utilise them.

The Operational Strategy

The student services programme is conceived as a part and parcel of the educational programmes of the university and the college. Hence, to operate it effectively, the following shall be needed :

- A provision of statutory budget with assured source of income.
- An in-built provision of evaluation, feedback and monitoring by involving in it the administration, faculty, students and community.
- An ongoing training programme for all the participants in the services, namely, the faculty, the students, the administrators and the support personnel.

Conclusion

The concept of comprehensive student services programmes provide the hitherto missing component of the Indian system of higher education inherited from a colonial historical context. If the institutions of higher education in India are to pay the role of nurseries of future leadership—intellectual, social, political, economic, industrial, and cultural—both at national and global levels, higher education shall have to consist of a comprehensive curriculum supported by myriad student services in order to be an instrument of transformation and development. The time for that is here and now. □

UNIVERSITIES AND LAW COURTS

T. K. Tope*

I

Duty of the Universities

The Supreme Court laid down that it is the duty of the University to see that no college affiliated to it shall give admission to students more than the prescribed number. Waking up at the last moment and then relying upon legal provisions causes great hardships to students.

(Narendra Bahadur Singh v. Gorakhpur University
A I R 1987, S.C. 1154)

Note : Many Universities fix a last date for admission to various courses. This is very essential. Similarly, it is also essential to fix a date early in the first term when colleges must convey to the Universities the number of students on rolls for various courses. It would be necessary to have flying squads to visit colleges and to ensure that no college has admitted more than authorised students, Guilty colleges must be penalised. Adequate provision in the University Acts must be made. Government must not interfere when Universities take a decision on this point.

II

Natural Justice

Members of the disciplinary committee appointed to enquire in the conduct of a person, should not participate in the final decision to be taken in that case.

(Institute of Chartered Accountants v. Loka Ratna
(1986) 4, S.C.C. 537).

III

Selection of Books and Bias

A committee was set up to select books for educational institution. Some of the members of the committee were themselves authors whose books were to be considered.

The Supreme Court laid down that in such cases possibility of bias cannot be excluded.

(Mohapatra and Co. v. State of Orissa
(1984) 4 S.C.C. 103)

Note : All educational institutions should have a rule that books of the members of Selection Committee for books, will not be prescribed. The only exception should be in case of persons who are required to be members of such committee ex-officio. In such a case the doctrine of necessity is applicacle.

IV

Law Course

Bombay High Court laid down that the rule of the Bar Council of India, which prohibited law students from pursuing other courses of study during the period of the study of law, was bad in law. In this case the person pursued his study for Chartered Accountants examinations while studying law. The Bar Council of Maharashtra refused to enrol him as an Advocate. The Court issued a writ of mandamus and directed the Council to enrol him as an Advocate.

(Peray Jal Pardiwalla v. Bar Council of India
A.I.R. 1987, Bom. 283)

Note : Many universities have a rule prohibiting a student to pursue two postgraduate courses simultaneously. One doubts whether in view of this ruling such a rule would be valid. LL.B. course is not a postgraduate course according to the Supreme Court. Hence, it appears that a rule which prohibits a law student from pursuing M.A., M.Com. or M.Sc. courses would be bad.

V

Admissions to Medical Faculty

The Supreme Court laid down following guidelines for admissions to medical faculty.

**Former Member, Law Commission and Vice-Chancellor, University of Bombay (1971-77).*

1. Present structure of postgraduate medical courses in existence in various States are allowed to continue upto 1992. From 1993 there will be one pattern of postgradate courses namely a three year course without any housemanship.

2. All universities and institutions are directed to take steps to bring about such amendments in their courses as may be necessary to conform to first directive.

3. The court pointed out that it did not intend to make any provision in regard to super specialities and other higher degrees.

4. Selection examination shall be conducted by the All India Institute of Medical Sciences, New Delhi. The announcement for holding of such selection examination shall be made on October 1 of every year. Examinations shall be held on second Sunday of January. The results shall be announced within four weeks from holding the examination. Admission will commence two weeks after the declaration of results. The courses of study shall commence in every institution providing for such study throughout the country from May 2.

(**Dinesh Kumar** v. **Motilal Nehru Medical College** (1987) 4, S.C.C. 459)

It is recommended that the entire judgement should be studied by Deans of Medical Colleges.

Medical Examination

Passing M.B B.S. examination at the first attempt is important in medical education. An interesting case was decided by the Supreme Court. A candidate was unable to attend classes and clinics and submit examination form as he was seriously ill and was hospitalised during the first term of III M.B.B.S. He passed M.B.B.S. examination with the next batch. The Supreme Court decided that he cannot be said to have passed the examination in second attempt. His admission to M.S. course must be determined as if passed the M.B.B.S. examination at the first attempt.

(**Abhijit** v. **Dean, Govt. Medical College, Aurangabad**, AIR 1987, S.C. 1362).

VI

Elections

Elections to various university bodies are held according to the system of single transferable vote. At such elections a certain quota of votes is also fixed for declaring a candidate successful. But a situation might arise when after eliminating all other candidates, only one candidate remains in the run but he does not secure the necessary quota of votes. Even then such a dandidate must be declared elected. The Kerala High Court was interpreting relevant sections of the Kerala University Act and the Statutes made thereunder.

(**M. Gopi** v. **A. Shamsuddin**, AIR 1988, Kerala, p. 22)

Which is the proper forum for challenging election to the various bodies in universities. Such elections are held under the Statutes passed for the purpose. Hence, if any election is to be challenged, it must be challenged firstly according to the provisions of the University Act and the Statutes made under the Act. The Supreme Court laid down that Section 58 of the Gujarat University Act which provides for reference of the dispute relating to election to any Authority of the University, to the State Government is mandatory. Hence, an aggrieved person must first approach the State Government and cannot move the High Court directly under Art. 226.

(**Gujarat University** v. **Noha Rajguru**, AIR 1987 SC 66)

VII

Minority Educational Institutions and Regulatory Measures

Frank Anthony School Employees' Association Case, (1987) 4 Supreme Court cases p. 707 or AIR 1987 SC 311) though is a case with respect to a school and therefore not with respect to higher education, the principle of law laid down in that case is likely to be applied to institutions of higher education. Moreover, it lays down a very important principle regarding the conditions of service of teachers in minority educational institutions. The Court laid down :

Conditions of service pertaining to minimum qualifications of teachers, their salaries, allowances and other conditions of service which ensure security, contentment and decent living standards to teachers and which will consequently enable them to render better service to the institution and pupils, cannot be said to be violative of the fundamental rights guaranteed by Art 30 (1). The management of a minority educational institution cannot be permitted under the guise of the fundamental rights guaranteed by Art 30(1) to oppress or exploit its employees any more than any other private employee. (p. 328)

Another important principle laid down in this case is regarding the right to approach a Tribunal for redress of grievances arising out of disciplinary action resulting in removal, dismissal or reduction in rank.

The Court laid down :

Section 8(3) provides for an appeal to the Tribunal constituted under Section 11, that is, a Tribunal consisting of a person who has held office as a District Judge or any equivalent judicial office. The appeal is not to any departmental official but to a tribunal manned by a person who has held that office as a District Judge and who is required to exercise his powers not arbitrarily but in the same manner as a Court of appeal under the Code of Civil Procedure. The right of appeal itself is confined to a limited classes of cases, namely, those of dismissal, removal or reduction in rank, and not to every dispute between an employee and the management. This limited right of appeal, the character of the authority constituted to hear the appeal and the manner in which the appellate power is required to be exercised make the provision of an appeal perfectly reasonable in our view. (p. 329)

It may be noted that the school in this case was a private unaided minority school. If teachers in such a school have the right to approach a Tribunal for redress of their grievances arising out of the action of the management resulting either in removal, reduction or dismissal, teachers in all educational institutions will have this right. **Thus, teachers in minority educational institutions whether in the secondary schools or in institutions of higher education have a right to approach a Tribunal in case the penalty is removal, reduction in rank or dismissal from service.**

As a corollary to the above judgement, it is submitted that the regulations regarding the age of superannuation of teachers in minority institutions are likely to be covered by the expression 'conditions of service'. Hence if the age of retirement laid down by the University is 60 (sixty) it would be applicable to teachers in minority institutions also. It would be illegal for the management of a minority institution to continue in service a teacher or even the head of the institution beyond the age of superannuation laid down in the regulations of the University.

Another important judgement relating to the minority educational institutions and the application of other laws of regulatory measure is '**Christian Medical College Hospital Union** v. **Christian Medical College Vellore Association** (AIR 1988, SC p. 37). The Supreme Court laid down that the provisions of the Industrial Disputes Act (Act No. 14 of 1947) are applicable to minority institutions. In this case, three employees of the Hospital were dismissed by the Management. Hence, the State Government made a reference to the Labour Court. This reference to the Labour Court was challenged by the Association before the Madras High Court which decided in favour of the Association. Hence, the Union appealed to the Supreme Court. The Court laid down that the Industrial Disputes Act is applicable to the Minority Institutions. The Court referred to the International Covenant on Economic, Social and Cultural Rights 1966 and to Arts 41, 42 and 43 of the Constitution of India. The Court also referred to some decisions of the American Supreme Court.

Note : It may be noted that the Supreme Court of India in Frank Anthony Public School's case (AIR 1987, SC 311) has adopted the correct approach in protecting the interests of the employees in Minority Educational Institutions. In this case, it laid down that the provisions of Section 9A, 10, 11A, 12 and 33 of the Industrial Disputes Act are applicable to minority institutions.

A Problem—This is indeed a correct judgement. However, it has to be noted that Managements of educational institutions (both of majority and the minority) find themselves in a dilemma. Practically all University Acts provide for a Tribunal for deciding the disputes between the management and its employees. As the non-teaching staff of the educational institutions is in law 'Industrial Worker' Vs. (See, Bangalore Water Supply and Sewage Board vs. A. Rajappa (1978)2 SCC 213), it has a right to move the Labour Court. It also has the right to approach the Tribunal, constituted under the University Act. In many cases the non-teaching employees approach simultaneously both i.e. the Labour Court and the University Tribunal. This creates an embarassing situation for the Management. Hence, it is suggested that either the U.G.C. or the Association of Indian Universities, should take this issue with the Law Ministry, Government of India. Following two alternative remedies are suggested:

(1) Jurisdiction of the Tribunals constituted under the University Acts should be restricted to the case of members of the Teaching Staff only. The non-teaching staff should be governed by the provisions of the

Industrial Disputes Act. This remedy would require amendments to the University Acts.

(2) Tribunals under the University Acts should cover cases both of the teaching and non-teaching staff. This is possible only if Parliament amends the Industrial Disputes Act and makes a specific mention that the provisions of the Industrial Disputes Act would not be applicable to the employees in any educational institution provided that there exists alternate machinery for the pur pose.

Admission to Courses

The Punjab and Haryana High Court laid down that Minority Institutions, not receiving any aid from the Government are not bound by the policy and procedure laid down by an outside authority like the Director of Technical and Industrial Education in the matter of admission to courses (Ashu Gupta vs. State of Punjab, AIR 1987 P & H, p. 227). It is submitted that this is a correct judgement. For, in this case the Institution is not receiving any aid from any outside authority and the decision is only on the narrow question of admission to courses.

Guidelines for Determining Religious or/and Linguistic Minority

The Supreme Court laid down following guidelines to determine religious and/or linguistic minorities :

(1) A linguistic minority for the purpose of Art. 30(1) is one which at least must have a separate spoken language. It is not necessary that the language should have at least a distinct script for those who speak it.

(2) Religious or linguistic minorities are to be determined only in relation to the particular legislation which is sought to be impunged. Thus, if it is the State legislation, the minorities are to be determined in relation to the population of the State.

(*D.A.V. College Jalandhar vs. State of Punjab,* AIR 1971, SC 1737)

In other case, the Supreme Court laid down :

(1) The Arya Samajists who are a part of the Hindu Community in Punjab are a religious minority having a distinct script and are entitled to the guarantees under Arts 29 & 30.

(2) A University cannot impose on such minorities a medium of instruction and script not their own.

(3) No linguistic minority can claim that the University shall conduct its examinations in the language or script which the institution has the right to adopt.

(*D.A.V. College Bhatinda vs. State of Punjab,* AIR 1971, SC 1731).

Note : If linguistic minorities have a right to conserve their language and script and establish and administer educational institutions of their choice, universities in metropolitan cities will find it extremely difficult to prescribe media of instruction and examination. This problem assumes greater importance as a result of formation of linguistic states. Hence P. Jaganmohan Reddy, J. in Bhatinda College case suggested following solution :

"When the country has been reorganised and formed into linguistic states, it may be a natural outcome of that policy to allow colleges established by linguistic minorities giving instructions in the medium of language adopted by Universities in other States to affiliate to them.........No inconvenience or difficulties, administrative or financial, can justify the infringement of their guaranteed rights."

In the light of the above observation, it is suggested that Parliament may pass a law authorising say a university in Tamil Nadu to affiliate to itself colleges imparting instruction in Tamil language and situated in any other part of India. The Association of Indian Universities may take up this matter with the Ministry of Human Resource Development.

It is further laid down that it is not for the universities to decide whether a particular institution is a minority institution or not.

Following are the leading cases with respect to minority educational institutions :

1. In re Kerala Education Bill 1957. All India Reporter, S.C. 956.
2. Ahmedabad St. Xavier College Society vs. State of Gujarat (1974) 1 Supreme Court cases p. 717.
3. All Saints High School vs. Government of Andhra Pradesh (1980) 2 SCC 478, AIR 1980, SC 1042.
4. Frank Anthony Public School case, AIR 1987, SC 311.
5. Christian Medical College Hospital Union cases, AIR 1988, SC, p. 37. ☐

Convocation

Inter-disciplinary Approach

Dr. D.P. Dhaundial, Director General, Geological Survey of India, delivered the Convocation Address at the Tenth Annual Convocation of the Indian School of Mines, Dhanbad. Advocating an inter-disciplinary approach to the development of earth sciences, mineral sciences, human resources and related application and technology areas, Dr. Dhaundial observed, "It may be worthwhile to strengthen the system or to foster a culture of working togethar supplementing each other's efforts to a common objective with clear identification of roles of different disciplines or sub-disciplines in various sectors from the point of view of efficiency, better results and above all, for creating new challenging job avenues for the available trained manpower". Excerpts.

The classical stages of earth sciences and particularly geoscience in relation to continental studies, has transgressed into truely global domains in which land, ocean and atmosphere have to be viewed ensemble, be it for fundamental or resource, environmental studies or for the origin of life. Space missions and practical knowledge of planetory compositions, their morphology and environments progressively bring in the comparative and contrasting features with respect to the mother earth, its matetrials, elements, isotopes, crustal behaviour, cosmic phenomena, etc. Impacts of the increasing knowledge of extraterrestrial bodies and thoughts germane to those bodies, for example on the origin of life on earth on one hand and concentration of some resources on the other hand are influencing the concepts of the genesis and behaviour of the earth's crust. Satellite imageries provide, in some cases, better overviews, and perceptions of the land surface than one could even imagine on the basis of laborious, time consuming ground mapping. Digital enhancement of imageries has opened a new field to choose the data parameters most suited for specific geoscientific studies, resource identification, exploitation, monitoring, environmental studies and so on.

The revelations of ocean floor geology, resultant to extensive geophysical work and deep sea drilling, has rather suddenly transformed the understanding of the global tectonics in time and space. Notwithstanding the gaps and mismatches in some spheres and healthy criticism from some quarters, the theory of plate tectonics has provided a uniformitarian global mechanism explaining at least through 200-300 million years, the origin, distribution, redistribution, destruction of continents, micro-continents, mountains, volcanism, oceans, and also to better understanding of the changing patterns of the seismicity, gravity, magnetism in space and time. The theory has also created significant impacts on intra-crustal, crust-mantle studies and on ideas about genesis, distribution and concentration of resources. Ore genetic processes of certain kinds are within broad premises of prediction in respect of specific locations, belts and tectonic setting. Likewise, views have also been expressed regarding large inorganic gas resources within the crystalline rocks.

Isotopic studies are now a common means of investigation highly sophisticated laboratories in as much as such studies provide reliable evidences to decipher the time, chemical and physical milieu of the crystallisation, migration, contamination, cooling, reheating and other processes operating on the crustal or infra-crustal constituents including the concentration of the some mineral resources. The knowledge of chemistry, physics and micro-biology rather than lone dependence on conventional palaeontological techniques is a must for new thoughts on organic evolution and origin of primitive life.

In the field of research and exploration, most of these modern trends are being integrated in the conventional systems of airborne, on-land, off-shore surveys and laboratory inputs in Geological Survey of India (GSI) and other institutions. Computer culture in data processing and modelling is also fast gaining ground.

Engineering inputs in the mineral based sector has assumed frontline position owing to technological advancements. Mining engineers are no more confined to cut and dry formulae but are involved in hazardous job of mining both at the surface and at depth. Extraction of maximum resources from the oil fields on-land and off-shore is in itself a highly specialised engineering venture. Easily accessible resources are fast depleting and the demand has to be met from the deeper levels or from remote and from ground confronted with problems. In order to ensure safety in mines, to surmount geotechnical problems, to utilise changing grades of ore and to meet day to day exploration problems, and also to ensure energy conservation, efficiency of machines and the socio-economic need, etc. mine planning and operations have become really a complex job requiring multi-disciplinary inputs. We have to choose between the concepts of large scale mining with full mechanisation covering over the entire range of gigantic problems on one hand and the concepts of a number of small scale mining centres with semi-mechanised systems dovetailed with labour intensive system on the other hand, after due weightage given for situations in regard to terrain, ore parameters, infrastructure, socio-economic and industrial conditions. Choice of the package of technology befitted with adequate scientific guidelines should be harmonising with the industrial needs, time schedules, investments and returns, production parameters and life of mine as also with the environmental necessities.

The ore beneficiation technology is becoming increasingly important and vital. The application of beneficiation technology has to be kept in view from the initial stages of the identification of gradewise delineation of mineral occurrences to the final stage of pilot production. With low grade to sub-marginal resources and complex ores in abundance around fast depletion of the suitably located, rich deposits in a highly industrialised system is inevitable. Availability of mineral resources of the deep sea bed appears to be a far cry as yet. The non-renewable natural mineral endowment occurring in the form of low grades in any segment of the crust the world over, would therefore one day or the other attract exploitation by the highly industrialised and technology dependent society. Such needs would be more in case of developing countries like ours, where the low grade ores occur as a rule. As in the case of deep sea bed resources, this low grade avenue of large on-land resources are dependent on the technological developments in the field of ore beneficiation and extraction. The need for new materials, fundamental research on elemental abundances and concentrations, and extraction technology are in certain spheres inter-related activities. Separation and extractive metallurgy using high temperatures, hydrometallurgy, laser technology, etc. are quite in vogue and fast taking over the conventional systems particularly in respect of high quality materials, generating the demand of certain elements, minerals in low volume but of vital importance.

The point which perhaps is lost sight of, in such a complex and advanced earth science and technology developing systems is in regard to the identification of points or nodes at which one or two or more disciplines can be usefully intertwined in research exploration and industry. It may be worthwhile to strengthen the system or to foster a culture of working together supplementing each other's effort to a common objective with clear identification of roles of different disciplines or sub-disciplines in various sectors from the point of view of efficiency, better results and above all, for creating new challenging job avenues for the available trained manpower. The institutions and universities would perhsps be equally interested in this aspect as the quality and quantity of the products from the teaching Institutions will have to be shaped accordingly.

By virtue of the very characteristics of earth sciences and allied engineering, the trained personnel have to have a sound three dimensional approach engrained in the thinking process, coupled with strong observational faculty and predictive approach. On the other hand, more often than not, there is dominance of qualitative and empirical trends in the conclusions because of the inherent nature depending more on the concepts encompassing large number of variables. The earth's crust which reflects a cumulative history of various episodes of vertical and planer cycles since 3.8 or possibly 4.6 billion years, is bound to present large number of variables in all dimensions in relatively short time and space intervals.

In the modern developments and researches, diverse applications of physics, mathematics and chemistry, have been profusely used in geosciences to arrive at homogenised models so as to select the critical variables for analysis, synthesis and for ultimate quantitative conclusions in terms of the materials and processes. One factor most important in the growth of modern earth science in its totality, is a direct relationship of the laboratory data, however, minute as they may be, with the bulk of materials in the field and with the genetic or concentration in the processes. In other words, there should be greater and greater accent on marrying the micro and macro data for better scientific results. Such interlinking of data is vital in the concept of modelling—the catch word of the day.

Thus the interplay of earth

sciences with basic sciences and the extensive use of modern interdisciplinary techniques are inevitable for refined and useful scientific and quantifiable predictive approach. In the years to come such trends are also likely to be applicable to environmental appreciation. It also stands to reason that in such modern developmental trends in earth sciences and technology, any concept or model needs constant review in multidisciplinary sense both at academic and professional levels. For such an approach, human resource needs have also to be properly evaluated and curriculum evolved in its totality and in segments, must serve such multidisciplinary purposes, shaping a young mind so as to be quickly useful to the demands of the users in various sectors at the national level.

The current and future needs of the earth science development, in the national perspective are well known in terms of VII Plan. The availability of correct and modern data bases on varied parameters concerning the surface of the earth's crust and also for deeper down to at least a few kilometers for mineral, oil and gas resources, stresses and strains pattern in the rocks, data base on the landscape, atmosphere and so on, both on-land and off-shore have to be ensured. The faster such modern computerised data bases are built up, the precise and quicker could be the planning process and subsequent action implementation and also the identification of the blind alleys or grey areas in mineral development, technology, research and related training.

Organisations both in public and private sectors concerned with mineral exploration, exploitation and geoscience and also the universities and institutes like ISM, deeply concerned with the growth and application of earth sciences in the national perspective, need to come together so that a proper orientation could be given to the modern unified approach to data base systems. To begin with the Department of Mines, Ministry of Steel and Mines has already initiated a step in this direction and GSI and some public sector organisations, NIC, ONGC, etc. are at work on the preliminaries.

In general and in the national perspective the minerals and earth science based development could possibly be viewed rationally upto the turn of the century for integrated development plan. A new curriculum for higher education in earth sciences should be a part of this overall plan. The period could be broken into suitable phases with proper action plan so that the results of first phase could be put to use in following phase. In other words, the action plan for the remaining years of the VII Plan and the VIII Plan would be crucially important, if we wish to have a practical integrated view point developed upto the turn of the century for research, mineral resources, and rationally oriented technical and scientific manpower development. ☐

NATIONAL INSTITUTE FOR THE MENTALLY HANDICAPPED

Manovikas Nagar, Bowenpally P. O., Secunderabad 500 011

Admission to Bachelor's Degree Course in Mental Retardation
(1988-89 Session)

Applications are invited for admission to the first year of the Three Years' Degree Course in Mental Retardation conducted by the National Institute for the Mentally Handicapped, Secunderabad. The course is affiliated to the Osmania University.

Seats : The total number of seats are 17 from all over the country.

Eligibility : (a) The candidates must have passed 12th standard of the 10+2 pattern or equivalent examination with a minimum of 50% marks in aggregate (40% in the case of SC/ST candidates). Those candidates who are appearing for the 12th standard examination of 1987-88 session are also eligible to apply provided a certificate obtained from the Head of the educational institution, is enclosed alongwith the application. (b) Age : The candidate should have completed 16 years as on 1.7.1988.

How to Apply : Application form together with detailed prospectus containing the detailed instructions including eligibility conditions for admission to the above degree course can be had personally from the office of the Director, NIMH, Secunderabad 500 011 on submission of a demand draft for a sum of Rs. 5/- per set; or through post by sending a request alongwith demand draft for Rs. 5/- payable to the Director, NIMH, Secunderabad 500 011 alongwith a self-addressed stamped envelope for Rs. 7.50 of the size 28 cm x 12 cm, to the Director, National Institute for the Mentally Handicapped, Manovikas Nagar, Bowenpally P. O., Secunderabad 500 011 for despatching application form and prospectus by registered post.

Requests for application forms to be sent by post will be entertained upto 2 May, 1988.

Last date for receipt of filled-in application forms is **23 May, 1988.**

Architecture and Human Behaviour

Modern architecture with its excessive stress on aesthetics has been cut off from human behaviour, said Sri Karekar, noted Architect from Bangalore.

Inaugurating the three-day 30th Annual Convention of National Association of Students of Architecture (NASA) "Architecture and Human Behaviour" organised by Manipal Institute of Technology, Sri Karekar said it was necessary for architects to study human behaviour in detail and as far as possible refrain from concentrating only on the beauty of the building.

He called on the new generation of architects to strictly follow professional standards in their work. He stressed that an architect should work in harmony with civil engineers to evolve modern building designs conducive for human dwelling.

He cautioned the budding architects against defective designing and said negligence in drawing the blue prints of a superstructure could bring down both the building and the reputation of the community of architects.

JNU Entrance Examination

The Jawaharlal Nehru University has announced the schedule for the Entrance Examination for admission to various Programmes of Study at the University for the year 1988-89. The entrance test will be held in 24 Centres spread all over the country from 19 to 21 May, 1988. The application forms shall be issued upto 4th April, 1988. The last date for the receipt of application forms is 11 April, 1988. Announcement for admission to Direct Ph.D. and part-time programmes will be notified in due course.

Since JNU entrance examination for admission to various science disciplines has been accredited by the UGC on par with its National Educational Testing (NET) examination for the award of Junior Research Fellowships (JRF), candidates joining the M. Phil/M. Tech./Ph. D. programmes in the Schools of Computer and Systems Sciences, Life Sciences, Environmental Sciences, Physical Sciences and the Centre for Biotechnology on the basis of their *inter se* merit in the JNU test would now become automatically eligible for the award of JRF without their having qualified the NET examination conducted by the UGC. The accredition is for three years for the present.

Eligibility Test for Lecturers

Indira Gandhi National Open University (IGNOU) will perhaps be the first University in the country to hold eligibility test for the post of Lecturer in various disciplines. This test which shall be held on April 17, 1988 at Bombay, Hyderabad, Patna, Bhopal, Lucknow, Guwahati, Delhi and Calcutta will gauge the candidates from the quantitative as well as qualitative point of view. Various disciplines for which this test will be held are Public Administration, Economics, Chemistry, Life Science, Physics, Geography, History, Psychology, Computer, Library Science, Performing Arts, Political Science, Education and Home Science. The test shall comprise 2 parts viz. objective and reflective type. While objective type questions will be common for all candidates, reflective type shall be discipline based. Those who pass this test will be finally called for interview in that discipline. University will, therefore, attract the best possible talent in the country by way of this eligibility test.

News from Agril. Varsities

Energy in Agriculture

Institution of Engineers (India), Karnal Local Centre and the Indian Society of Agricultural Engineers, Hisar Chapter recently organised a Seminar on "Energy in Agriculture" at Haryana Agricultural University. Dr. Har Swarup Singh, Vice-Chancellor, HAU inaugurated. He said : In Indian agriculture, the energy derived from the sun has greatly influenced techniques and processes of crop production. Only about 10% is contributed by way of manpower, animal, fertilizers, pesticides beside fuels and electricity. Dr. Singh expressed concern for the depleting reserves of fossil fuels.

He emphasised energy plantation at various levels i.e. social forestry, farm forestry etc. to maintain the environmental and the ecological balance. Over the years, this can further contribute to the availability of wood for several purposes. Dr. Singh further stressed that efficient use of machinery and equipment in agriculture combined with effective care, timely use, management and operation with precision contributes to savings energy and increase in productivity. He exhorted the engineers to develop a comprehensive methodology taking into consideration the on and off farm energy, directly or indirectly put to crop production and household and asked the researchers to carry out micro level savings for proper planning by inter-disciplinary approach.

Professor M.L. Jain, Convenor of the Seminar and Chief Engineer, HAU said that amongst the various aspects of energy in agricultural production, the participants would discuss energy use pattern for production of paddy and wheat in Haryana, structure and pattern of energy sources in the state, bio-gas production from cattle waste as affected by saline water etc.

Seminar on Environment Pollution

Occurrence of toxic amount of fluoride in well waters has been reported in various parts of the country particularly, in Andhra Pradesh, Panjab, Haryana, Delhi and Rajasthan. The excessive intake of fluoride is toxic to human beings and causes many diseases, said Dr. Har Swarup Singh, Vice-Chancellor, Haryana Agricultural University (HAU) while inaugurating a 2-day seminar on Environment Pollution and its Management. Dr. Singh expressed concern over the imbalance in nature and stressed a thorough understanding of the agro-chemicals under different conditions and the possible adverse affects they may have. He urged upon the scientists to formulate strategies of judicious use of agro-chemicals and help in keeping the environment healthy and uncontaminated.

The seminar, being organised by the Department of Environment, Govt. of Haryana and Haryana Agricultural University, has attracted about 130 scientists from different disciplines

Lac Sheller Developed

The Agricultural Engineering Unit of the Birsa Agricultural University, whose Birsa seed drill has earned the appreciation of the I.C.A.R. and has been recommended for adoption by all the states in India, has now evolved yet another instrument for the extraction of Lac.

The scientists of the Unit have evolved three prototypes of Lac Sheller, which has the capacity to extract three times more of Lac compared to the conventional method without any waste. The approximate cost of the Lac Sheller is expected to be Rs. 350/-.

Till now Lac is being extracted by Dabia—a conventional tool. In this conventional system, the time taken is more and the extraction of Lac alongwith waste is much more to make it a profitable venture.

News from Abroad

Women in Scientific and Technological Development

The Third World Academy of Sciences with financial support from the Canadian International Development Agency plans to convene a major conference on "*The Role of Women in the Scientific and Technological Development of the Third World*" to be held in Trieste, Itlay during 3-7 October 1988.

The Conference will bring together a large number of leading women scientists and technologists in the Third World as well as some eminent women scientists and technologists from advanced countries, thereby enabling them to share experiences and exchange ideas in a number of issues, including :

* The Status of Women in Science and Technology in various Third World countries.

* Reasons for discrimination of women scientists in various countries of the Third World and measures to avoid such discrimination.

* Role of women in scientific leadership and decision making.

* The ways and means of involving young talented women in Science and Technology projects in the Third World.

* Identification of the most important achievements carried out by women from the Third World in various scientific fields.

* Characterization of fields where women seem more creative than men.

It is expected that the Conference and the Roundtable discussions, which will be held on specific themes during the Conference, will result in a 3-5 years Project which should help in providing a substantial enhancement of the Role of Women in the Scientific and Technological Development of the Third World. The Project may involve among other things :

* The development of an *inventory of women scientists* in various fields and countries in the Third World.

* The establishment of an *association of women scientists* active in the Third World.

* The development of concrete South-South and South-North collaboration programmes in which women and men scientists play equal roles.

Further information can be obtained from the Executive Secretary, Third World Academy of Sciences, C/o International Centre for Theoretical Physics-34100 Trieste (Itlay).

University Administrators to Meet at Maryland

The Sixth International Meeting of the Conference of Registrars and Secretaries and Conference of University Administrators of the United Kingdom has been scheduled to be held from 23 to 28 July, 1989 at the University of Maryland, College Park Campus, Center of Adult Education in the United States of America.

Several national associations such as the American Association of Collegiate Registrars and Admission Officers (AACRAO), the National Association for Foreign Students Affairs (NAFSA) are expected to join with the University of Maryland in hosting the Meeting.

Further details can be had from :

Dr. John A. Bielec,
Assistant Vice-Chancellor for Administration,
Main Administration Building
College Park,
Maryland 20742
USA.

University Level Coaching Camps—1988-89

80 Coaching camps are allotted to various universities every year under the University Level Coaching Camps Scheme that has been in operation since 1980-81. For the present, the scheme is confined to 10 disciplines and 8 camps are organised for each discipline. The disciplines included in the scheme are Athletics (M&W), Badminton (M&W), Basketball (M&W), Football (M), Hockey (M&W), Volleyball (M&W) and Wrestling (M). The period prescribed by AIU for organising these camps is from May to September. AIU renders financial assistance to the universities for organising these camps, which are primarily aimed at nurturing university sports talent during the long summer vacation when the students tend to slacken. For the year 1988-89, these camps have been provisionally allotted to 38 university centres as per details below :

1. Athletics (M&W)

1. Allahabad, 2. Gandhiji, 3. G.N.D.U., 4. Madras, 5. Punjabi, 6. Rajasthan, 7. Shivaji, 8. Calicut.

2 Badminton (M&W)

1. Jiwaji, 2. Jodhpur, 3. Marathwada, 4. Meerut, 5. Patna, 6. Punjab Agrl., 7. Rani Durgavati, 8. Calicut.

3. Basketball (M)

1. Aligarh, 2. Berhampur, 3. Calcutta, 4. Haryana Agrl., 5. Mysore, 6. Osmania, 7. Patna, 8. Vikram.

Basketball (W)

1. Gandhiji, 2. Gujarat, 3. Kerala, 4. Kurukshetra, 5. Lucknow, 6. Sardar Patel, 7. S.N.D.T., 8. Banasthali.

5. Football

1. Aligarh, 2. Kashmir, 3. Madras, 4. North Bengal, 5. Panjab, 6. Shivaji, 7. Burdwan, 8. Calicut.

6. Hockey (M)

1. Delhi, 2. Kurukshetra, 3. Ranchi, 4. Meerut, 5. Osmania, 6. Panjab, 7. Punjab, Agrl., 8. Punjabi.

7. Hockey (W)

1. Delhi, 2. G.N.D.U., 3. Gujarat, 4. Kerala, 5. Ranchi, 6. Punjabi, 7. Panjab, 8. Banasthali.

8. Volleyball (M)

1. Aligarh, 2. Allahabad, 3. Berhampur, 4. Himachal Predesh, 5. Mangalore, 6. Mysore, 7. Rani Durgawati, 8. Rajasthan.

9. Volleyball (W)

1. Calcutta, 2. Gandhiji, 3. G.N.D.U., 4. Kerala, 5. Osmania, 6. Ranchi, 7. Sardar Patel, 8. S.N.D.T.

10. Wrestling

1. Gujarat, 2. Kurukshetra, 3. Marathwada, 4. Meerut, 5. M.D.U., Rohtak, 6. Punjab Agrl., 7. Shivaji.

GND Varsity Bags Maulana Azad Trophy

The Guru Nanak Dev University, Amritsar, has won the Coveted Maulana Abul Kalam Azad Trophy for the year 1986-87, for the ninth time in succession. The members of the Senate of the university commended the performance of the Sports Departmen for its excellent achievements.

Dr. S.S. Bal, Vice-Chancellor, informed that the Government has approved the laying of an Astro-Turf at the University and a sum of Rs. 50 lacs will be provided for the purpose. The State Government has also agreed to contribute the matching share.

News from UGC

INSAT-1B Programme of UGC

Between 11th April to 30th April, 1988 the following schedule of telecast on higher education through INSAT-1B under the auspices of the University Grants Commission will be observed. The programme is of one hour duration every day from 12.45 p.m. to 1.45 p.m. (Repeated from 4 p.m. to 5 p.m.) and will be available on the TV Network throughout the country. For the viewers in Delhi and surrounding areas these programmes can be seen on the second channel.

ASSOCIATION OF INDIAN UNIVERSITIES

CORRESPONDENCE COURSE IN EVALUATION METHODOLOGY & EXAMINATIONS

Applications are invited from College/University teachers for admission to Correspondence Courses in Evaluation Methodology and Examinations at Basic Level, Intermediate Level and Advanced Level/Special Professional Course. The duration of each of the three courses is six months. A personal 'Contact Programme' for three days is planned for each of the three courses. Universities/Institutions sponsoring candidates can meet the registration/course fees from out of unassigned grants by UGC.

Request for prospectus and application form accompanied by crossed Indian Postal Order for Rs. 10/- drawn in favour of the Secretary, Association of Indian Universities and a self-addressed stamped envelope (Rs. 2) should be sent to the Project Director (Exams), Association of Indian Universities, 16 Kotla Marg, New Delhi 110002. Last date for receipt of applications is extended to **25th April, 1988** for both sponsored and non-sponsored candidates.

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

RESEARCH IN PROGRESS

A List of Research Scholars Registered for Doctoral Degrees of Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Alonay, Mahipat Rao. *Endomorphism ring of flat modules.* HS Gour. Dr. R.S. Singh.
2. Arjariya, Anil Kumar. *Fixed point theorems for some mappings.* HS Gour. Dr. R.K. Jain.
3. Badbude, Ramesh Kumar. *Endomorphism ring of quasi injective modules.* HS Gour. Dr. R.S. Singh.
4. Chourasia, Bharati. *Some problems on fixed point theorem.* HS Gour. Dr. K.C. Srivastava,
5. Gangele, Sudhir Kumar. *Some problems on fixed point theorems.* HS Gour. Dr. K.C. Srivastava.
6. Khan, Subhan. *Fixed point theorem.* HS Gour. Prof. P.L. Sharma.
7. Kushwaha, Ram Chandra. *Theory of relativity.* BHU. Dr. T. Singh.
8. Pandey, Rang Nath. *Optimal ordering in sparsity techniques applied to large power system networks.* BHU. Dr. O.P. Singh.
9. Pandey, Sheel Sindhu. *A study in the theory of multipliers in Banach and locally convex spaces.* HS Gour. Prof. P.L. Sharma.
10. Sinha, Vivek Kumar. *Applied functional analysis and operations research.* BHU. Dr. R.N. Mukherjee.
11. Srivastava, Renu. *Quasi flat module.* HS Gour. Dr. R.S. Singh.
12. Srivastava, Shashi Kant. *Fluid mechanics and magnetohydrodynamics.* BHU. Prof. H.L. Agrawal.
13. Tewari, Poonam. *Strongly M-projective module.* HS Gour. Dr. R.L. Singh.
14. Tewari, Sharad Kumar. *A study of continuous functions and spaces.* HS Gour. Dr. R. Prasad.

Physics

1. Agarwal, Bhushan. *Charge transport in organic semiconductors and polymers : A search for organic photo-voltaic materials.* Devi Ahilya. Dr. Brijesh Kumar.

Chemistry

1. Bhadouria, Brijesh Kumar. *Studies on phytoestrogens of Sopubia delphinifolia (Fam. Scrophulariaceae).* HS Gour. Prof. V.K. Saxena.
2. Garg, Ravindra Kumar. *Preparation and physio-chemical studies of dithiocarbamate complexes of some metals.* Delhi. Dr. B.S. Garg.
3. Gouda, Panchanana. *Synthetic studies in benzopyrone derivatives.* Delhi. Prof. S.K. Grover.
4. Hans, Naresh. *Synthetic studies in polyphenolics.* Delhi. Prof. S.K. Grover.
5. Jahromi, Mohammad Ali Farboodniay. *Medicinal chemistry : Studies and biological activities of phytochemicals.* BHU. Prof. A.B. Ray and Dr. J, P.N. Chansuria.

6. John, Liza. *Nuclear chemistry : Separation of some fission products.* BHU. Dr. R.N. Singh.

7. Mathew, Jose. *Studies on corrosion of bronze in aqueous solutions.* BHU. Dr. Ravindra Nath.

8. Misra, Suman. *Biochemistry of human filarial parasite, W. bancrofti.* BHU. Dr. (Mrs) S. Rathaur.

9. Pandey, Jagdamba Prasad. *A study of coordination compounds of some bivalent and trivalent transition metal ion with hydrazine derivatives.* BHU. Dr. K.K. Narang.

10. Pandey, Sanjay Kumar. *Synthesis and characterisation of organometallic compounds.* BHU. Dr. V.B. Pandey and Dr. V.P. Singh.

11. Rohatgi, Amit. *Chemistry of natural products.* Delhi. Dr. S.C. Jain.

12. Satapathy, Sanjukta. *Biomimetic studies of biologically active heterocycles.* Delhi. Dr. S.M.S. Chauhan.

13. Singh, Indra Mani. *Photoelectro-chemical solar cell.* BHU. Dr. Lal Bahadur.

14. Singh, Mamta. *Synthesis and stereochemical studies.* BHU. Dr. R.M. Singh.

15. Singh, Pramod Kumar. *Studies on organic conductor.* BHU. Prof. S.M. Verma.

16. Singh, Vineeta. *Radio tracer studies on adsorption.* BHU. Dr. S.P. Mishra.

Engineering & Technology

1. Amar Nath. *A.C. impedance studies on metallic corrosion.* BHU. Prof. T.K G. Namboodhiri.

2. Banerjee, Uttan Chand. *Fermentative production of rifamycin oxidase and optimization of process parameters for enzymatic-conversion of rifamycin B to Rifamycin S.* Panjab. Dr. S.C. Jain and Dr. Sunil Das.

3. Cheriyan, Achamma. *Studies on the behaviour and strength of fibre reinforced concrete structural members.* Kerala. Dr. S. Krishnan.

4. Gupta, Thummalapalli Kumara Siva Prasad. *Studies on semi-conducting chalcogenides.* BHU. Dr. Shamsuddin and Prof P. Ramachandra Rao.

5. Mishra, Awadhesh Kumar. *Some geological factors affecting physico mechanical properties of rocks.* BHU. Dr. R. Nath.

6. Sharma, Manoj Kumar. *Project management : A study of corporate strategies : Planning system for resource allocation and scheduling of resource constrained projects in multiproject organisation,* Delhi. Prof. Rajnish Prakash.

7. Saluja, S.S. *Studies of metal deformation in foraging and extrusion.* Delhi. Dr. D.P. Grover.

8. Singh, Krishna Kant Kumar. *Rock mechanics.* BHU. Prof. D.P. Singh.

9. Sreenivasa Rao, Chavakula. *Mine environmental pollution.* BHU. Prof. B.B. Dhar.

BIOLOGICAL SCIENCES

Marine Biology

1. Benny, P.J. *Studies on L-appsraginase activity in microorganisms of Ashtamudi lake.* Kerala. Dr. K. Dhenvendran.

2. Bindu, B. Kavitha. *Some studies on the effect of heavy metal pollutants on esturaine animals with particular reference to copper and zinc.* Kerala. Dr. Tresa V. Fernandez.

3. Geethamony, S. *Studies on bacterial diseases of fishes of South West Coast of Kerala.* Kerala. Dr. K. Dhevendran.

4. Joe, O. Wilfred. *Distribution of trace metals in the Ashtamudi estuary, Kerala with special reference to molluses.* Kerala. Dr. P.K. Abdul Aziz.

5. Kumar, U.G. *Studies on the estuarine bivalves of the Kerala Coast.* Kerala. Dr. N. Balakrishnan Nair.

6. Thomas, George. *Comparative studies on the ecobiology of mangrove communities along the backwater systems of Kerala.* Kerala. Dr. Tresa V. Fernandez.

Biochemistry

1. Agrawal, Rajendra Kumar. *Immunology of filariasis.* BHU, Dr. (Mrs) S. Rathaur.

2. Bhatia, Ranu. *Studies on the cultivation and genetics of biocide producing bacilli.* BHU. Dr. H.P. Pandey and Prof. R.H. Singh.

3. Durga Prasada Rao, P.V S S. *Phosphorylases and phosphatases in Lens esculenta seedlings.* BHU. Dr. (Mrs) V. Taneja.

4. Misra, Mahendra Kumar. *A biochemical study of some psychiatric disorders.* BHU. Dr. H.P. Pandey and Prof. R.H, Singh.

5. Singh, Satyendra Bahadur. *Metabolism in plants.* BHU. Dr. Om Prakash.

Botany

1. Ajith Kumar, T. *N_2 fixing cyanobacteria.* BHU. Dr. D.N. Tiwari.

2. Mishra, Surya Sankar. *Basipetal mobilization of photosynthesis from senescing cotyledons of Raphanus sativus seedling.* Sambalpur. Dr. U.C. Biswal.

3. Mishra, Sushma. *Air pollution.* BHU. Dr. (Mrs) M. Agrawal.

4. Panda, Ram Krishna. *Ecophysiological studies on the little leaf disease of Solanum melongena L.* Sambalpur. Dr. Ram Krishna Kar.

5. Patnaik. Anuradha. *Basipetal mobiiization of nitrogen assimilates from senescing cotyledons of Raphanus sativus seedlings.* Sambalpur. Dr. N.K. Choudhary.

6. Sahu, Sushil Kumar. *Physiology of inflorescence growth and development in rice varieties differing in duration of growth.* Sambalpur. Dr. P.K. Mohapatra.

Zoology

1. Arora, Chandra Bhan. *A study of the biology of Coptotenies Rhinotemitidae : Isoptera : Insecta.* Panjab. Prof. H.R. Pajni.

2. Chaurasia, Pratima. *Phasing of nucleosomes on satellite DNA of rats during aging.* BHU. Dr. M.K. Thakur.

3. Das, Abhay Kumar. *Evaluation of some Indian earthworm casts and tissues as media for mushroom growth and vermifeed for Japanese quails.* Sambalpur. Dr. M.C. Dash.

4. Hota, [illegible]rafulla Kumar. *Ecology of soil nematodes in tropical irrigated crop fields of Sambalpur, India.* Sambalpur. Dr. G.B. Pradhan.

5. Mishra, Vinod Chandra. *Some physiological and biochemical effects of braceation stress on tropical earthworms.* Sambalpur. Dr. T.V. Rao.

6. Mohandad, N.N. *Evolutionary genetics.* BHU. Prof. T. Sharma.

7. Mohanty, Ashok Kumar. *Studies on some physio ecological, biochemical and biometric aspects during development in the tasar silkworm, militea Daud.* Samalpur. Sri Ashutosh Mittra.

8. Nayak, Rama Kumar. *Pollution studies in and around Bargarh (Orissa) due to Hira Cement Factory aerial discharges.* Sambalpur. Dr. B.N. Naik.

9. Singh, Sunita. *Genetic variation in the Indian pygmy field mice.* BHU. Prof. T. Sharma.

10. Srinivasa Rao, M. *Impact of heavy metals on fish skin.* BHU. Dr. A.K. Mittal.

11. Srivastava, Sushil Kumar. *Studies on insects reproduction and development.* BHU. Prof. K.P. Srivastava.

12. Tripathi, Dinesh Kumar. *Pineal control of estrogen receptor complex in female Indian palm squirrel, F. penanti.* BHU. Dr. C. Haldar.

13. Vidhu, S. *Male hormone and DHT receptor function in accessory sex organ of male Indian palm squirrel, F. pennanti.* BHU. Dr. C. Haldar.

Agriculture

1. Kashyap, Uma. *Namatode fauna of forests, its ecology, pathogenicity and role in litter decomposition.* Sambalpur. Dr. N.K. Sharma and Dr. P.C. Mishra.

Medical Sciences

1. Basak Asim Kumar. *Studies on the pathogenesis of gallstone.* BHU. Prof. N.N. Khanna.

2. Bhaduri, Brahm Gopal. *Aushadhiyon par grah nakshatron ka prabhav ka adhyayan.* BHU. Prof. J.K. Ojha.

3. Sharma, Pramod Kumar. *Study of different chemotherapeutical agents in urogenital malignancies.* BHU. Prof. V.N.P. Tripathi.

4. Tyagi, Pankaj. *Chemistry and pharmacology of medicinal plants.* BHU. Prof. J.K. Ojha and Dr. S.K. Datta.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Bhargava, Dinesh Chandra. *Investigations into certain aspects of special functions transformations and their application.* Rajasthan. Dr. A.N. Goyal.

2. Choudhury, Khanindra Chandra. *A study of goldie rings and modules and associated concepts.* Gauhati. Dr. Binay Kumar Tamuli.

3. Dass, Jagannath. *Transient analysis of some finite simple birth-death models.* IIT Delhi. Prof. O.P. Sharma.

4. Ghosh, Bandana. *Some problems connected with differential operators and special functions.* Calcutta.

5. Mukhopadhyay, Sailesh. *Some problems on statistical mechanics (foundations) from abstract standpoints.* Calcutta.

6. Mukhopadhyay, Samares. *Some problems of elastic and piezoelectric crystals.* Calcutta.

7. Patel, Tulananda. *Some results on sequence spaces.* Sambalpur. Dr. S. Nanda and Dr. M.N. Mishra.

8. Patil, Mahadeo Raghunath. *Some 'problems in fluid mechanics.* Shivaji.

9. Premchand, S. *Semigroup of stochastic matrices.* Kerala. Dr. K.S. Subramonian Namboodiripad.

10. Shah, Madhubala Arun. *Rheology of special materials in relativity.* Shivaji. Dr. B.B. Waghmode.

11. Shahwan, Othman Said Yousef. *A study of transfinite bases in banach spaces.* Jamia. Dr. Khailil Ahmad.

Statistics

1. Deshpande, Vijay Vasantrao. *A study of certain models in demography pertaining to Ambajogai town.* Marathwada. Dr. S.G. Prabhu Ajgaonkar.

2. Harishchandra, K. *Applications of optimization and statistical techniques in design and control of queueing systems.* Bangalore. Dr. S. Subba Rao and Dr. T. Srivenkataramana.

3. Sarma, Putcha Venkata Subrahmanya. *Models and measures of fertility for regional comparisons.* Andhra.

Astronomy

1. Sarma, M. Kameswara. *Comparative synthetic light curve studies of four eclipsing binaries on ellipsoidal and roche models.* Osmania.

Physics

1. Agarwal, Vandna. *Synthesis, microstructure and mechanical properties of chromium carbide and chromium nitride films.* IIT Delhi, Prof. K.L. Chopra.

2. Baruah, Mandira. *A study on the relationship between the trace contents, uranium and boron and medicinal properties of some common medicinal plants of Assam.* Gauhati. Dr. T.D. Gowswami.

3. Chakraborti, Sibkumar. *Homogeneous spacetimes and electromagnetic fields in general relativity.* Calcutta.

4. Chakraborty, Taposh. *Laser raman studies of orientational dynamics of molecular ions and phase transformations in ammonium perchlorate single crystals.* NEHU. Dr. A.L. Verma.

5. Desai, Jayashree Shrinivas. *Some studies on Cu-In-S thin films and their use in BCPV cells.* Shivaji. Dr. S.H. Pawar.

6. Joshi, H.H. *Investigation of magnetic and electrical properties of ferrites.* Saurashtra. Dr. R.G. Kulkarni.

7. Joshi, Prabhakar. *Study of consequences of superluminal Lorentz transformations.* Kumaun. Prof. B.S. Rajput.

8. Krishna Murthy, Kolla. *Application of current algebra and peac to kaon proton interactions.* Andhra.

9. Kumbhakar, Dharmadas S. *Quark madels and gauge theories.* Calcutta,

10. Nandi, Jitendra Narayan. *Principal magnetic susceptibilities of some rare earth ions in crystals at low temperatures and a study of the crystalline electric fields.* Burdwan. Prof. Dhiraj Neogi.

11. Neogi, Aparna. *Theoretical and experimental studies on the paramagnetic behaviour of some rare earth and iron group ions in crystals.* Burdwan.

12. Padiyan, D. Pathinettam. *X-ray diffraction studies on crystalline solids.* Madurai.

13. Palchoudhari, Shanta Dhiraj. *Studies on superionic solids.* Marathwada. Dr. G.K. Bichile.

14. Pathak, M.S. *Acoustic wave interactions in solid state plasma.* Vikram. Dr. S. Ghosh.

15. Ramesh Babu, Gorge. *Experimental investigations on KC-X-Ray satellites excited by photons.* Andhra.

16. Rujh, Abdul Javed Nouvin. *Development and study of solar cells.* Devi Ahilya. Dr. R.P. Pandey.

17. Singh, Vipin Bahadur. *Molecular electronic spectroscopy of indium monobromide.* BHU. Prof. D.K. Rai.

18. Sinha, Kumar Virendra. *Computer-aided modelling and simulation of slow positron behaviour in light-gases.* Delhi.

19. Subrahmanya Swamy, Madhyannapu Leelanada. *Ultrasonic study of phase transitions in cholesteric liquid crystals.* Andhra.

20. Surendra Singh. *Electrical properties of sodium-niobate silicate glasses.* Delhi.

21. Varshney, R.K. *Temperature dependence of second, third and fourth order elastic constants of nace-structure alkali halide crystals.* Kumaun. Dr. Jai Shankar.

22. Venugopal, C. *Near perpendicular propagation of ion-cyclotron and electromagnetic waves in a loss cone plasma.* Kerala. Dr. K.S. Viswanthan.

23. Verma, Indu Bhushan. *Far infrared non-linear photoresponse in silicon-inversion layers.* Delhi.

24. Vikram Kumar, B.T. *A study of the equatorial ionospheric irregularities using V.H.F. backscatter and H.F. phase coherent radar techniques.* Kerala. Dr. P. Balarama Rao.

Chemistry

1. Ateeque Ahmad. *Isolation of new terpenoids from essential oils of potential value and elucidation of their structures.* Avadh. Dr. M.C. Nigam.

2. Bandyopadhyay, Anup Kr. *Complex equlibria of some rare earth metal ions with some chelating ligands in some mixed aqueous solvents.* Burdwan. Prof. Ajay Kr. Choudhuri.

3. Basu, Srabani. (A) *Chemical investigation of Dendrobium gibsonii, D. densiflora and Jacquinia ruscifolia (B) Studies on synthetic heterocycles.* Calcutta.

4. Batra, Rameshkumar Jeewandas. *Neutron activation analysis of geological samples using low flu 241 Am-Be neutron source.* Nagpur. Dr. A.N. Garg.

5. Bayan, Kiran Chandra. *Studies on extractive spectrophotometric determination of some metalions in micro quantities with benzyldimethylphenylammonium chloride and benzyltriethylammonium chloride.* Gauhati. Dr. Himadri Kr. Das.

6. Bhatt, V.C. *Preparation and solution properties of co-polymers.* Bhavnagar. Dr. R.S. Patel.

7. Chattopadhyay, Debabrata. *Kinetics and mechanism of oxidation of Cis-diaquo-bis-ethylenediamine cobalt (III) ion by bidentate ligands.* Burdwan. Prof. Gauri Sankar De.

8. Doshi, A.V. *Study of mesomorphism and exploration of its characteristics.* Saurashtra. Late Dr. J. M. Lohar.

9. Juneja, Ravindra Kumar. *Chemical investigation of ethno botanical medicinal plants.* Avadh. Dr J.S. Tandon.

10. Kuchekar, Shashikant Raghunath. *Extraction separation studies of some metals.* Shivaji. Dr. M.B. Chavan.

11. Kundu, Anjali. *Studies on the chemistry of plant products and oxidative phenol coupling.* Calcutta.

MAHARSHI DAYANAND UNIVERSITY ROHTAK

Invites applications on prescribed form (obtainable from Asstt. Registrar (General) on payment of Rs. 2/- at Counter or through IPOs of Rs 3/- by post), containing full bio-data with attested copies of certificates/testimonials for award of a University Research Scholarship in **SANSKRIT** so as to reach the Head of Sanskrit Dept. of this University latest upto **7.5.88.** Scholarship @ Rs. 800/- per month+annual contingent grant of Rs. 3000/-, is tenable for two years in the first instance. Those possessing Master's degree in Sanskrit with atleast 55% marks, preferably with M.Phil. degree, below 30 years of age as on Ist July, 1987 can apply. Incomplete/late applications will not be entertained.

REGISTRAR

इन्दिरा गांधी राष्ट्रीय मुक्त विश्वविद्यालय
INDIRA GANDHI NATIONAL OPEN UNIVERSITY

YMCA CULTURAL CENTRE, JAI SINGH ROAD, NEW DELHI-110 001

Applications are invited from Indian Citizens for filling up the following posts in the Indira Gandhi National Open University :

(1) Professors: Commerce, Sociology

Scale of Pay: Rs. 4500-150-5700-200-7300 plus usual allowances as admissible under the University Rules.

Qualifications: An eminent scholar with published work of high quality actively engaged in research. About ten years experience of teaching research and/or extension. Experience of guiding research at doctoral level.

OR

An outstanding Scholar with established reputation who has made significant contribution to knowledge. Explanation: F.P.M. (Indian Institutes of Management Doctoral Programme) will be treated as equivalent to a doctoral degree of a University.

(2) Readers: Sociology, Public Administration, Physics, Philosophy and Management Studies

Scale of Pay: Rs. 1200-50-1300-60-1900 (to be revised) plus usual allowances as admissible under the University Rules.

Qualifications

(a) For disciplines other than Management Studies

Good academic record with a doctoral degree or equivalent published work. Evidence of being actively engaged in (i) research (ii) innovation in teaching methods or (iii) production of teaching materials. About five years' experience of teaching research and/or extension provided that at least three years are as Lecturer or in an equivalent position. This condition may be relaxed in the case of candidates with outstanding record of teachin/research.

(b) Management Studies

Reader in Management Studies : Good academic record with a doctoral degree or equivalent published work. Evidence of being engaged in (i) research (ii) innovation in teaching methods or (iii) production of teaching materials Five years experience of teaching, research and/or extension provided that at least three years are as Lecturer or in an equivalent position. This condition may be relaxed in the case of candidates with outstanding record of teaching/research. Preference will be given to candidates specialising in behavioural sciences or operations management or marketing management.

Explanation: For determining "good academic record" the following criteria shall be adopted :

(i) A candidate holding Ph.D. degree should possess at least a second class Master's degree or

(ii) A candidate without at Ph.D. degree should possess a high second class Master's degree and second class in the Bachelor's degree or

(iii) A candidate not possessing Ph.D. degree but possessing second class Master's degree should have obtained first class in the Bachelor's degree.

The following general conditions are applicable to all posts at 1 and 2 above.

(a) **Additional Qualifications:** Experience and proven ability in imparting education through communication media and innovations in distance teaching methods and materials.

(b) Job Requirements : Academic staff of this University will have the following responsibilities :

1. Curriculum and course development
2. Preparation of self instructional print material.
3. Preparation of and participation in the production of audio-video materials
4. Participation in contact programmes, workshops, week-end-programmes, summer institutes, face-to-face teaching etc.
5. Undertaking of research, individual, institutional sponsored etc.

In addition to pay, the posts carry all allowances as per University rules. Higher start in the prescribed scale may be given in deserving cases on the recommendation of the Selection Committee. In a few cases, the University would be able to provide accommodation Provident Fund/Pension, Gratuity, Leave Travel Concession, Medical reimbursement and Leave will be admissible as may be approved by the Board of Management. (It is anticipated that such benefits would be more or less comparable to other Central Universities).

The prescribed application forms can be had from **Registrar, Indira Gandhi National Open University, YMCA Cultural Centre, Jai Singh Road, New Delhi-110001** on a written request by post and accompanied by a self-addressed envelope (size 13 cms x 28 cms) bearing postage stamps of Re. 1.00. Completed application forms along with attested copies of degrees, experience etc. should reach the Registrar at the above address on or before **25th April, 1988**. The originals of the above degree/certificates should be produced at the time of interview.

Candidates called for interview from outside Delhi will be paid single second class railway fare to and fro by the shortest route from their place of residence/work.

Canvassing in any form by or on behalf of a cadidate will be a disqualification.

Applications received after the last date or without complete information will not be entertained.

Note : 1. It will be open to the University to consider the names of suitable candidates who may not have applied. Relaxation of any of the qulifications may be made in exceptional cases in respect of all the posts on the recommendation of the Selection Committee.

2. The University reserves the right not to fill up any of the vacancies advertised if the circumstances so warrant.

(Advt. No. 7/ADMN/87-88) **REGISTRAR**

COUNCIL OF SCIENTIFIC AND INDUSTRIAL RESEARCH

ADVERTISEMENT No. 5/88

It is proposed to appoint two Scientists 'F' for the Central Institute of Medicinal & Aromatic Plants (CIMAP), Lucknow.

CIMAP undertakes R&D work on medicinal and aromatic plants which includes development of agrotechniques for these plants, development of agro-technology and introduction and acclimatisation of exotic species. The reseach projects of the Institute are of multi-disciplinary nature calling for interplay of agricultural sciences, botany and pharmacognosy, chemistry of natural products as well as chemical engineering.

Job requirements (Post No. 1) : The selected candidates will be expected to provide a high level leadership in R&D in Soil Science and Agronomy with special reference to agronomy of medicinal and aromatic plants. He should be able to identify, plan and coordinate research in the area of Soil Science and Agronomy with special reference to developing, improved and new methods for growing medicinal and aromatic plants under stress conditions on marginal soils, coastal soils, marshy lands, salt and acidic soil conditions, rocky area and other waste land conditions and also work as Chief Coordinator of R&D work at 5 Regional Centres located in different parts of the country. He should be able to develop a strong unit of basic as well as applied research in the area of plant nutrition, soil fertility, weed and water management.

Qualifications : High academic qualifications with first class Master's Degree and Doctor's Degree in Soil Science/Agronomy. At least ten years research experience with proven R&D ability in the area of Soil Science and Agronomy with special reference to agronomy of medicinal and aromatic plants. He should be familiar with the use of modern instruments of analysis of soils and plants. He should have proven ability to guide and coordinate agronomic research with a fairly large group of agronomists in various specialities.

Job Requirements (Post No. 2) : The selected candidate will be expected to provide a high level leadership in R&D in the area of Genetics and Plant-Breeding with special reference to medicinal and aromatic plants. He should be equipped with knowledge and skill of modern genetic engineering techniques/plant molecular biology. He will be required to assist the Director in planning and execution of projects in the area of improvement of medicinal and aromatic plants.

Qualifications : High academic qualifications with first class Master's Degree and Doctor's Degree in Botany or Agriculture with specialisation in Genetics and Plant-Breeding. At least ten years research experience with proven R&D ability in the area of Genetics and Plant-Breeding with special reference to medicinal and aromatic plants.

Salary/Conditions of Service : The scale of posts is Rs. 5100-150-5700-200-6300 plus allowances as per Central Government rules. Consultancy subject to an upper limit of Rs. 15,000 per year is permissible which is likely to be revised. This is a contractual appointment initially for a period of six years. The contract is extendable and the incumbent can also be confirmed. Free medical aid and leave travel concession are also permissible for the family as per Central Government rules. Residential accommodation will be provided as soon as the staff quarters are constructed on payment of usual rent.

Age should be preferably below 50 years, relaxable in deserving cases.

A duly constituted screening committee will decide on the number of scientists to be invited to meet the full selection committee for discussion. The decision of the Council in this behalf will be final. Applications from employees working in Government Departments, Public Sector Organizations and Govt. funded Research Agencies will be considered only if forwarded through proper channel and with a clear certificate that the applicant will be relieved within three months of receipt of the appointment order.

Those interested may kindly send in their curriculum vitae in duplicate in the form obtainable from the Joint Secretary (Admn.), Council of Scientific and Industrial Research, Rafi Marg, New Delhi-110 001 on or before **10-6-1988**. Literature about CIMAP will be available on request from this address.

Ministry of Human Resource Development
(Department of Education)
Jawaharlal Nehru Memorial Trust (U.K.) Scholarships 1988-89

Applications are invited on plain paper from Indian nationals for the award of two scholarships offered by the Jawaharlal Nehru Memorial Trust (U.K.) for advanced study/research in any of the following subject fields :

1. Material Science 2. Laser Physics 3. Opto Electronics 4. Electronics Instrumentation 5. Micro Electronics 6. Computer Science 7. Bio-Technology 8. Econometrics 9. Management 10. Mass Communication.

Tenure *:* The Scholarships are tenable for two years and may be extended by a year, where necessary.

Value (Subject to Revision) : (i) A monthly stipend (currently £ 402) for subsistance and personal expenses (including daily travel). (ii) Additional allowances for books (£. 130), Clothing (£. 141), Arrival (£. 130) and departure expenses (£. 145). (iii) Reimbursement of approved study, travel and project cost. (These will be paid directly to the training institution). (iv) There is no provision for dependents. The value of the award is adjusted annually for inflation.

Passage Cost : Cost of passage from India to U.K. and back will be provided by the Government of India.

Minimum Qualifications : (i) Uniformly brilliant academic record, preferably Ph.D. degree, intending to do Doctoral or Post-Doctoral studies in the subject related to the field chosen, or published work of equivalent merit. (ii) Candidates must produce evidence of capacity for intensive scientific investigation/research/specialised work.

Age/Marital Status : Not more than 30 years of age on 1.10.1988 (relaxable by two years in the case of Scheduled Caste/Scheduled Tribe candidates)/Unmarried/Single.

Last Date : Application on good plain paper in the prescribed format together with the relevant documents should reach the Assistant Educational Adviser, Department of Education, External Scholarship Divisions, E.S. 4 Section, Room No. 517, 'B' Wing, Shastri Bhavan, New Delhi **latest by the 29th April, 1988.**

Note : 1. Candidates who have already been abroad for study/research either on a scholarship or on their own, are eligible to apply only if they have been in India, at least for three consecutive years after their return from abroad. Applications of the candidates who are abroad will not be considered. 2. Where grades are mentioned, the candidates must indicate exact percentage of marks, failing which it would not be possible to entertain his application. 3. Candidates should have sufficient knowledge of donor country i.e. U.K. as well as of India. 4. Employed persons must send their applications through their employers with "NO OBJECTION CERTIFICATE" in time failing which their applications will be considered provisionally and they shall not be interviewed unless the same is brought. 5. Applications in the subject fields other than those specified in the advertisement will not be considered. 6 Candidates who do not possess the requisite qualifications need not apply. 7. Applications sent in advance must be accompanied with the attested copies of the certificates, certificate of age, marks sheets of the qualifying examinations and of all degrees/diplomas/certificates including Postal Order for appropriate value i.e. Rs. 5/- for General candidates and Rs. 1.25 for SC/ST candidates. 8. Equivalent foreign degrees are also acceptable in all the subject fields. 9. Papers/Books/Articles which have already been published may only be indicated in the application form. The material which has not been published, need not be mentioned. 10. Whatever experience etc. is mentioned in the application form has to be supported with documentary evidence. 11. Applications of the candidates belonging to All India Services, will be entertained only when received through their Cadre Controlling Ministries. Advance copies received from them will not be entertained.

Note : Before filling up the application, candidates are advised to go through the instructions carefully.

PROFORMA FOR APPLICATION

A recent Passport Size Photograph should be affixed here.

1. Name of the Scholarships Scheme : Jawaharlal Nehru Memorial Trust (U.K.) Scholarship Scheme 88-89.
2. (a) Subject (b) Sub-subject :
3. Name of the candidate, (in Block Letters), (with full mailing address) :
4. Date of Birth and the State to which the candidate belongs :
5. Whether a member of SC/ST or a tribal or aboriginal community ? If so, give full particulars :
6. Academic record starting from High School/Hr. Secondary (Attested/Photostat copies of Certificates to be attached) :

Name of the University/Board/Institution	Examinations passed	Year of passing	Division/Class with position, if any	Percentage of marks obtained	Subjects taken

7. Details of Professional/Practical Training and Research Experience, specifying the period and number of papers published, previous employment with name and date of employment, if any.

8. Nature of the present employment (with date of appointment, designation and the name & address of the employer).

9. Names, designations and addresses of three referees who are familiar with the work of the scholar.

N.B. Candidates called for interview will have to bring with them the original comments of all the three referees.

10. Have you been abroad ? If so, give full particulars of the country and the period. Also mention the exact date of return to India.

11. Proposed Programme of Study/research/training, specifying:—

(i) the work at present engaged in : (ii) nature and programme of study/research/training desired (iii) future plans/prospects after the proposed studies/research/training, and (iv) how are these related to the technical or economic development of India.

12. Crossed Postal Order of Rs. 5/- (Rs. 1 25 in case of SC/ST candidates) purchased after the date of our advertisement and payable to the Secretary, Ministry of Human Resource Development (Deptt. of Education), New Delhi be attached with application form.

Place : Date : (Signature of the Candidate)

REGISTRAR (EXAMS.)

NATIONAL INSTITUTE OF HYDROLOGY
JAL VIGYAN BHAWAN
ROORKEE

Advertisement No. 5/88-NIH (Admn.)
Dated : March 29, 1988

Applications are invited for the following posts in National Institute of Hydrology (A Govt. of India Society), Roorkee from Indian Nationals satisfying qualifications and experience laid down therefor :

1. **Scientist-C** : 6 Posts in the following area :

(a) Water Resources System/Surface Water Hydrology/Drought Studies —3 Posts

(b) Ground Water Hydrology—1 Post

(c) Hydrological Investigations. —1 Post

(d) Atmospheric Land Surface Modelling. —1 Post

Scale of Pay : Rs. 3000-100-3500-125-4500.

Age : Below 40 years.

Qualifications I. : For Areas (a)

Water Resources System/Surface Water Hydrology/Drought Studies

A Bachelor's degree in Civil Engg. with minimum of 60% marks or 7.0/10.0 CPI or equivalent.

OR

Master's degree with specialisation in Water Resources/Hydraulics Engg. Hydrology, with minimum of 60% marks or 7.0/10.0 CPI or equivalent.

For Areas (b)

Ground Water Hydrology

A Bachelor's degree in Civil Engg. with minimum of 60% marks or 7.0/10.0 CPI or equivalent.

OR

Master's degree with specialisation in Water Resources/Hydraulics Engg/Hydrology with minimum of 60% marks or 7.0/10.0 CPI or equivalent.

OR

Master's degree in Science in Geology/Geophysics/Earth Science with minimum of 60% marks or 7.0/10,0 CPI or equivalent.

For Areas (c) :

Hydrological Investigations

Master's degree in Physics/Chemistry with minimum of 60% marks or 7.0/10.0 CPI or equivalent with specialisation in Nuclear Physics/Nuclear Chemistry.

For Areas (d) :

Atmospheric Land Surface Modelling

A Master's degree in Science with specialisation in Physics/Meteorology with minimum of 60% marks or 7.0/10.0 CPI or equivalent.

II. 5 year's experience of Design/Teaching research in Institutions dealing with Wather Resources, area.

Desirable

Ph.D. in Science/Engineering.

2. **Sr. Research Assistant (Programming) :** 1 Post

Scale of Pay ; Rs. 1640-60-2600-EB-75-2900.

Age : Below 30 years.

Qualifications

Essential

A Bachelor's degree in Electrical/Electronics.

OR

A Master's degree in Science in Physics/Mathematics/Electronics

OR

A Bachelor's degree in Science with Mathematics and 5 years relevant experience.

Desirable

Experience of Computer Programming.

3. Sr. Computer Operator : 1 Post

Scale of Pay : Rs. 1400-40-1600-50-2300-EB-60-2600.

Age : Below 30 years.

Qualifications : A Master's degree in Science in Physics/Electronics

OR

A diploma of 3 years duration in Electrical/Electronics with 3 years relevant experience.

OR

A Bachelor's degree in Science with Physics and Chemistry and 4 years relevant experience.

4. Personal Assistant : 6 Posts (Reserved 2 post for SC & 1 post for ST candidates).

Scale of Pay : Rs. 1400-40-1600-50-2300-EB-60-2600.

16. Deptt. of Social Work: (S)/(A) Professor/Reader- 3: Open.
17. Home Science: (S) Professor/ Reader- 1: Food Nutrition & Child Development/Clothing & Textile.
18. Deptt. of Khasi: (S) Lecturer- 1: Open.
19. Institute of Self-Organising System & Bio-Physics: (S) Professor/Reader- 1. General. Open Post; preferably experimental work in photon counting and millimeter wave techniques for spectroscopy for vector and scaler measurements; Lecturer- 2: Open.

"The Institute is an inter-disciplinary research centre of the University with its M.Phil/Ph.D. programme in Self Organising System open to students from various faculties. The major equipments available in the Institute for experimental research are Photo Acoustic Spectrometer OAS 400, Network Analyser HP 8510, Low Level Photon Acquisition System and Photon Counting Image Acquisition System (Hamamatsu). Persons experienced and/or interested with the research programme of the Institute will be given preference".

20. Deptt. of English: (S) Lecturer-1: Open. (K) Lecturer- 1: Open.

21. Deptt. of Education: (S) Professor- 1: Teacher Education/Social Studies Teaching/Curriculum & Evaluation/ Higher Education/Population Education.

22. School of Agricultural Sciences & Rural Development: (M) Nagaland.

(a) Animal Science: Professor- 1: Specialisation in any branch of Animal Science preferably Animal production/ Breeding/Physiology/Nutrition.

(b) Rural Dev. & Planning: Professor 1, Reader- 1, Degree in Agricultural Economics/Agriculture/Economics/ Geography/Sociology with specialisation in Regional Planning/Micro-Planning.

(c) Agricultural Extension; Reader-1, Lecturer- 1: Specialisation in any branch of Agricultural Extension Education.

(d) Soil Conservation: Reader- 1, Soil Water Conservation/Soil Water Conservation Engineering/Soil Conservation.

(e) Mathematics: Reader- 1, Lecturer- 1.

(f) Statistics: Lecturer- 1, Specialisation in any branch of Statistics/Agricultural Statistics with specialisation in design of experiment/sampling theory.

(g) Agril. Engineering: Reader- 1: Specialisation in any branch of Agricultural Engineering preferably soil & water conservation on engineering/Farm machinery.

(h) Animal Husbandry : Reader-1.

(i) Horticulture: Lecturer- 1. Pomology & Olericulture.

(j) English: Reader- 1.

23. Pachhung University College: (A) Mizoram. English: Lecturer- 1; Economics: Lecturer- 1; Botany: Lecturer—2; Psychology: Lecturer- 2: Mathematics: Lecturer- 1.

24. Director, College Development Council (S)- 1. The post-is available upto March, 1990 for the time being. Pay Scale : Rs. 1500-60-1800-100-2000-125/2-2500/- (pre-revised). Qualifications : Five years experience as a Reader or Principal of a degree college.

25. Director, Academic Staff College: (S) Pay Scale : Rs. 4500-150-5700-200-7300/- Qualifications: Qualifications and service conditions are the same as prescribed for a Professor.

26. Principal, University Law College: (A)- 1. Pay Scale : Rs. 4500-150-5700-200-7300/- Qualifications : Master's degree in Law teaching experience for a minimum period of 5 years in Law.

27. Sr. Scientific Officer (Regional Sophisticated Instrumentation Centre; (S)- 1. Pay Scale : Rs, 1200-50-1300-60-1900/- (pre-revised). Essential qualifications: (i) M.Sc./B.E. Electronics or equivalent, preferably with solid state experimental physics/electronics/instrumentation and sound background in handling and maintenance/pf. sophisticated analytical instruments. (ii) Five years experience in maintenance/installation/service of sophisticated instruments preferably electron microscope/ mass spectrometer/spectre-photometer.

28. Executive Engineer: (S)- 1. Pay Scale : Rs. 1200-50-1300-60-1900/- (pre-revised). Essential qnalifications: Degree in B E./B.Tech./B.Sc. Engineering in Civil Engineering from a recognised University/Institutian or Section 'A' and 'B' Examination of the Institute of Engineers (India) with an experience of at least 10 to 15 years in Asstt. Engineer or as SDO (PWD) and 5 to 7 years as Executive Engineer in a Govt. Department. Preference will be given to candidates having sufficient experience in the line for more than 5 years as Executive Engineer having Administrative capacity.

29. Asstt. Librarian- 3 (S), 1(A), 2(P). Pay Scale : Rs. 700-40-1100-50-1600/- (pre-revised). Essential qualifications: Master's degree in Library Science/Information Science/Documentation or an equivalent professional degree with at least fifty five percent marks or its equivalent grade plus a consistently good academic record, OR Master's degree in the Arts/Science/Commerce or equivalent degree with at least 55% marks or its equivalent grade and a Bachelor's degree in Library Science/ Information Science/Documentation or an equivalent professional degree with at least 55% marks or its equivalent grade plus a consistently good academic record.

Scale of Pay (Revised)

Professor — Rs. 4500-150-5700-200-7300/-
Reader — Rs. 3700-5700/-
Lecturer — Rs. 2200-75-2300-100-4000/-.

Essential Qualifications

1. **Professor** : An outstanding scholar with established reputation and significant contribution to the subject : OR (i) Doctorate in the subject or equivalent; (ii) Ten years teaching experience of Post Graduate classes or 15 years teaching experience including 5 years of P.G. Classes or 10 years Post-Doctoral Research experience and guidance.

2. **Reader:** (i) Doctorate in the subject or equivalent; (ii) 5 years teaching experience with at least 3 years of teaching P.G. classes or 7 years including 5 years of Honours classes or 5 years of Post Doctoral Research.

3. **Lecturer:** (i) Consistently good academic record with at least 55% marks in the Master's degree in the relevant subject or its equivalent grade. (ii) Preference will be given to candidates who have research degree like M.Phil./Ph.D.

Note : Candidates already in service should send their applications through proper channel. An advance copy may, however, be sent direct.

Applications received on plain paper, applications not in conformity with the requirement as specified in the application form and applications received after the due date will not be entertained and no correspondence will be entertained in this regard.

A person applying for more than one post should send a separate application for each post.

In addition to the pay and allowances, the University also provides a free and furnished accommodation to teachers or fixed house rent allowance in lieu thereof.

The University reserves the right to negotiate with suitable persons who may not have applied formally. The University also reserves the right to fill up or not to fill up the post or to call only selected candidates for interview. The number of posts may vary.

REGISTRAR

INDIAN SCHOOL OF MINES

DHANBAD-826004

No. 614001/88 **Dated : 5-3-1988**

ADMISSION NOTICE—M. TECH./DISM. PROGRAMMES

Applications are invited for admission to the following Post-Graduate programmes commencing on June 20, 1988 at ISM, a deemed University under the UGC Act.

A. M. TECH./DISM IN ENGINEERING DISCIPLINES

M. Tech. programmes in engineering subjects at ISM, in common with other Universities, are of 3 semester duration. A unique feature at ISM, however, is the award of a postgraduate DIPLOMA OF INDIAN SCHOOL OF MINES (DISM) on completion of the first two semesters. The third semester (for project work) leading to award of M. Tech. can be pursued either in the institution or on job at respective places of work of the candidates.

Discipline	Eligibility Qualification : B. Tech. or equivalent degree in
(1) Drilling Engineering. (6 seats)	—Mech/Prod/Min Engg. or Mining Machinery.
(2) Fuel Engineering. (6 seats)	—Fuel/Chem/Met/Mech/Min Engg.
(3) Maintenance Engg. & Tribology (6 seats)	—Mech/Prod/Min Engg. or Mining Machinery.
(4) Mineral Engineering. (15 seats)	—Mech/Chem/Met/Min. Engg. OR M.Sc. in Mineral processing or equivalent/M.Sc. Applied Geology or equivalent with mathematics at B.Sc. level.
(5) Mining Engineering (6 seats) with specialisation in (1) Mine Planning & Design. (2) Rock Mechanics. (3) Mine Environment.	—Mining Engg.
(6) (*) Opencast Mining (10 seats)	—(A) Min Engg., Open Cast Mining or Mining Machinery. OR —(B) Civil/Elec/Mech Engg/with at least one year approved experience in opencast mines.

(*) For OCM programme, there will be an additional bridge semester for candidates with qualifications in Civil/Elec/Mech Engg. Graduates of Mining Engineering, Opencast Mining and Mining Machinery may have to undergo some training in Open Cast mines during this period, if required. One year's experience in open cast mines will be necessary for all applicants other than those with Min. Engg. Open Cast Mining & Min. Mech. background.

(7) (**) Longwall Mine Mechanisation—Mech/Elec/Min Mach/Mining. (15 seats).

(**) Fresh graduates will have to undergo a pre semester make up course before being admitted to regular 3 semester M. Tech. course.

(8) Industrial Engg. and Management (15 seats)	—Any branch of Engineering with at least six months experience in industry.
(9) (***) Petroleum Engg.	—Chemical Engg/Mechanical Engg/Petroleum Engg.

(***) The candidates with B. Tech. degree in Chemical Engg. and Mechanical Engg. shall have to undergo a make-up semester course before being admitted to regular 3-semester M, Tech. course.

(B) M. TECH. IN EARTH SCIENCE DISCIPLINES

M. Tech. programmes in Earth Science disciplines at ISM are of 2-semester duration. There are six seats in each programme.

Discipline	Eligibility Qualification
(1) Geophysical Instrumentation & Techniques.	—M. Sc. Tech, or equivalent in Applied Geophysics.
(2) Mining Geophysics	—M. Sc. Tech. or equivalent in Applied Geophysics.
(3) Mineral Exploration	—(a) M. Sc. Tech, or equivalent degree in Applied Geology. OR (b) M. Sc. degree in Geology with two years field experience.
(4) Engineering Geology	—(a) and (b) as above OR B. Tech. or equivalent degree in Civil Engineering.
(5) Petroleum Exploration	—M. Sc. Tech. or equivalent degree in App. Geology/App. Geophysics.

NOTE : Candidates applying for programme B (3) or (4) should also have passed in Physics or Mathematics at the graduate level.

2. Admission to M. Tech. Programmes :

Admissions to above programmes (A & B) shall be made from amongst those candidates who have passed GATE examination with valid scores.

3. General Information

3.1 15% of seats are reserved for Scheduled Caste and 7½% for Scheduled Tribe candidates, if available; otherwise they will be treated as unreserved.

3.2 Other things being equal, preference shall be given to sponsored candidates, sponsorship in this context meaning retention of lien on post and grant of suitable allowance by the concerned organisation. Applications of these candidates should carry endorsement to this effect from the employer.

3.3 Candidates called for appearing in the Viva-Voce (likely to be conducted in the 1st week of June 1988 at ISM, Dhanbad) will have to do so at their own cost. TA/DA is not admissible.

3.4 **Scholarship :** Non - sponsored candidates admitted to the above programmes will be eligible for a scholarship of Rs. 1000/- p.m. for a period not exceeding the duration of the programme.

3.5 Courses where the number of students admitted falls down below four may not be run.

4. **How to apply :** Applications on prescribed forms should reach the undersigned, by **30th April, 1988** at the latest. The forms are obtainable by sending a crossed postal order for a sum of Rs. Ten only (made payable to the Registrar, Indian School of Mines, Dhanbad-826004 at ISM Post Office, Dhanbad) along with a self-addressed unstamped envelope of size 23 × 10 cm. The envelopes containing request for form must be superscribed "Request for Admission Form".

REGISTRAR

SOUTH GUJARAT UNIVERSITY
SURAT

COMPUTER CENTRE

(2) Two Lecturers in Computer Science : Ph.D. or P.G. Degree in Computer Science/Computer Application or Master's Degree in Mathematics/Physics/Statistics with P.G. Diploma in Computer Science/Computer Application of a University or deemed university.

Note : The post of Lecturers are reserved for Scheduled Caste/Tribe/Other Backward Class (Baxi Panch) of Gujarat State and only the candidates belonging to these classes need apply.

Pay Scale for the above Posts are as under :

(1) **Reader :** Rs. 1200-50-1300-60-1600-Assessment-60-1900.

(2) **Lecturer :** Rs. 700-40-1100-50-1300-Assessment-50-1600.

In addition to pay, the permanent teachers of the University Departments are entitled to draw Dearness Allowances, House Rent Allowance and other benefits like Pension-cum-Gratuity, Leave Travel Concession and Medical benefits.

Candidates belonging to Scheduled Castes/Scheduled Tribe and Backward Class should clearly indicate in their application the caste to which they belong and attach necessary certificate alongwith their applications.

Information about qualifications and special field in which the appointment on each post is to be made, will be supplied with prescribed application forms which can be had from the undersigned on payment of Rs. 7.00 in cash or by Postal Order alongwith self-addressed envelope of 22 cm x 13 cm. size with postal stamps worth Rs. 3.10 ps. affixed thereon. Canvassing in any form will disqualify the candidate.

The last date for receipt of application is 25-4 1988.

MINISTRY OF HUMAN RESOURCE DEVELOPMENT

(Department of Education)

TURKISH GOVERNMENT SCHOLARSHIPS, 1988-89

Applications are invited on plain paper from Indian nationals for the award of 4 Research Scholarships (Eight months' duration each, starting from 1.10.1988) offered by the Government of Turkey for 1988-89 in the following subject-fields :

1. Architecture ; 2. Geological Engineering; 3. Restoration and Preservation of Historical Monuments.

AGE : Must be less than 40 years on 1.10.1988. Age relaxable upto 2 years in upper age for Scheduled Caste/Scheduled Tribe candidates.

VALUE : 1,10,000/- Turkish Liras per month. This amount has been fixed taking into consideration only a single person's requirements.

QUALIFICATIONS : (1) Architecture : Bachelor's degree in Architecture. (2) Geological Engineering : Master's degree in Applied Geology or in allied field. (3) Restoration & Preservation of Historical Monuments : Bachelor's degree in Architecture with 4 years experience in conservation of historical monuments.

ESSENTIAL EXPERIENCE : (For courses 1 and 2 above) At least two consecutive years' study/teaching/research/practical experience as on 1.10.1988 in the subject-field selected after obtaining the prescribed qualifications. Successful completion of M.Phil./Pre-Ph.D. course would be considered towards experience.

PASSAGE COST : Travel expenses from India to Turkey and back will be borne by the candidate or his/her sponsors/employers. Subject to availability of funds, the passage cost may be met by the Government of India, provided the candidate is eligible under the rules.

NOTE : 1. Only candidates who secured 60% marks or more at the prescribed qualification level are eligible. Where grades are mentioned, candidates must indicate the conversion formula adopted by the University/Institution. 2. Equivalent foreign degrees will be considered 3. Candidates who have already been abroad for study/training/specialisation/research either on a scholarship or on their own, are eligible to apply only if they have been in India for at least three consecutive years after return from abroad. Applications of candidates who are abroad will not be considered. 4. Upper age limit and experience can be relaxed by not more than three months at the discretion of Selection Committee in the case of brilliant candidates. 5. Candidates should have good command of English or French or Turkish language. Knowledge of Turkish language will be given preference. 6. Candidates would have sufficient geographical knowledge of India and the donor country i.e. Turkey. 7. Applications of candidates who are abroad will not be considered. 8. Employed persons must send their applications through their employers with "NO OBJECTION CERTIFICATE" in time, failing which applications will not be considered. 9. Applications in subject-field other than those specified above will not be considered. 10. Candidates who do not possess the requisite qualifications need not apply. 11. Applications which do not contain the Postal Order will not be considered.

Candidates should apply for the above scholarship on a plain paper with a recent passport size photograph, furnishing the following details/particulars to the **Secretary, Ministry of Human Resource Development (Department of Education), External Scholarships Division, ES-3 Section, Room No. 516, B-Wing, Shastri Bhavan, New Delhi-110 001 by 6th May, 1988.**

The applications received late will not be entertained.

FORMAT OF APPLICATION

1. Name of the Scholarships Scheme :
2. (a) Subject (b) Sub-subject :
3. Name of the candidate (in Block Letters) with full mailing address :
4. Date of Birth and the State to which the candidate belongs :
5. Whether a member of SC/ST or a tribal or aboriginal community ? If so, give full particulars :
6. Academic record starting from High School/Higher Secondary ;

Name of the University/Board/Institution	Examination(s) passed	Year of Passing	Division/Class with position, if any*	% of marks obtained & Position, if any.	Subjects taken

*In case no Division class is awarded and only grading is done, the conversion formula adopted may be mentioned.

7. Details of Professional/Practical Training and Research Experience, specifying the period and number of papers published, previous employment with name and date of employment, if any.

8. Nature of the present employment with date of appointment, designation and the name & address of the employers.

9. Have you been abroad ? If so, give full particulars of the country and the period. Also mention the year and month of return to India.

10. Proposed programme of study/research/training, specifying:

(i) the work at present engaged in ; (ii) nature and programme of study/research desired. (iii) future plans/prospects after the proposed studies/research; and (iv) how are these related to the technical or economical development of India?

11. No. and Date of crossed Postal Order of Rs. 5/- (Rs. 1.25 in case of SC/ST candidates etc.) attached with the form.

NOTE: Employed persons must send their application fully sponsored by the Employers. However, advance applications will be considered provisionally pending sponsorship by employers.

Place : Date : (Signature of the Candidate)

Excellence & Relevance in Education

S. Abdul Kareem*

The major thrust areas of higher education within the parameters of the New Education Policy are : equity, excellence with relevance and efficiency. As concepts, they have at their basis the philosophical views of the emergent society with perceptions and priorities felt by the people. Equity derives its strength from the premise of social justice. In our national perception education is essentially for all (NPE : 2.1). The present paper seeks to examine only the second thrust area, viz. excellence with relevance, broadening the spectrum within the ambit of higher education.

Excellence as a goal is laudable in itself. Being a quality trait, it is not easy to identify it and once identified, it is a task by itself to quantify a quality. If excellence in a particular educational activity like reading at the primary stage is to be quantified, one can assess the measure of excellence by evaluating the performance. The same may be possible in respect of writing or speaking. But to quantify the totality of a teaching process in its evaluation is an elusive affair. The shift from an individual to the institutional level necessitates the strengthening of academic supporting sub-systems, the lack of which stigmatizes the unit as mediocre and substandard.

Equity and excellence are more often irreconcilable. They tend to pull each other in opposite direction. Equality among people, of opportunity and access presupposes a dilution which otherwise is a quality norm confined to the few. It is generally held that if an asset or facility is made accessible to all without any restrictions, its quality would suffer.

Dr. F.R. Leavis in his essay 'Mass Civilization and Minority Culture' did establish convincingly that culture is a minority creation. Medieval Italy had a few families like that of De Medici which were centres of excellence and seats of culture. Hence it is inevitable that excellence should create around itself an aura of elitism and respectability. Ben Jonson during the Elizabethan times sang :

> *"In small proportions we just beauties see;*
> *And in short measures life may perfect be."*

Prof. Schumacher sets the modern stamp of finality when he says : Small is Beautiful.

In education, excellence may not always be a function of numbers only. It is possible there may be small colleges which apart from being non-viable, may have no excellence whatsoever in them while large colleges, despite their overflowing numbers, may yet deserve the reputation of being centres of excellence. Hence it is possible to achieve excellence in education with proper educational inputs which, among others, may be identified as teachers, infrastructural facilities, content of courses, teaching learning processes and the students. In respect of teachers to a great extent and in students to some, quality means the level of

---

capabilities and potentialities in terms of knowledge, skills, aptitudes and values which have as much a contextual relevance as universal which enables people to aim high and attain peak performance. Excellence as a value has no fixed upper limit. The attainment of one set of goals and ideals pushes it to a higher plane necessitating human endeavour ad-infinitum. This love for excellence is an essentially human trait which knows no satiety.

Higher education gives unto itself lofty goals to socialize, sanitize, sensitize men. In fine, it is called upon to prepare men for work and life. The institutions will be expected to think through their goals, get them accepted and be accountable for them. They must develop the whole person. Learning is not the exclusive province of the mind or the intellect. It engages the whole person, the hand, the eye, the muscle and the brain. Learning is a continuous biological process that begins at conception and ends only at death. Hence it is a continuum. One must continue it life-long. If the institution responds to these goals as a collectivity in a positive way, it bids fair to achieve excellence.

With as many as 150 Universities and 5000 Colleges, 7 Central Universities, 5 IITs, IIMs, about 20 Regional Colleges of Engineering and a dozen Deemed to be Universities, higher education is as vast and varied as it is uneven. There is the need to put this massive mansion in order. The degree of obsolescence being high, there is the dire need to update the outdated data within its portals. New blood should flow imparting vigour and dynamism as never before. The requisite infrastructure is sought to be developed by strengthening libraries, laboratories, students' amenities by phased funding on settled guidelines. Most of the Colleges are already equipped with Colour TVs and Computers to streamline administration and strengthen teaching. New Management Systems with definite organisational structures, roles and responsibilities are being worked out to eliminate the accumulated deficiencies, plan-wise till about the 9th plan period coinciding with the closure of the 20th Century.

Autonomous Colleges

Of late academic excellence is sought to be injected through autonomus Colleges. The country has so far only 21 autonomous Colleges and the UGC has an ambitious plan of conferring autonomy on 500 Colleges in the Sevent Plan period. The affiliating system, being a hang over of the colonial past, is purported to have come in the way of the progress and development in universities and is sought to be dispensed with the grant of a measure of autonomy. Autonomous colleges will be free to devise their own academic calendar of admissions, terms of sessions and vacations. They will be free to formulate their own syllabus and conduct their own teaching and examination and have the degrees awarded by the parent university with the name of the College recorded in the diploma. With an Academic Council and Board of Studies of their own with duly constituted Governing Bodies, the Colleges with qualified teachers can undertake experimentation and innovation in uncharted fields. The UGC will fund these schemes in a big way for the plan period.

It is a moot point how far this idea catches the imagination of educational administrators. Many an intending management has visited these academic shrines, mostly in Tamil Nadu to have a first hand appraisal of their functioning. The freedom that flows from autonomy may foster creativity and innovation. But there is a fear of adventurism and experimentation with the outcome almost uncertain. The institution to go autonomous should have their credibility well-established which otherwise may degenerate into unrestricted licence unacceptable in the society. The abrupt stopping of funding after the five years period may cause greater dislocation before the state government could take over the financial burden in its fold. The existence of quality and non-quality institutions may give rise to a new academic casteism.

Restructuring of Courses

Yet another major premise of excellence is the need for restructuring of courses (R.O.C.) stagnating for decades. In view of the growing demand of specialisation, it is felt proper to bring in the necessary measure of relevance, application orientation, flexibility and diversification and emerging employment opportunities, including self-employment. A standing committee was set up to finalise the guidelines which are specified below :

(a) Foundation courses taking 20-25 per cent of the time to create awareness like history of the freedom struggle in India, Science in everyday life, Gandhian Thought.

(b) Core programme with in-depth study covering 75-80 per cent of the time involving the main disciplines.

(c) Applied studies/Project work/Field studies are to be incorporated as an integral part of the core programme.

(d) Extension work is be integrated with the curricular to make courses relevant to the needs of the society.

The combination of the core curricular could be asunder :

(i) Physics, Mathematics & Instrumentation/Communication/Metallurgy/Computer Sciences.
(ii) Botany, Chemistry+Horticulture/Pharmacy/Fertilizers/Food Technology.
(iii) Economics, Commerce + Marketing / Rural Banking/ Cooperative Management.
(iv) Economics, Political Science+Panchayati Raj.

The University Grants Commission has come in a big way to support such programmes by way of grants on non-lapsable nature for 5 years.

Restructuring of courses as a step towards achieving academic excellence necessarily brings in the component of social relevance. The higher educational system should respond to the important aspect of human resource development by accepting the responsibility of providing trained manpower in skills to go into all the sectors of economy. Curricular contents prescribed with relevance to the social needs should also explore relevance in relation to what the student has already learnt earlier at the school so much so that relevance establishes linkages among School-learning, College-learning and social needs. The basic purpose of restructured courses is to introduce the student to applied aspects and to enable him to use his knowledge at least, to become para-professional with middle level technician functions. The third subject of the restructured course is oriented towards field/practical work thereby integrating the learning process by having it exposed to the field of work.

Extension

In addition to teaching (now termed teaching-learning process) and research, university education has developed a new dimension of extension. Extension is not to be viewed as a welfare activity for the deprived social groups but as a process of interaction with the society leading to valuable learning experience and as a means of making higher education relevant to the needs of the society and oriented towards a solution of existing problems. The university system should absorb the concept of "extension culture" as its integral component and a fair measure of time be allocated for the off-campus extension work through NSS, NCC, NAEP and PEC. This new dimension of extension has made possible yet another area of relevance-continuing education. Formal education has generally proved to be segregating and fragmentative rather than harmonising and integrative. Continuing education is not merely furthering or refreshing information or skills but a process of achieving integration of knowledge with life or a process of rectifying the imbalances created by formal education in individual as well as community life. T S. Eliot articulated these imbalances so vividly in the following lines :

"Where is the life, we have lost in living
Where is the wisdom, we have lost in knowledge
Where is the knowledge, we have lost in information."

The basic philosophy of continuing education is

that it is a life-centred and life long process.

Passion for Change

Academic work gets the stigma of irrelevance when it beats a retreat to the rarefied pursuits of theoretical abstractions when the hour demands that it should enter the arena of praxis. Higher learning becomes relevant when research or teaching will yield insight into the nature of social reality that surround us. Members of the academia cannot purify the moral climate by pontificating in the classroom. They must enter the arena of action and get themselves posted on fronts as instruments of change. They must outgrow the ivory tower attitude. It is not enough to merely understand the world. One must develop a passion for changing it. The dichotomy between fundamental and applied disciplines has been more artificial. With nearly three decades of developmental planning, poverty stares us in the eye everywhere. Relevance is more often an expression of broad societal concern and education must deal with not merely subject-oriented disciplines but problem-oriented issues. The Gandhian system of education had emphasised the joy and excitement of doing things while learning. As Prof. A.N. Whitehead said, "In the process of learning, there should be present, in some sense or another, a subordinate activity of application. In fact, the applications are part of the knowledge For, every meaning of things is wrapped up in relationships beyond themselves. Thus unapplied knowledge is knowledge shorn of its meaning." We can ill afford to ignore ideals which Nehru placed before the university community when he said, "A University stands for humanism, for tolerance, for reason, for progress, for the adventure of ideas and for the search for truth. It stands for the onward march of the human races towards our higher objectives. If the universities discharge their duties adequately, then it is well with the people. But if the temple of learning itself becomes a home of narrow bigotry and petty objectives, how then will the nation progress or a person grow in stature?"

In the entire system of education, the role of teacher is pre-eminent. In fact, he is the live-wire of the system though some deadwood can easily be discounted. The Education Commission (1966) had outlined, 'Of all the different factors which influence the quality of education and its contribution to national development, the quality. competence and character of teachers are undoubtedly the most significant.' Dissemination of knowledge through teaching, creation of new knowledge through research, forging links between the growth of knowledge and its application are his major areas of preoccupation What contributes to avenues of excellence in a teacher is his commitment to his profession through his personal example and practice of values like honesty integrity sense of responsibility and compassion. It is imperative that the teachers have a self-imposed code of ethics to guide them in their professional competence which eventually may foster excellence. It is equally necessary that they are made a part and parce of institution planning for effective implementation o the educational priorities. 'Schedules of inspectio must give place to schemes of introspection' in th words of Prof. V.V. John. With self-regulation shoul go self-evaluation, peer-evaluation and peer-disappro bation.

Excellent teachers relate their teaching with wha has already been learnt by the students. Academi Staff Colleges mooted by the new education policy ar designed to cater to teacher orientation programmes More than anything, the teachers must have a positiv attitude to identify the aptitudes of the students so a to help them grow and prosper. Reviewing the boo 'Three Score and Ten' by Asok Mitra, Prof. Amri Singh wrote (**Deccan Herald** Oct. 18, 1987) :

> "The core of this process of one lamp lightin another comes from the fact that teaching, i essence, is an act of joy. It is not a chore impose upon someone; on the contrary, it is a liberatin and creative act. It releases something withi the teacher and gives him the feeling th nothing is more rewarding than to be able t give".

Looking at what is happening around, he lament that the desire to give has died while the desire t grab has become a burning passion. With Aso Mitra, Amrik Singh fully concurs with followi statement "I have rejoiced when my pupils excelle me". Only the culture of excellence can foster th attitude of magnanimity.

Island of Excellence

In the oceans of mediocrity, there have been isla of excellence like the IITs, the IIMs and the Nation Laboratories. There is symbiotic-relationship b ween higher education and research, each help susta the other; otherwise each will lack in dynamism a will eventually grow dull. The vital component

(*Continued on page 9*)

The Humanistic and Scientific Values in the Pursuit of Science

J.N. Kapur*

Prof. J. N. Kapur expressed his anguish at the erosion of basic humanistic and scientific values in science education and research while delivering the Eighth J. P. Chatterjee Award Lecture at the 75th Indian Science Congress (Platinum Jubilee) Session at University of Poona, Pune recently. He opined that it was still possible to realise the goal of 'divinity of man' suggested by Dr. Chatterjee if we put our 'scientific house' in order. He reiterated Dr. Chatterjee's plea for the fusion of scientific and humanistic cultures and said that unless education and research in science was pursued in the true spirit of science, growth in science will not mean growth in wisdom and character. We are pleased to publish excerpts of this highly inspiring address for the benefit of our readers.

Some Basic Theses

● Every scientist has to be a true humanist and a great lover of mankind. He should have a great vision for mankind, in which there will be no poverty, no hunger, no disease of the mind or body, no suffering, no greed, no hatred, no violence; in which there will be universal love and fellow feeling and in which everybody will be continuously learning from womb to tomb and will be enjoying the learning. His love for Science should also be the result of his love for humanity.

● Every scientist shall also be a true scientist. He should imbibe all values of science like originality, creativity, innovation, impartiality, fairness, integrity, objectivity, excitement and passion for new knowledge, love for truth and so on, not only for his scientific pursuits but for all his actions.

● If a scientist tries to follow these values in the scientific work, but is otherwise superstitious, unfair, dishonest in his other actions, this lack of integrity in other actions will sooner or later, affect the integrity of his scientific work. A scientist has to be ruthless in his observance of basic ethical scientific values, in case he wants to remain a true scientist.

● In scientific research, the ends are very noble and the means should be equally noble and pure.

● There is a pollution of corruption, nepotism and favouritism all round us. A scientist should not succumb to it, but he shoud fight this evil with all his might. The first step is that he should observe all the basic and ethical and scientific values scrupulously in all his scientific work. The second step is that he should see that all the values are observed with no exception, in the management of scientific institutions. Hopefully, this step will help in removing pollution in the atmosphere outside scientific laboratories also.

● If science grows tremendously, but the scientific spirit decays and the scientific values decline, all will not be well for mankind and all will not be well even with science, since scientific values are even more important than science itself.

● A scientist should defend scientific values and his own selfless passion, devotion and dedication to science, with all the strength at his command

● Scientific research is becomming Big Business and just like any other Big Business, it tends to be exploited by self-seeking individuals for whom Science is not a Search after Truth, but is only a means of getting unfair advantage over others. A scientist should see that the Big Business of Science is conducted according to the highest possible ethical standards.

●There are thousands of dedicated scientists in our country and in the world, but there are also a few pseudo-scientists who want to exploit the Science System for their narrow personal ends, their designs

---

Hony. Visiting Professor, IIT, Delhi and University of Delhi.

have to be foiled in the beginning by an enlightened public opinion.

Values-Oriented Science Education and Research

The erosion of human values in our educational institutions has been a matter of great concern. A number of our educational thinkers have expressed their great concern about it. Two National Symposia have been held to discuss ways and means to restore human values in our educational system.

There is a similar erosion of scientific values in our scientific research. The Society for Scientific Values is doing excellent work in creating a public opinion against the unethical practices in scientific research. All the crusades launched by dedicated individuals and groups deserve all the support both in speech and action.

We discuss some of the unethical practices which are causing tremendous damage to science education and research in our country.

Erosion of Scientific Values in Science Teaching

Some unscientific values are transmitted to the students in school science laboratories themselves. They are encouraged to cook results. Students are asked to verify some scientific results with imperfect instruments and then are encouraged to get perfect agreements with theory by manipulating the observations. Teachers themselves declare : "What does it matter if a few observations are changed to get good agreement ?" They do not realise that through this practice, they are teaching forgery, they are teaching something against which science has always fought. They may be teaching some facts of science, but they are killing the Spirit of Science.

Students sometimes do not perform experiments themselves, but copy the results from others' practical notebooks. Sometimes teachers themseves encourage students to do so, so that the authorities may get the impression that all the students have done all the experiments. This happens usually when the equipment is not sufficient for all the students to perform experiments.

It is not uncommon that in many schools and colleges, equipment for performance of only 40-50 per cent of the experiments prescribed by the Board or University is available. The teacher requests the examiner to examine the students out of only those experiments and the examiner is given a party at the expense of the examinees. Many examiners of practical lessons are approached by parents, teachers and otherwise decent citizens to do favours to some students. One wonders whether in this way we are 'educating' or 'miseducating' our students in science.

Even the learning of science is not through the discovery process, but by committing some facts to memory, without understanding all the implications of those facts.

To crown all this is the final murder of the scientific spirit when mass copying takes place in public science examinations.

It is important that the government should see that every science school and college is equipped with all the necessary equipments for all the experiments prescribed by the examining body, that the school managements and teachers see to it that the students perform all the experiments themselves before they appear in the examination, that the 'cooking' of result is regarded as a scientific crime which should be looked down upon by every student and teacher and science examinations are conducted so as to discourage cramming and copying.

One of the basic aims of teaching Science is to teach the Scientific Spirit, the Scientific Methods of Enquiry and the Process of Science. These are even more important than the facts of science. Every lesson in Science should emphasize these basic values of science.

Ultimately it is only a strong public opinion of teachers, students and parents which can restore scientific values of science.

Erosion of Scientific Value in Scientific Research

Manipulation of results of scientific experiments to make them fit certain theories is not an uncommon practice in research. I realised this some years ago when as a vice-chancellor, I was present in one Ph.D. viva-voce examination of a Zoology candidate. He showed some slides of eggs some of which were apparently lying in heaps. When I asked him how he had counted those eggs, he said casually, "I ignored all of them." In this way, he claimed that he had disproved an earlier theory. What was surprising was that his supervisor supported him by asking immediately, "If he could not count them, what else could he do ?" This illustrates the non-scientific value of taking the easy convenient path rather than the correct path which may be difficult.

I found a similar case in a medical thesis, when the candidate came to me to get my help in the statistical analysis of his data. I was surprised to find that all his entries were in terms of even numbers. When questioned, he told me that he was to undertake one hundred case studies, but he could get only fifty patients. His supervisor therefore advised him to multiply all the entries by two. This type of manipulation is quite common in some social sciences theses, depending on results of surveys, in cases where very few people reply to questionnaires sent by investigators.

Many persons become Ph.Ds. in science by following completely unscientific procedures.

Another unscientific or unethical practice is noticed in the names of authors of research papers where many persons who have nothing to do with the actual research in the paper are shown as authors. In some laboratories, the name of the head of the laboratory and the name of the head of a group occurs in every paper sent from that group though these persons may not know even the A B C of the papers. The claiming of authorship of papers which one has not written is completely unscientific and unethical, but sometimes this practice leads to some such persons being dubbed as great scientists and their winning prestigeous national awards.

Another such similar unethical practice arises because some universities insist on an internal supervisor being associated with a supervisor external to the university system. The external supervisor does all the guidance, but the internal supervisor who knows nothing about the theses also gets the credit. Some persons become professors on the basis of the fake research guidance experience and even examine theses in the subjects in which they have provided this fake guidance.

Other unethical practices include (I) publishing of unreferred papers by charging "page-charges", (II) appointment of 'convenient Ph.D. examiners', (III) examination of Ph.D. theses by persons not working in the fields concerned, and (IV) yielding to political and other pressures in faculty appointments.

It appears that many persons engage in scientific research not for the sake of love of science or love of truth or the excitement that scientific research alone can give, but for the sake of undue advantages received. This explains the sharp decline of research productivity of a person after getting a Ph.D. degree or after becoming a professor.

Science as Big Business

Some year, ago my daughter got an offer of a fellowship from a professor in Canada for research in physiology. To see his credentials, I went to the medical college library, went through Medical Science Abstracts and was happy to find that the professor was writing, on an average, twentyfive papers per year in good journals. As such I gave my daughter permission to go and work under his guidance. After a year I went to Canada and I was invited by him to dinner. I naturally congratulated him on his research output. He hesitated for a moment and then confessed, "Most of the papers you saw were written by me. I got grants of a few million dollars every year from the government, I gave fellowship to bright students, I buy costly equipments and I let the students work on problems considered important by the government funding agencies. They write research papers, write my name on these papers so that I may get more grants and they may have no financial problems. I go to the laboratory only when new equipment is to be installed. This was not always the situation. Eight years ago, I used to spend sixteen hours a day in the laboratory and I was doing first-rate research, but I found that the credit for those papers was going to my boss who was always the first author. I then decided to become a science manager and I succeded. I sometimes have a guilty conscience and I feel I was happier when I was an active scientist."

This is the story all the world over. When Science in India was on a small scale, most of the scientists worked in their laboratories. Now that science in India has become a large scale affair, many of them have become managers of big science, control large funds and have praises and prizes showered on them. The Mathews effect becomes operative *viz* "More power will be given to those who have large powers and from those who have small powers, these will also be taken away."

Mighty governments place large funds at the disposal of the big science managers and ask them to achieve results consistent with their aims in peace and war. These managers then give contracts to smaller managers who are their friends and whom they know and trust. The pure scientists who does not want to spend time in getting and managing funds, works in his laboratory with relatively smaller resources. In fact every scientists has to spend some percentage of his time in getting funds and this percentage may vary from five per cent to ninety per cent.

Science as an Industry

Whether one likes it or not, Big Science is a reality today. Scientific knowledge is sought to be manufactured in the same way in which other more tangible products are manufactured. There is a public sector and there is a private sector. There is a large scale science industry and there is a small scale science industry. The small scale industry sometimes acts as auxiliary to large scale science industry. Fortunately there is still some place for individuals with bright ideas, but they are also being encouraged to group together.

Science as a Profession

In scientific industry human beings play a major role and machines have still not become dominant. However, the role of sophisticated scientific equipments, computers and robotics is increasing and the role of the individual scientist is decreasing. Science is however still a profession and peer recognition is still a major motivation for scientific research. There are however signs already that a politically powerful scientist may receive more honours than a scientifically powerful scientist and if this trend continues, science as a profession may decline. Moreover group efforts and team efforts are becoming more important than individual efforts and in this case recognition is also given to groups and teams. The groups are however identified by the names of their leaders and the leaders may be those persons who get funds for the group rather than those who really do the work.

Science and Religion

Sometimes man worships science in the same spirit in which he worships gods and goddesses. He builds large temples for science, instals costly equipment there and prays for results. He is even tolerant of irreligious practices in temples and of unscientific practices in science laboratories. However, unless the priests in a temple are deeply religious and unless the devotees go there for worship of deity and not for asking for undue advantages over others, no progress in true religion takes place. Similarly unless the scientists in a laboratory are truly dedicated to science and are not interested only in getting undue advantages over others by cornering costly equipment, no progress in science can take place.

How is Science Doing ?

Science is doing extremely well. For the last hundred years, it has been growing exponentially with a doubling period of about ten years. This means that if we had one unit in science in 1900, we had two units in 1910, 4 units in 1920, 8 in 1930......256 units in 1980 and we shall have 512 units in 1990 and more than 1000 units in the year 2000.

This means that in the year 2000, we shall have about 1000 times as much science as we had at the beginning of the century. This also means that 99.9% of the science we have today has been created in this century and that 99% of the scientists who ever lived have lived in this century. This also means that in order to keep up-to-date with the explosion of knowledge a scientist has to work very hard indeed.

The exponential growth follows from the mathematical model : rate of growth of science at any time,

= k (amount of science at that time)

The constant k depends on the investment of funds and the dedication of the scientists. If developing countries have to catch up with the developed countries, they have to increase their investments and dedication of their scientists significantly, otherwise the gaps between developing and developed countries are going to increase.

The doubling period applies to all factors *viz* the number of Ph.D.s, books, research papers, journals, funds spent, number of scientists and so on. For the number of scientists, the doubling period cannot go on indefinitely because the doubling period of the human population may be 25 years or so and if the doubling period of scientists is ten years or so, it is easy to see that one day there will be more scientists than human beings. This can happen only if we have robot scientists and machines with intelligence as good or better than that of human beings. This might as well come out to be true !

The Impact of Computers and Informatics on the Pace of Scientific Discovery

The availability of knowledge-based simulation techniques, electronic laboratories, electronic libraries, vast knowledge-bases stored in computers, decision-support systems, computers capable of proving theorems and discovering patterns in complex situations, computer-controlled manufacturing systems, robots, etc., will vastly accelerate the pace of learning and research. As Dr. Raj Reddy said in his recent convocation address at IIT, Bombay, "Computers and communications can truly revolutionise the nature of research and education in the twenty-first century. Each one of us can have a personalised intellectual assistant which could use voice and vision for man-machine communication, tolerate errors and ambiguities in human interaction with machines, provide education and entertainment on a personalised basis, provide expert advice on a day-to-day basis, make vast amounts of knowledge available in an active form and make ordinary mortals capable of superhuman tasks, leading to new discoveries and inventions at an unheard of rates."

Science and Man

I was asked to speak on some aspects of Science and Man. On the one hand a great scientific future backons mankind. Science may grow a thousand fold in the twenty-first century. Every one will have a chance to attain great intellectual heights. The brilliance of a thousand Suns of Knowledge will be available to us.

On the other hand, the Scientific Spirit characterised by objectivity, rationality, integrity, impartiality, fairness, tolerance, excellence and truth seem to be declining in science itself. Unless we reverse this trend and persue Education and Research in science in the true Spirit of Science, Growth in Science will not mean Growth in Wisdom and Character and the net result may be that man may be much further away from divinity than he is to-day, if man survives at all during the next century.

As such we should be ruthless in insisting on scientific values in all Education and Research and in fact in all walks of life. These values are ultimately the same as the great humanistic values. Without these values man is doomed; with these values, he has a great future.

The growth of Science is going to change the relation between Science and Man. The nature of this change will depend on our values and our wisdom.

Let each one of us do some soul-searching, and do only those actions which are worthy of the great values of science and none others. □

Excellence & Relevance in Education

(*Continued from page 4*)

research in higher education, apart from creating scientific manpower will help maintain the industrial competitiveness of the country. Basic research, as contrasted with the applied variety, has a new kind of relevance in creating a hierarchy-free atmosphere, of freedom, of an enquiry with an accent on multidisciplinary approach. Research activity warrants cooperation and collaboration breaking the barriers that have all along divided the academic community. It is but proper that industry establishes campus labs of their R & D wings which will be a shot in the arm for education and research which bids fair to be cost-effective.

Excellence and relevance go hand in hand. Linkages between research establishments and user agencies could be overseen by state agencies and apex bodies to safeguard, pursue and enlarge the interest of research in the institutions and establish its relevance to the nation. The nexus between the ideas and concepts on the one side, and problems and issues on the other may generate a healthy interaction between thinkers and practitioners. This may necessitate what Prof. A. N. Whitehead calls a clash of ideas, nay, an adventure of ideas, which is an opportunity unlike a clash of personalities which is a disaster.

Schemes of collaboration and networking necessitate a measure of mobility. Provisions of transfer and deputation from institutions to agencies and vice versa spell health and sanity to the work undertaken. Inbreeding has more often been the cause of campus unrest. Inter-regional mobility establishes the universal character of a university without any dogmatic consideration of domicile or nativity. The students enrolment and the faculty strength must reflect the all India character of higher education which fosters feelings of national integration.

Excellence of an institution of higher education is a function of many facets. It involves institutional consolidation, fostering of autonomy, restructuring of courses with relevance, orientation of teachers, strengthening of research, provision of infrastructural facilities for students—all geared to ensure that the system of higher education will work more efficiently. Institutional planning, plan implementation, decision-making must be free, and of participatory nature befitting a vibrant democracy like ours. In our national perception, human beings are positive assets and precious national resources. Our endeavour should be to design a strategy for the development of human resources through education. The challenge of education will have to be met by the collective endeavour of the teachers and students as much with earnestness and rigour as with freedom and creativity. □

Tilak Maharashtra Vidyapeeth

Hon'ble Shri Shankarrao B. Chavan, Chancellor of Tilak Maharashtra Vidyapeeth and the Chief Minister of Maharashtra, paid handsome tributes to the Vidyapeeth when he observed: "Work oriented education was introduced here sixty years ago though it has received recognition only recently at other universities". Shri Chavan was delivering the Convocation Address at the annual convocation of the Tilak Maharashtra Vidyapeeth (Deemed University). We are pleased to carry excerpts of this highly informative address in which Shri Chavan traced the history of the Vidyapeeth and described the vicissitudes it passed through till its emergence as a Deemed University.

Convocation

This university was founded on May 6, 1921 to commemorate the contribution of the Late Lokmanya Bal Gangadhar Tilak to national education. Tilak was convinced that the British educational system prevalent in India at that time was solely directed towards the creation of a cadre of educated workers to serve the administrative machinery of the foreign rulers. The British Government had little concern about the values of patriotism, national pride, social commitment and self reliance. "The only way to impart national education was the establishment of a National University," thought Lokmanya Tilak and our university was founded in deference to his thought and desire. Avoiding the defects of the prevailing educational system, this university strove towards making the youth nation-minded, self reliant and able to overcome all obstacles in their way. The student community was not expected by the nationalists to be merely job-seekers after their graduation but be free and dignified members of the society. Educationists working here in Tilak Maharashtra Vidyapeeth meticulously followed this policy right from its inception. Work oriented education was introduced here sixty years ago though it has received recognition only recently at other universities.

Curricula in the faculties of Arts, Commerce Engineering and Ayurvedic Medicine were framed in the beginning and teaching of the subjects also commenced. Even postgraduate training was available in some branches. A number of educational institutions outside Pune sought affiliation to this university. The teachers working here and students too were dedicated to the cause of nation building and many of them actively participated in the National Movement and the freedom struggle. Many of the national institutes had to be closed because of the wrath of the British power. In 1932 educational activity came to a standstill as the institutes imparting national education were declared illegal. In spite of this Tilak Maharashtra Vidyapeeth continued its noble work of education with a few changes suitable to the changing needs of society.

Conscious of the relevance of village uplift in the nation building process the university prepared a curriculum for teaching this subject and began practical work in village organisation in the vicinity of Pune to train young workers in this field. When Gandhiji propounded the philosophy of Basic Education this university supported it fully and conducted Basic Education programme in a number of primary schools. A centre for training of teachers of Basic Education was also run by this university. In 1938 an act concerning indigenous system of medical education was passed by the Government of Bombay and this university took up the responsibility of conducting professional examination for the courses in Ayurvedic medicine for students from all over Bombay Presidency. The delegation of such an important task by the British rulers to a national university speaks volumes about its integrity and diligence in the field of education.

From 1932 to 1947 Tilak Maharashtra Vidyapeeth was continually engaged in adult education, literacy drives, Basic Education, courses in Ayurvedic Medicine, and production of technical and scientific books in Marathi, thus catering to the various educational needs of the community at large. The Vedic Sanshodhan Mandal started by this university for advanced research in vedic studies carried on its activities without interruption.

The conduct of public examinations in Sanskrit, English and Mathematics for school going children gave a boost to Tilak Maharashtra Vidyapeeth's work in the field of higher education. Shri Balmukund Sanskrit Mahavidyalaya was started by Tilak Maharashtra Vidyapeeth for higher education in Sanskrit. A novel method of teaching Sanskrit, combining the traditional and modern techniques was evolved and students passing the tests were awarded Shastri degrees. The state authorities approved the award of these degrees. These degrees were also granted equivalence with degrees conferred by other universities established by law. This college teaches courses in Sanskrit language and literature from the school level to the advanced postgraduate level.

In 1969 a unique scheme of imparting training in Social Sciences at the university level was introduced with the setting up of Nehru Institute of Social Studies. This institution started a postgraduate course 'Parangat' in social sciences with emphasis on the interdisciplinary approach. Tilak College, which had to be closed down during the years of our struggle for independence, was started again and two new diploma courses, one in Salesmanship and the other in Office Management were instituted. All these programmes received approbation from leaders in the field of education. Many a research project had been undertaken by Tilak Maharashtra Vidyapeeth in the fields of Social Sciences, and Sanskrit studies. Many of the publications of this university have proved to be significant and original contributions to various fields of learning.

This university believes that it has a stake in the process of social change and so it has undertaken the work of conducting short term courses in Yoga, Ayurveda, Library Science, and Practical accountancy for women which will fulfil the educational needs of society in years to come.

Seven non-agricultural autonomous universities are functioning in the State of Maharashtra at present. They are working in the sphere of higher education following the conventional curricula. The courses offered in these are available only to those students who have attained certain academic standards in formal education. A large number of the student community finds itself excluded from this small group, and is thus deprived of the opportunity for higher education. The number of students desirous of higher education has been growing rapidly since independence and though new colleges have been started, the craving of the masses for higher learning cannot be satisfied. A considerable number of young students is deprived of higher education because of economic and family constraints. A few of these obtain higher degrees as external students but they have to depend entirely on their individual effort for want of guidance. Being aware of this felt need, Tilak Maharashtra Vidyapeeth has started courses in higher education for those who were denied the opportunity. These courses may help adult learners barred from the portals of higher education like leaders from rural areas, labourers, workers and women students in the acquisition of higher education. But, we have to go a long way in this direction.

While catering to the various needs of society and planning new undertakings suitable to the demands of the age, Tilak Maharashtra Vidyapeeth had to take upon itself a new responsibility when the University Grants Commission conferred on it the status of a deemed university. This has opened new vistas of growth for Tilak Maharashtra Vidyapeeth. The Union Government has envisaged a New Education Policy and the state is geared up for its implementation. College development, realignment of college education facilities, emergence of a few select colleges into autonomous ones, restructuring of the pre-university courses, training of teachers, qualitative improvement in research work, and establishment of a rural university are some of the tasks in the field of higher education. Tilak Maharashtra Vidyapeeth which carried on its noble work even in the days of British rule and engaged itself in the work of social development should come forward to implement some of these tasks. ☐

"Designs of Institute's monogram, logo, moto, letterheads and composition of an Institutional song are invited from interested competent persons for adoption by the Institute. The new Institute started this year by Delhi Administration under the University of Delhi, after the name of our beloved late Prime Minister Smt. Indira Gandhi, as a model centre for advanced studies in Physical Education and Sports Sciences of our country, envisages to cater for higher studies in the new fields of activity with scientific orientation.

Details about colour combination, size shape, theme and other requirements could be obtained from the Institute's Office, during working hours. Competent persons will be suitably identified, awarded and recognised by the Institute. Last date for receipt of the proposals is **April 25, 1988**".

Dr. J.S. Naruka
OFFICER ON SPECIAL DUTY

JUST OUT

EFFECTIVE MANAGEMENT

N.G. CHOUDHURY

This book, based on the practical day to day experience of a multinational organisation deals with the theory of success, of delegation, motivation and communication.

The author, one of the country's most respected experts on Company Law and allied matters, suggests the kind of parameters a manager should cultivate in order to exercise authority appropriately and efficiently.

The essence of managerial norms reduced to a series of aphoristic statements which are easy-to-remember, comprehend and communicate makes this book extremely useful to managers, corporate executives and students of management.

Why IIT Graduates Settle Abroad?

A study recently conducted by IIT, Bombay reveals that lack of adequate opportunities for career growth and living conditions at home coupled with the poor industrial climate in India are possible push factors for emigration from the IITs. Brain drain (BD), as the study points out, forms part of the flow of high quality manpower (HQM) from the less developed countries to the developed countries (DC), a phenomenon which even the United Nations has reported.

The most significant impact of brain drain on the underdeveloped country is that its manpower which feeds the technology base of the developed countries, makes for a "reverse flow of technology". When less developed country tries to 'purchase' technology it cannot do so, since it has inadequate knowledge of promotion in the absence of any HQM available domestically.

Quoting from the journal of Higher Education and Science Age, the study states that Indian HQM abroad experiences the three phases. The golden period of the graduate student under the neo-colonal patronage of the western professor, the middle phase of conflict over whether settled for a safe and unexciting professional life, or fight a vain struggle resulting in bitterness over poor scientific recognition. Thirdly, the mature professional life for either category with attendant restlessness or frustration.

The student is further informed that while science is universal, the institutions of science are not. While Indian immigrants are encouraged to be "bright boys" they are not expected to be "powerful and trend-setting men", showing plainly that the western scientific establishment is more than fair to its most outstanding imports.

"Quite unacceptable", say some of the IIT graduates, who question the wisdom of staying back in India, when high specialisation study programmes are available without any obstacles and "politics" in US universities. The aid available in an American university is by far many times higher than a stipend for a postgraduate engineering programme in India.

Better scientific establishments with more freedom for individual growth and performance together with better economic incentives would keep them in the country itself.

One of the common complaints from the graduates is that there is little emphasis on domestic research and development efforts, and a high ranking technologically qualified who joins a "reputed" organisation is confined to translating imported technology upto implementable forms.

Poona Varsity Plans Distt. Sub-Centres

Poona University has drawn up elaborate plans for decentralisation. It proposes to establish district sub-centres at each of the five district headquarters. These sub-centres will be delegated with some administrative, financial and academic functions. Dr. V.G. Bhide, Vice-Chancellor, said each of these centres could gradually grow and develop into a full-fledged university.

Dr. Bhide said to reduce rigidity in the education system, the national policy on education had recommended giving of autonomy to colleges. The university would soon process cases of 14 colleges which had applied for autonomy. He said autonomy would be granted essentially to improve the standard of teaching and changing the evaluation system and it must be earned on the basis of academic programmes the colleges wished to pursue.

The University also plans to conduct several skill-oriented courses in the evenings and on week-ends for the benefit of the students. The university was making a list of such courses and laying down syllabi for the courses. After the completion of such a six-month course, the student would be entitled for a certificate, while those completing one-year courses for a diploma. There would also be qualitative difference in the certificate, diploma and graduate level courses.

Hyderabad Varsity to Offer New Courses

The University of Hyderabad has decided to establish a new school, "Sarojini Naidu School of Performing Arts, Fine Arts and Communication." Besides, two new centres, a "Centre for Applied Linguistics and Translation Studies" and a "Centre for Comparative Literature," would be started from the academic year 1988-89.

The Sarojini Naidu School of Performing Arts, Fine Arts and Communication would offer post-graduate courses leading to M.A. in four subjects, namely, Dance, Theatre Arts, Painting and Communication (audio-visual media, TV and Radio). The courses would be full-time spread over four semesters.

The Centre for Applied Linguistic and Translation Studies would offer M. Phil. and Ph.D. programmes in Applied Linguistics with special reference to translation. The centre would be engaged in developing translation manuals and materials for training professional translators in major Indian languages and English. The Centre for Comparative Literature would also offer M Phil. and Ph.D. courses from the next academic year of 1988-89.

Vocational Training Centre for Bombay

A vocational training centre is likely to be set up in Bombay under the auspices of the Indo-German Chamber of Commerce. It is modelled on the German system of "dual education."

Under the system, practical "on-job training" and theoretical education in the vocational school are closely intermeshed to provide a praxis-oriented, through training for young executives. The system is stated to be working well in Germany.

Poona Open Universit

The Poona University is report-ed to have decided to establish a Open University and Professo Ram Takawale, former Vice-Chan cellor has been entrusted with th implementation of the project.

Under the scheme, the three majo wings of the university—adult edu cation centre, continuing educa tion centre and the educationa media research centre would initial ly be amalgamated to become

nucleus for the proposed open university.

According to the draft proposal for the open university, educational courses in subjects which are regularly taught in the university would not be covered by the open university. But informal and socially-oriented educational courses would be introduced by the open university. Short-term vocationally-oriented courses, diploma and degree both, would form the core of the new scheme.

The new university is expected to start functioning from the coming academic year.

Central Assistance for Anna University

The Union Ministry of Human Resource Development have sanctioned a grant of Rs. 40.00 lakhs to Anna University for meeting the non-recurring expenditure during 1987-88, for modernisation and removal of obsolescence in mechanical Engineering Lab of the College of Engineering, Automotive Engine and Vehicle Testing Laboratory of the Madras Institute of Technology, and Lab. Studies and Workshop of the School of Planning and Architecture.

Renal Sciences Facilities at Sanjay Gandhi Institute

The Sanjay Gandhi Post-graduate Institute of Medical Sciences (SGPGI), Lucknow, is reported to be developing one of the best facilities of renal sciences which will

cater to the needs of millions of people suffering from renal ailments in Uttar Pradesh and neighbouring States. According to Dr. Mahendra Bhandari, Professor at the Urology Department, the "shock therapy machine" would soon be acquired which 'destroys the renal stones in minutes'. This machine costing about Rs two crore, can pulverise the stones without any surgery. There are also no chances for recurrence of this stones, he pointed out.

School of Economics & Behavioural Sciences

A Centre of Excellence known as the "School of Economics and Behavioural Sciences" has been created at Bhopal University with the financial assistance from the State Government. This Centre which includes the three teaching departments of Economics, Psychology and Sociology" will have interdisciplinary teaching and research.

The University Grants Commission (UGC) has also sanctioned to the University Rs. 10 lakhs as special assistance for the purchase of books and journals and Rs. 40 lakhs for the purchase of equipment in different teaching departments of science and humanities in addition to the VII plan allocation for the University.

Fellowship for Dr. Beg

Dr. Mohammad Hanif Beg, Lecturer in Cardiothoracic and Vascular Surgery, J.N. Medical College, Aligarh Muslim University has been elected to the fellowship of the International College of Angiology, New York (USA). This is in recognition of Dr. Beg's performance comprising over 725 major operations which include nearly 200 closed heart operations and about 1200 minor thoracic operations.

He has also fifty papers to his credit published in various national and international journals.

News from Agril. Varsities

ICAR Summer Institutes/Short Courses

The Indian Council of Agricultural Research (ICAR) has decided to hold 25 Summer Instt./Short Courses in the field of Agriculture Sciences during Summer vacation of 1988 for the benefit of teachers and specialists. The main objective of this inservice training course would be to communicate the latest technological advances in the subject and provide the necessary orientation to teachers and research workers of agriculture/agricultural engineering/Animal Science/Fisheries so that they are able to relate the teaching of their subject to the problems in their respective disciplines. The ICAR have undertaken to meet the expenses for organising these Summer Instts /Short Courses. It would be possible to accommodate one or two from the sponsored list of teachers, researchers and extension specialists from the University/College/Institute/Deptt. who are actively engaged in teaching/research or extension in the respective subjects.

Further details with regard to eligibility requirements, duration of the course, date of commencement, registration fee, etc. may be obtained from the college/university concerned or the Assistant Director General (ASE), Indian Council of Agricultural Research, Krishi Anusandhan Bhavan, Pusa, New Delhi-110012.

Sophisticated Instruments for HAU Scientists

Dr. C. Niemoller, Cultural Counsellor, West German Embassy, gifted on behalf of the Alexander von Humboldt Foundation of West Germany some sophisticated instruments to Dr. Gopal Krishna, Animal Nutritionist of the Department of Animal Breeding, HAU, Hisar. The equipment comprising RUSITIC (artificial rumen), Buchi Nitrogen Analyser and fine auto pipettes have been gifted in recognition of the meritorious work carried out by Dr. Gopal Krishna. The equipment will be used for studying the quality of feeds and fodder fed to dairy animals viz. cows, buffaloes and goats. Thus it would be possible to carry out advanced research in this area.

Dr. Niemoller also gifted a Beta counter to Dr. M.M. Galhotra, Department of Animal Production Physiology & Dr. A.S. Virk, Department of Animal Nutrition. This will be helpful to estimate the harmonal levels in animals.

Dr. R.S. Malik of the department of Soils, was presented a sensor recorder for studying soil physical properties while Dr. I.S. Dahiya was offered a computer for soil investigation purposes.

This equipment, amounting approximately Rs. 23 lacs have been gifted to these scientists for their outstanding research work in the respective areas.

Speaking on this occasion, the Director of Research, Dr. Mahendra Singh congratulated the scientists and assured Dr. Niemoller that these instruments will be used for doing investigational work in the respective fields.

Earlier, Dr. C. Niemoller visited the H.A.U. campus and saw the research work being done at the laboratories of the department of Animal Breeding and the department of Soils. In a meeting, held with the senior scientists of the university, Dr. Niemoller explored the possibilities of initiating an Indo-German partnership project on the topic "Developing technology for minimising the cost of milk production in the dairy animals raised under tropical/subtropical conditions".

AIU News

Bahrain Secondary Certificate Recognised

The Association of Indian Universities (AIU) have formally recognised the General Secondary Certificate of Bahrain for purposes of admission to higher studies.

The Ministry of Education of Bahrain had invited Shri K. C. Kalra, Deputy Secretary (Evaluation), AIU to acquaint him with the secondary stage pattern of education in Bahrain and to recommend the parity of its General Secondary Certificate. The Certificate had earlier been equated with the old pattern of 11 years secondary education in India. Almost all the countries in the Arab Gulf, including Bahrain, have switched over to 12 years secondary education during the last few years.

Bahrain spends about 13% of its budget on education as it is thought to be the best investment for an assured future of the country. It claims to have reached an 'Adult' stage in education with the commissioning of Gulf University in Bahrain. The country has now 2 universities, an engineering and medical college each and about 139 Primary/Secondary Schools for a population of about 5 lakhs. It raised necessary infrastructure facilities to enrol every child in the school and to see him through the university level. Bahrain is the only country in the Gulf which has the facility for teaching of English as a second obligatory language in secondary schools. Although standardisation of education is regulated through the Education Ministers Conference of the region. Bahrain is treated as one of the advanced countries in the field of education. The country has achieved the target of obligatory and free education upto primary stage.

Shri Kalra had associated in his Team a Member of the Indian Faculty now in Bahrain University and Principals of Indian Secondary Schools in Bahrain and Dubai for the study, as these Members were found to be acquainted with the pattern of education in both the countries. The Committee had visited a number of Secondary Schools, met the Minister and other senior officials and discussed with them various issues involving comparability of the two systems.

The Team's report was placed before the appropriate authorities of the AIU which have approved the recognition.

SPORTS NEWS

Campus Fitness Programme

The Department of Physical Education and Sports Sciences of the Annamalai University runs a Campus Fitness Programme for the benefit of its staff and students. Students, teachers and other members of the staff test their own Physical Fitness through a medium of simple battery of tests conducted by the Department with the help of prospective teachers in physical education. Simple tests have been selected mainly to test strength, endurance and cardio vascular efficiency. These tests include: **For men:** Floor Push ups—straight back, 12 min. Jog/run/walk. Sit ups-bend knee for 1 min. continuous. **For women:** Flexed arm hang (in seconds), Sit ups (band knee) and 8 min. Jog/run/walk.

For each participant, a fitness card is maintained which shows the periodical improvement he or she has made in terms of frequent testing. The programme is being organised at the SNIPES Field Station and UGC physical conditioning centres.

We Congratulate ...

1. **Prof. K.V. Ramana who has been appointed as Vice-Chancellor of the Andhra University, Waltair.**
2. **Prof. S.V.J. Lakshman on his appointment as Vice-Chancellor, Sri Vankateswara University, Tirupati.**
3. **Shri G.S. Randhawa who has been appointed as Vice-Chancellor of the Guru Nanak Dev University, Amritsar.**
4. **Dr. Madhukar Govindrao Bokare who has been appointed as Vice-Chancellor of Nagpur University.**

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

CURRENT DOCUMENTATION IN EDUCATION

A List of Select Articles culled from periodicals received in the AIU Library during March, 1988

EDUCATIONAL PHILOSOPHY

Klafki, Wolfgang. The significance of the classical theories of education for an up-to-date concept of general education. *Education* (36), 1987, 7-31.

EDUCATIONAL PSYCHOLOGY

Kagan, Dona M. The social implications of higher level thinking skills. *Res Hr Edn* 27 (2), 1987, 176-87.

EDUCATIONAL SOCIOLOGY

Chiplunkar, V.V. Education and development of women : Project Maher. *J Ednl Plg & Admn* 1 (2), 1987, 173-90.

Imtiaz Ahmad. Educational development of minorities in India : Future perspective. *J Ednl Plg & Admn* 1 (2), 1987, 191-209.

Moonis Raza and Premi, Kusum K. Indicators of equity in education : A conceptual framework. *J Ednl Plg & Admn* 1 (2), 1987 1-29.

Saiyid Hamid. Education of minorities : Future perspective. *J Ednl Plg & Admn* 1 (2), 1987, 210-15.

EDUCATIONAL ADMINISTRATION

Gross, Ronald. Leadership for the learning society : Harvard's Institute for the management of lifelong education. *Coll Bd Review* (146), 1987-88. 10-3, 24-5.

Sapra, C.L. and Mathew A. Promoting equity and diversity in education : Challenges for educational administrators. *J Ednl Plg & Admn* 1 (2), 1987, 57-89.

TEACHERS & TEACHING

Aston, Mike. Professional development and teacher education—Have we got it right. *Computers & Edn* 12 (1), 1988, 79-83.

Klemm, W.R. Ten ways to improve graduate teaching. *Coll Bd Review* (146), 1987-88. 16-9, 26-9.

Lewis, Florence C. On self-esteem. *College Bd Review* (146) 1987-88. 2-3, 31-2.

Trainor, Richard H. Implementing computer-based teaching and research : The need for a collaborative approach. *Computers & Edu* 12 (1), 1988, 37-41.

Underwood, Jean. An investigation of teacher intents and classroom outcomes in the use of information-handling packages *Computers & Edn* 12 (1), 1988, 91-100.

EDUCATIONAL TECHNOLOGY

Adams, Tony. Computers in learning : A coat of many colours. *Computers & Edn* 12 (1), 1988, 1-6.

Beevers, C.E. and others. The CALM before the storm : CAL in university Mathematics. *Computers & Edn* 12 (1), 1988, 43-7.

Bennett, Mike and Smith, David. Evaluating television-linked computer software. *Computers & Edn* 12 (1), 1988, 133-9.

Chatterton, John L. Knowledge control : The effect of CAL in the classroom. *Computers & Edn* 12 (1), 1988, 185-90.

Degl' Innocenti, Riccardo and Ferraris, Maria. Database as a tool for promoting research activities in the classroom : An example in teaching Humanities. *Computers & Edn* 12 (1), 1988, 157-62.

Duchastel, Philippe C. Display and interaction features of nstructional texts and computers. *British J Ednl Tech* 19 (1), 988, 58-65.

Gardner, Nigel. Integrating computers into the university curriculum : The experience of the U.K. Computers in teaching initiative. *Computers & Edn* 12 (1), 1988, 23-7.

Hartley, James. Using principles of text design to improve the effectiveness of audiotapes. *British J Ednl Tech* 19 (1), 1988, 4-16.

Mason, Robin. Computer conferencing : A contribution to self-directed learning. *British J Ednl Tech* 19 (1), 1988, 28-41.

McCormick, Sophie and Bratt, Peter. Some issues related to the design and development of an interactive video disc. *Computers & Edn* 12 (1), 1988, 257-60.

Thornburg, David D. From metaphors to microworlds : The challenge of creating educational software. *Computers & Edn* 12 (1), 1988 11-5.

EDUCATIONAL EVALUATION

Joshi, Pradeep. Question Banking as a tool of examination reform. *Prog of Edn* 62 (8), 1988, 186-88, 185.

Kealy, Mary Jo. Student perceptions of college quality. *J Hr Edn* 58 (6), 1987. 683-703.

Lane, David S, Jr and others. The effects of knowledge of item arrangement, gender and statistical and cognitive item difficulty on test performance *Ednl Psy Measurement* 47 (4), 1987, 865-79.

Muffo, John A and others. Using faculty publication rates for comparing 'PEER' institutions. *Res Hr Edn* 27 (2), 1987, 163-75.

Stodt, Martha McGinty. Educational excellence as a prescription for retention. *New Directions Hr Edn* (60), 1987, 5-13.

Stodt, Martha McGinty. Intentional student development and retention. *New Directions Hr Edn* (60), 1987, 15-26.

ECONOMICS OF EDUCATION

Mohammad Abul Basher Mian. Demand for higher education : A comparative study of ratio and logit models. *Manpower Journal* 21 (3), 1985. 19-29.

Sharma, G.D. Equity, quality and costs : Some fundamental issues and evidences. *J Ednl Plg & Admn* 1 (2), 1987, 30-7.

VOCATIONAL EDUCATION

Hearn, James C. Impacts of undergraduate experience on aspirations and plans for graduate and professional education. *Res Hr Edn* 27 (2), 1987, 119-411.

ADULT EDUCATION

Cervero, Ronald M. Professionalization as an issue for continuing education. *New Directions Cont Edu* (36), 1987, 67-78.

Eswara Reddy, V. Human rights : The interactive context of development and non-formal education. *Indian J Adult Edn* 48 (4), 1987, 53-61.

Garrison, D. Randy. The role of technology in continuing education. *New Directions Cont Edu* (36), 1987, 41-54.

DISTANCE EDUCATION

Meintjes, Laurie. Program development : Plan for success take time to succeed. *Distance Edn* 8 (2), 1987, 162-75.

Nation, Daryl. Some reflections upon teaching Sociology at a distance. *Distance Edn* 8 (2), 1987, 190-207.

COMPARATIVE EDUCATION & COUNTRY STUDIES

Flather, Paul. Challenge that was not met. *Times Hr Edn Supplement* (795) January 29, 1981, 5.

Shahane, Vasant A. Perspectives on Indian universities and research in Humanities. *New Quest* (66), 1987, 363-74.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities

BIOLOGICAL SCIENCES

1. Mookerji, Prasun. *Intra and inter-population variations in anthropometric variables and work performance in Lodhas, Mahalis and Mundas of West Bengal*. Delhi.

2. Rai, Shri. *The influence of season of birth on the formation of dermatoglyphic characteristic : A case study among the Kalar of Madhya Pradesh*. HS Gour. Dr. Ramesh Choube.

3. Shil, Anu Prabha. *Comparative evaluation of growth patterns in various biological variables among Lepchas, Bhutias, Sherpas and Tamangs of Sikkim Himalayas*. Delhi.

4. Srutikar, Pankaj Kumar. *Finger and palmar dermatoglyphic variationg among some Assamese castes*. Gauhati. Dr. Renuka Das.

Marine Biology

1. Chandran, A. *Functional morphology of the digestive system in certain marine lernaeopodids (Copepoda : Siphonostomatae) with notes on the nature of infestation of copepod parasites of fishes of the South-West Coast of India*. Kerala. Dr. N. Balakrishnan Nair.

2. Gopinathan, K. *Ecology and fisheries of certain inland water bodies of Kerala*. Kerala. Dr. N. Balakrishnan Nair.

3. Shadananan Nair, K. *Hydrometeorological studies of Kerala in relation to the Western Ghats*. CUST. Dr. H.S. Ram Mohan.

Biochemistry

1. Annapurna, V.V. *Effects of oral contraceptive on non-regenerating and regenerating rat liver*. Osmania.

2. Basu, Jayati. *Effect of fatty acid supplementation on some biochemical properties of Saccharomyces cerevisiae*. Calcutta.

3. Das, Sanjay Kumar. *Mechanism of action of mycobacillin on a molecular level*. Calcutta.

4. Kanthe, Vijaya Vaman. *Studies in alteration in microsomal electron transport reactions*. Marathwada. Dr. S.S. Pawar.

5. Kundu, Manikuntala. *Studies on some exocellular proteins of Neurospora crassa and Saccharomyces cerevisiea.* Calcutta.

6. Nandi, Pranati. *Effect of dietary fibre(s) on the absorption of some nutrients in experimental rats.* Calcutta.

7. Nandi, Ratna. *Fermentative production of glucoamylase* Calcutta.

8. Padmaja, G. *Biochemical studies on cassava, Manihot esculenta Crantz, toxicity with special reference to linamarin.* Kerala. Dr. K. Ramachandra Panicker.

9. Panth, Meena. *Evaluation of Vitamin : A status in pregnancy.* Osmania.

10. Parchwani, Hundal. *A study of the effect of feeding edible oil, cholesterol, onion, garlic and guar gum on the development of regression of atheros, Clerotic plaques.* Rajasthan. Dr. P.K. Sharma.

11. Usha, V. *Biochemical investigations on dietary fibre.* Kerala. Dr. P.A. Kurup.

Botany

1. Agarwal, Madhu. *Regulation of seconpary metabolites in Trigonella species by chemical treatments.* Rajasthan. Dr. S.C. Jain.

2. Anjaiah, N. *Effects af salinity on osmoregulatory solutes in Atriplex griffithii Mog.* Bhavnagar. Dr. A.J. Joshi.

3. Appanna, Nikku. *Studies on airspora and daily pollen release at Vijayawada A.P. India.* Andhra.

4. Arya, Inder Dev. *Studies on cytogenentics and tissue culture of certain legumes.* Rajasthan. Prof. N. Chandra.

5. Awasthy, Rama, *Studies on the cellulose degradation and synthesis by some soil fungi.* Durgawati. Dr. S.K. Hasija.

6. Bhoite, A.S. *Studies on salt tolerance of Aeluropus lagopoides Linn : A halophytic grass.* Bhavnagar. Dr. A.J. Joshi.

7. Chatterjee, Meenakshi. *Aerobiological studies of Bangalore North with particular reference to fungal aeroallergens.* Bangalore. Dr. Shripad M. Agashe.

8. Chauhan, Suchita. *Assimilation of inorganic nitrogen in some tropical forest tree seedlings.* Avadh. Dr. H.S. Srivastav.

9. Datt, Bhaskar. *Flora of Chhatarpur District, Madhya Pradesh.* Kumaun.

10. Ghadge, Dattatrya Nanasaheb. *Studies in discomycetous fungi.* Shivaji. Dr. M.S. Patil.

11. Harsh, Rajni. *Histopathological studies of some insects induced plant galls.* Rajasthan. Dr. Uma Kant.

12. Jain, Shakuntala. *Effect of dust pollution on opium poppy and wheat of Mandsaur District.* Vikram. Dr. R.K. Tugnavat.

13. Johar, Maninder Singh. *Studies in rhizobium ecotypes of Leucaena leucocephala and their nitrogen fixation potential.* Durgawati. Dr. J.N. Dubey,

14 Kamala Devi, T. *Biological studies on the germination of winged bean, Phosphocarpus tetragonolobus (L) (DC) seeds.* Calicut. Dr. K. Sreekumar and Dr. P.S. Krishnan.

15. Kundu, Prasanta Kr. *Studies in damping-off disease of cauliflower by Rhizoctonia solani Kuhn and its biological control.* Burdwan. Prof. Balen Nandi.

16. Lazarus, Smita Nilima. *Investigations on the production of antibacterial and antifungal antibiotics by actinomycetes from soils of Jabalpur.* Durgawati. Dr. G.P. Agrawal.

17. Meera Bai, Guddati. *The ecology of butterflies and their role in natural pollination of plants at Visakhapatnam, A.P., India.* Andhra.

18. Mulik, Niranjana Gopalrao. *Studies on some aspect of mangroves.* Shivaji. Dr. (Smt) L.J. Bhosale.

19. Narasimham, Malapaka. *Tissue culture and reproductive physiology of some legumes.* Delhi.

20. Naveen Chandra. *Cytological and mutational studie in Gloriosa superba Linn.* Nagpur. Dr. J.L. Tarar.

21. Paliwal, Ranjana. *Structural and functional relationship of photosystem II components in higher plants.* JNU Prof. G.S. Singhal.

22. Rama Devi, Kothapalli. *Pollination ecology of Zizyphus mauritiana and Z. oenoplia of Rhamnaceae.* Andhra.

23. Sah, N.C. *Ethnobotany in the mountainous region of Kumaun Himalaya.* Kumaun. Dr. S.K. Jain.

24. Samant, S.S. *Flora of the Central and South Eastern parts of Pithoragarh District.* Kumaun. Dr. Y.P.S. Pangty.

25. Sarma, Donepudi Viswanatha. *Embryological, palynological and foliar dermotype studies in Asteraceae.* Andhra.

26. Satyanarayana, Narra Venkata. *Morphological physiological and biochemical responses of the seedlings of pigeonpea, Cajanus cajan (L) Millsp to sulphur dioxide* Andhra.

27. Satyanarayana Murty, Kambhampati. *An ecologica study of Lake Kondakarla.* Andhra.

28. Sharma, Binju. *Studies on pollen morphology of angiospermic flora and in air borne pollen and spores causing allergy to human being of Jaipur region.* Rajasthan. Dr. Na Jyot Sarma.

29. Sharma, Kiran Kumar. *Control of organ differentiation from somatic tissues, and pollen embryogenesis in anther cultures of Brassica juncea (L.) Czern.* Delhi.

30. Shrivastav, G.K. *Effect of sewage sludge applications and sewage enriched cadmium and zincs on three varieties of Abelmoschus esculentus (L.).* Vikram. Dr. V.P. Singh.

31. Singh, Atul. *Studies on false smut, Claviceps oryzae sativae Hashioka of rice in eastern Uttar Pradesh.* Avadh. Dr H.B. Singh.

32. Singh, Devendra Pratap. *Physiological aspects of Azolla-Anabaena symbiosis, its contribution to nitrogen nutrition and yield of rice.* Utkal.

33. Venkanna, Pamarti. *Flora of Krishna District, Andhra Pradesh.* Andhra.

34. Ziledar Singh. *Studies on seed mycoflora of important oil and seed crops.* Avadh. Dr. H.B. Singh.

Agriculture

1. Arora, Indu. *Genetic analysis of certain developmental traits in relation to grain quality in Indian mustard.* PAU.

2. Behera, Bananjaya. *Studies on some seed borne diseases on groundnut.* Orissa Agrl. Dr. A. Narain.

3. Chakrabarti, Syamali. *Studies on some aspects of the problem of breeding low temperature tolerant Boro Paddy.* Calcutta.

4. Chanda, S.V. *Physiological and biochemical studies in relation to productivity parameters and cell elongation in pearl millet.* Saurashtra. Dr. Y D. Singh.

5. Chaubey, Ashok Kumar. *A study on the impact of integrated rural development programme on socio-economic life of farmers in Varanasi District of UP.* BHU. Dr. B.D. Panday.

6. Chauhan, Youdhbir Singh. *Investigations on the morphological, biochemical and genetical basis to fruit rot resistance, phytophthora nicotianae var. parasitica in tomato.* YS Parmar. Dr. M R. Thakur.

7. Deka, Arun Kumar. *Exchange/adsorption studies on , Cu, and Co in soils of semiarid and humid regions.* HAU.

8. Dwivedi, Naresh Behari. *Studies on sugarcane culmilous smut caused by Ustilago scitaminea (Sydew).* RAU.

9. Jagan Nath. *Structural and biochemical nature of sistance in apple to Venturia inaequalis (Cke) Wint. causing ab.* YS Parmar. Dr. J.L. Kaul.

10. Kapoor, Onkar Chand. *Effect of mulching, methods of anting and irrigation management on percolation losses, water se efficiency and soil thermal regimes in potato.* HP Krishi. r. B.S. Kanwar.

11. Kishori Lal. *Studies on the effect of different sources f nitrogenous fertilizers on the yield and quality of chinery ybrid types of tea, Camellia sinensis L.* YS Parmar. Dr. T.R. hadha.

12. Rajan Kumar. *Cytogenetic investigations in male terile mutants of rice.* PAU.

13. Rattan Chand. *Variability and biocontrol of Phytophthora cactorum on apple.* YS Parmar. Dr. V.K. Gupta.

14. Sharma, Jatinder Kumar. *Study of genetics of some morphological, biochemical and physiological characters associated with drought resistance in maize, Zea mays L.* HP Krishi. Dr. S.K. *Bhalla.*

15. Subhash Chander. *Studies on resistance to Erysiphe graminis f.sp. tritici causing powdery mildew in wheat.* PAU.

16. Tripathi, Radhey Krishna. *Bionomics of red cotton bug, Dysdercus Koenigii F. and its insect enemies and their comparative susceptibility to cerrain anticholinesterases.* BHU. Dr. H.N. Singh.

17. Vaidya, Dina Nath. *Influence of environmental factors on foraging activity of honeybees and their role in berseem, Trifolium alexandrinum L. seed production.* YS Parmar. Dr. O.P. Bhalla.

Zoology

1. Balamani, B. *Studies on population dynamics of helminth and acanthocephalan parasites of certain avian hosts.* Osmania.

2. Bandyopadhyay, Tarit Kumar. *Studies on the ecology of the pest complex of brinjal in West Bengal.* Calcutta.

3. Chatterjee, Anupam. *Chemical protection against ionizing radiation and radiomimetic chemical induced chromosomal aberrations in mammalian lymphocyte culture.* BHU. Dr. (Mrs) M.J. Raman.

4. De, Kalyan. *Studies on the morphology, ecology and control of mango nut weevil, Sternochetus gravis/Fabricius (Coleoptera : Curculincidea) in Tripura.* Calcutta.

5. Joshi, Rachana. *Studies on the biology and control of grape vine beetle, Aides scutellata Hope (Chrysomelidae : Coleoptera).* Kumaun.

6. Nayak, Manorama. *Limnology of the marginal waters of the Hirakud Reservoir.* Sambalpur. Dr. Ajoy Kumar Patra.

7. Parameswara Kurup, K.N. *Some aspects of limb regeneration in the fresh water crab, Paratelphusa hydrodromous Herbst.* Calicut. Dr. Rita G. Adiyodi.

8. Patil, Mohan Ganpati. *Comparative studies on lipids in adipose tissue of Indian bats.* Shivaji. Dr. V.A. Sawant.

9. Remadevi, O.K. *Biology, morphology and host parasite relationships of Goniozus nephantidis, the bethylid parasite of the black-headed caterpillar pest of coconut, Opisina arenosella Walker.* Calicut. Dr. U.C. Abdurahiman.

10. Selvan, M. Senthamizh. *Physiological studies on chosen insect pests, predators and parasites.* Madurai.

11. Shanavas, K R. *Studies on haemoprotozoans from the lower vertebrates of Kerala, India.* Calicut. Dr. P. Ramachandran.

12. Sharif Uddin Ahmed. *An electrophoretic approach to biochemical systematics of animals with special reference to fish.* Manipur. Prof. H. Tombi Singh.

13. Singh, Oinam Lukhoi. *Comparative histomorphology and certain aspects of physiology of the digestive tract of Odoiporus longicollis (Oliv) (Coleoptera : Curculionidae).* Manipur. Dr. B. Prasad.

14. Syed Akhtar Hussain. *Abnormal sexual development and infertility in humans: A cytogenetic, hormonal and cell cycle kinetic study.* BHU. Dr. R. Bamezai.

15. Tripathi, Arun Kumar. *Studies on insect feeding deterrents in plants.* Avadh. Dr. Harihar Jha.

16. Viswanathan, N. *Maternal entrainment of the circadian activity rhythm of the pups in the field mouse, Mus booduga.* Madurai.

Medical Sciences

1. Bhattacharyya, Ratna. *Studies on the adsorption of choleraphage to Vibrio Choleroe.* Calcutta.

2. Chandra Kant. *Neuroclinical and neuro-pharmacological studies on Shuddha Kupilu (S. Nu-Vomica).* BHU. Dr. S.K. Bhattacharya.

3. Chowdhury, Mridul Kanti. *Multivariate analysis of infant and childhood diarrhoeal morbidity and mortality : A longitudinal study in rural Bangladesh.* BHU. Dr. V.M. Gupta.

4. De, Swapankumar. *Studies on gastric peroxidase.* Calcutta.

5. Dwivedi, Shridhar. *Prostaglandins and related neurohumors in ischaemic heart disease.* BHU. Prof. K.N. Udupa.

6. Mishra, Ashok Kumar. *Concept of embryology as described in ancient and modern literature.* BHU. Dr. L.P. Gupta.

7. Momin Ali Kazim Ali. *A study on standardisation aspects of ayurvedic drugs commonly used in primary health care.* Gujarat Ayurved. Prof. Gurudeep Singh.

8. Ratnam, Garigapati Venkata. *Chemical and biological studies on the flavonoids of Tephrosia fulvinervis and T. procumbens.* Andhra.

9. Tripathi, Ajay Kumar. *Gramin swasthya sanrakshan Prashasan : Prathamik swasthya kendra Charai Gaav prakhand Varanasi kee prashasanik sanrachana evam bhumik a per adharit ek somaj vaigyanik adhyayan.* BHU. Dr. K.P. Shukla.

10. Tripathi, Krishna Murari. *A study of personality and behaviour pattern profile in psychosomatic disorders and the role of certain therapeutic interventions.* BHU. Prof. R.H. Singh.

11. Vajayan, P. *Virological and epidemiological studies of poliomyelitis at Calicut.* Calicut. Dr. C.K. Jayaram Panicker.

Animal Husbandry

1. Bhatt, Vinod Kumar. *Disposition of gentamycin and ampicillin in buffaloes following intra-muscular and intrauterine administration in luteal phase of normal oestrus cycle and metritis.* HAU.

INDIAN COUNCIL OF MEDICAL RESEARCH

Applications are invited upto **25th May, 1988** for the following posts at the Council's Institutes/Centres :

(1) At the National Institute of Occupational Health, Ahmedabad.

(a) Senior Research Officer (Pesticide Residue)-One Post

(Scale of Pay : 3000-100-3500-125-4500)

Qualifications & Experience: Essential

1st Class M.Sc./Master's degree in Analytical Chemistry of Agriculture Chemistry with 6 years research/teaching experience in pesticide residue analysis work in human tissues, blood, milk, etc. or Ph.D. with 2 years experience in research/teaching.

Job Requirements

To plan and carry out biological monitoring of pesticides in workers exposed to pesticides and evaluation of pesticidal pollution.

(b) Deputy Director (Two Posts-one each at Regional Occupational Health Centre, Bangalore and Calcutta) (Scale of Pay : Rs. 4500-150-5700)

Qualifications & Experience : Essential

(i) M.D. in Medicine or PSM or Community Medicine or Ph.D. in Environmental Sciences with 10 years research/teaching experience in the discipline of Occupational Health & Hogiene (12 years experience in case of M.B.B.S./1st class M.Sc./Master's degree).

(ii) Original work as evidenced by publications.

Job Requirements

To provide high level leadership in formulation and implementation of research programmes & developments & activities related to occupational Health problem of the region.

(2) At the Cytology Research Centre, New Delhi

(a) Assistant Director (Cytopathology) One Post. (Scale of Pay : Rs. 3700-125-4700-150-5000)

Qualifications & Experience : Essential

(i) M.B.B.S./1st Class M.Sc. in Pathology/Cytopathology from a recognised University. Evidence of leadership with 12 years or M.D./Ph.D. with 10 years research/teaching experience in cytopathology.

(ii) Original work as evidenced by publishe papers.

Desirable

M.D./Ph.D. in Pathology with 10 years experienc Out of which 5 years experience in the field of Cytopa thology.

Job Requirements

(i) Planning & implementation of research pro gramme in the field of Cytopathology and relate Subject.

(ii) Diagnostic cytopathology in referral cases.

(b) Assistant Director (Clinic)-One Post (Scale of Pay : Rs. 3700-125-4700-150-5000)

Qualifications & Experience : Essential

(i) M.B.B S. from a recognised University. Evi dence of leadership with 12 years of M.D. with 1 years research/teaching experience in the field o gynaecology.

(ii) Original work as evidenced by publishe papers.

Job Requirements

(i) To co-ordinate the clinical aspects of maj multicentric studies such as cervical precancer & ca cer, and breast cancer undertaken by the Centre i collaboration with other institutes & hospitals.

(ii) To offer appropriate management to cervic precancer and cancer cases.

(iii) Participation in planning & administratio and other research programmes.

(iv) To look after the Administrative work of t division of Clinical research.

(c) Senior Research Officer (Cytopathology) —One Post

Scale of Pay : Rs. 3000-100-3500-125-4500)

Qualifications & Experience : Essential

M.B.B.S. with 6 years research/teaching experien in Pathology or M,D. with 2 years research/teachi experience in Pathology.

ob Requirements

(i) To assist and organise various research programmes in Cytopathology.

(ii) To assist in Conducting training programme and preparation of teaching material in cytopathology.

(3) At the Enterovirus Research Centre, Bombay
Deputy Director—One Post.
(Scale of Pay : Rs. 4500-150-5700)

Qualifications & Experience : Essential

M.B.B.S. with 12 years research experience in Virology (10 years for those with M.D. in Microbiology or Pathology)

Desirable

(i) Ability to guide postgraduate students.
(ii) Administrative ability.

(4) At the Malaria Research Centre, Delhi
Senior Research Officer (Malaria Control)—One Post.
Scale of Pay : Rs. 3000-100-3500-125-4500)

Qualifications & Experience : Essential

1st class Master of Science degree in Organic Chemistry with 6 years research/teaching experience or Ph.D. (Organic Chemistry) with 2 years research/teaching experience, preferably in protein chemistry and gene-cloning as evidenced by research publications.

Job Requirements: Selected candidate would be required to set up a laboratory of molecular cloning of genes for antigens from Indian isolates of human malarial parasites development of non-radioactive, NDA probes for parasite detection, participate in collaborative research activities, both national and international in various aspects of immunology and immunoprophylaxis against malaria, teaching and other duties assigned by the Director.

(5) At the Tuberculosis Research Centre, Madras.
Deputy Director (Clinic)—One Post
Scale of Pay : 4500-150-5700)

Qualifications & Experience : Essential

(i) M.B.B.S. with research experience in tuberculosis for 12 years (10 years for those with M.D. (Tubrculosis) or M.D. (Medicine).

(ii) Original work as evidenced by published papers.

Desirable

Experience in Conducting controlled Clinical trials in the treatment of communicable diseases.

Job Requirements

Controlled Clinical investigations in the treatment of Pulmonary Tuberculosis, Tuberculosis of Lymphadeitis, tuberculos meningitis, tuberculosis of the spine and leprosy. The incumbent will have to supervise the work in the clinic which undertakes the Clinical Studies in patients. He will also have to tour the districts in various States where 'Short Course Chemotherapy under District Tuberculosis Programme" is undertaken. He will be required, to plan guide and supervise the conduct of the clinical investigations and will have certain administrative responsibilities in the Clinic.

(6) At the Rajendra Memorial Research Institute of Medical Science, Patna.
Asstt. Director (Epidemiology)—One Post
Scale of Pay : Rs. 3700-125-4700-150-5000)

Qualifications & Experience : Essential

(i) M.B.B.S./1st class M.Sc. in Entomology/Medical Entomology with 12 years research/teaching experience in the field of parasitic disease of public importance ; or

(a) M.D. in PSM Medicine, or

(b) Ph.D. in Entomology/Medical Entomology with 10 years research or teaching experience in the above field.

(ii) Original work as evidenced by Publications.

Desirable

Experience in Epidemiological Research in Parasitic disease especially leishmaniasis.

(7) At the Regional Medical Research Centre, Dibrugarh.
Senior Research Officer Each in Pathology Microbiology, Epidemiology and Medicine.
Four Posts
(Scale of Pay : Rs. 3000-100-3500-125-4500)

Qualifications Experience : Essential

M.B.B.S./1st class M.Sc./Master's degree in related subject with 6 years research/teaching experience in the related field or M.D./Ph.D. in Pathology/Microbiology/Social & Preventive Medicine or Medicine with 2 years research/teaching experience.

Job Requirements

S.R.O. (**Pathology**): To plan and co-ordinate research projects on various problems involving Histopathology, Cytology and Haematology.

S.R.O. (**Microbiology**) : To Plan, organise carry out research work on problems involving microbiology, Virology, Parasitology and Mycology.

12. Associate Professor of Veterinary Gynaecology (1)
13. Associate Professor of Animal Breeding (1).

Posts in the scale of Rs. 700-1600 (UGC) :

14. Assistant Professor of Microbiology (1)
15. Assistant Professor of Extension Education (1)
16. Assistant Professor of Agricultural Engineering (1)
17. Assistant Scientist of Maggar Bamboo (1)
18. Assistant Scientist of Agro-Meteorology (1)
19. Assistant Vegetable Breeder (1)
20. Assistant Professor of Veterinary Physiology (1)
21. Assistant Professor of Veterinary Parasitology (1)
22. Assistant Scientist of Yak Genetics (1)
23. Assistant Farm Manager (Dairy Farm) (1)

Post in the scale of Rs. 700-1300 (UGC) :

24. Assistant Scientist (Fisheries) (1)
25. Press Manager (1)

Post in the scale of Rs. 510-880+Rs. 30—S.P. (State scale)

26. Junior Scale Stenographers (English/Hindi) (9) Reservation SC—4, SC (IRDP)—1, S.T.—1, ST(IRDP)—1, Ex-Serviceman (IRDP)—1 & General—1.

Applications complete in all respects, with attested copies of testimonials and list of publication, etc. should reach the Registrar, HPKVV, Palampur-176 062 (HP) by 9.5.1988.

STRUCTURAL ENGINEERING RESEARCH CENTRE
GHAZIABAD (UP)
(COUNCIL OF SCIENTIFIC AND INDUSTRIAL RESEARCH)

Advertisement No. 2/88

Security Assistant : 1 Post. Scale Rs. 1640-60-2600-EB-75-2900. (Revised)

Educational Qualifications

Bachelor's Degree from recognised University (relaxable in Exceptionally deserving Cases) with at least 5 yrs. experience relating to management of Security, Fire Fighting/Prevention and allied jobs. Should be able to handle Fire Arms. Ex-Army/other para military organisation persons preferred.

Job Requirement : The selected candidate will be required to look after the Security arrangements of the SERC installation, premises, residential site and other residential accommodation of SERC at Ghaziabad and carry out deployment and supervision of Security staff. He will also be responsible for handling and maintenance of Fire Fighting appliances of the Centre.

Age Limit : 28 yrs., relaxable in case of SC/ST Candidates and Ex-Servicemen as per rules. No age bar for CSIR employees.

Prescribed application form for the above post are obtainable (free of cost) on or before 25.4.1988, from the Administrative Officer, S.E.R.C., Post Bag No. 10, Ghaziabad. Request for application forms must indicate the number of advertisement, particulars of the post applied for (speciality and level) and full address of the applicant in block letters with Pin Code alongwith a self-addressed envelope of size 28 x 13 cms duly affixed with postage stamps worth Rs. 1.80.

Complete application forms alongwith application fee of Rs. 8/- (no fees is required in case of SC/ST candidates) in the form of Crossed Postal Order drawn in favour of the Director, S.E.R.C., Ghaziabad should reach the Administrative Officer, S.E.R.C., Post Bag No. 10. Ghaziabad by 12.5.1988. Application from employees working in Govt. Deptt., Public Sector Organisation and Gov. funded agencies will be considered only if forwarded through proper channel and with the clear certificate that in the event of selection of the candidate he/she will be relieved within one Month of receipt of the appointment order. Incomplete applications as well as those received after the due date are liable to be rejected. Those who are called for interview will be paid travelling allowance to the extent of a single second class return rail fare (Mail or Express) by the shortest route as per rules.

The selected candidates will be liable to serve, if so required in any defence service or post connected with the defence of India for a period of not less than four years before attaining the age of 40 yrs.

Candidates are required to mention clearly on the application if any of their close relative is working in SERC, Ghaziabad/Roorkee and if so, full details thereof.

Since it is not possible to call all the eligible candidates for interview/personal discussion, the applications shall be shortlisted for the purpose and the decision of the SERC in this behalf will be final and binding on all concerned.

CANVASSING IN ANY FORM AND/OR BRINGING IN ANY INFLUENCE POLITICAL OR OTHERWISE WILL BE TREATED AS DISQUALIFICATION FOR THE POST. INTERIM ENQUIRIES WILL NOT BE ATTENDED TO.

Council of Scientific and Industrial Research

ADVERTISEMENT NO. 7/88

CSIR is seeking to appoint a Scientist 'F' for its National Aeronautical Laboratory (NAL), Bangalore. NAL is the premier research Laboratory in India in the field of aerospace engineering with first rate facilities and expertise in the field of aerodynamics Fluid mechanics, Materials science, Propulsion, Structural sciences, and Systems engineering. The principal supportive facilities available at NAL include (a) an excellent library, (b) a Computer Centre with a Sperry Univac 1100/60-HI System with a 524-kilobyte memory and with multi-programming and time sharing facilities, (c) a National Trisonic Aerodynamic Facility (NTAF) with a series of wind tunnels, and (d) a 24-Actuator Computer Controlled Full-scale Fatigue Test Facility.

Current R&D thrust areas of NAL include Light Combat Aircraft, Computer simulation, Fatigue and fracture studies of aircraft frames, failure analysis and aero-elasticity.

JOB REQUIREMENT

This is a senior research position and the incumbent will be required to provide high level leadership to formulate, plan, co-ordinate and guide R&D activities in the field of aerospace systems, oriented towards the development and testing of aeronautical and aerospace systems. The candidate should have experience with :

— modern aerospace systems including measurement systems and flight control systems, oriented towards fly-bywire systems,

— electronics specially of sensors and digital data acquisition and telemetry systems,

— electro-pneumatic transducers for high intensity acoustic testing of aeronautical and aerospace vehicles.

QUALIFICATIONS

The candidate must have high academic qualifications with specialization in measurement systems and electrical engineering. Proven capability and long R&D experience in establishment of large aerospace systems and ability to guide research projects are essential. Adequate high quality research publication work is also desirable.

This is a contractual appointment for a period of six years in the scale of pay of Rs. 5100-150-5700-200-6300 plus allowances as admissible. Consultancy is permitted with a ceiling of Rs. 50,000/-on annual remuneration receivable. Residential accommodation would be provided in accordance with the rules.

A duly constitued 'Screening Committee' will decide on the number of Scientists to be invited to meet the full Selection Committee. The decision of the Council in this behalf will be final. Applications from employees working in Govt. Departments, Public Sector Organisations and Govt funded research agencies will be considered only if forwarded through proper channel and with a clear certificate that the applicant will be relieved within three months of receipt of the appointment orders.

Standard proforma for submitting the curriculum vitae and the literature about the laboratory can be had, on request, from the Joint Secretary (Administration), CSIR, Rafi Marg, New Delhi-110001. The last date for receipt of curriculum vitae is **31.5.1988**. Further information, if required, can be had from the Director, National Aeronautical Laboratory, Bangalore-560 017.

Indian Traditions and Creation of an Indian Identity

B. Sheik Ali*

The main objective of any university system is not merely to acquire, preserve, impart and extend knowledge but also to preserve cultural traditons, promote basic human values, train for living together, and enrich the quality of life. A university should foster what is called "enculturation process", which means our alumni should be cultured, creative and committed to resolve the crisis of present-day values. They should be able to reflect on the real purpose of life, enjoy and appreciate the beneficence of nature, and to be able to integrate the best of the past with the finest of the present to build a glorious future. Nations are made by artists and thinkers, by saints and scientists and by the struggling masses of men and women. Fortunately, in the realm of knowledge and wisdom Indian traditions are so rich as to intoxicate any Indian with just pride.

We have to become increasingly conscious of the cultural heritage of the past. This awareness is useful to us from three different standpoints, historical, philosophical and political. Historically speaking, Indian philosophical traditions are the oldest that have survived to this day. They witnessed a process of continuous development in history. They are concerned with man's relation to the universe, the nature of reality, and man's place therein. Indian traditions throw much light into the inner nature of man, which can be classified as a study of "man universal". It is man's mind and soul at their best in philosophy and religion. In Indian system of thought there is great sublimation of man's intellect which has never been surpassed. This rich cultural tradition every Indian should know.

Secondly, philosophically our ancients have contributed much to the pursuit of truth. Philosophy deals with such abstract concepts as human soul, ultimate reality, truth, beauty, value, honour, virtue, morality and so on—concepts which are as relevant today as in the past. Our traditions have done much to understand the meaning of our ideas, the synthesis of the concepts that elude explanation, and the search for the good things of life. These traditions have thrown deep insight into the doctrine of ideas, causality, natural laws, behavioural pattern, regularities and direction of development, law and the ideal and a host of other concepts that have a direct link with our everyday life. Our ancients have synthesised ideas to arrive at broad conclusions, which have resulted in several systems of philosophy, which are regarded today as the precious treasures from the past.

Thirdly, politically and socially as well, Indian traditions deserve deep study. Humanity is after all one, and the current of Indian thought cuts across the barriers of time, region and race. Political and social unity is impossible without a clear understanding of our roots. Social and political conditions do revolve on spiritual and philosophical ideas of any society. It is to philosophy or man's rational thinking that we have to turn for harmony, unity and peace in any society. Perhaps no society is in greater need of such rational thinking than Indian society at this juncture. The profundity of Indian traditions and thought has the potentiality to excite interest and unity even at the global level, as the parameters of Indian traditions are intellectual, which alone move the wheels of human progress. A unified nation, much less a unified world, is a dream without spiritual and intellectual awareness in the hearts and minds of men. Indians have offered that thought process which sustains mutual harmony and understanding, if that thought is correctly explained and interpreted.

---

*Vice-Chancellor, Goa University.

Having explained the value of Indian traditions, let us proceed to examine their contents. The major thrust of our traditions is an attempt to understand the mysteries of this universe. Our sages were excited with poetic imagination to burst into lyrics at the wonders of this universe. The mystery of life, the purpose and meaning of life, the immensity of this universe, the uniqueness of its creation, the problems of life and death and such other concepts engaged the attention of our rishis. It was the awe and the wonder of the natural phenomena that was at the root of their inspiration. Even the names of the deities, Indra, Varuna, Mitra, Aditi, Rudra and so on suggest the link of thought with nature. Surya (sun), Prithvi (earth), agni (fire), apas (water), vayu (wind), usha (dawn) are all in the same chain of man's quest to know the value, attributes and the causation of the several elements of nature. Qualities which emphasise particular aspects of natural phenomenon attracted special attention to gain the rank of independent deities. Abstract qualities such as *sraddha* (faith), *manyu* (anger), *gandharva* (fairies), *apsaras* (angels) also became the part of Indian traditions.

Indian traditions are pragmatic as well. They attempted to understand such issues as life and death, peace and war, power and authority, love and sex, family and state, and a host of such other problems. Indian mind tried to comprehend the outer world, the phenomena of nature, as an essential aspect of human intelligence. Indian traditions should be viewed in a different light from that of the western traditions. Our ancients viewed nature or the universe not merely as beautiful product of art created not as a mere matter of chance, but for a purpose designed according to divine law, so that man could take nature as the model and mould his life to lift himself to higher plane. Truth, goodness and beauty are regarded in Indian traditions as transcendental. Again, man was central in the thinking of our sages, who regarded him as the measure of all things. Our sages reflect on everything in the heaven, the empty space, the mother earth, the father sky, the lighted sun, the circling years, the countless ages, and the cosmos beyond the imagination of man.

What is important to remember is that beneath the mythology and the traditions lie concealed profound thoughts. The Indian legends, traditions and myths may appear absurd to an unreflective person, but they do contain a new light, and a new beauty to a reflective mind. He would be impressed by the imaginative faculty. As Jawaharlal Nehru rightly put it, "Indian mythology is richer, vaster, very beautiful and full of meaning. I have often wondered what manner of men and women they were who gave shape to these bright dreams and lovely fancies, and out of what gold mine of thought and imagination they dug them". (*Discovery of India*, p. 78). When we consider the age of their composition, the social background of the people, and the level of thinking in other regions of the world, we cannot but appreciate the knowledge and wisdom of our people.

Indian traditions stand for universalism, humanism, eclecticism and liberalism. The greatness of Indian mind is its ability to reconcile the irreconcilable, the ability to absorb every creative idea, the capacity to accommodate every shade of thought. An example would explain the point better. Rig Veda speaks of the plurality of gods, and yet it emphasises on one God. When worship is offered from among many gods t one God, He becomes the Chief God, the Creator, the Preserver, the Sustainer and the Judge of this Universe The attributes of creation, preservation and judgemen (destruction) were ascribed to different gods, Brahma Vishnu and Shiva, and yet it was felt that these power were originally connected one with the other, an hence they cannot be separated. Logically it follow that this must be something supreme over this Trinity and hence by implication the concept of the oneness o God is established. The tendency of polytheism exist simultaneously with monotheism or the unity of God This attribute of All-Powerful, the Supreme Reality the Sublime Truth, the Self-existing Eternal Creator Protector and Sustainer of everything in the Univers was accorded to **Prajapati**, the Lord of the Creatures **Vishvakarma**, the world-maker. The concept of **Rit** or the order of the world supports this idea. The poin to remember is that Indian mind is at its best in recon ciling the opposite view—endless variety of the worl suggests numerous deities, yet the unity of the worl implies one deity, and both these concepts exist in th Indian traditions.

What is significant in Indian tradition is the libera outlook in which there is room for every shade o thought. Even the notion of a "Church" is alien t Indian thought, although India has throughout bee intensely religious. Our traditions are superb i absorption, assimilation and adaptation. Hindu elec ticism is such that in course of time Buddha was recognised as the incarnation of Vishnu. In social institutions and rituals, Hinduism is so close to Jainism that the latter appears to be almost a sect of the former. For the eclectic Hindu, religion is a matter of personal realisation, and that every religion to him is only a path to truth. He respects the Divine in every manifestation, and he is not dogmatic about his own doctrines. Hinduism incorporates all forms of beliefs and worship without necessitating the choice or rejection of anything particular. Hindu traditions stand for the belief that the highest divine powers complement each other for the well-being of the world and of mankind.

Indian traditions in their broad liberalism almost touch idealism divorced from realities. Take our Indian history. Other countries had placed genealogies in chronological order; we place them in cosmic settings. Others narrate events after they occur. We mention them in advance as if we are predicting the future—we are good in astrology. Others take note of relative values; we concentrate on absolute values. Others indulge in narrative, descriptive and expository type of history; ours is argumentative, critical, and dialectic dialogue, Indian literary traditions are replete with incongruities. Macaulay was furious on knowing that our kings ruled for 30,000 years, or that our geography was made up of "oceans of treacle and seas of butter". The point to remember is that no people could excel Indians in imaginative faculty, and that is a strong point in our traditions. Our ancients dwell more in the realm of the ideal than that of the real.

All aspects of our creative genius, whether art, architecture, sculpture, painting, poetry or drama are more idealistic than realistic. Hindu art revels in variety and complexity and delights itself in rich decoration. Even the great secular epic, **Ramayana**, presents a possible picture from the second to the sixth part, but the last part in which mother earth consumes Sita is typical of Indian mind, which is restless until it mixes something impossible with the possible. The anatomy of the human figure in Indian sculpture is yet another example. In Greek art human figures gain identity with real human beings; in Indian art they stand for the divine and hence lose proportions. This spirit pervades every walk of life, and is indicative of an aspect of Indian tradition which mixes real with imaginative. Take one more example. Alberuni who visited India in the beginning of eleventh century was all amazed at the scienific explanation of the lunar eclipse by Aryabhatta, who had rightly stated that a particular alignment of the sun, moon and earth causes the eclipse, but Alberuni was shocked to find the same Aryabhatta saying that a heavenly dragon devoured the moon and hence the eclipse. Alberuni could not comprehend why a scientific fact be thus killed by a myth. But that is Indian tradition which loves to mix up possible and impossible.

The same tradition of idealizing abstract concepts persists even in such a mundane field as politics. Political authority in India was never centred in the 'State', but in a very different entity **'dharma'** to which every one was subordinate but which never resided in any specific, identifiable individual. The kings were only the upholders of the **'dharma'** and never its source. Not only in politics but also in all basic issues of life, such as what should man live for, our ancients have said that he should live for loving, understanding, sharing, caring and for creative tasks, the whole of which is epitomized in one word "**dharma**". There is no exact equivalent for that in English. Perhaps, righteousness comes close to it. According to Indian tradition everything in the universe has its, 'dharma' on which its existence depends. The essential nature of a thing becomes its 'dharma' or 'attribute' or 'duty'. Man's survival would depend on the performance of his **'dharma'**.

Unity, diversity, continuity and flexibility are other aspects of Indian traditions which form the core of Indian culture. There is a running unity in diversity which is a hallmark of Indian pride. A casual look at India from its geographical, linguistic, demographic, social, religious or even political point of view would exhibit a range of diversity, which would compel an observer to declare that it is hardly a nation. From the Kashmir valley to Cape Camorin, from the Assam hills to Rajasthan desert you have the landscape of a continent which is hardly condusive to a compact nation. Linguistically, you have a museum of languages, over 2000 dialects, of which at least fifteen are listed in the eighth Schedule of the Constitution as of national importance. We have declared Hindi as the national language, but when two Indians meet outstde their State, they understand each other only in English. The demographic distribution, colour, size and physical make up of Indians are so varied that a Kashmiri and a Madrasi or a Punjabi and Malayali have nothing common in physical appearance to declare they are from the same country. The society is cut up into so many castes, creed, class and sects that it is a delight to a sociologist to find in one country all conceivable forms of human groupings. Religiously, India is a spiritual gallery where pictures of every shade of faith and belief are hung, whether Hinduism, Buddhism, Jainism, Sikhism, Judaism, Zorastrianism, Christianity or Islam. Each religion is in itself a variety shop for numerous brands of its own faith. Politically, no democracy in the world has generated such mushroom growth of political parties as India, where splitting comes close to biological division of a cell.

Despite all this bewildering complexity, India is one, Indians are a nation, Indianness is in the bone and marrow of every one. Culturally they belong to one composite whole. Beneath all superficial differences lurks an essential unity. Take for example, such a divisive force as religion. Religious congregations of any of our faiths have one thing in common. They are not mere social assemblies to declare their separate identity, but are meetings to worship God they hold dear, and acknowledge His superiority. Whether it is a temple or a mosque or a church or a gurudwara, it is the same sentiment of devotion to the Supreme Being that forms the main business within its precincts, because God is not with us a distant God, but a spiritual force within every soul. God belongs to our home as well as to our temple. Every Hindu house has a puja room. God is the Chief Guest there, whom he worships. Rabindranath Tagore has so beautifully put it, "In seasons of flowers and fruits, in the coming of the rain, in the fullness of the autumn, we see the hem of His mantle and hear His footsteps...We love Him when love is true. In the woman who is good we feel Him, in the man who is true, we know Him; in our children He is born again and again, the Eternal Child. Therefore, religious songs are our love songs and our domestic occurrences such as the birth of a son, or the coming of a daughter from her husband's house to her parents and her departure again, are woven into our literature as a drama whose counterpart is the Divine". Whether Hindu, Muslim, Christian, Sikh, Parsi or Jain, the feeling is the same towards the Ultimate Reality, the Cosmic Consciousness. This is unity in diversity.

Scratch the brown, black or tan skin of any Indian, you would find the same temper, attitude, behaviour, values and outlook. His strong points also are alike, and his weak points also are alike. When he likes you, he will praise you to the sky, and when he dislikes you, he condemns you to a hell. Visit any village in India, you will find the folks affable, hospitable, sentimental, innocent, industrious and poor. Visit any city, you will find competitiveness, craziness, craftiness, show and bad taste for superficial things, the cinema posters being one example as if we have nothing else to show. Our social customs, habits, manners, tastes, ways of living, thinking, doing, sharing, acting, all have remarkable similitudes over the length and breadth of India. Masses below poverty line yet with a smile over their face, a small section of affluent people with vulgar display of wealth and increasing craze for acquisitiveness, and a sizeable segment of middle class lost in its avocation of business, service, art, craft, farming or industry, present the same kaleidoscopic panorama of Indian society all over India. Every linguistic group passionately loves its own language, and leaves no stone unturned for its development. Every religious group clings to its faith as leeches do to a body. Every political party sings its own song of its ability to lead us to the Garden of Eden, if only it was voted to power. Our communist brothers are as fond of private property as our capitalist friends. Our socialist democrats are as keen to centralise all power in their own hands as our conservatives. If it comes to gain something our moralists are as aggressive as our fighting cocks. There is running unity in all we do, think, wish or plan. There is perfect harmony in all our behaviour, good, bad or indifferent.

Indian identity is not difficult to find. Extremely intelligent, resourceful, creative, visionary, basically good and innocent he carries the load of rich culture of 5000 years old, which at times acts as an impediment. He has not shaken off his age-old inertia, the soul-killing rigidities of the caste system, the slavish mentality of looking to the masters to deliver the goods, to grab the bigger cake when opportunity occurs, to dwell in the glory of the past, even if that past were to be an illusion, to compromise his principles if that were to be to his advantage, and to place self before all. This is the general trend but not uniform. Otherwise we could not have survived through the centuries. There is another side to the same coin. In the company of good, he appears to be the tallest. When calamity comes, (whether from Chinese or Pakistani), he stands solid like a rock. On the basic values of humanism, liberalisms eclecticism, socialism or democracy he is as innovative, and enlightened as any advanced nation of the world. In all other countries of Asia (with the exception of Japan) governments are changed by dagger, but the Indians change it by ballot box. The freedom of press touches licence, where he could ridicule the highest authority and yet get away with it. The family still retains the filial bond where the old parents need not knock at the House for the Old. Its scientists, technologists, thinkers.

poets and philosophers could cross sword with any the best in the world. Its land emits gold and its rivers could feed three times the population of the world, if properly used and yet the people are poor. In the last forty years Indian has washed off a good lot of bad stuff, and has created a new India, where creative cross fertilisation of ideas is still strong and yet we are not out of wood.

Let this be on record that the land of Buddha, Asoka and Akbar has produced in recent times a Gandhi and a Nehru, the brightest luminaries of the present age, who reversed the direction of history, liberated millions from bondage, and laid the foundation of the greatest democracy on earth. In the post-indepence era a super craftsman in ideas turned a newly emerged nation into a leader of resurgent Asia, despite the fact that India commanded neither the economic strength of America nor the military power of Russia. This is because the inner organs of Indian society are basically sound. Culturally, India has been reinvigorated by mental contact with the outer world from the time of Alexander to the British raj, and had absorbed ideas from every quarter which got fertilised under its rich tradition of assimilation. Spiritually, the area of its supreme pride, India has preached and practised the moral code of love, patience, non-violence, truth and bhakti from Buddha to Gandhiji. Historically, India has an unbroken record of over 5000 years, which witnessed the drama of man's struggle to carry truth and justice into the administration of the human society, in the rise and fall of the creeds, in the world of ideas and deeds of many great actors, who have left deep imprints on the sands of time. India does present us a picture of the march of man across the centuries and the work of the multitudes of human beings trying to pass on to us a better life than their own.

If someone asks our identity we can boldly say that we belong to that group which in arts and letters, philosophy and religion, adventure and administration, and in culture and way of life, have made significant contribution to the heritage of mankind. Open the pages of the **Upanishads** or **Geetha** or **Geethanjali**, you will be struck by the profundity of Indian thought. Go to Taj Mahal or Puri temple or Ajanta caves you would be amazed at the richness of our art. Think of Buddha or Shankara, or Madhava or Kabir or Tulsidas or Guru Nanak or Basaveshwara or Gandhi, you would gain a glimpse of cosmic consciousness. Your identity in social sphere is linked to that fabric of diverse strands which is woven into an unique pattern by the inner urge to find unity in diversity—a concept of deep significance which sums up the substance of

deep significance which sums up the substance of

Indian life. Your identity in political arena takes you to the ground of krukshetra where good and evil fight out their everlasting battle. Your campaign began in Mahabharata and you are in it right today. Your identity is that you have limitless potentiality, to do both good and bad. You are the finest among the best, and quite the opposite in the other camp. The richest live in our land and also the poorest. The most enlightened exist in our midst and also the most ignorant. Sometimes we soar high as supermen, and other times we fall like flies. Indian is nothing if he is not an enigma. ☐

Administration in Indian Agricultural Universities

S. T. Kachwe*

Administration itself is a very complicated process. Administration in the educational institutions and universities has become more complicated. In agricultural universities the process is most complicated because these universities have been established in recent years and the concept also differs from traditional universities. The traditional universities have gained considerable experience and therefore, were able to remove the lapses, correct the mistakes if any, while formulating their policies and while making provisions in the Act, Statutes and Regulations.

Moreover, the traditional universities act mainly as the examining bodies with comparatively less component of research and extension personnel or labourers. The administrator in agricultural universities has to manage with teachers, research workers, extension education workers, other staff, students and labourers. All these components have diversified interests. A look at these components will show that the administration in agricultural universities has to deal with highly qualified academicians and also the labourers who are practically illiterate. Such types of diversified activities and various types of groups are rarely found in traditional universities and government offices. The administration in agricultural universities has to act as a liaison between the university and ICAR, UGC, State Government, non official members of various bodies, other officials and outside public in general. Therefore, the administration in agricultural universities is to be considered different than that of traditional universities or government offices.

Though the basic principles of administration will remain the same, in practice the actions will differ.

This paper is confined to the provisions of Model Act circulated by the ICAR, recommendations made in different conventions of the agricultural universities, and the present Act in force in Maharashtra State.

The ICAR had circulated Model Act with a view that all the states while formulating the Agricultural University Act may consider broadly the guidelines given in the Model Act of ICAR so that all the agricultural universities in the country may have uniform provisions on major points with flexibility for minor adjustments depending upon the local situations. Following aspects are considered in this article.

Board of Management

In Model Act, the list of members to be nominated on the Board of Management is given. In this the number of non official members is less. In the Seventh Convention of the Agricultural Universities it was decided that the Board of Management should be a compact one with members having an understanding of the problems of agricultural education. In the Maharashtra Agricultural Universities Act 1983 the Senate or University Court is abolished and the Board of Management consisting of as many as 20 members is provided. Fifty per cent of them are non officials. Other official members very rarely attend the meetings. Number of non official members is not much important. But it must be seen that whether they have thorough knowledge of agricultural developments in that area, the problems of the agriculturists and an understanding of the agriculture and allied businesses in that area. If such persons are nominated they may contribute to agricultural development. Otherwise, the discussions mainly rotate around administrative actions and personnel problems. To overcome this it is suggested that :

(i) The non official members to be nominated should be experts in their field. For example, nomination of progressive farmers should be from those who have won awards as Krishi Ratna, Krishi Bhushan or Shetinishta or Krishi Pandit.

(ii) The discussions in the meetings of Board of Management should be policy-oriented rather than person-oriented.

(iii) If the resolutions passed by the Board of Management are not in conformity with the provisions of the Act, Statutes and regulations, the Chairman of the Board of Management should be empowered to nullify such resolutions. Accordingly provision should be made

---

*Registrar, *Marathwada Agricultural University, Parbhani, Maharashtra.*

in the Act or to avoid confrontation between the members and the Chairman of the Board of Management provision may be made to refer the matter to Pro-Chancellor or to the Chancellor (if there is no provision of Pro-Chancellor) for further advice.

Selection Committee for Vice-Chancellor

The ICAR Model Act has suggested the constitution of selection committee to recommend the names of the persons to be appointed as Vice-Chancellor. In the Maharashtra Agricultural Universities Act 1983 the provision is not as suggested in the Model Act. In the State Act of 1983 a committee consisting of the Director General, ICAR, one member nominated by Chancellor and one non official executive council member of the university concerned to be nominated by the executive council of the concerned university has to recommend the panel for appointment as Vice-Chancellor. The member nominated by the executive council is a person having close contacts with the local officials and non officials. The local persons have easy access to such a member. The personal likings and dislikings of the member may appear in recommendations rather than merit. It is therefore, suggested that :

(i) Standing Committee of Director General ICAR, Chairman, UGC, and the Chief Secretary of the concerned State Government may be constituted for this purpose.

(ii) A list of eminent persons who are highly respected as administrators, educationists and scientists may be prepared at the level of UGC/ICAR on the basis of certain prescribed norms. This list can be updated every three years. The list may be circulated to all the State Governments and Chancellors. On the occurrence of a vacancy, the Chancellor may appoint any person as Vice-Chancellor from the list on recommendation of the committee proposed above.

Appointments of Registrar and Comptroller

As per the provisions of the Maharashtra Agricultural Universities Act 1983, the Registrar and Comptroller are to be appointed by the State Government on deputation. Such appointments on deputation can be appreciated for a specific period at any crucial moment. However, this arrangement has become a permanent feature in view of the provisions of the Act.

It is generally observed that the persons coming on deputation are from different fields, mostly from the Revenue Department. The administration done by these people in their department varies at many places with the administration in the universities. These persons have less knowledge of the educational system prevailing in the university. Also in their service career they are not much involved in management of students, labourers and academicians. They are normally on deputation for a period of 2 years or maximum upto 4 years. Because of such short period, they may think themselves as foreigners and may not have much association and feelings about the institution. A situation may arise when the Vice-Chancellor and Registrar may differ and both of them trying to act differently create disharmony. It is therefore, proposed that :

(i) The Registrar and Comptroller may be appointed by the University. In Maharashtra the Act provides State Council and the Council is empowered to select the persons in the cadre of professors and above. The selection of Registrar and Comptroller can also be made by the State Council.

(ii) The Registrar and Comptroller may be liable for transfer from one agricultural university to another within the State.

(iii) If the Registrar or Comptroller is found to be inefficient or it is observed that there are little chances of his improvement, he may be shifted to some other post suitable to his qualifications and/or experience or he may be removed from service by following usual procedure.

Powers of Registrar

In the Maharashtra Agricultural Universities Act the Registrar does not enjoy any administrative power. The principal executive is the Vice-Chancellor and the Registrar has to act on approval and orders of the Vice-Chancellor. For any and every matter the Registrar is accountable but he is without any administrative powers. This has weakened the position of the Registrar. Unless some powers are delegated to him in the Act, he may not be in a position to exercise the command. Therefore, it is proposed that the Registrar may be provided with some administrative powers so that he can act and control the staff effectively.

(Continued on page 26)

A Dangerous Illusion

"As the size of the modern sector is so large in absolute terms, the growing prosperity of that sector may give it the sensation of extra ordinary growth and expansion for the nation as a whole which would be a dangerous sort of illusion", observed Shri K.R.Narayanan, Minister of State for Science & Technology, Atomic Energy, Space, Electronics & Ocean Development, Government of India. Shri Narayanan was delivering the Convocation Address at the Eighth Convocation of the Anna University, Madras. He cautioned, "If the modern sector is not to become a vulnerable bastion beleaguered by the majority of the ignorant and the deprived in the country it is necessary for it to involve itself in the advancement of the people and integrate its destiny with that of the educationally and economically deprived". Excerpts

Convocation

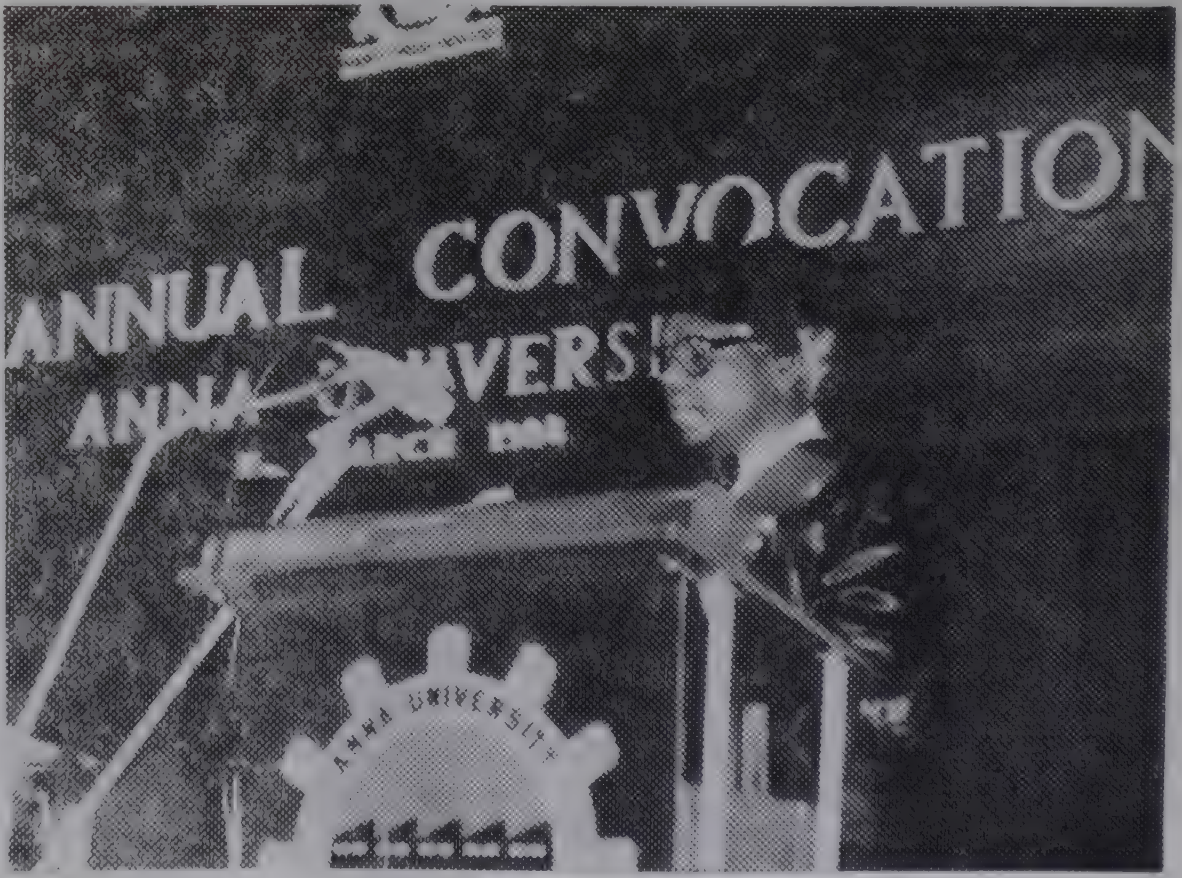
Science, Jawaharlal Nehru once said, has destroyed many a god, but has itself assumed the pose of a god. It is gradually unravelling the mystery of things, the nature of the world in which we live, the nature of the atom and the gene on the one hand and on the other, the interacting forces or as the poet and the philosopher would put it "the laws that leap the sky", regulating the universe. Science is at once understanding nature and changing it. Shakespeare talked of "the art" "which does mend nature—change it rather", adding, "but the art itself is nature". One can say the same of science. It is mending and changing nature, creating a second nature of new materials, products and processes in fundamental and spectacular ways. But the science itself is nature, for in the final analysis, nothing is made out of nothing; things are only mended, changed, transformed in so many myriad ways and in whatever fantastic forms. This is particularly so in the new world of science where the distinction between physics, chemistry and biology— indeed even the distinction between mind and matter—has been almost abolished. My Professor of Logic and Scientific Method, Prof. Karl Popper, used to define mind and matter in the following way: "Mind—No matter; Matter—Never mind".

In India the scientific pursuit originated in philosophical questionings and metaphysical speculations. This is the background for the assertion in the Scientific Policy Resolution of 1958 that "It is an inherent obligation of a great country like India with its traditions of scholarship and original thinking and its great cultural heritage to participate fully in the march of science, which is probably mankind's greatest enterprise today." The Resolution also declared the aim of the Government's scientific policy as "to secure for the people of the country all the benefits that can accrue from the acquisition and application of the scientific method." At the same time it had emphasized, with wisdom and foresight, that "technology can only grow out of the study of science and its applications".

It is necessary to have this twin approach both for fundamental and practical reasons. The gap between pure science and its applications in technology has been narrowing very rapidly, and also the highest technologies, the so-called frontier technologies are today having direct applications in tackling the common problems of the common people. One may recall that Michael Faraday on his discovery of the phenomenon of electromagnetic induction was demonstrating the induction of electric current before a group of distinguished British citizens when a Member of Parliament asked him : "What was the use of this phenomenon ?" Faraday replied : "Some day you will be able to tax the applications of electromagnetic induction." Since those days the gap between a scientific discovery and its utilisation has reduced drastically not only in raising revenue for the Government but in providing enormous profits for private enterprise. Besides, the interplay between science and technology has become more intimate, science giving rise to technology and technology generating science.

In India we are pursuing today with intensified and coordinated efforts the pursuit of both basic sciences and applied sciences and technologies. The vast infrastructure and manpower that we have built up over the last forty years enable us to make important breakthrough in theoretical sciences and in applications, not only in the modern sector of industry but in agriculture, in rural development and in education. heath and other social services. I have a sensation that Indian science and technology has today reached the stage of criticality when with larger R & D funding, more autonomy and freedom, greater incentives to young scientists, and more disciplined coordinated efforts, it can produce results that are significant in scientific terms and palpable and visible to the people in a practical sense. It is in this perspective that we have embarked upon basic projects like research and development in superconductivity, parallel processing and supercomputers, medium range weather forecasting, and far reaching programmes in biotechnology, while continuing our very successful adventure in nuclear, space, and ocean sciences and technologies. It is also in this perspective that we have undertaken a series of Technology Missions involving some of the high technologies impinging upon the basic needs of the people like drinking water, literacy, communications, immunisation and edible oils, and capable of transforming the conditions and the quality of life of millions of our people in the rual areas.

Education, in my opinion, is the key to the success of these immense undertakings in science and technology and in national development. I am referring not only to higher education but to general and elementary education. We have today in India, even with our low rate of literacy, about 250 to 300 million people who are literate which is the size of the populations of the super-powers, and perhaps 80 to 100 million who may be said to belong to the so-called modern sector of the economy, which is the population size of the bigger developed countries of the world. Such magnitudes of educated people can no doubt make an impact not only on our own vast country but on the world. But how much greater would have been this impact if this vanguard in our society had a literate nation behind it! Moreover, would it be possible for the educated and the elite sector in India, however large it may be, to continue to flourish indefinitely if the majority of nearly 450 million people are deprived of the blessings of literacy. It is possible to argue, indeed it is correct to do so, that literacy, and for that matter, even education is not culture or wisdom or knowledge, but it must be recognized that without it there cannot be any progress, certainly any scientific-technological progress for any country. As the size of the modern sector is so large in absolute terms, the growing prosperity of that sector may give it the sensation of extraordinary growth and expansion for the nation as a whole which would be a dangerous sort of illusion. If the modern sector is not to become a vulnerable bastion beleaguered by the majority of the ignorant and the deprived in the country it is necessary for it to involve itself in the advancement of the people and integrate its destiny with that of the educationally and economically deprived. One cannot talk meaningfully of advances in science and technology, of bringing its fruits to the people, of creating the awareness of science and spreading the temper of science among the people unless we can educate the people at least to the level of literacy. This is the rationale of the emphasis on elementary education and adult education in the New Policy on Education formulated by the Government of India. In this context it is important for us to recall that the Education Code of Japan introduced as early as 1872 had adopted the policy that, "There shall in future be no community with an illiterate family, nor a family with an illiterate person", and that in the post-war period Japan had taken a decision that educational planning would form the main aspect of economic planning. There could be no better model for us to follow in this field.



Shri K.R. Narayanan delivering the convocation address

I may add here that what is important is not just education but the kind of education that we are going to impart to our people. It has been recognized that our educational system has not been planned purposively from the point of view of social and economic objectives. The system of education has acted as a cause of alienation between the educated and the masses resulting in the current phenomenon of internal and external brain-drain. In spite of Mahatma Gandhi we have neglected the need for linking studies in schools and colleges with social reality, physical labour, and craft and industrial training as an integral part of general education. What we have been doing is to educate a person in a manner that would alienate him from his social and economic environment and then at the end try unsuccessfully to reorient his outlook or to provide inducements to him to work in rural areas or in areas of social priority.

In regard to science education, before the students come to centres of excellence like the Anna University it is essential that they should be introduced to computer and other technological devices very gradually, but on a wide scale from the school stage onwards. CLASS and the audio-visual programmes being implemented under the New Policy on Education are intended to achieve this objective. In an undeveloped rural society like that of ours infinite patience and subtle capbilities are required on the part of the teacher for the dissemination of basic scientific knowledge and famliarity with technological devices among rural boys and girls. Even in North America some surveys conducted show that in elementary schools the majority of microcomputers stand idle. and in secondary schools only 15 per cent of teachers use computers with any regularity in spite of the computer revolution that is taking place in education. I have no doubt that in future the computer will play an important role in education in India and it is necessary that we begin this process right now introducing students to this new aid to learning and training teachers in the use of it. As regards the popularisation of science among the people apart from the work being done at the governmental and voluntary organisations' levels we could usefully think of introducing a system of scientific extension work as part of the implementation of rural development which all have one or other aspect of science and technology involed in them. Colleges, universities and laboratories can play a useful role in such extension work in their own geographical surroundings. Such work is essential for generating in the rural population a minimum of capacity to benefit from these programmes. Without such widespread popularisation, science and technology might become yet another factor in the gap between the well-to-do and the educated, and the poor and the illiterate in our society.

As I said earlier India has made great strides in the advancement of science and technology, thanks to the vision and foresight of our political leadership, the high calibre and organisising capability of our top scientists, and the availability of a large pool of promising young scientists in the country. We have achieved world standards in the quality of research in our best universities, institutes and laboratories. But we have yet to raise the general standard of our research and to realize the fullness of our potentialities, especially in integrarting closely the activities of the university, the laboratory, the industry and the Government. In particular, the university must be made to emerge as the central focus of scientific research by the proper education and training of youth, laying more emphasis on fundamentals without neglecting current and future applications, evolving a problem-solving approach keeping in mind the interdisciplinary nature of science and the merging of the boundaries of scientific-technological pursuits including the boundaries of social sciences, and utilizing facilities of new educational technologies such as audio-visual aids, computers, etc.

I may emphasize here that, in the ultimate analysis, it is not enough that we make marvellous scientific discoveries and inventions and understand about their applications for the benefit of mankind. Einstein once said : "Concern for man himself and his fate must always from the chief interest of all technical endeavours, concern for the great unsolved problems of the organization of labour and the distribution of goods—in order that the creations of our minds shall be a blessing and not a curse to mankind." With this concern for man in mind, Einstein once wished, "May the new theorems of mathematics never find applications." As you go home with the bright prizes of your degrees in hand, you must reflect on the question of applications but perhaps on the priorities of research, including the expenditure of vast amounts on projects which logically and inevitably, will end up as a curse for mankind. You must also reflect upon whether the scientist as a responsible citizen of the world not insist upon working on projects and programmes which cry out for funds and priority attention and which will be a blessing for mankind. □

Implementation & Monitoring of National Policy on Education

The Association of Indian Universities (AIU) at its Annual Meeting held at Osmania University, Hyderabad organised a two-day National Conference on 'Role of Universities in Implementation of New Education Policy' on 18-19 December, 1987. The conference deliberated on several issues like Education in Human Values, Human Resource Development, Teacher Training, Restructuring of Courses, Research & Extension, Autonomous Colleges and Departments, Evaluation and Accreditation of Institutions, State Councils for Higher Education, Consolidation and Expansion of Institutions, Distance Teaching/Learning, Rural Universities, Youth Services, Sports & Physical Fitness Programme, and Women Education.

Department of Education, Ministry of Human Resource Development, has now approached the AIU for organising four 3-day seminars on Implementation of New Policy on Education (NEP) with emphasis on monitoring and continuous evaluation of the progress of implementation. The first Seminar was held at IIT, New Delhi on April 14-16, 1988.

Welcoming the participants to the Seminar, Dr. N. M. Swani, Director, IIT and Vice-President AIU, gave an overview of all the four seminars including those proposed to be organised at Imphal, Pune, and Bangalore. He reiterated the fact that one of the important specific objectives of the seminar, in addition to taking stock of status of implementation, is to devise ways and means, methods and procedures to monitor the process of implementation. He suggested that the participants must bring to the seminar individual experience of their universities in implementing whatever they have done, including the constraints they faced and the steps they undertook to overcome them. Briefing the participants with the schedule of work, Prof. S. K. Agrawala, Secretary, AIU drew their attention to the important task of identifying parameters and machinery for monitoring implementation of the areas of NEP under consideration in the seminar. He said that the Hyderabad seminar could make only general recommendations and therefore the report of the Hyderabad seminar may serve only as a guideline. Dr. Satya Bhushan, Director, National Institute of Educational Planning and Administration (NIEPA) inaugurating the seminar brought out clearly the need to evolve a code of conduct for all those involved in the implementation of the NEP. He suggested certain imperatives like effective utilisation and management of resources to reduce wastages. He made particular reference to certain case studies that were done comparing top down and bottom up strategies of policies that are usually 'long on description' but short on prescription', revealing that

(1) Change or process of change is linked up with ethos of delivery point;

(2) Changes cannot be always brought about by bureaucrats but by involving other actors of change; and

(3) Internal reforms are very much necessary alongwith external forces to make the system more responsive. He reiterated that every step for implementation must build in a process of democratic culture as well participative dimension.

Critically viewing simple collection of statistics, he said, a target oriented approach for both monitoring and evaluating progress of implementation is very much necessary.

Presiding over the first session on 'Role of Higher & Technical Education in Human Resource Development' Prof. Moonis Raza,

Prof. Moonis Raza, VC, Delhi University, addressing the first session of the Seminar

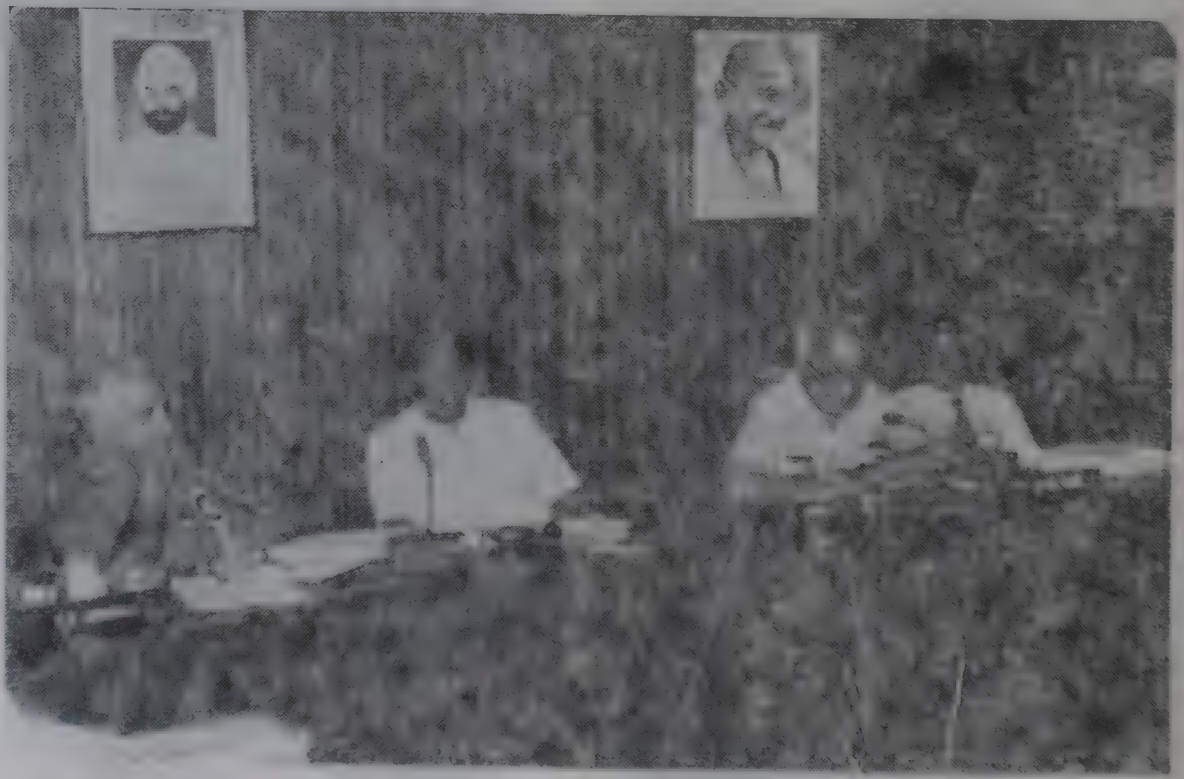
Vice-Chancellor, University of Delhi, drew the attention to working hours, work leisure concept, performance reflected by level of technology and quality of education, and the kind of import substitution in intellectual area of development of human resource. He said higher education performs the mother role to all sectors of education and, quoting figures like 'for every one student in agriculture there are 16 liberal arts students' and 3 to 5 technology and medicine students, the imbalance brought out between manpower requirements and the outputs of the education system. Mr. Anand Sarup, Chairman, NBT and former Education Secretary and one of the architects of the NEP, in his keynote address, traced the historical background of the NEP and suggested networking as one of the basic necessities of implementation of the NEP, in addition to the removal of all kinds of constraints enumerated in the Challenge of Education document. He forcefully recommended that the agency for implementation must also be the agency for monitoring the progress of implementation. He appealed to the participants to constitute themselves into small committees to deliberate on issues like what has been implemented so far, which of them have been successful, which of them have been failures, which of them could be implemented without any financial assistance from other sources, which of them could be implemented only when the environment changes and lastly, how to monitor and evaluate the progress of implementation.

A lively discussion followed in which attention was drawn to the proposal to establish many institutions for implementation, lack of resources, phasing of programmes, centre-state relationship in implementation etc.

Distance Teaching/Learning was the subject of discussion in Session II and Dr. G. Ram Reddy, Vice-Chancellor, Indira Gandhi National Open University & former President AIU, in his keynote presentation, outlined the three aspects of distance education which the National Education Policy incorporated as a concept namely, Correspondence Courses that are run by Directorates of Correspondence education of various universities, Indira Gandhi National Open University, and coordination and maintenance of standards in distance education. He felt that some correspondence courses still suffered from being stamped second class system, lack of autonomy to plan and implement courses and using only print material and suggested that in order to improve standards of these correspondence courses, they must be helped with training for preparation of resource material (lesson audio-visual etc), provision of well-equipped study centres and overall improvement of study materials. He was of the view that the State Open Universities, when they are established must be persuaded not to duplicate courses and materials already developed by the National Open University and to the extent possible make use of those materials, if necessary, translated into regional languages. He drew attention to the fact that UGC is responsible for maintenance of standards of correspondence courses in universities and the National Open University for standards in State Open Universities. In this context it becomes all the more necessary that norms and standards are laid for distance education in general.

In the discussion that followed, several points were raised including the need to improve existing correspondence courses, facilities at the study centres, preparation of instructional material in Hindi and regional languages, improving delivery system, starting not only degree programmes but continuing education programmes as well.

Dr. S.K. Khanna, Secretary, UGC delivering a keynote address on 'Consolidation & Expansion of Institutions' brought to the notice of participants various programmes and activities of the UGC in the matter of consolidation of Institutions, deciding on developmental grants,



Prof. G. Ram Reddy, VC, IGNOU, speaking at the second session programmes of consolidation for universities and affiliated colleges, deviating from the procedure of sending visiting teams to the universities, adopting direct discussions with Vice-Chancellors and their teams Also, he made it clear that guidelines giving norms for establishing new colleges and departments have been circulated to all colleges and also assistance provided in new thrust areas identified by NEP. Prof Sampath, in his keynote address on the topic, particularly in technical education, called for academic freedom, flexibility in conformence to prescribed rules and regulations, speed in implementing innovative measures in education and training programmes, encouraging merit in admission and selection, special care for under privileged, meaningful research programmes, fitting into the framework of evolving science and technology plan at the national level. In technical education, he said, primary emphasis should be on linkages of academic institutions with R & D units, industrial consultancy, technology transfer, net-working and the like. He called for immediate attention to identifying and rewarding good teachers and provide incentives to those who take and do teaching seriously, even though leisure time activity of research should also be taken as a criterion. The problems of obsolescence, provisions of new equipment and infrastructure, maintaining and utilizing existing facilities are areas of important concern in the NEP and attention should be paid to implement various programmes in technical education.

Discussion followed in which participants came to a consensus that no new college or university should be established unless it satisfies the norms laid down and approved both by State Government and the UGC.

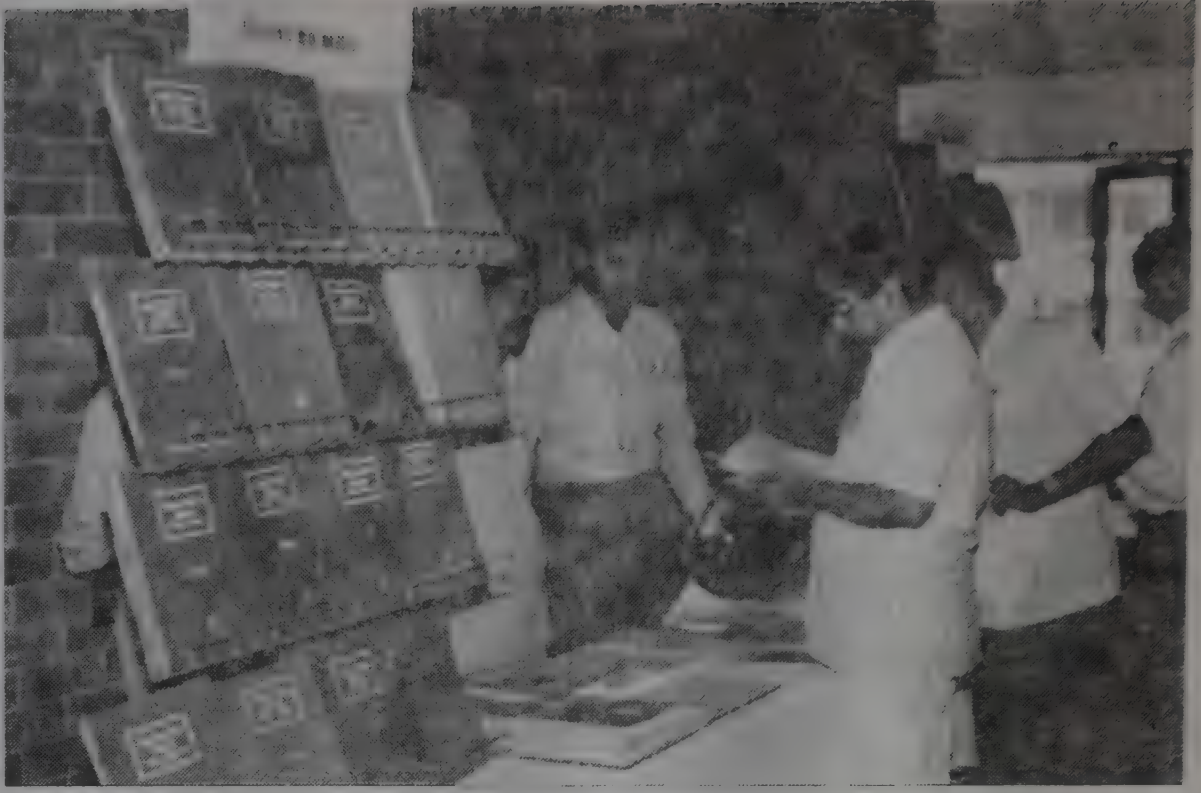
A view of the participants

Introducing the theme of Academic Staff Colleges, Prof. C.J. Daswani traced the background of Academic Staff Colleges concept in the attempt of UGC to translate the policy perspective of providing training to new entrant teachers. The document accepted and circulated by UGC discussed in detail the need for such training programmes, the content and scope of short term orientation courses and the extent of coverage of teacher population under these programmes. He brought it to the attention of the participants the 'Poona Model' of 8-weeks of training in summer, winter and the subsequent summer vacations, the modular concept of training, lead lecture, peer group discussion and assignments in various areas of training, incentives provided to teachers and the motivation shown by them. After detailed discussion of the topic, the consensus was that something close to Poona medel must be tried in various Academic Staff Colleges in addition to their own ways of organising similar training programmes. There was also unanimity that since the programme is new, every effort must be made to work out uniform norms for standards in these courses, in provision of infrastructure and in monitoring the progress of work in these colleges.

Dr. Sneh Bhargava, Director, AIIMS, in her presidential remarks before the session on "Youth Services, Sports & Physical Fitness Programmes' dealt with the importance of physical fitness and suggested that universities should pay a lot more attention to it than they did in the past, sice the Education Policy lays not only emphasis on physical fitness and sports but has made a provision of substantial financial resources. Mr A.K. Pandya, Director General, Sports Authority of India (SAI), talked of various programmes of sports activities including scouting of talent below 12, offer of incentives to 200 and odd potential sports talented boys and girls with free education and boarding and lodging, the provision of coaches by SAI for various tournaments and above all, placing the infrastructure of stadia and other facilities in cities and towns for use by educational institutions and the like. Mr G.S. Sivia, Deputy Secretary (Sports) AIU, in his address dealt with sports in society and the place of sports in Higher Education. He dealt with various programmes of AIU in the matter of inter-university tournaments, organising inter-university athletic and sports meet, and promoting consciousness of sports in colleges and universities. Discussion followed in which it was made more clear that several programmes have been inadequately implemented and the seminar called for better implementation in the remaining period of the 7th Plan.

Participants at the seminar were exposed to an exhibition of AIU publications and also a computer demonstration of desk top publishing system (Abacus) and software packages of pre and post examination processing (Binary Semantics).

In the concluding plenary session, reports from various committees one in ecah of these areas, to go indepth on issues like what could be implemented without financial assistance, what has been implemented/not been implemented, what could be implemented with financial inputs and environmental changes and what mechanisms can be adopted to monitor, were presented and adopted. □



AIU Book Exhibition

INDIAN INSTITUTE OF SCIENCE

BANGALORE-560 012

The Institute is looking for brilliant and highly motivated young scientists (Indian Nationals) for **FACULTY POSITION** with a Ph.D. Degree and atleast 5 years of Post-doctoral experience in frontier areas in any one of the following or related areas in the Department of Organic Chemistry and to carry out research and teaching in (i) **Organic Synthesis;** (ii) **Reaction Mechanisms;** (iii) **Bio-organic Chemistry;** (iv) **Structural Organic Chemistry;** (v) **Organic Spectroscopy**. The applicants should have a record of original publications to their credit and be capable of carrying out independent research work. Desirably, the candidate should have the flexibility and capability to participate in collaborative research with other faculty of the department. Experience is relaxable in exceptional cases.

Prescribed application forms can be obtained on request from the Registrar accompanied by a crossed I.P.O. for Rs. 5/-(free of cost to SC/ST on production of Caste Certificate from a competent authority) drawn in favour of the Registrar, Indian Institute of Science alongwith a self-addressed stamped (Rs. 5-40) envelope of the size 28×18 cms. Completed application form has to reach him within six weeks from the date of publication.

R(IA) 308-9/88 **REGISTRAR**

National Commission on Libraries

A committee set up under the chairmanship of Mr. D.P. Chattopadhyaya to formulate an action plan on the national policy on libraries and information systems has recommended the setting up of a national commission on libraries for generating a library movement in the country, with emphasis on literacy and presentation of the cultural heritage as envisaged in the new education policy.

In its report submitted recently to Shri P.V. Narasimha Rao, Union Minister for Human Resource Development, it has said that the main thrust should be on rural public library development and a community centre library should serve as a community's information centre resources from agencies engaged in fields such as public health, adult education, local self-government and cottage industries should be mobilised to build up this centre.

The committee said this kind of rural library/information centres be made available under the minimum needs programme by 2000 A.D. The Ministry of Rural Development and Department of Culture should undertake a plan for building up one community centre with library facilities in every panchayat under the eighth plan. Every public library should have a children's section. A minimum of 20 per cent of the public library collections should be meant for children.

The other major recommendations are : All public libraries and community centres should have audio-visual materials and equipment to meet the needs, especially for the benefit of neo-literates, community centre libraries should have an important role in adult education programme, a national authority of adult education, a national institute of adult education, should be set up, and voluntary agencies should be associated with the state public library development programme and the national commission for libraries, and the publications of Indira Gandhi National Open University should be available in all local public libraries.

All the States and Union territories should have a public library Act in some form or the other. The Central government, in collaboration with state governments, may establish at least one multilingual (all Indian language publications) library in each state

BIT Develops Rocket Fuels

The Union Government is understood to have sanctioned special projects in rocketry, space engineering and pharmaceutical science for the Birla Institute of Technology (BIT) at Mesra Ranchi. The Institute, it is believed, has successfully developed several rocket fuels for solid propellant rockets and has set up a research facility in hybrid and liquid propellant technology.

Several projects have been undertaken for the Ministry of Defence, the Atomic Energy Commission, the ICAR and the new R and D schemes. Flamo R propagation and stability unit has been installed to study the combustion behaviours, flamability limits and flame propagation velocity of gaseous fuels.

The Institute also proposes to start a course in plasma engineering science at the postgraduate level and a basic plasma laboratory has been set up. Proposals for starting postgraduate courses in environmental engineering as well as remote sensing have also been finalised and submitted to the concerned authorities for approval.

Examination Reforms

The Examination Reform Unit of the South Gujarat University concentrated on modifying/developing the question banks in the subjects of Mathematics, Gujarati, Home-Science, Accountancy, Biology, Political Science, Economics, Microbiology, English, Hindi, Sanskrit, etc. during the year 1987-1988. It also made an attempt to develop the question bank in the subject of Electronics—F.Y.B.Sc. level.

The Unit organized a three-day workshop on orienting teachers on various concepts of Examination Reforms at Vanraj Arts & Commerce College, Dharampur. The emphasis in this workshop was on orienting the teachers to basic concepts of examination and evaluation and also on sharpening the evaluation tools; question/s and question papers. The teachers were oriented to basic concepts like Examination and Educational Evaluation, Taxonomy of Educational Objectives, Writing of objectives of teaching a particular subject, Characteristics of a good measuring Instrument and Techniques of framing various types of items such as Multiple Choice and Matching type, etc. They were also given the practical training of framing various types of items and writing of objectives.

A one-day seminar on 'Curbing Malpractices at the Examination' at two centres located in interior areas was also organised. Students, Teachers, Invigilators and all those who perform duties at the time of examination participated in these seminars. Why students resort to malpractices was the main thrust for discussion. Irregularities in academic terms and teaching, inadequate coverage of prescribed syllabus, non-availability of prescribed textbooks, etc. motivated students to indulge in malpractices.

The students also emphasized urgent need to change the present examination system and suggested an Open Book examination system. They also emphasized compulsory supervision by teachers and preferred centralised assessment alongwith dummy numbers. With regard to punishment, they said publicity be given to the rules regarding punishment and all those who are connected with malpractices should be punished.

100th Study Centre

With the establishment of 100th Study Centre of Indira Gandhi National Open University (IGNOU), 95% of the States including Union Territories of the country have been covered.

The work of these Study Centres is coordinated by the eight Regional Centres at Delhi, Bhopal, Lucknow, Bhubaneshwar, Hyderabad, Bangalore, Ahmedabad and Kota to assist its 25000 students.

While Regional Centres are manned by full time IGNOU staff, the Study Centres are managed by part time coordinators with the help of part time staff. For counselling purposes, expert/experienced teachers are appointed as academic counsellors at Study Centres. The student admitted to any of the courses of the University is allotted to the Study Centre nearest to his residence. Therefore, a student attends counselling sessions as per course requirements as well as gives exams as per his convenience. Each Study Centre is equipped with two colour TVs/VCRs, tape recorders, course materials alongwith audio and video cassettes of the courses run by the National Open University. Even the assignments of the students are assessed at the Study Centres by the counsellors and monitored by Regional Directors. As the Study Centre is managed by part time staff, orientation programmes are organised frequently. Students are bound to benefit maximum from such steps taken by IGNOU, as there is also a regular communication between Headquarters at New Delhi, Regional Offices and Study Centres all over the country to sort out problems of students.

Hindi Courses from July

The next session of the certificate course and diploma course in Hindi conducted by the Central Hindi Directorate of Human Resource Development Ministry will commence from July.

These courses will be of one-year duration each and will be taught through the medium of Malayalam, Tamil and English. Relevant lessons for these courses and response sheets will be supplied to the students on a monthly basis, for which a nominal fee of Rs 30 has been fixed.

Supplementary books and related literature would also be periodically supplied to the students. In addition, the students will be provided the facility of personal contact programme at important centres. The last date of submission of applications for the courses is May 31.

Training Social Workers on Behaviour Modification

The Madurai Institute of Social Work, in collaboration with the Association of Schools of Social Work in India, organised a National Institute on Training of Social Workers on Behaviour Modification from 24th March to 30th March 1988 at Madurai under the aegis of University Grants Commission (UGC).

Dr. S. Krishnaswamy, Vice-Chancellor of Madurai Kamaraj University, in his presidential address, urged Social Workers to study the behavioural pattern of individuals and plan their programmes in keeping with this pattern.

Prof. N. Anandapadmanaban, Director of Collegiate Education, Madras, who inaugurated the training programme, pointed out that in India today not only the society but even individual families were facing many problems which led to tension. There was therefore an urgent need to develop behaviour modification to overcome this tension. He also said, the Social Workers must understand the changing attitudes of people and act accordingly. He urged social workers to form into groups to work with different sections of the people, like those living in slums workers, etc.

Dr. K.K. Jacob, Principal, Udaipur School of Social Work, Udaipur and President, Association of Schools of Social Work in India, stressed the need for development of human resources.

Dr. K.V. Kaliappan, Professor, Dept. of Psychology, University of Madras, traced the historical background of the method of Behaviour Modification from 1880 till 1930.

He also pointed out that inspite of the acknowledged importance of 'Behaviour Modification' techniques in the academic circles, no degree course including medical and nursing courses had included behaviour modification in the curriculum.

Papers were presented on different aspects of Behaviour Modification and the topics discussed included, amongst others, Behavioural Social Work, Effect of tension on our body, suicidal tendency, Transcendal Meditation, Time Management, etc.

A syllabus on Behaviour Modification for the Postgraduate course in social work was framed during the week long seminar which was attended by over 35 social work teachers from all over the country.

National Law School

The Bangalore-based National Law School of India, set-up last year and the first such institution to be given university status, is likely to start its first year of academic instruction from July. The school's director, Dr. N.R. Madhava Menon, said in Delhi recently that the proposed university would have a unique organisational structure with the Chief Justice of India, judges of the Supreme Court and High Courts as well as chairman and members of the bar council as participants in the governance of the institution.

Fake Degrees

The Monopolies and Restrictive Trade Practices Commission (MRTPC) is reported to have temporarily restrained the Delhi-based Society for Advanced Studies in Medical Sciences from issuing false and fake medical degrees and diplomas. It was alleged that the institute was making false claims because it was neither a recognised one nor entitled to impart education or confer post-graduate medical certificates.

APOU Offers New Courses

The Andhra Pradesh Open University (APOU) proposes to offer six postgraduate courses, four of them of degree level, from the next academic years. The courses include M.Sc. (Maths). M. Com. M.A. (Political Science). M.A. (Public Administration), P.G. diploma in nutrition and P.G. diploma in marketing management.

Course in Condensed Matter Physics

The Pondicherry University proposes to introduce an M.Sc. course in Physics (Condensed Matter) of two years' duration with an intake of 10 students from the academic year 1988-89 in its Department of Physics.

News from Agril. Varsities

Forage & Fodder Crops Research

The Indian Grassland and Fodder Research Institute (IGFRI) is reported to have made rapid strides in evolving technologies in areas of grass and fodder crops and has also helped in combating drought. Set up at Jhansi about 25 years ago, the institute has been playing a vital role in conducting research and co-ordinating training and extension programmes in different aspects of forage production and utilisation.

According to its Director, Dr. Punjab Singh, the Institute is at present conducting research in diverse fields like forage plant improvement and utilisation, grassland improvement, plant protection, conservation and post-harvest technology and seed technology. Dr. Singh said the institute has improved varieties of forage crops which suit farming systems, intensive forage crop rotation, fodder production systems, agro-forestry and grassland production systems. It has also developed several low cost labour saving implements. The fodder conservation techniques have been standardised to conserve surplus fodder during lean periods.

Dr. Singh said the institute has also developed a variety of high yielding, nutritive and disease resistant forage crops. Besides this, the institute has developed fodder production systems providing about 175-280 tonnes of green fodder per annum for dairy farming.

Considering the vast area under rainfed conditions, the institute has undertaken work on forage components and inserted the same cropping pattern in dryland areas. The level of green forage production ranged from 20 to 35 tonnes per hectare for cowpea, 24-26 tonnes for guar and 24 to 38 per tonnes for mothbean.

Malagasy Republic Delegation Visits HAU

A high level ministerial delegation from Madagascar headed by His Excellency Mr. Remi Clement Tiandraza, Member of Supreme

Revolutionary Council and Chairman of CSR Commission on Agriculture, Livestock and Forests, visited the Haryana Agricultural University recently and lauded the work being done by the scientists, especially in the field of socio-forestry and evolving of high yielding yield varieties. The delegation visited the College of Agriculture, where they were shown the new varieties developed by the HAU scientists. The visitors evinced keen interests in the nursery of the Department of Forestry where the HAU is establishing the country's first tree germ plasm bank.

At the College of Animal Sciences, cross breeding programmes and projects on the Management and rearing of animals were shown to the visiting team.

Dr. Gillon Visits HAU

Dr. Luc Gillon, Director of the research foundation of University Louvain, Brussels (Belgium) recently visited Haryana Agricultural University to study the impact of research activities in the actual fields and to measure the degree of transfer of technologies from lab to land programme. During his one-day visit, Dr. Gillon visited the colleges of Agriculture, Animal Sciences, Veterinary Sciences of the University and saw the work being done there. He also visited the seed technology and horticultural laboratories where the senior scientists explained to Dr. Gillon the impact that lab to land programme of the university has made in various fields.

In a meeting with the Vice-Chancellor and senior scientists of the University Dr. Gillon held discussions on the research, extension as well as administrative set up of the University.

SPORTS NEWS

Universities Junior Hockey Probables

With a view to field a strong team for the coming Junior Nationals, about 100 players from 34 universities have been identified on the basis of performance in the Inter-University Hockey Tournament organised at 4 zonal centres. These probables will be invited to attend the selection trials and the selected players will be retained for the coaching camp proposed prior to participation in the Junior National Hockey Championship 1988. Only those boys who are below 19 years of age are eligible to participate in this competition which is the nursery of budding hockey players in the country.

Indian Universities Junior Hockey Team secured the runners up position in the Junior National Hockey Championship at Lucknow last year.

A Fascinating Account

Bhargava, Moti Lal. Hundred Years of Allahabad University. Ashish Publishing House, New Delhi, 1987, Pp. xiii, 376. Rs. 250.00.

Dharma Vira*

Even though the Allahabad University has been in existence for one hundred years it is strange that so far no attempt has ever been made to write its history. The Allahabad University is one of the oldest universities of our country. During the hundred years of its existence the University has played a leading role in the growth and development of University education in India. It was not long ago that the Allahabad University was rated as the best university in India along possibly with the Madras University. It has produced distinguished students who have rendered valuable service to the country in all walks of life—political, academic, civil services and law, etc. It is to the credit of Dr. Bhargava that he has now produced a history of 100 years of the Allahabad University against all possible odds. It is a pity that the University authorities and many public sector organisations who could have made Dr. Bhargava's task easier denied to him their cooperation and help. Viewed against this lack of cooperation and help the work done by Dr. Bhargava is all the more commendable.

The statistical and documentary information about the growth of the University, which at one stage covered a major part of North India, and thereafter gradually shed most of its functions as an affiliating university, with the setting up of local universities in most areas and finally being reduced to the position of a local university confined to a small area surrounding Allahabad, is a fascinating account. Also enlightening are the accounts of the pre-Independence period during which India's foreign rulers vainly endeavoured to stifle the growth of nationalistic tendencies amongst the students of the University through official interference, mainly exercised through Vice-Chancellors who were either foreign bureaucrats or appointees of the provincial government. That they did not succeed was principally due to the efforts of Sir Sunder Lal, Pandit Iqbal Narain Gurtu, Pt. Madan Mohan Malaviya, etc. all old students of the Allahabad University.

However statistical and documentary information only cannot be considered to be the full historical record of the University. History has to have much more body. A University is a body of students and academicians which besides academic occupations pulsates with the social, nationalistic and other activities of the community which as an ex-student of the Allahabad University. I am aware the University had in plenty. It is those activities and not the academic pursuits alone which helped the University in producing alumni who served the country in all walks of life with great distinction. The book alas is deficient in this respect and hence does not provide the complete history of the university. Further, the causes of the decline of this great university, besides its financial difficulties have also not brought fully into the picture. The growing and rampant indiscipline amongst the students, the fall in the role of the teachers and their recurrent strikes, political interference by M.L.As, M.Ps and Ministers all have contributed to the decline of the University. How all these have grown and what is required to be done to restore the University to its former glory would have been important parts of the history of the University. But for these deficiencies Dr. Bhargava has done an excellent job of work and deserves to be congratulated on the completion of his "Labour of Love". ☐

TO OUR READERS

Knowledgeable and perceptive as they are, our contributors must not necessarily be allowed to have the last word. It is for you, the readers, to join issues with them. Our columns are as much open to you as to our contributors. Your communications should, however, be brief and to the point.

UNIVERSITY OF HYDERABAD

CENTRAL UNIVERSITY P.O. HYDERABAD-500 134

ADMISSION ANNOUNCEMENT 1988 89

The University will hold an **Entrance Examination** from 24th June to 29th June, 1988 for admission to various programmes of study.

Schools and Programmes of Study :

1. **School of Humanities**

(i) M.A., (ii) M. Phil. and (iii) Ph.D. in English, Philosophy, Hindi, Telugu, Urdu, (iv) M.Phil. & Ph.D. in Applied Linguistics (Translation Theory & Practice), Comparative Literature.

2. **School of Social Sciences**

(i) M.A., (ii) M.Phil. and (iii) Ph D in Economics, History, Political Science, Sociology, Anthropology.

3. **School of Mathematics & Computer/Information Sciences**

(a) **Courses in Mathematics :**

(i) M.Sc., (ii) M.Phil. in Mathematics, Applied Mathematics, Statistics, (iii) Ph.D. in Mathematics.

(b) **Courses in Computer/Information Sciences :**

(i) Master of Computer Application (MCA) (6 sem), (ii) Diploma in Computer Application (DCA) (2 sem.), (iii) *B.Tech in Computer Science & Engg. (PG Course, 6 sem.) (iv) M. Tech in Computer Science/Artificial Intelligence & Robotics (3 sem.), (v) Ph.D. in Computer/Information Sciences.

**1988-89 admissions subject to clearance from Govt. of India.*

4. **School of Physics**

(i) M.Sc., (ii) M.Phil. in Physics with Material Science, Modern Optics/Laser Physics, (iii) Ph.D. in Physics.

5. **School of Chemistry**

(i) M.Sc , (ii) M.Phil in Chemistry, Chemical Education (for in-service candidates), (iii) Ph.D. in Chemistry.

6. **School of Life Sciences**

(i) M.Sc. in Life Sciences (Bio-Chemistry, Plant Sciences, Animal Sciences), (ii) M.Phil. in Bio-Chemistry, Plant Sciences, Animal Sciences, (iii) Ph.D. in Life Sciences.

7. **Sarojini Naidu School of Performing Arts, Fine Arts and Communication**

(i) M.A. in Dance, (ii) M A in Theatre Arts, (iii) M.A. in Painting, (iv) M.A. in Communication (Audio-Visual Media).

Entrance Examinations

(i) For M.A., M.Sc., M.C A , D.C.A. and B. Tech. Courses

Admissions are made on all-India basis, in order of merit taking into consideration the past academic record (25%) and performance of the candidates in the Entrance Examination (75%). These written examinations will be held from 24th June to 29th June, 1988 at **HYDERABAD, WALTAIR, DELHI, BOMBAY, CALCUTTA, MADRAS AND TRIVANDRUM.** (The University reserves the right to cancel any of these Centres if the number of eligible candidates is less than 100 from that Centre)

(ii) For M.Tech , M.Phil. and Ph.D. Programmes

The written examinations and interviews will be held only at HYDERABAD from **7th to 9th July.** Candidates attending the tests for these programmes will be eligible for reimbursement of II Class Railway fare as per rules detailed in the Prospectus 1988.

Reservation of Seats

15% and 7.5% of the seats in each course are reser-

admission is also provided. 3% of the seats in each course are reserved for physically handicapped candidates. Weightage will be given to sports persons and certain concessions to blind students as per UGC guidelines.

Eligibility

Detailed information regarding minimum qualifications and other requirements for various courses is given in the Prospectus 1988.

Candidates who have graduated under the 10+2+3 system of education are eligible to apply. Candidates who have graduated under 10+2+2 system of education are also eligible to apply only if they have successfully completed a one-year bridge course as per UGC guidelines.

Candidates whose results are awaited and also those who are due to appear for the final examination of the qualifying degree before the dates of the Entrance Examinations are also eligible. They must however submit the results of the final examination at the latest by 31st August, 1988, failing which, their provisional admission, if granted, will automatically stand cancelled.

How to Apply

Application form together with Prospectus 1988 containing detailed instructions including eligibility criteria for admission to each course/programme of study can be obtained :

(i) **In Person,** either from the Academic Section, **in the Campus at Gachi Bowli,** or from **"The Golden Threshold"** premises at Nampally Station Road, Hyderabad-500 001, against cash payment of Rs. 8/- for each set (one application and prospectus) (Rs. 2/- for each additional application form) from **20 4-1988.**

(ii) **By Post** : from the Deputy Registrar (Acad & Exams), University of Hyderabad, P.O. Central University, Hyderabad-500 134 by sending him (i) requisition, (ii) two self-addressed slips, (iii) Crossed Demand Draft drawn in favour of the Registrar, University of Hyderabad, on State Bank of India or on Andhra Bank or any nationalised Bank at Hyderabad for Rs. 10/- for a set of one application form and prospectus and Rs. 2/- for each additional application form.

Note : A separate application is required for each course. However, for the following courses one application for each set of courses (courses as mentioned below) is sufficient :

(i) M.Sc. Maths, (Applied Maths., Maths., Statistics); (ii) M.Sc. Life Sciences (Bio-Chemistry, Plant Sciences. Animal Sciences); (iii) M.C.A. and D.C.A.; (iv) M. Tech. (Computer Science, Artificial Intelligence and Robotics); (v) M. Phil. Maths. (Applied Maths., Maths., Statistics); (vi) M. Phil. in Physics, Modern Optics/Laser Physics; (vii) M. Phil. in Chemistry, Chemical Education; (viii) M. Phil. in Bio-Chemistry, Plant Sciences, Animal Sciences

Financial Assistance Available (FOR DETAILS REFER TO PROSPECTUS 1988)

Last date for receiving request for application by Post	10-5-1988
Last date for receiving completed applications.	20-5-1988

The University will not be responsible for any postal delay

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through inter library loan for which requisition must be made through your Librarian.

2. Rathore, Kum Kum. *Export promotion in India and the role of state trading agencies.* Rajasthan. Prof. R.N. Singh.

Administration in Indian Agricultural Universities

(Continued from page 7)

Decentralization of Powers

At present all the powers are centralized at the level of Vice-Chancellor and all and every sundry matter goes to Vice-Chancellor either for his approval, perusal or orders. The Vice-Chancellor because of his heavy work load does not find time to go into the details and therefore there is possibility of errors. Further other officers in the University who have no powers are unable to exercise control over their subordinates. The tendancy to shirk the responsibility is also increasing because of this situattion. It is, therefore, proposed that there should be decentralization of power and the staff should be held responsible for inefficiency if any, even after delegation of powers.

Training of Staff

On the lines of the faculty upgradation scheme, it is necessary that the supporting staff is also sent for training in administrative matters at different institutions. If felt necessary, the administrative staff may be sent for training abroad. Periodical trainings will help in acquiring latest knowledge in administration and the same can be efficiently used while working in the University.

Action Plan

In the beginning of the year every staff member should be given an action plan for the work which he is expected to do during the entire year. At the end, a review be taken. The annual grade increment should not be released unless the performance during the year is satisfactory. If the performance is not satisfactory, the concerned official should submit reasons which shall be considered by the concerned Director and on recommendation of the concerned Director, further actions be decided. For extra-ordinary performance, incentives may be considered.

This is not an exclusive list. However, time has come to think in making the university administration more efficient. ☐

Tata Institute of Fundamental Research

HOMI BHABHA ROAD, BOMBAY-400 005

Invites applications for admission as RESEARCH SCHOLARS for the year 1988-89

Advt. No. 12/88

The Institute offers a programme of Graduate Study in several branches of Physical, Chemical and Computer Sciences. The prime objective of this programme is to train scholars in the methodology of fundamental research. The work also enables the scholar to earn a Ph.D. degree of Bombay University. Selection for the academic year 1988-89 will be made on the basis of interviews to be held in Bombay between July 1 and July 15, 1988. The academic programme will start in the first week of August 1988.

The basic requirements for admission are exceptional talent and motivation for research. Candidates who are keen to pursue a research career and who have an outstanding academic record, need apply. Candidates should have completed Master's Degree (M.Sc., M. Tech. etc.) before joining this programme (students who have appeared for the Master's degree examination, may also apply). For Physics, candidates with Master's degree in Applied Mathematics or Astronomy may also apply. B.E.'s and B. Tech's may also apply for Computer Science and Solid State Electronics. Exceptional B.E.'s and B. Tech.'s may also be considered for other areas, if they should be interested. For Chemical Physics, candidates with Master's degree in Chemistry, Physics or Biochemistry, may apply.

Admission is highly selective and during this year only a few candidates may be admitted in each of the following areas :

THEORETICAL STUDIES	:	(Theoretical high energy physics; nuclear theory; condensed matter theory; theoretical astrophysics).
EXPERIMENTAL SPACE SCIENCES AND ASTRONOMY	:	(Cosmic rays and solar physics; x-ray and gamma ray astronomy; high energy astro-physics; optical astronomy; infrared astronomy; radio astronomy; gravitation).
EXPERIMENTAL HIGH ENERGY PHYSICS	:	(High energy cosmic rays; experimental high energy physics using underground detectors, bubble chambers and high energy accelerators abroad).
EXPERIMENTAL NUCLEAR AND ATOMIC PHYSICS	:	(Nuclear interactions, heavy-ion collisions using pelletron, nuclear spectroscoy; nuclear reactions, atomic collisions).
EXPERIMENTAL SOLID STATE PHYSICS AND SOLID STATE ELECTRONICS	:	(Magnetism; superconductivity; low temperature physics; semiconductor physics).
CHEMICAL PHYSICS	:	(Bio-inorganic chemistry; fast reactions; energy transfer; molecular biophysics; laser spectroscopy).
COMPUTER SCIENCES	:	(Speech and digital systems; computer communication; Theoretical Computer Science, Logic programming, Programming Methodology).

After completion of the programme, outstanding candidates have the possibility of absorption into the regular academic staff of the Institute.

More details about fields of study in each area will be supplied with the application form.

Financial Assistance : Research Scholars will be paid a fixed monthly honorarium of Rs. 1800/-. Based on satisfactory performance, the honorarium may be raised to Rs. 2,000/- per month subsequently. Appointments are made for a year at a time but are normally renewable annually upto 5 years, subject to evidence of satisfactory performance.

Travelling Allowances : Each candidate called for interview, will be paid 1-1/3 railway fare each way by second class (not airconditioned) and a sum of Rs. 35/- as halting allowance for the day on which he/she is interviewed.

Applications : Applications in the prescribed form which can be obtained from the Administrative Officer (Establishment) on request alongwith 23.8 x 10.8. cms. self addressed stamped (Rs. 1.40) envelope should reach the Institute not later than May 31, 1988. Requests for the application forms will be entertained only upto May 20, 1988. In the application, the candidate must clearly specify his/her **area of interest**.

National Council of Educational Research & Training

SRI AUROBINDO MARG : NEW DELHI-110 016

Advt. No. 125

Applications are invited for the following posts :

1. **Three Posts of Professors** : (1) Two in Education ; and (2) One in English. **Qualifications**: (a) An eminent scholar with published work of high quality actively engaged in research in the relevant subject. Ten years' experience of teaching and/or research. Experience of guiding research at doctorate level. OR An outstanding scholar with established reputation who has made significant contribution to knowledge. (b) Those who have put in 10 years' service in research/development/teaching in the Council of which atleast five years should be in the capacity of Reader in the area, can also apply.

2. **Nine Posts of Lecturers:** (1) Three in Chemistry (2) Two in Botany, (3) One in Agriculture and one each in (4) Zoology, (5) Sociology and (6) Psychology. **Qualifications**: (a) A Doctoral degree or research work of an equally high standard; and (b) Good academic record with atleast second class (C in the seven point scale) Master's degree in the relevant subject from an Indian University or an equivalent degree from a foreign University.

Note: (i) One post each in Botany and Agriculture are reserved for SC candidate. One post in Chemistry reserved for ST candidate. (ii) 25% of the posts of Lecturers and above are earmarked for being filled up by deputation/contract for a period of 2 to 3 years from school system in the States viz. SCERTs/SIEs, Teacher Training Institutes, Universities with Departments of Education etc. provided they filfil the prescribed qualifications. Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above. Provided further that if a candidate possessing a Doctoral degree or equivalent research work is not available or is not considered suitable, a person possessing a good academic record, (weightage being given to M. Phil or equivalent degree or research work of high quality) may be appointed provided he/she has done research work for atleast two years or has practical experience in a research laboratory/organisation on the condition that he/she will have to obtain a Doctoral Degree or give evidence of research of high standard within 8 years of his/her appointment. failing which he/she will not be able to earn future increments until he/she fulfils these requirements.

3. **Two Posts of PGT in Electronics** (Reserved for SC/ST candidates). **Qualifications**: Diploma in Eletronics Engineering from a recognised Polytechnic with three years teaching experience. Preference

ics). Experience of teaching is not essential in their case.

4. **One Post of Laboratory Technician (Psychology** (Reserved for SC) **Qualifications** : Essential : Second class Master's degree in the Psychology: Desirable: (a) Degree or Diploma in Education. (b) Experience of Maintaining Psychology Laboratory. (c) Diploma in Educational and Vocational Guidance.

Scale of Pay and Age Limit as on 1.4.1988.

1.	Professor	Rs. 4500-7300	Below 45 years
2.	Lecturer	Rs. 2200-4000	Below 35 years
3.	P.G.T.	Rs. 1640-2900	Below 40 years
4.	Lab. Technician	Rs. 1640-2900	Below 30 years

Note : (a) There is no age limit for the employees of the Council. Age concessions allowed for SC/ST candidates, displaced persons and Ex-servicemen as per Govt. of India instructions. (b) The number of vacancies in each subject is tentative and liable to change. (c) All employees of the Council can be transferred to any of the establishments of the Council, anywhere in India. (d) If a candidate is found to be of exceptional merit relaxation of qualifications, experience and age etc., may be given by the Selection Committee at its discretion. (e) The prescribed qualifications are minimum and mere possession of the same does not entitle candidates to be called for interview. When the number of applications received in response to the advertisement is large, it will not be possible or convenient for the Council to interview all these candidates. The Council may then restrict the number of candidates for interview to a reasonable limit, on the basis of qualifications and experience higher than the minimum prescribed in the advertisement.

Application forms can be obtained from the address given below by enclosing an unstamped envelope (28 cms × 12 cms) giving name of the post, serial number and advertisement number. The outer cover should be marked 'Request for Application Form. Separate application should be submitted for each post.

Those employed in Govt./Semi-Govt./Autonomous Organisations should send their applications through proper channel. They may however, if they so desire, submit advance copy of their Bio-data direct to the Council enclosing the application fee, if applicable.

Completed application form alongwith attested copies of certificates of qualifications and experience etc., and a crossed Indian Postal Order for Rs. 8/- (No fee for SC/ST candidates) in favour of Secretary. NCERT should reach him by **17th May, 1988**.

Applications/Bio-data received without prescribed fee and/or received after the closing date will not be entertained.

MINISTRY OF HUMAN RESOURCE DEVELOPMENT
(Department of Education)
JAPANESE GOVERNMENT SCHOLARSHIPS, 1989-90

Applications are invited from Indian nationals for the award of thirteen (13) research scholarships offered by the Government of Japan for Post-graduate study/research. Two scholarships are reserved for Japanese Language & Literature. The jubjects in which scholarships will be awarded are given below :

(1) Microprocessor Applications/Technology; (2) Opto-Electronics; (3) Fibre-optics; (4) Quality and Reliability Engineering (as applied to various systems like Electricity and Power, Railways Heavy Industry, Heavy Electricals, Electronics and Communications etc.); (5) Robotics; (6) Remote Sensing; (7) Laser Technology; (8) Textile Engineering/Technology. (9) Bio-technology; (10) Ship-building; (11) Biological Oceanography; (12) Pedagogy; (13) Fine Arts (Painting Sculpture, Aesthetics); and (14) Japanese Language and Literature.

DURATION : 1-1/2 to 2 years.

VALUE : Maintenance allowance of 1,76,000 Yen per month (in FY 1987), arrival allowance of 25,000 Yen, Field study allowance, Tuition and Examination fees exempted; part of the medical expenses in Japan Paid; Accommodation will be arranged.

PASSAGE COST : Tourist class air-ticket from India to Japan and back will be provided by the Japanese Government.

AGE LIMIT : Below 33 years on 1st April, 1989 (i.e. born on or after 2nd April, 1956) relaxable upto 2 years for Scheduled Caste/Scheduled Tribe candidates.

QUALIFICATION : The minimum qualification for Textile Engineering, Ship-building and Japanese Language & Literature would be a bachelor's degree in a subject or a related field. The minimum qualification in Fine Arts would be a bachelor's degree or a diploma in Fine Arts. For other subjects the minimum qualification would be a Master's degree in the subject concerned or a related field.

ESSENTIAL EXPERIENCE : Except for subjects at S. No. 13 & 14 above, after obtaining the prescribed qualifications, candidates should possess at least two consecutive years of practical research/teaching experience as on **October 1, 1988.**

NOTE : (i) Only candidate with 60% marks and above at the Graduate/Post-graduate level, according to the minimum qualifications prescribed, will be considered Where Grades are mentioned the candidate must indicate the conversion formula adopted by the University/Institution. (ii) The following papers must be attached with the application:—(a) Attested copy of the certificate certifying the date of birth. (b) Attested copy of marks sheet of the qualifying examination. (c) Attested copies of all degrees/diplomas certificates, etc. (iii) Equivalent foreign degrees will be considered. (iv) Candidates, who have already been abroad for study/research/training either on a scholarship or on their own, are eligible to apply only if they have been in India for at least three years after return from abroad. Application of candidates, who are abroad, will not be considered (v) Age and experience may be relaxed maximum upto three months at the discretion of the Selection Committee in the case of exceptionally outstanding candidates. (vi) Master's degree means M.A./M.Sc. M.Tech./M.E. but not M.Phil. or pre. Ph D. (vii) The candidate should have adequate knowledge of Geographical situation, culture and heritage of India and Japan. Candidates having knowledge of Japanese Language will be given preference. (viii) Applications in subject field other than the above will not be considered. (ix) Candidates who do not possess the requisite qualifications need not apply. (x) the application form should accompany a crossed Postal Order of Rs. 5/- (and Rs. 1.25 in case of Scheduled Caste/Scheduled Tribe and other backward classes) payable to the Secretary, Ministry of Human Resource Development, Department of Education, New Delhi. (xi) Applications which do not contain Postal Order will be considered incomplete and will not be considered. The candidate should apply for the above scholarship on a plain paper, furnishing the following details/particulars to the **Secretary, Ministry of Human Resource Development (Department of Education), External Scholarships Division, Section, ES-3, Room No. 516, B-Wing, Shastri Bhavan, New Delhi-110 001 by 15th May, 1988.**

APPLICATIONS RECEIVED LATE WILL NOT BE ENTERTAINED.

FORMAT OF APPLICATION

1. Name of the Scholarships Scheme :
2. (a) Subject (b) Sub-subject
3. Name of the candidate (in Block Letters) with full mailing address
4. Date of Birth and the State to which the candidate belongs
5. Whether a member of SC/ST or a tribal or aboriginal community. If so, give full particulars
6. Academic record starting from High School/Higher Secondary :

Name of the University/Board/Institution	Examination(s) passed	Year of Passing	Division/Class with position, if any*	Percentage of marks obtained & Position, if any.	Subject taken

*(In case no division/class is awarded and only grading is done, the conversion formula adopted may be mentioned.

7. Details of Professional/Practical Training and Research Experience, specifying the period and number of papers published, previous employment with name and date of employment, if any.

8. Nature of the present employment with date of appointment, designation and the name & address of the employers.

9. Have you been abroad ? If so, give full particulars of the country and the period. Also mention the year and month of return to India.

10. Proposed programme of study/research/training, specifying (i) the work at present engaged in : (ii) Nature and programme of study/research desired; (iii) future plans/prospects after the proposed studies/research; and (iv) how are these related to the technical or economical development of India?

11. Number and date of Crossed postal order of Rs. 5/- (Rs. 1.25 in case of SC/ST candidates etc.) attached with the form.

NOTE: Employed persons must send their application fully sponsored by the employers. However, advance applications will be considered provisionally pending sponsorship by employers.

Place : Date : (Signature of Candidate)

Reader : Rs. 1200-50-1300-60-1900 ; **Lectnrer :** Rs. 700-40-1100-50-1600. In addition to Pay, Dearness Allowance, House Rent Allowance and Compensatory Local Allowance will be paid according to the University rules. The total emoluments at the minimum of the respective pay-scale at the current rates of allowances are as follows :

Reader : Rs. 3321.75; **Lecturer :** Rs. 2254.00.

A higher starting pay may be given to persons appointed to the post of Reader in special cases. All posts carry the retirement benefits according to the existing rules of the University. **Teachers of the University are permitted to take np outside work according to the University rules.** The appointments to the posts, will be made on probation for a period of two years.

The minimum qualifications prescribed for the posts other than the posts at serial Nos. 4 and 8 are as under :

Reader : Good academic record with a doctoral degree or equivalent published work. Evidence of being actively engaged in (i) research or (ii) innovation in teaching methods or (iii) production of teaching materials.

About five years' experience of teaching and/or research provided that at least three of these years were as Lecturer or in an equivalent position. This condition may be relaxed in the case of candidates with outstanding record of teaching/research.

Lecturer : (a) A Doctor's degree or research work of an equally high standard; and

(b) Good academic record with at least second class (C in the seven-point scale) Master's degree in a relevant subject from an Indian University or an equivalent degree from a foreign University.

Having regard to the need for developing interdisciplinary programmes, the degrees in (a) and (b) above may be in relevant subjects.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, a candidate possessing a good academic record, (weightage being given to M.Phil. or equivalent degree or research work of quality) may be appointed provided he has done research work for at least two years or has practical experience in a research laboratory/organisation on the condition that he will have to obtain a Doctor's degree or give evidence of research of high standard within eight years of his appointment, failing which, he will not be able to earn future increments until he fulfils these requirements.

Lecturer in Foreign Languages (Applicable to post at serial No. 4) :

(a) A Doctor's degree or research work of an equally high standard; and

(b) Good academic record with at least second class (C in the seven-point scale) Master's degree from an Indian University or an equivalent degree from a foreign University.

Having regard to the need for developing inter-disciplinary programmes, the degrees in (a) and (b) above may be in relevant subjects.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, a candidate possessing a good academic record may be appointed provided he has done one-year post M.A. Diploma course in the teaching of Foreign Language concerned from a University on the condition that he will have to obtain a Doctor's degree or give evidence of research work of equivalent high standard within eight years of his appointment, failing which, he will not be able to earn future increments until he fulfils these requirements.

Lecturer in Education—(Applicable to post at Serial No. 8) :

(a) A Doctor's degree in Education or research work of an equally high standard; and

(b) Good academic record with at least second class (C in the seven-point scale) Master's degree in a relevant subject from an Indian University or an equivalent degree from a Foreign University;

OR

(a) A Doctor's degree in any University discipline or research work of an equally high standard; and

(b) Good academic record with an M.Phil. degree in Education (which may be acquired while in service) from an Indian University or an equivalent degree from a Foreign University.

Having regard to the need for developing inter-disciplinary programmes, one of the degrees in (a) and (b) above may be in relevant subjects, the other being in Education.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, a candidate possessing a good academic record (weightage being given to M.Phil. or equivalent degree or research work of quality) may be appointed provided he has done research work for at least two years or has practical experience in research laboratory/organisation on the condition that he will have to obtain a Doctor's degree or give evidence of research work of equivalent high standard within eight years of his appointment, failing which, he will not be able to earn future increments until he fulfils these requirements.

The additional qualifications prescribed for the posts are as under :

1. **Lecturer (Economics) :** Specialisation or interest for research work of quality in Urban Economics.

2. **Reader (Applied Psychology) :** Desirable : Specialisation in either Clinical Psychology or Counselling Psychology.

3. **Lecturer (Applied Psychology) :** Essential : Specialisation in any area of Educational or Clinical Psychology including Counselling Psychology, Vocational Guidance, Developmental Psychology, Psychodiagnostics and Psychotherapy.

4. **Lecturer in German :** (Foreign Languages) : Post-graduate Diploma in the teaching of German is desirable.

5. **Reader (History) :** Specialisation/research experience in Medieval Indian History, Social and Economics/West Asia is desirable.

6. **Lecturer (History)** Specialisation in research experience in Chinese History/History of West Asia/Russian History.

7. **Lecturer (Hindi) :** Modern Literature as area of special interest will be preferred.

8. **Lecturer (Educatirn) :** Specialisation in Advanced Statistics, Experimental Psychology or Educational Technology.

9. **Lecturer (Philosophy) :** Specialisation in Phenomenology and Existentialism or symbolic logic.

10. **Lecturer (Centre of East African Studies) :** Preferably with some specialisation in African Studies with reference to any of the Spcial Science disciplines such as Economics, Political Science, History, Sociology, Geography, International Affairs and Area Studies.

Knowledge of Swahili will be an added qualification.

Explanation : (1) For determining "good academic record" the following criteria shall be adopted :

(i) A candidate holding a Ph.D. degree should possess at least a second class Master's degree; or

(ii) A candidate without a Ph.D. degree should possess a high second class Master's degree and second class in the Bachelor's degree; or

(iii) A candidate not possessing a Ph.D. degree but possessing a second class Master's degree should have obtained first class in the Bachelor's degree.

(2) Candidates having secured marks more than the mid-point of the prescribed minimum marks for passing an examination in the second class and the prescribed minimum marks for passing an examination in the first class by a University shall be deemed to have passed that examination in the high second class.

The qualification regarding experience is relaxable at the discretion of the Executive Council on the recommendation of the Selection Committee.

Nine copies of the application in the prescribed form, together with copies of certificates and the prescribed fee, should be sent in an envelope superscribed with "Application for the post of————" so as to reach the Registrar, University of Bombay (Teaching Appointments Unit), Fort, Bombay 400 032, on or before **Tuesday, 17th May, 1988**. Candidates from abroad, Andaman and Nicobar Islands and Lakshadweep may send their applications so as to reach the Registrar on or before **Tuesday, 31st May, 1988. Candidates who are already employed shall send**

their applications through proper channel. Applications received after the last date fixed for the receipt of applications will not be accepted. Incomplete applications and applications on plain paper will not be considered. Canvassing direct or indirect will be a disqualification.

Prescribed forms of application can be had, in person, free of charge from the Teaching Appointments Unit, Registrar's Office (Room No. 134), University of Bombay, Fort, Bombay 400 032. Requests for supply of a set of nine prescribed forms by post should be made sufficiently in advance with a self-addressed stamped (Rs. 3.80) envelope of the size of 27 x 12 cms.

Note : All the above posts are being advertised for the third time. Candidates possessing the minimum qualifications prescribed for the posts may also apply.

23.	Lecturer in Social and Preventive Medicine	—	1
24.	Lecturer in Rural Health Centre	—	1
25,	Lecturer in Urban Health Centre	—	1
26.	Lecturer-cum-Epidemiologist	—	1
27.	Lecturer in Medicine	—	3
28.	Lecturer in Obstetrics and Gynaecology	—	2
29,	Lecturer in Dermatology	—	1
30,	Lecturer in Radiology	—	1
31.	Lecturer in Casuality Medical Unit	—	2
32.	Medical Officer-cum-Lecturer in Blood Bank	—	1
33.	Lecturer in Orthopaedics	—	1
34.	Antenatal Medical Officer-cum-Lecturer	—	1
35.	Maternity and Child Welfare Officer-cum Lecturer		1
36.	Tutors	—	25
37.	Store Medical Officer (Tutor Grade)	—	1
38.	Out-patient Medical Officer (Tutor Grade)	—	2
39.	Blood Bank Medical Officer (Tutor Grade)	—	1
40.	Clinical Pathologist (Lecturer Grade)	—	2

QUALIFICATIONS

Professor: Applicant should have 4 years of teaching experience as Reader in a Medical College, besides the prescribed educational Qualification.

Reader: Applicant should have 5 years of teaching experience as Lecturer in a Medical College besides the prescribed educational qualification.

EDUCATIONAL QUALIFICATION

For Sl. No. 1 : M.D. (Pathology)/M.D. (Pathology & Bacteriology)/ M.D. (Pathology with Bacteriology) / Ph.D. (Pathology)/D.Sc. (Pathology)

For Sl. No. 2 : M.D. (Physiology)/ M.B.B.S with M.Sc. (Physiology)/Ph.D. (Medical Physiology) / D.Sc. (Medical Physiology)

For Sl. No. 3 : M.D. (Medicine)/ M.D. (General Medicine).

For Sl. No. 4 : M,S. (Surgery)/M.S. (General Surgery)

For Sl. No. 5 : M.D. (Obstetrics & Gynaecology)/M.S. (Obstetrics & Gynaecology)/M.D. (Mid. & Gynae.)/M.S. (Mid. & Gynae.)/M.O.

For Sl. No. 6 : M.D. (Tuberculosis)/ M.D. in Medicine with T.D.D., D.T.D. or D.T.C.D.

For Sl. No. 7 : M.S. (Orthopaedics)/ M.Ch. (Orth.)

For Sl. No. 8 : M.D. (Anaesthesiology)/M.S. (Anaesthesiology)

For Sl. No. 9 : M.D. (Psychiatry/M.D. (Psychological Medicine)/M.D. in Medicine with Diploma in Psychological Medicine.

For Sl. No. 10 : M.D. (Pharmacology)/ M.D. (Pharmacology & Therapeutics)/ M.B.B.S. with M.Sc. (Pharmacology)/ Ph.D. (Medical Pharmacology) / D.Sc. (Medical Pharmacology)

For Sl. No. 11 : M.D. (Pathology)/ M.D. (Pathology & Bacteriology)/M.D. (Pathology with Bacteriology) / Ph.D. (Pathology)/D.Sc. (Pathology)

For Sl. No. 12 : M.D. (Bacteriology)/ M.D. (Microbiology)/M.D. (Bacteriology with Pathology)/M.D. (Pathology & Bacteriology) / M.B.B.S. with M.Sc. (Medical Bacteriology)/M.Sc. For Sl. Nos. 36. 37 and 38 : M.B.B.S.

For Sl. No. 39 : M.B.B.S., Training in Blood Transfusion Technique in King Institute, Guindy.

For Sl. No. 40 : M.D. (Pathology)

Scale of Pay : Pending revision in the light of the recommendations of the University Grants Commission.

Professor : Rs. 1500-60-1800-100-2000-125/2-2500, with usual allowances.

Reader : Rs. 1200-50-1300-60-1900, with usual allowances.

Lecturer and Tutor : Rs. 700-40-1100-50-1600, with usual allowances.

Higher start will be considered keeping in view long experience, special qualifications etc.

Payment of Non-practising Allowance is admissible as per University rules.

Candidates invited for interview for the posts of Professors will be paid a single first class to and fro railway fare and for the posts of Readers a single second class to and fro railway fare.

Those who are in service should route their applications through proper channel.

Application forms can be had from the undersigned on payment of Rs. 10/- by cash/money order/postal order (Not refundable). Filled in applications (with 5 additional copies) should reach the undersigned on or before **18.5.1988.**

CORRIGENDUM

In respect of Advertisement No. PER(T)/1/88 : Please read—

Qualifications for Lecturer (Research) Under N.A.R.P. Posts :

Essential : (i) A consistently good academic record with 1st or high 2nd Class Master's degree in the relevant subject or an equivalent degree of a foreign University following a good B.Sc. (Ag.)/ B.V.Sc. & A.H. where necessary. (ii) A Doctorate Degree in the relevant subject or equivalent published works with a good record of research.

For the Post at Sl. No. 2—Lecturer in Meat Technology.

Doctorate Degree or equivalent research work is not essential.

Other terms and conditions laid down in the advertisement No. PER(T)/1/88 will remain unchanged.

REGISTRAR

TAMIL UNIVERSITY

THANJAVUR

Advt. No. 2305/88.A1.

Dated 8.4 88.

Applications in the prescribed form in quadruplicate are invited for the following temporary post.

Associate Professor in Linguistics.

Tribal Research Centre. Ooty.

Scales of Pay : Rs. 1200-50 1300-60-1900.

Last date for receipt of application is **16.5.88.**

The above post is temporary in nature and is likely to be made permanent.

Candidates who wish to apply for the above post may get the required application forms etc. by sending a written requisition with clear postal address accompanied by Bank Draft to the value of Rs. 25/- (Rupees Twenty five only) (Rs. 15/- for Scheduled Caste and Scheduled Tribe Candidates) drawn in favour of the **Finance Officer, Tamil University, Thanjavur-613 001** payable at Thanjavur.

All requisitions, however should be addressed to the Registrar, Tamil University, Thanjavur-613 001 accompanied by a self-addressed cover bearing postage stamps to the value of Rs. 2.60. The cost of the application blanks will not be refunded under any circumstances.

First Convocation of the Thapar Institute of Engineering & Technology (TIET), Patiala. From Left to Right : Dr. N.C. Nigam, Director, Mr. L.M. Thapar, President, Dr. Raja Ramanna, Chairman, Governing Council, IISc, Bangalore and Mr. I.P. Anand, Chairman, Board of Governors, TIET.

United States Educational Foundation in India

"Fulbright House", 12 Hailey Road, New Delhi 110001

Applications are invited for the following scholarships/fellowships for the 1988-89 academic year :

1. U.S. Government post-doctoral fellowships for independent research (duration 4-6 months). Scholars permanently employed in colleges, universities and research institutions, with Ph.D. or equivalent published work, below 45 years of age are eligible for fellowships. Available fields : American Studies, Educational Technology, Economics (Economics of Education, Economics of Health), Public Law, Public Administration, Public Policy, Sociology relating to Development, Women's Studies, Environmental Sciences, Information Technology and Communication.

Last Date : July 15, 1988

2. Readers and Professors and faculty of equivalent rank in research institutions, below the age of 55 years and permanently employed, with Ph.D. or equivalent published work, may apply for short-term (3 months) fellowships. Fields : (i) American Studies, (ii) Educational Management (Vocational Education, Curriculum Development, Economics of Education), and (iii) Educational Testing and Psychological Measurement.

Last Date : July 15, 1988

3. Hubert H. Humphrey Fellowships for academic study and practical training for nine months, for managers and administrators at decision making levels in the fields of Agriculture, Planning, Resource Management, Public Health and Public Administration, preferably first class both at bachelors and masters level with a minimum of five years professional experience. Age below 35.

Last Date : June 15, 1988

4. U.S Government post-doctoral Travel-Only grants—beginning **September '88 or later** for those who (i) have a teaching/research appointment in a U.S. university for a minimum period of three months or (ii) have faculty assignments under inter-institutional collaboration for a visit of 1-3 months or (iii) have invitation for a professional visit of 2-3 months with assured financial support.

Last Date : May 15, 1988

5. East-West Centre, Hawaii, pre-doctoral scholarships. Permanently employed persons (preferably below 35), with two years of experience in the field of specialization with 55% marks in B.A. and 60% in M.A. are eligible. Available fields : Agricultural and Resource Economics; Agronomy and Soil Science; American Studies; Anthropology; Biostatistics/Epidemiology; Botanical Sciences; Business Administration; Chemistry; Communication and Information Sciences; Drama and Theatre; Economics; Educational Psychology; Electrical Engineering; Entomology; Geography; Geology and Geophysics; History; Horticulture; Linguistics; Mechanical Engineering; Meteorology; Microbiology; Ocean Engineering; Oceanography; Philosophy; Political Science; Psychology; Public Health; Sociology; Zoology.

Last Date : June 14, 1988

6. Internships in Communication Technology for a non-degree program up to six months. Persons employed in Television (software and production) and other media practitioners below 40 years of age are eligible.

Last Date : August 5, 1988

Only persons holding permanent positions are eligible to apply. For details and preliminary application forms, please write to the relevant office of USEFI, giving details of age, class and percentage of marks of all university examinations taken and present position, with a stamped (Rs. 2.00) self-addressed envelope, size 23 cms. x 10 cms.

Basic Sciences in Agricultural Universities

R. C. Paul*

Agricultural practices have become vastly complex over the last few decades. This becomes obvious even to a casual observer watching agricultural operations of today and comparing them with those prevaletn before independence. The use of improved seeds, adequate dosages of fertilizers, pesticides, insecticides, fungicides and weedicides besides an assured supply of water, use of harvesting machinery etc., are features of present day agriculture, absent in the traditional agriculture of the past. This revolution in agriculture has necessitated a critical look at the education of agricultural scientists.

Agricultural universities were started about three decades ago. Their curriculum initially included instruction in the traditional agriculture, i.e. agronomy, plant breeding, soil science and farm economics etc. Little emphasis was placed on basic sciences and either these subjects were omitted from the undergraduate curriculum or were given only peripheral consideration. Consequently in the beginning the faculty of agricultural universities was recruited primarily from men of agriculture and there were very few scientists belonging to basic sciences. At the undergraduate level, only B.Sc. (Agriculture) degree was awarded. Where specialisation was permitted, it was largely restricted to agricultural subjects e.g. B. Sc. (Agriculture) (Plant Breeding etc.). A limited number of courses in basic science subjects were allowed as an elective in the final year of undergraduation to enable a student to pursue higher degree courses at M.Sc. level. For example, a student with Biochemistry as an elective subject could enrol for M.Sc. (Agricultural Biochemistry).

No student with a pure science background could register for this or any other course. Thus an agricultural university consisted of an academically closed society. With passage of time, things began to change. The separation of school of basic sciences from the college of agriculture, the appointment of an independent Dean (college of basic sciences) led to the recruitment of faculty, opening up of new departments or the separation of basic science components from the existing agricultural departments (e.g. from the department of Botany—Plant Pathology was separated and Botany department became an independent department in basic sciences college), and the initiation of new and independent programmes of instruction leading to M. Sc. & Ph. D. degrees. Concurrently pure science graduates were allowed admission in agricultural universities. Thus the doors of agricultural universities were thrown open to non-agriculture students. This led to great enrichment of the university culture and great benefit accrued alike to students of agriculture and of basic sciences. This development however was restricted to only a few agricultural universities, and majority of agricultural universities are still struggling to establish a meaningful set up of basic sciences.

Independent College of Basic Sciences

There are several reasons why there should be strong independent schools/colleges of basic sciences in agricultural universities ?

Former Vice-Chancellor, Panjab University and President, Association of Indian Universities.

(1) Agriculture has become complex and agriculture graduates without adequate background in basic sciences cannot grasp the intricacies of their subject matter. For example, no plant breeder can be productive unless he can make effective use of techniques of molecular biology, i.e. unless he has an effective knowledge of biochemistry, microbiology and genetics. The technique of transferring genes by biotechnology should be taught to all plant breeders.

A soil scientist working in the area of soil organic matter should be thoroughly conversant with structural and modern organic chemistry. He should have an ideal of the tools currently being used by organic chemists e.g. NMR, IR, Mass, UV & Visible spectra, etc.

(2) Many of the agricultural universities are located in areas where there are no traditional universities. There, these universities could discharge a great social service to the area by offering courses in basic sciences.

(3) As agriculture advances the number of persons (including agricultural scientists) actually engaged in farm operations declines, while those indirectly engaged in agricultural sector like engineers in farm machinery, organic chemists in industry manufacturing insecticides, pesticides, etc. geneticists engaged in gene manipulation, microbiologists in fermentation technology based upon agriculture, etc. are required in larger numbers. This should reflect in the increasing emphasis which should be laid on the teaching and research in these ancilliary disciplines.

Among the Agricultural Universities only a few have a fullfledged basic science college under the overall administration of the Dean of the College. These include PAU, Ludhiana; HAU, Hisar; G.B. Pant University of Agriculture & Technology, Pantnagar; Rajendra Agricultural University, Bihar; and Orissa University of Agriculture & Technology, Bhubaneshwar.

In many of the colleges, however, there are departments of basic sciences either under a single head as in Palampur (H.P.) or there is a faculty of basic sciences as in J.N.K.V.V., Jabalpur (M.P.). In many other universities the basic science subjects are administered by Dean, College of Agriculture and occasionally some subjects are looked after by Dean, College of Veterinary Sciences.

In the case of the three major universities—HAU, Hisar; PAU, Ludhiana; and G.B. Pant University of Agriculture & Technology, Pantnagar; the basic science colleges are well developed and have been offering Postgraduate Courses leading to M.Sc. & Ph. D. in many basic science subjects such as Biochemistry, Microbiology, Genetics etc. I feel the safest way to get guidance in this matter is to look into the history of development of the land grant colleges of the United States after which our agricultural universities have been patterned. Till 1862 every state received federal land to support a college of agriculture and mechanical arts (A.M.). The immediate result was to establish more than three dozen small teaching and research centres. Most of the A.M. colleges have today become fullfledged state universities and have changed their names to reflect this fact. In most respects the majority of A. M. colleges have become pragmatically indistinguishable from public Universities. Michigan, Cornell, Ohio State, and Wisconsin Universities which started as agricultural colleges are big universities today and have excellent departments of chemistry and biochemistry and other basic sciences. A university for its proper growth has to be a multi-faculty university. Even IITs which were essentially meant to produce engineers have very strong departments of basic sciences, as it has been realised that without proper knowledge of basic sciences, applied sciences cannot be easily mastered and research in these areas (applied) is very difficult without the sound knowledge of basic sciences. In future, agricultural scientists will need strong inputs of instrumentation, electronics, statistics or computer science and will need senior staff members in these fields to interact with and therefore, there should be facilities for teaching and research in these fields along with other basic sciences on the agricultural university campuses.

It should therefore be obvious that the ultimate fate of agricultural universities is to become fullfledged multifaculty universities. While the transformation from A.M. colleges to state universities in U.S.A. took considerable time, considering the fast pace of events today and the current day needs of varied education of the society, this transformation should be effected speedily. Already the older and better known agricultural universities like G.B. Pant University of Agriculture & Technology, Haryana Agricultural University (HAU) & Punjab Agricultural University (PAU) are multi-faculty and have independent colleges of basic sciences. But these are only a few universities. Position in most of them is exemplified by Gujarat Agricultural University which has four campuses but there is no college of basic sciences on any of them.

One of the major advantages of having an independent college of basic sciences is that it permits recruitment of competent faculties. No good scientist in basic sciences would care to serve in college of agriculture where he cannot professionally grow because he will not have adequate number of professional colleagues to discuss his problems with, nor independent programmes of instruction and no opportunity to engage in Master or Ph. D. programme in his subject. Where such a provision exists, invariably better faculty has been attracted and the basic science departments have given good account of themselves.

The PAU Example

In this connection I would like to dilate upon PAU and its basic science departments. The basic science departments of Botany, Zoology, Biochemistry, Chemistry and Physics have been doing excellent research in their respective fields which are very much oriented to the needs of agriculture which is of advantage to agriculture and their own subject. Today the work done by their professors is of such a high level that their Professors of Botany (Prof. C.P. Malik), Zoology (Prof. S.S. Guraya) and Biochemistry (Prof. I.S. Bhatia) have been elected fellows of the Indian National Science Academy. There are a few other scientists who have also been honoured in this way but the main reason of bringing this fact on record is to indicate that the border areas between pure sciences or basic sciences and agricultural sciences are the areas which need far greater attention today than ever before.

Basic science departments such as Chemistry, Physics, Biochemistry, Genetics, Microbiology, Botany, Zoology, Mathematics and Statistics should have graduate programmes leading to M. Sc., and Ph. D. In some of the agricultural universities this is already the case at least in a number of subjects. For example, at PAU Master and Ph. D. degrees are awarded in Chemistry, Biochemistry, Microbiology, Botany, Zoology, Statistics and Genetics in addition to some of the subjects which fall under social sciences and humanities e.g. Economics, Sociology and Business Management etc. The situation is not very different at HAU, Hisar. The G.B. Pant University of Agriculture & Technology at Pantnagar also has postgraduate programmes in basic science subjects.

The situation is a little different now so far as under graduate programmes are concerned at the PAU. Undergraduate programmes were started in 1970 in Chemistry, Biochemistry, Zoology, Botany and Statistics. But for some reason these programmes were closed down in 1985.

Integrated Courses

It is felt that an agricultural university is in a unique position to offer well balanced integrated courses in biological subjects. The vast facilities of well defined materials of research like seeds, crops, and laboratory animals such as sheep, goat and Buffaloes, milk, eggs, fruits etc., the varied faculty in well developed disciplines like Genetics, Veterinary Science, Bacteriology, Immunology, Plant and Crop Physiology, Soil Science, Plant Biochemistry, Animal Nutrition, Food Technology, Animal Sciences, Energy etc., and good interaction resulting from the system of education—there is enormous flexibility in the courses a student could take to get his degree under the trimester system of education, excellent budgetary support for research—research is given much more importance than teaching in agricultural universities are some of the factors which make agricultural universities ideally suitable for teaching and research in biological subjects. It is beyond the capacity of an ordinary traditional university to conduct teaching and research in subjects such as Biochemistry, Microbiology, Genetics and Reproductive and Cell Biology, etc. It is suggested that a three to four year integrated course or undergraduate programme involving chemistary, biochemistry, microbiology, genetics, physics, mathematics, statistics and humanities should be started in all such agricultural universities where adequate facilities exist for running such a course. In other universities, colleges/schools of basic sciences should be started and this will help research in agriculture subjects.

Interaction between Agricultural and Traditional Universities

There should be a close collaboration between these universities involving exchange of faculty, joint offering of courses and joint registration of students for research. Informally, this is already there, but this is only a trickle and the process needs to be accelerated. In this age of specialization, it is but natural that no university can have all the expertise needed for proper functioning of its academic programmes and, therefore, pooling of resources may become an absolute necessity. Arrangements should be institutionalized so that collaboration can be made effective.

Teachers could go to other universities and offer a course for a semester and be treated as a university guest. Students could do a part of their research in another university and be given facility in the hostel or the guest house. Joint research programmes between two universities could be undertaken.

In fact there are already some collaborative research programmes between the Indian Institute of Science and the Bangalore University of Agricultural Sciences in the area of Plant Biochemistry and Plant Physiology.

The exact institutional arrangement is a matter of detail and could vary according to the local situation. It will be desirable to have a committee of the Vice-Chancellors including those of Agricultural Universities which could meet periodically and sort out matters of mutual interest.

Biotechnology which is going to play an important role during the next few decades can best be developed on the campuses of agricultural universities. To support this technology, it is recommended that integrated courses of instruction including Chemistry, Biochemistry, Genetics and Microbiology be started at the undergraduate level in all the agricultural universities. It is only in these universities, with the flexibility of approach in instruction and with their vast resources, that a breed of biologists can be trained who will be indispensable for managing Biotechnology.

Agricultural Education for General Students

Agriculture as a subject should form a part of our general education. Since 75-80% of our population is living in rural areas, introduction of agriculture or agriculture related subjects will bring awareness amongst our youngmen and women and be of a great advantage to the country as it is the most important source of income in this country, much more important than even industry.

Introduction of agriculture at B. Sc. level in colleges under traditional universities will not mean specialised training or an advanced course in agriculture, making the student fit for a job in agricultural universities or research institutes or in state and central governments but it will only impart an awareness about it. If agronomy can be taught or allowed to be taken as a subject at +2 level in West Bengal and sericulture with Chemistry and Botany or Zoology at B Sc. level or electronics with Physics and Mathematics at Bangalore, I see no harm if agriculture is also allowed to be introduced at B. Sc. level. It is worth mentioning that we are promoting physical education and have already allowed it as one subject at graduate level. The course for such an elective subject at B.Sc. level may include knowledge about a general awareness of agriculture related matters including the use of seeds, fertilizers, pest control, ground water and irrigation, and rabi and kharif crops.

A little knowledge about Farmer's organisations, banking and farm insurance, marketing, distribution and storage of farm produce etc. will also be very useful. Such awareness amongst the youth of the country will go a long way to improve agriculture and the farmers' lot.

Higher Education in Agriculture

There are 26 state agricultural universities (SAUs) in the country that are conducting teaching, research and some extension services in an integrated manner. They look after the area assigned to them by the state government. They are created by an act of state legislature and are supported mainly by the state. They enjoy great deal of autonomy. They are governed by their respective Boards of Management which have a number of state government representatives on them. Of course, the Chairman of the Board is the Vice-Chancellor of the University and the Governor of the state is its Chancellor. They offer degree courses in many broad areas covering agriculture and allied fields. These universities also offer postgraduate degree programmes (Master & Doctoral) in a large number of disciplines. Students after +2 or 12th grade in science can join bachelors level degree programme. Bachelor's degree programme is of 4 years duration except Home Science which is of 3 years and veterinary science which is of five years duration.

Apart from the agricultural universities, there are other institutions which are imparting education in agriculture and awarding degrees. At present there are eleven state level general universities which continue to have agricultural faculties and there are 34 colleges of agriculture under these faculties. They impart degrees in agriculture at all levels with the difference that while the agricultural universities follow a semester of trimester system these follow the old annual system of examinations. As they have no area assigned to them in their state and no extension programme responsibility, financial support is much below the level of SAUs, and therefore, their teaching and research programmes are much below the level of SAUs. Their teaching programmes are also weak as the bachelor's programme is only that of three years and master's and Ph D. programme is 2 and 3 years duration.

(*Contd. on page 7*)

Genesis of Student Alienation

R. R. Sharma*

Alienation as a psycho-social phenomenon is growing among students at almost all levels of education. But at the stage of higher education its emergence, growth and intensity are of serious concern not only for social scientists but also for college and university authorities; and all are engaged in trying to seek its probable causative factors. The well known social scientists Durkheim (1964) and Merton (1938) are of the opinion that alienation is the result of social condition at a particular stage of time. In their view, it is purely a social phenomenon. But some observers have hypothesised that alienation is the cause of both psychological as well as social factors. Whatever may be the explanations of psychologists and social scientists regarding the emergence of alienation, it is absolutely clear that the reflections of alienation among college and university students are the result of inadequacy, ambiguity and ineffectiveness of these institutions. It is strange that the authorities, instead of looking into the real sources and roots of alienation in the institutional framework, vainly, exert in the darkness. Here an attempt has been made to pinpoint certain changes that have occurred recently in the educational scene and generated the phenomenon of alienation among the students at the higher education level.

(a) Change in Education as a Discipline

It needs no saying that education—a product of knowledge industry, has undergone a tremendous change. The ancient and outmoded aims, like knowledge sake, education for self-realization or education for self-development, have lost currency. Today, knowledge is acquired and education is pursued not to achieve ultimate aims but immediate objectives. A large survey undertaken by Hunt (1952) has revealed in very clear terms the apathy and ignorance of a large majority of students about the ultimate aims of education. Similar results have been reached in the studies of Coomb (1980), Rozer (1981), and Mitchel (1982). Thus, this new wave has made people aware about the immediate gains of education. Students want to see the direct cause-effect relationship between the level of education and the level of their achievement. But when in actual operation such a relationship is absent, they are prone to be frustrated. That frustration creates an indifference in them not only for education but for all processes, agencies and services related to education. Such indifference impinges upon their aspirations in such a fashion that indifference is combined with personal hatred—institutional estrangement, and when this particular process sets in, the disregard for norms, respect and urgency for institutional goals are normal consequences which envelop students in a very slow manner. Thus, it can be said that as long as the relationships of knowledge to achievement and achievement to attainment of social position are ambiguous alienation is bound to be a permanent feature of our educational system.

(b) Confusing Social Demands of Educational Institutions

With the lapse of time the cardinal institution like education has undergone a tremendous change. It is going to be a centre of social, economic, cultural, physical and political activities, for the modern world is knowledge-oriented. So, right from dietary knowledge to the launching of satellites, the school is supposed to take up the responsibility even after one has entered active life. The educational institution is supposed to guide the personnel continuously. Thus, school has acquired a tremendous responsibility which it fails to fulfil due to inadequate physical and human resources. A new student, when enters into this mighty world of activities, fails to adjust himself properly. He cannot keep pace with the swiftly changing programme and gets confused when the institution is disrupted by anti-social activities. He finds himself in a conflicting situation. The institution demands obedience and submission from him, while the student-culture demands protest and aggression from him. Similarly, he has been told that if he pursues the studies properly, he will be rewarded with good achievement. But he finds that rewards are awarded to those who hinder the educational process. He is asked to be an upright citizens, but when he expresses his grievances in an upright and straight manner, he is denounced and punished by the authority. He is put in a typical confusing situation wherein he is supposed to fulfil the demands of becoming a bright student, a cultured social member, a politically aware citizen and physically strong, well-built person; whereas in actual practice, there are meagre resources to fulfil these demands. This multiplicity of demands creates such

---

Garhwal University, Srinagar (Garhwal)-246174.

a stress and confusion in his personality that he relapses in helplessness. He feels as if he is drained of all the physical, moral and social power. The consequences force him to become alienated. So, the demands upon educational institution need to be streamlined in such a fashion that these contribute to generating a healthy personality rather than an alienated one.

(c) Over-crowding of Institutions

The social scientists, who have worked in large mass organizations, have come to this conclusion invariably that a growing institution, when expands in its numerical volume, gradually loses its face to face primary relationships due to which the warmth, the affection and the concern at personal level diminish in such a manner that ultimately coflicts, tensions and competitiveness take place. But in this situation only groups can survive. Individual and individuality lose identity and significance. When an individual loses his individuality in an organization, where he expects it to enhance and develop it, he is bound to get frustrated. He is bewildered by the multiplicity of relationships. He is intrigued by multi-dimensional interactional matrixes. He feels himself lost, and the sense of self-loss is bound to create a feeling of alienation in him. Ikner and Roza (1977) studied large number of educational institutions of varying sizes and found that the cases of self-loss were more in number and intensity in comparatively larger institutions. Keeping in view these observations, this can safely be assumed that institutions of education are getting crowded day by day. The clientele is highly heterogeneous from the point of view of culture, economic background, social connection, academic achievement and psychological make-up. In such institutions, although actual competitiveness is unidentifiable, yet the veiled and concealed competitiveness creates the atmosphere of acute anxiety and stress for the students. So alienation directly emanates from the numerical character of overcrowding of institutions. It is very interesting that such overcrowding not only creates a psychological alienation, but because of the paucity of material facilities, resources and services, it creates institutional alienation also. Bore (1982) was perhaps correct when he observed that inadequate environmental supply and highly intensified personal demands create a vacuum in the personal world of the subject and generate a sense of deprivation in him.

(d) Fluctuating Administrative Styles

It is usually observed that administration at the level of higher education institutions is exigency-oriented and fluctuates from time to time due to iternal and external pressures. These pressures are normally individual or group-oriented. So the decisions are neither broad-based nor impersonal and impartial in nature. The growing politicization has put administrators and authorities under great suspense and stress. In general, the administrator tries to escape the responsibility, shifts it to his subordinate and tries to act as a spectator. Consequently, the major and most significant decisions in the universities and colleges remain unexecuted or half-executed. In such a situation a student has no choice but to get things done with the help of aggression or get alienated. It is aptly remarked by Eckorn (1980) that a disrupted institution exhibits its internal chaos and looseness in administration.

Secondly, the channels of communication are not clearly defined because of the multiplicity of roles of one administrative agent in many affairs. The responsibilities have multiplied and grown in case of even teachers that they can fulfil them by ignoring their primary responsibility of teaching and research. Recently, a new trend of subordination of teaching and research to bureaucratic machinery of higher education has generated conflicts and stresses amongst the teachers. They transfer these things to the students.

In such situations, there are very few students who can cope up with the realities of administration. Majority of them either build up a castle of loneliness around them or become catalysts. Gore (1979) was correct when he remarked that despite all mismanagement, our campuses survive because of inherent conditioning of our students to our cultural fatalism. As a matter of fact, the fatalistic tendencies should be included within the form of alienation. In short, the fluctuating administrative style, growing group rivalries, heightened politicization and confusing communication channels in cumulative manner, accelerate the tendencies of activism and alienation amongst the students.

(e) Loss of Significance of Education in Job Market

The uselessness of education or quality of education alone in getting a reasonable job has been so much propagated that it has started generally demotivating effect upon the learning activity of the student. Although he is admitted to a course, yet he fails to recognize its significance. So, he cannot put his honest and sincere labour to it. Moreover, the results of examinations have lost all popular faith. Ultimately, when a student finds that his degree does not testify his amount of labour in academic setting and is not a definite passport to any job, he grows desperate, and unfortunately, under this desperate mental state he has to pursue his studies. But this psychological state cannot be dragged to a long span, and so, he either joins activists' camp or gets alienated.

From the above account, it can be safely concluded that student alienation, in its present form and function, is the by-product of the academic and organizational weaknesses of our educational institutions. ☐

Basic Sciences in Agricultural Universities

(Continued from Page 4)

Three central universities also have colleges of agriculture and offer bachelor, master and doctoral degrees. They also have no area responsibilities. They are supported by the central university but do not have the same financial support as the SAUs.

The large number of colleges of agriculture affiliated to general universities and three central universities are turning out quite a large number of agriculture graduates. However, because of lack of facilities due to paucity of funds, the very old syllabi and weaker faculty, the graduates coming out of these institutions have much lower level of education. One is not sure of their numbers but it may be about 30% of the total agriculture graduates produced in the country. This shortcoming has to be remedied and must be taken note of by the management of these colleges and the general universities to which they are affiliated. An offer from the SAUs to affiliate them and a directive from the state government may help the managements of these colleges and universities to realize the problem that they are creating by turning out graduates of a lower level. The state governments could offer small areas for extention work as their responsibilities and appropriate funds may also be allocated. SAUs could offer them affiliation and much a better syllabus, which the university itself is following and also academic help to the teachers for starting of the SAU syllabus in these institutions. Of course, the SAUs may have to help the teachers of these colleges in updating their knowledge in special fields.

The other alternative is to help the general universities with special grants for upgrading these colleges with equipment, etc. Of course, even if these colleges do not join the mainstream of agricultural education, the general universities be asked to follow the same syllabi as are followed by the agricultural universities (4 years) in the area and the the Indian Council of Agricultural Research (ICAR) may help them with grants under these special circumstances.

Apart from these we have some central All India Institutes. Two of them have the "Deemed to be a University" status Indian Agricultural Research Institute (IARI), Delhi and Indian Veterinary Research Institute (IVRI), Izatnagar. National Dairy Research Institute (NDRI), Karnal is also likely to acquire this status pretty soon. They are doing ressarch of very high level and are also running regular courses under M. Sc. and Ph. D. programmes. Since these All India institutes "Deemed to be Universities", and some other central research institutes under ICAR are very well equipped and are doing research of a very high level in the fast developing new fields also, they should help the SAUs by running summer schools, seminars, etc. for the staff members of colleges and SAUs regularly. ☐

A Strange New Attitude

Dr. Raja Ramanna, Chairman, Governing Council, Indian Institute of Science, Bangalore, deprecated the new strange attitude of not taking interest in one's work and allowing time to pass without anything being done regarded as an achievement. Dr. Ramanna was delivering the Convocation Address at the First Convocation of the Thapar Institute of Engineering and Technology (Deemed University), Patiala. There was no substitute to quality technology and its being shared with others, he said. Excerpts.

It often happens that to become a respected and great engineer, more than in any other profession, one has to struggle harder. The struggle is a difficult one, involving much competition and responsibilities, both financial and otherwise It is, however, good to believe in the old saying that harder the struggle, the more satisfying the achievement, and more permanent one's place in the profession. It is also at the early stages of one's life that one can learn to face the facts of life that all people are not gifted equally to achieve great things, and good, routine work has to be done and it is just as important. What one has to learn is how not to become a complacent or frustrated engineer, complaining about how badly life has treated one and finally become a menace to society by taking revenge on those around one or trying to rise high by sycophancy and other questionable methods.

To be a truly and intellectually successful technologist and not merely be able to make money quickly, as seems to be order of the day, it is necessary to understand and appreciate one's own country. India is a complex country where greatness coexists with deep shortcomings. An understanding of the former gives one the feeling of confidence and of the latter demands ways and means by which one can contribute to the country by trying to eliminate them. But to understand one's country, in order to build on it, it is necessary to understand it from one's own experience and not through that of others. The tendency is to see India through a foreign projection and such an approach gives a false sense of aims and achievements. We have many faults and we can not wish them away. At best, we can learn to understand why these weaknesses have come about and thus find remedies to eliminate them through knowledge. An obvious and unpleasant example is the practice of dowry, a practice which, in my view, is no different from sati or its glorification. Science and technology should be able to tell you that it is not only cruel but inhuman to the extreme. It is one of the cases where even animals show a superiority over humans. What is surprising is that even those trained in the methods of science indulge in it, or tacitly support it by closing their eyes to it. Why do I refer to dowry at a convocation of technologists where there is no obvious connection? Because, I believe that good creative technology requires the highest kind of all round morality, one even higher than that described in our religious text-books. It is because we have not appreciated the need for a consistent approach to life that our technology does not find a place for itself among the best.

The usual question asked among people of my age group is why, after forty years of Independence, India, in spite of her many technological achievements, continues to be rated among the lower rung of countries of the world. Even in the Punjab, where we have always admired the hard-working farmer and the machinist, deep poverty exists. We are a country which has preached to the world for centuries on contentment, calmness and truth and yet, amongst our own educated classes, these virtues are no longer visible. It makes a mockery of our philosophy and all that the great leaders of the BHAKTI MOVEMENT preached to us.

In recent times, we have absorbed western technology in a manner worthy of admiration from all over the world. We have produced Mathematicians and Scientists of the highest calibre, but considering the large size of the country and the available human resources, we seem to be able to only just compete with the smaller, advanced countries of the world. Where then lie our deficiencies ?

The first aspect of our lives one would question in this context is our philosophy. Does our philosophy preach selfishness with its concentration on MOKSHA or release of bondage of the individual with no particular concern for the next man ? Do our traffic behaviour, our distaste of queues at bus stops and railway platforms and our business methods arise from such an attitude to life ? There is also our non-recognition of the best man amidst us and the use of unfair methods to destroy competition with him. Unrestricted jealousy seems to be a special Indian trait. It shows itself with a virulence of self-destructiveness as to affect the country, its integrity and all that we cherish as important for its stability as a nation. Or, is the problems simpler and has nothing to do with our philosophy? Is it just stupidity on our part that we cannot see what is good for us beyond a time scale, of not more than just a few years, when the rest of the world is planning for a whole new century.

Good technology requires deep concentration if it has to be creative. Individual engineers have to have the highest moral integrity so that their calculations are correct and based on facts. It should allow for no humbug of any sort. The quality of workmanship must be of the highest order or your creation can lead to the deaths of many innocent people due to slipshod work. Arrogance in technology can make your colleagues contemptuous of you.

We are a society in transition and even in our own life time have seen changes which were impossible to dream of in our younger years. Such violent transformations are bound to create new tensions and new ambitions. In such circumstances, it is not surprising that solutions seem to be too slow for the younger generation and many are tempted to resort to the use of violent methods, the inspiration coming through the cinema or the video.

It is a strange new attitude that has come about : not taking interest in one's work and allowing time to pass without anything being done is an achievement. It is believed that idleness at the expense of the employers is justified and forcing others to do the same is equally justified. Often, people who come to consult are made to wait and suffer. Many of us seem to get great pleasure in seeing others cringe for favours or go disappointed for no fault of theirs. Treating the rest of humanity roughly seems to have become a measure of power and authority. In other countries, these deficiencies would be considered a crime. Do we really have to behave like this to satisfy our ego ?

There is, in my opinion, no substitute for quality technology and its being shared with others. All this sounds simple but is not followed, perhaps for fear of loss of credit. It may even be justified in a period of transition to use strategies, if by some misfortune you happen to be in an atmosphere where your work is not appreciated. But if yo want to be a good technologist with a clean mind, remember what I have said today.

The last forty years have shown that we can do some fantastic things in India without any help from other countries. Our progress in the material and nuclear sciences has shown that by inter-disciplinary efforts, we can produce the most sophisticated of items within the country. As examples, I can mention the production of Beryllium and its alloys, the rare earth metals, superconducting devices, etc. The DHRUVA Reactor at Trombay, designed and built entirely by us, is one of the most complicated reactors in the world and has been working at its full power for several months. If, however, you pull out some of the older copies of some of the glossy magazines of Bombay and see what was said of it, you would just not believe it. It was said that this reactor would never work and everything was wrong with its design, including the leaders of the organisation. But not a word now. I mention this to warn you that appearance of items and names in the press is of no great gain for technology; it merely reflects Indian weaknesses.

You will, no doubt, ask me that if we are essentially a capable people and the country is on the threshold of several breakthroughs in technology, what, as new graduates, is your role in these new ventures ? In foreign countries, the government and industry go out of the way to recruit good people. The seriousness of our brain drain rests on the fact that this outlet is available only for the best. The cream is thus lost to the country. What are we doing about this matter ? My answer is that if we learn to recruit people on the basis of merit to the extent of just even fifty per cent and start projects which will generally improve technology quality in India, however expensive be in the beginning, the rest will take care of itself. Large investments on low quality technology with low quality people is the cause of most of our troubles. To appreciate all this requires planning through experience and not by "fast food" approaches. India is not a fast country. This is what I meant by saving in the beginning, about knowing your country first. We are loaded with an ancient past which gives us some sort of inertial stability but to remove the mass above us. we require Indian solutions with an understanding of Indian sociology and not the Western weaknesses

□

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
May 9-June 4, 1988	Summer Course in Analysis and Probability	Topics to be covered are Probability Theory and Stochastic Processes, Fourier Analysis & Functional Analysis.	Indian Statistical Institute, Bangalore Centre.	T.S.S.R.K. Rao, In-charge, Summer School 1988, Stat-Math. Division, Indian Statistical Institute, R.V. College (P.O.) Bangalore 560 059
May 18-20, 1988	Conference on Recent Advances in Mathematical Techniques and Applications	Topics proposed to be discussed include Mathematical Physics, Mathematical Methods, Biofluid Dynamics, Chaos, Stability and Turbulence.	Dr. Y.S. Parmar Institute of Mathematical Sciences, Shimla.	Dr. J.R. Gupta, Organising Secretary, Dr. Y.S. Parmar Institute of Mathematical Sciences, Hainault, Shimla-171002
June 27-July 8, 1988	Short-term Intensive Training Programme on Abstracting & Indexing	To train the participants in the application of abstracting and Indexing methods and construction of an indexing language (Thesaurus).	National Institute of Small Industry Extension Training, Hyderabad.	Mrs. K. Subhashini, Course Director, NISIET, Yousufguda, Hyderabad-500045
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis.**	**University of Hyderabad in collaboration with the Indian Society of Andrology.**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667**
October 27-29, 1988	National Seminar on Statistics in Medicine, Health and Nutrition.	To discuss Data-Base and Analysis in Health and Nutrition—Present and Future.	Department of Statistics National Institute of Nutrition, Hyderabad.	Dr. K. Visweswara Rao, Organising Secretary, National Seminar on Statistics in Medicine, Health and Nutrition, Department of Statistics, National Institute of Nutrition, Indian Council of Medical Research, Jamai Osmania, Hyderabad-500 007
Dec. 15-17, 1988	National Conference on Fluid Mechanics and Fluid Power	To provide a forum for exchange of information on topics in flcid mechanics and design, research and development activities in areas like power generation, aerodynamics, fluidics, biomechanics, etc.	Harcourt Butler Technological Institute, Kanpur.	Dr. N.L. Kachhara, Organising Secretary, 16th National Conference on Fluid Mechanics and Fluid Power, Mechanical Engineering Department, Harcourt Butler Technological Institute, Kanpur-208002

Tatas to Set up National Institute

A National Institute of Advanced Studies is proposed to be set up by the Tatas at Bangalore under the directorship of Dr. Raja Ramanna, former Chairman of the Atomic Energy Commission. The Karnataka Government is reported to have offered an interest-free loan of Rs. 1.5 crores to be paid back in 10 years for this purpose.

The proposed institute would give a chance to administrators, industrial managers, defence personnel, scientists and technologists with a proven record of achievement in their respective fields to broaden their perspective and develop an insight into subjects like scientific philosophy, the principles of economics, the philosophy of history, psychology, defence and politics, appreciation of the arts, and Sanskrit language and literature. The first two sessions would be held in Pune till such time as the buildings in Bangalore were completed. There would be five lectures in each subject, with one lecture a day delivered by some of the best known authorities in the country. There would be two sessions a year, with each session lasting for three months and catering to not more than 50 participants in the age-group of 35 to 50. The participants would be sponsored by their respective organisations.

Dr. Ramanna stated that the institute would try to broaden the perspective of participants who otherwise had a tendency to over-specialise and take decisions without knowing enough from a cultural point of view. It will also encourage participants to take up multi-disciplinary research, based on both the sciences and the humanities.

Varsity to Sell High-Tech. Products

The School of Biology of Madurai Kamaraj University has launched an autonomous unit—Madurai Kamaraj University Biologicals—which will sell high technology products. According to Dr. S. Krishnaswamy, Vice-Chancellor, these products would be ready shortly for commercialisation, available to both foreign and Indian firms. He said the university could secure over Rs. 10 crores as aid last year for 148 projects from the various Indian and foreign funding agencies. Another Rs. 10 crores was in the pipeline for projects during this year.

High technology products to be developed include : Immuno-diagnostic Kits for detection of diseases like leprosy; Production of monoclonal antibodies against particular diseases like malaria; Unisex Cultures (a technology for producing unisex cultures of fish—for instance, producing only male fish for eating purposes since these can be fattened easily); and Growth harmones for retarding sexual maturity and prolonging the 'somatic growth' (China has already developed this technology and two researchers from the Madurai Kamaraj University spent some time in China collaborating with Chinese scientists on this project).

Other items are related to : (a) use of streptomyces for production of antibiotics (a large number of streptomyces are available in the soil) ; (b) Oligo-nucleo-tides (which are bases for DNA sequencing) for research purposes ; (c) Biocides for protection of plants against insect attacks ; (d) Skin bank for the treatment of acute burns.

Morbidity among Varsity Students

A sample survey conducted recently by the Population Studies Centre of S.V. University, Tirupati reveals that Morbidity rate among the university students in south India is of the order of 30 per cent. During the survey, sponsored by the Indian Council of Medical Research (ICMR), 25 per cent of the final year students in S.V. University, Karnataka & Kerala Universities were covered. According to Prof. P.B. Jorapur, principal investigator of the project, the morbidity rate of 30 per cent is not as low as one would have expected it to be considering their age. This rate is highest among the students of Karnataka University (32 per cent) followed by S.V. University (30 per cent), while it is lowest among the Kerala University students (22 per cent).

The principal causes of illness are flu, diarrohea, dysentry, skin disease, headache, etc. The life-time morbidity rate is highest among Kerala students (85 per cent) followed by Karnataka students (75 per cent) and the lowest being S.V. University (72 per cent).

Smoking

The prevalance of smoking among the students is not that high as one would anticipate. Nearly 10 per cent of the students have smoking habit. Most of the students generally smoke 'just for fun' or to 'give company' to their friends. This is highest (11 per cent) among Kerala students. In the other two universities the rate is only nine per cent.

About 11 per cent of the students are consuming alcoholic drinks and as in the case of smoking it is 'for pleasure' or 'give company'. Some said they drink to forget their worries or to escape loneliness. Many have started drinking at an young age of 16-20 years. Most of them have not attempted to give up the habit. But they are not addicted to it as such. They drink occasionally say once or twice a month. This habit is highest (15%) in Karnataka followed by Kerala (13%) and lowest in S V. University (7%).

Management of Sustainable Development of Mountains

Delivering a lecture on "Nehru and Sustainable Mountain Development" to mark the Nehru Centenary Celebrations at the Himachal Pradesh University, Dr. Collin Rosser, Director, International Centre for Integrated Mountain Development, Kathmandu, stressed the need for International and Regional Cooperation in the management of sustainable development in the Himalayas without disturbing its eco-systems. He said that the growth in population and exploitation of Agro Climatic conditions and natural resources of the Himalayan Region posed a danger for ecological balance which affects a hundred million people living in the plains as well. An integrated approach to solve this problem was therefore most essential, he said.

Dr. Rosser said that Pandit Nehru regarded the Himalayas as being the very symbol of the Indian Culture. He quoted instances which showed that Pandit Nehru was deeply in love with the development of mountains.

Dr. Rosser said that Himachal Pradesh deserves appreciation for the remarkable progress made in various fields of development during the last forty years. He hoped that due importance would be given to research training and information relating to the Scientific management of sustainable development of the mountains by involving the three universities of Himachal Pradesh.

Astronomy Centre at Poona

An Inter-University Centre for Astronomy and Astrophysics (IUCAA) is being set up by the University Grants Commission (UGC) in the Poona University campus to facilitate interaction among the academic, community. The centre will help participation of scientists, talented students and teachers in the fabrication and building of the Giant Metrewave Radio Telescope (GMRT).

The centre would also have an associateship programme on the lines of the International Centre for Theoretical Physics.

Orientation Course for College Teachers

The Academic Staff College of Goa University conducted its first Orientation Course for college teachers recently. Inaugurated by Dr. Gopal Singh, Governor of Goa, the course was attended by 40 participants selected from Bombay, Shivaji and Goa Universities.

The objective of the course was to create an awareness among the teachers about the problems faced by the society and the role of education in resolving these problems. The course comprised 3 components. Component I sought to create awareness of the linkages between society environment, development on one hand and Education on the other. Component II dealt with Philosophy of Education, the Indian Educational System and Pedagogy while the theme of Component III was Management and Personal Development.

Certificate Course in Folkloristics

North-Eastern Hill University proposes to introduce a Certificate Course in Folkloristics at its Shillong Campus in the Centre for Literary and Cultural Studies. The Course is of one Semester duration and will provide perspective in the scientific study of folklore with exposure to concepts and methods and familiarise the students with the rich treasure of folklore material of north-east India.

Any student who has passed BA/BSc/B Com and has interest in folklore studies is eligible for admission to this course. Further details can be had from the Head, Centre for Literary and Cultural Studies, North-Eastern Hill University, Mayurbhonj Complex, Nongthymmai, Shillong-793014.

UGC Panel on Superconductivity

The University Grants Commission (UGC) has constituted a standing committee on superconductivity to advise it on various aspects of research and education in this area. The UGC has also, in cooperation with the technical education wing of the Department of Education, taken steps to identify viable groups in different universities and institutions which are already associated with research in this area and could be activated further with some support.

Mercy Chance for Failures of Agra Varsity

Dr. B.B. Saxena, Vice-Chancellor of Agra University is reported to have recently announced that ten thousand students of various faculties of graduate and post-graduate classes, who failed last year during the university examinations, will be given one "mercy' chance this year. This facility has been given following the stopping of the supplementary examinations at the university. The students, at the graduate level, will be allowed to appear afresh in one single subject in which they had failed, while at the post-graduate level, the students will be allowed to reappear in only one paper.

Part Time Post-graduate Course in Longwall Mine Mechanisation

The Indian School of Mines, Dhanbad, has recently introduced the M. Tech (Part Time) course in Longwall Mine Mechanisation. This is for the first time that such a course of its kind in the country has been introduced. The course is presently open to candidates sponsored from the industry. Classes are held three days a week in the evening hours.

Dr. M.S. Randhawa Award

The National Literature and Arts Society, Ludhiana, has invited recommendations for Dr. M.S. Randhawa Award for the year 1988 from recognised organisations and individuals. The award will be given to the persons who have made significant contributions in the fields of literature, art, folk music and journalism. The recommendations must reach the Secretary of the Society Mr. Satbir Singh or the President Dr. Ranjit Singh, Communication Centre, Punjab Agricultural University, Ludhiana by 30th May, 1988.

Courses in Comparative Studies

The Telugu University proposes to introduce two new courses in comparative studies in Tulnathmaka Adhyana Kendram and Classical Literature (Pracheena Sahityam) from the current academic year. This was disclosed recently by the State Planning Board Vice-Chairman, Mr. Gorantala Buchaiah Choudhary.

Autonomy for Engg. Colleges

The Maharashtra Government has decided to develop the Victoria Jubilee Technical Institute, Bombay, Engineering College, Pune and the Regional Engineering College, Nagpur—all run by the Government—as autonomous educational institutes under their respective universities.

The directorate of technical education is reported to have been entrusted to draw up an elaborate programme, including short courses to equip the principals of the three colleges and their staff to shoulder the new responsibility.

Indira Gandhi Institute

The College of Physical Education, affiliated to Delhi University, has been renamed as the Indira Gandhi Institute of Physical Education and Sports Sciences.

News from Agril. Varsities

Workshop on Cotton Production

Dr. Har Swarup Singh, Vice-Chancellor, Haryana Agricultural University, inaugurated the North Zone Workshop on Cotton at Hisar recently. He said that experimental results indicated that the yields of cotton could go up considerably in India with the adoption of existing technologies. Lauding the cotton growing efforts of Haryana and Punjab, Dr. Har Swarup Singh said that both these states have come to the rescue of the Indian Cotton Industry by producing 30 lac bales of lint, thus producing more than 1/3rd cotton in India. This has been possible due to the superior varieties of the cotton and production technology developed by the scientists of the University as well as the hard work put in by the farmers of Haryana He said that quality of lint produced in Haryana was in great demand by the industries in India and abroad. He urged upon the delegates to reorient the cotton research programme so as to evolve low cost production technology to make the crop more remunerative to the farmers.

Dr. B.P.S. Rao. ex-Director of the Cotton Development Corporation, Bombay who presided over the inaugural function, said that crop management which included cultural practices, nutrient management, water management and seed management was the main thrust where the scientists should devote more attention as this aspect could help a lot in increasing the cotton production in India.

Over 90 delegates from Haryana, Punjab, Rajasthan, Uttar Pradesh, Madhya Pradesh and Delhi participated in this workshop.

PAU to Organize Soil Testing Week

The Department of Soils of the Punjab Agricultural University (PAU), in collaboration with the State Department of Agriculture, is organizing a Soil Testing Week throughout the State from May 16.

During this week-long programme, the Farm Advisory Service staff of the University will be selecting two villages in each district for soil survey. The farmers of these villages would be persuaded to get their soil tested during this week so that specific recommendations in respect of fertilizer use could be made.

The soil testing service is rendered by the Soil Testing Laboratories of the PAU, the State Department of Agriculture and some other organizations free of cost. Since the fertilizer is a costly input leaving the farm machinery, its application on soil test basis can help economising the cost of cultivation.

News from UGC

INSAT-1B Programme of UGC

Between 16th May to 31st May, 1988 the following schedule of telecast on higher education through INSAT-1B under the auspices of the University Grants Commission will be observed. The programme is of one hour duration every day from 12.45 p.m. to 1.45 p.m. (Repeated from 4 p.m. to 5 p.m.) and will be available on the TV Network throughout the country. For the viewers in Delhi and surrounding areas these programmes can be seen on the second channel.

News from Abroad

New Superconductor Developed

A team of U.S. scientists headed by an Indian-American has developed a new, ceramic material that is capable of handling 100 times more electrical energy than any of the current superconducting material.

According to International Business Machines (IBM) sources, where the Indian scientist, Dr. Parveen Chaudhari, has been a research scientist, the discovery of the new material will mean to electricity what breaking the sound barrier meant to aviation or what breaking out of the earth's atmosphere meant to the space programme.

As a result of the development by the IBM team, the world's most powerful computers could be reduced to the size of a football and could probably operate 10 times faster than existing computers. All uses of electricity would be altered. The making and storing of massive quantities of electronics such as recorders and radios could be accomplished more cheaply, using less energy with greater efficiency.

SPORTS NEWS

Varsities Wrestling Team

The next Junior National Wrestling Championship is scheduled to be held at Cuttack from June 30 to July 3, 1988. For the Indian Universities Team, 35 probables have been identified who will be invited to attend the selection trials. The selected team will undergo the training prior to participation in the National Championship.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through inter library loan for which requisition must be made through your Librarian.

INDIAN INSTITUTE OF SCIENCE

BANGALORE-560 012

Is looking for brilliant and highly motivated young scientists to fill its **faculty positions** at the level of **Assistant Professor in the Centre for Ecological Sciences** with Ph.D. degree in Social Sciences based on research in the area of Human Ecology, Ecological History or Management of Biological Resources and a minimum of two to five years of research experience in the field of Human Ecology.

The candidate would be expected to work as a member of an interdisciplinary team involved in ecological research and contribute to field work currently being undertaken in the areas of Western Ghats. The candidate will also be required to participate in the teaching programme and interact with the visitors of the Centre.

The tolal emoluments will be Rs. 5055/- p.m. in the Scale Rs. 3700-5300

If candidates at the level of Assistant Professor are not available, candidates with potential could be considered for Lecturer's post.

The requirement regarding experience is relaxable in exceptional cases.

Interested persons may obtain application forms from the Registrar, accompanied by a crossed postal order for Rs. 5/- (free of cost to SC/ST on production of Caste Certificate from a competent authority) drawn in favour of the Registrar, Indian Institute of Science alongwith a self-addressed Rs. 5.40 stamped envelope of the size 28 x 18 cms. **on or before 12th May 1988.**

UNIVERSITY OF ROORKEE

ROORKEE—247 667

ADMISSION TO POST-GRADUATE PROGRAMMES 1988-89

Applications are invited for the following Programmes commencing on August 1, 1988 :

1. **Master of Engg. Courses of 1½ Years (3 Semester) Duration**

(a) Chemical Engineering

* Advanced Transfer Processes * Computer Aided Process * Plant Design * Industrial Pollution Abatement.

(b) Civil Engineering

* Building Science & Technology * Computer Aided Design * Environmental Engg. * Geotechnical Engg. * Hydraulic Engg. * Remote Sensing & Photogrammetric Engg. * Structural Engg. * Transportation Engg.

(c) Earthquake Engineering

* Soil Dynamics * Structural Dynamics.

(d) Electrical Engineering

* Measurement & Instrumentation * Power Apparatus & Electric Drives * Power System Engineering * System Engineering & Operations Research.

(e) Electronics and Computer Engineering

* Communication System * Control & Guidance * Microwave and Radar * Solid State Electronics * Television Technology● * Computer Science & Technology (M. Tech.).

(f) Mechanical & Industrial Engineering

* Machine Design Engg. * Production & Industrial System Engg. * Thermal Engg. * Welding Engg.

(g) Metallurgical Engineering

* Extractive Metallurgy * Industrial Metallurgy * Physical Metallurgy

(h) Water Resources Development

* Civil● *Electrical● * Mechanical● * Water Use Management●

(i) Hydrology

* Hydrology●

* **Eligibility for Admission**

* Bachelor's degree in the appropriate field of Engineering/Technology.

● Post-graduate Diploma in respective courses

2. **Master of Arch. and Planning Courses of 1½ Yeas (3 Semester) Duration**

Architecture * Urban Rural Planning●

* **Eligibility for Admission**

* Bachelor's degree in Architecture.

● Alternately Master's degree in Geography.

3. **Post-Graduate Diploma Course of 1 Year (2 Semester) Duration**

* Earthquake (Earthquake Engg./Earthquake Technology)

* Electronics & Computer Engg. (Television Technology)

* Hydrology (Hydrology)

* Humanities & Social Sciences. (Industrial Management)●

* Water Resources Development (Civil/Electrical/Mechanical/Water Use Management)

* **Eligibility for Admission**

* Bachelor's degree in Engineering or Master's degree in Sciences in the appropriate discipline.

● Alternately Master's degree in Economics/Psychology / Commerce with Mathematics at Bachelor's degree level.

4. **M. Phil Programmes of 1 Year (2 Semester) Duration**

* Chemistry (Industrial Methods in Chemical Analysis)

* Mathematics (Computer Applications/Mathematics)

* Physics (Instrumentation/Material Science)

* **Eligibility for Admission**

* Master's degree in sciences in the appropriate discipline.

5. **M. Tech. Programmes of 3 Years (6 Semester) Duration**

* Earth-Sciences (Applied Geology/Applied Geophysics)

* **Eligibility for Admission**

* Bachelor's degree in Sciences in appropriate discipline.

6. **Master of Science Programmes of 2 Years (4 Semester) Duration**

* Applied Geology * Applied Mathematics * Bio-Sciences and Biotechnology● * Chemistry * Physics

* **Eligibility for Admission**

* Bachelor's degree in Sciences in the appropriate discipline.

●Alternately Bachelor's degree in Agriculture/Pharmacy Veterinary Science/Animal Husbandry.

Information Bulletin containing Application form will be supplied on payment of Rs. 20/- (Rupees Twenty only) by crossed Postal Order/Bank Draft/University receipt payable to Registrar, University of Roorkee, Roorkee, from the office of the Assistant Registrar (Academic), University of Roorkee, Roorkee-247667 in person or by sending a self-addressed 26 x 17 cms. envelope with postage stamp of Re. 1/- affixed to it. Last date for receiving request for application form is June 6 by post or June 14, 1988 in person. Last date for receipt of complete Application Form is **June 15, 1988.**

Andhra Pradesh Open University Hyderabad

ADMISSION NOTIFICATION

B.A., B. Com. & B. Sc. Courses—1988-89

The Andhra Pradesh Open University invites applications (i) from all those who have passed Intermediate Examination or its equivalent, **without age restriction;** (ii) Also from those candidates who will be completing 21 years age by 1st July, 1988 and have passed the Eligibility Test conducted by Andhra Pradesh Open University, in the years 1986 and 1987 (who for some reason could not seek admission in that particular year) for direct admission into the B.A., B. Com., and B.Sc., courses; and (iii) from all those candidates who have appeared at the Intermediate Public Examinations held in March/April, 1988 and are awaiting for results. However, their admission will be confirmed on submission of the pass certificate.

Mode of Instruction : The University adopts a multi-media approach by supplying printed course material (prepared by experts); broadcasting radio lessons; making available Audio Cassettes and Video lessons and arranging Contact-cum-Counselling programmes on Sundays and in the evenings on other days, at the study centres, to suit the convenience of office and factory-goers, house wives etc. The candidates will be admitted into the study centres, as indicated below, which are located in each district of the State and in the twin cities of Hyderabad and Secunderabad.

HOW TO OBTAIN APPLICATION FORM

By Post : You can obtain the application form by post from the office of the Director, Student Services Branch, 8-3-952/10/6 & 7, Srinagar Colony Road, Panjagutta, Hyderabad-500 016 by sending a crossed DD(s)/IPO(s) for Rs. 10/- drawn in favour of 'The Registrar, Andhra Pradesh Open University, Hyderabad' along with the requisition letter superscribed on the cover 'Application for Direct Admission to First Year B.A., B.Com., B.Sc. course for the academic year 1988-89. The sale of Application requisitions by post will be entertained upto 18-05-1988 only.

By Person : You can obtain the application in person by submitting either a crossed DD(s)/IPO(s) for Rs. 5/- drawn in favour of 'The Registrar, Andhra Pradesh Open University, Hyderabad' from (a) the Office of the Director, Student Services Branch, 8-3-952/10/6 & 7, Srinagar Colony Road, Panjagutta, Hyderabad-500016 (b) Public Relations branch, APOU 6-3-645, Somajiguda, Hyderabad, (c) Office of the Co-ordinators of the following Study Centres of A.P. Open University (from 3.00 p.m. to 6.00 p.m. daily except on Thursday and public holidays).

Twin Cities : 1. Kachiguda Junior College, Hyderabad; 2. D.B.P.M. College, Secunderabad (Key's High School Premises); 3. Govt. Women's College, Begumpet (Opposite to Hyderabad Public School).

Districts : 1. Adilabad (Govt. Degree College) 2. Anantapur (Govt. Degree College) 3. Cuddapah (Govt. Degree College for Men) 4. Eluru (Sri C.R. Reddy College) 5. Guntur (J.K.C. College) 6. Karimnagar (S.R.R. Govt. Degree College) 7. Khammam (S.R. & B.G.N.R. Govt. College) 8. Kurnool (Silver Jubilee Govt. College) 9. Mahaboobnagar (M.V.S. Arts & Science College) 10. Nalgonda (Nagarjuna Govt College) 11. Nellore (Sri Sarvodaya College) 12. Nizamabad (Giriraj Govt. College) 13. Ongole (C.S.R Sarma College) 14 Rajahmundry (Govt Degree College) 15. Siddipet (Govt. Degree College) 16. Srikakulam (Govt. College) 17. Tirupathi (S.V. Arts College) 18. Vijayawada (P.B. Siddartha College) 19. Visakhapatnam (Dr. V.S. Krishna Govt. College) 20. Vizianagaram (Maharaja College) 21. Warangal (Arts & Science College, Kakatiya University Campus-Subedari) 22. Sirpurkagaznagar (Govt. Jr. College) 23. Hindupur (S.D.G.S College) 24 Polavaram (Govt. Jr College) 25. Peddapalli (Govt. Jr College) 26. Godavarikhani (Govt. Jr. College) 27. Kothagudem (K.Y.K.R.Y. & B.N. Goud's Govt. Jr. College) 28. Shadnagar (Govt. Jr. College) 29. Alair (Govt. Jr. College) 30. Kavali (Jawahar Bharathi College) 31. Banswada (Govt. Jr. College) 32 Pithapuram (R.R.B.H.R. Govt. Jr College) 33. Kakinada (P.R. Govt. College) 34. Sangareddy (Tara Govt. Degree College) 35. Chittoor (P.V.K.N. Govt. Degree College) 36. Kuppam (M.F.C. Govt. Jr, College) 37. Satyaveedu (Govt. Jr. College) 38. Machilipatnam (Andhra Jateeya Kalasala) 39. Yelamanchili (Govt. Jr College) 40. Mulug (Govt. Jr. College) 41. Vikarabad (S.A.P. Arts & Science College) 42. Khammam (Govt. Degree College for Women) 43. Martur (Govt. Jr. College).

* The Application Forms can be obtained.

TWIN CITIES—FROM 18-4-1988 to 25-5-1988
DISTRICTS —FROM 25-4-1988 to 25-5-1988

* **Last Date for receipt of filled-in application form along with prescribed fee at the Office of the Director, Student Services, APOU**	**On or before 31-5-1988.**

REGISTRAR

Central Drug Research Institute

(Council of Scientific & Industrial Research)

ADVERTISEMENT No. 4/88

Applications are invited for the following posts in Central Drug Research Institute, Lucknow :

1. **Scientist E1** : One post (Clinical & Experimental Medicine)
(Rs. 3700-125-4700-150-5000)
M.D. with 10 years experience in Clinical Pharmacology as evidenced by publications on clinical studies. **Job Requirement** : To initiate, plan and conduct clinical trials on compounds under development as drugs. Experience in human pharmacokinetics would be a desirable qualification.

2. **Scientist 'C'** : Five posts
(Rs. 3000-100-3500-125-4500)

Post No. (i) (At Seth G. S. Medical College, C.P.U., Bombay) M.D. with 4 years research experience preferably in clinical pharmacology as evidenced by publications. **Job Requirements** : To help in conducting clinical trials on compounds under development as drugs.

Post No. (ii) (Parasitology)

Ist Class M.Sc. (Zoology/M.V.Sc. (Parasitology) with 6 years experience as evidenced by published papers in chemotherapy/Immunology/Immunopharmacology of helminthic infections or M.D. with 4 years experience/Ph.D. with two years research experience in the field. **Job requirement** : To carry-out chemotherapeutic/ Immunological investigations in helminthic infections.

Post No. (iii) (Parasitology)

Ist Class M.Sc. (Zoology/Microbiology)/M.V.Sc. (Parasitology) with 6 years experience or M.D. with four years experience in Cell Biology/Immunology of protozoans infections/Ph.D. with two years experience in the subject. **Job Requirement** : To carry out chemotherapeutic/ immunological (immunoprophylactic and immuno diagnostic) investigations in experimental Leishmaniasis.

Post No. (iv) (Toxicology)

Ist Class M.Sc. (Zoology/Physiology) with six years experience/M.D. with four years experience/Ph.D. with two years experience in the field of cytogenetics and mutagenesis as evidenced by publications. **Job Requirement** : To carry out studies in the Toxicology of Drugs with particular reference to their cytogenetic and mutagenetic action and related chromosome studies.

Post No. (v) (Pharmacology)

M.D. (Pharmacology) with 4 years experience/Ph.D. (Pharmacology/Biochemistry) with two years experience as demonstrated by original publications in the field of Neuropharmacology, with consistently good academic career. **Desirable** : Experience of using modern pharmacological techniques like radio-receptor binding/auto-radiography/microspheres and behavioural equipment. **Job Requirement** : The candidate will be expected to undertake and guide independently research in the area of Neuro-pharmacology including new drug development programme in the area.

3. **Scientist 'B'** : Four posts (Unreserved —2)
(Rs. 2200-75-2800-EB-100-4000) (Reserved for S.C.—1)
(Reserved for S.T.—1)

Post No. (i) (Endocrinology) (Reserved for S.C.)

Ist Class M.Sc. in Biochemistry/Physiology/Zoology or M.V.Sc. (Physiology) or Ph.D. in any of the above subjects. Experience in mammalian reproduction will be an added qualification. **Job Requirement** : To undertake studies on reproductive biology of mammals and development of antifertility agents.

Post No. (ii) (Physiology)

Ist Class M.Sc. (Biophysics/Physics/Biochemistry/Zoology/Physiology or Life Sciences)/M.V.Sc. (Physiology, Pharmacology)/M.Pharm (Pharmacology)/M.B.B.S. Three years research experience in a field closely allied with job requirement is desirable.

OR

M.D./Ph.D. in the above subjects. Experience in theoretical or experimental electrophysiology. **Job Requirement** : The candidate will undertake theoretical and experimental investigations on the ionic channel activities in multicellular and isolated single cell preparations

Post No. (iii) (Parasitology) (Reserved for S.T.)

1st Class M. Sc. (Zoology/M.V.Sc. (Parasitology) or M.B.B.S. **Desirable** : 3 years research experience in Immunochemistry/Immunology including immunoprophylaxis and immunodiagnosis of helminthic infections. Ph.D. or M.D. in the subject will be considered as additional qualification. **Job Requirements** : To isolate and characterize antigens of helminth parasites and to avaluate their immunogenicity and immunodiagnostic potential.

Post No. (iv) (Microbial Genetics)

Ist Class M.Sc./Ph.D. in any area of Life Sciences including Biochemistry and Biotechnology. **Job Requirement** : Specialization in protein biochemistry of antigen and/or enzyme isolation and characterization.

4. **Senior Technical Assistant :** Three posts (Unreserved—2)
(Rs. 1640-60-2600-EB-75-2900 (Reserved for S.T.—1)

Post No. (i) (Clinical & Experimental Medicine)

B.Sc. with Biology with 5 years experience or M.Sc. Zoology with good academic career. **Desirable :** Familiarity with clinical trials, experience in taking and evaluation of Papsmear of women volunteers would be preferred. **Job requirement** : To assist the Sr. Scientists in the Clinical Trials and relevant clinical investigations.

Post Nos. (ii) & (iii) (Photography) (1 post reserved for S.T.)

Degree in Commercial Arts/5 years Diploma Course in Colour and black and white photography/ 3 years course in Medical Science photography from a recognised Instt. or University with 3-5 years experience after graduation. **Job Requirement** : The candidate will be required to undertake the work of Photomicrography, microphotography, outdoor and indoor colour and black and white photography and may have to draw scientific diagrams and charts.

5. **Junior Technical Assistant :** Five posts (Unreserved —3)
(Rs. 1400-40-1800-EB-50-2300) (Reserved for S.C.—1)
(Reserved for S.T.—1)

Post No. (i) (Animal House)

B.Sc. degree with Zoology as one of the subjects and a good academic record. Candidates having experience in an Animal House or Animal Res. programmes will be preferred. **Job Requirement** : To carry out breeding operations, experimental manipulations maintenance of animal breeding records, implementation of routines of feeding cleaning operations, animal rooms and Laby. maintenance.

Post No. (ii) (Biochemistry) (Reserved for S.T.)

B.Sc. (Chemistry, Botany, Zoology or Chemistry, Physics, Maths) with good academic record. Two years experience desirable. **Job Requirement** : To carry out work in the Biochemistry, immunology of parasites.

Post No. (iii) (Chemistry) (Reserved for S.C.)

B.Sc. with Chemistry with good academic record. **Desirable** : Two years experience in a Lab. **Job Requirement** : To carryout the Laboratory work of medicinal chemistry.

Post No. (iv) (Pharmacology)

Graduate degree in Science with Zoology as one of the subjects and good academic record. Candidates having experience of working in pharmacological Laboratory and conversant with using newer techniques will be preferred. **Job Requirement** : To help the senior scientists in carrying out biological screening of new compounds and basic research.

Post No. (v)

B.Sc. with Chemistry as one of the subjects.
Desirable : One year course in programming and handling of computers. An experience in working on Micro-VAX and IBM) PC XT systems and in use of 3-D graphics for organic molecules of biological interest will be desirable. **Job Requirement** : To assist in the QSAR and Computer-graphics work in the Institute.

6. **Junior Engineer :** One post
(Rs. 1400-40-1800-EB-50-2300)
Three years Diploma in Civil Engineering/Architect or equivalent. Two years experience in Civil work desirable. **Job requirement** : Preparation of estimates for civil works, actual execution of civil work, preparation of bills and recording of M-B. In addition should be able to handle the day-to-day civil maintenance works.

General Conditions

1. All the above posts carry usual allowances as admissible under the rules of Govt. of India. Total emoluments at the minimum and the maximum of the grades including H.R.A. at present are as follows :

Scale	Minimum	Maximum
Rs. 3700-5000	Rs. 5030/-	Rs. 6530/-
Rs. 3000-4500	Rs. 4065/-	Rs. 6030/-
Rs. 2200-4000	Rs. 3011/-	Rs. 5330/-
Rs. 1640-2900	Rs. 2353/-	Rs. 3952/-
Rs. 1400-2300	Rs. 1867/-	Rs. 3124/-

2. Candidates belonging to S.C./S.T. conmmunities should invariably enclose an attested copy of original caste certificate issued by a competent authority with their application failing which they will not be

entitled to the concessions otherwise admissible to them. In the event of non-availability of S.C./S.T. candidates for the post of Scientist 'B' the post will be filled up by general candidates by following the prescribed procedure.

3. Since it is not possible to call all the eligible candidates for the interview, the applications will be shortlisted for the purpose and the decision of the Director will be final.
4. Applicants called for attending interview will be paid single second clas rail-fare to and fro the actual place of undertaking the journey or from the normal place of residence as mentioned in the application whichever is earlier to Lucknow Railway Station.
5. The prescribed application form may be obtained from the office of the Controller of Administration, Central Drug Research Institute, Chattar Manzil Palace, P.B No. 173, Lucknow-226001 (U.P.), by sending a requisition duly indicating the post and adverisement number alongwith a self-addressed envelope of size 23 x 10 cm. Any request for application form received after **19.5.88** will not be entertained for supply by post. Application duly completed (supported by the attested copies of certificates and testimonials) alongwith a non-refundable fee of Rs. 10/- (no application fee is prescribed for SC/ST candidates) in the form of crossed Indian Postal Order drawn in favour of the Director, Central Drug Research Institute, Lucknow should reach the Director, Central Drug Research Institute, Lucknow, on or before **30.5.1988**. Application received after this date will not be considered.
6. Separate application for each post alongwith requisite postal order in a separate envelope indicating the advertisement number and post applied for should be sent.
7. The candidates in Government/Semi-Government Organisations, Public Undertakings and Autonomous Bodies should route their applications through proper channel.
8. The number of vacancies to be filled may vary at the time of actual selection and due consideration for reservation of posts will be given where necessary.
9. Persons selected for the posts of Scientist E. 1, Scientist 'C' and Scientist 'B' will be appointed on contract for six years including probationary period of two years. The other posts are temporary but likely to continue on year to year basis.
10. The Institute has a system of periodical assessment promotion on merit.
11. The candidate selected for post no. 2(i) will have to join Clinical Pharmacology Unit at Seth G.S. Medical College, Bombay.
12. Canvassing in any form and/or bringing in any influence political or otherwise, will be treated as a disqualification for the post.

INTERIM INQUIRIES WILL NOT BE ENTERTAINED.

VECTOR CONTROL RESEARCH CENTRE

(Indian Council of Medical Research)
MEDICAL COMPLEX, INDIRA NAGAR
PONDICHERRY-605 006

M. Sc. in Medical Entomology

ADMISSION NOTICE FOR THE THIRD BATCH FOR THE ACADEMIC YEAR 1988-89

Applications are invited for admission to the 2 year M. Sc. Course (Trimester Pattern) in Medical Entomology, affiliated to the Central University, Pondicherry. Those who have passed (i) B Sc. with Zoology or Biology as one of the subjects, (ii) M.B B.S., (iii) B.V.Sc, or (iv) B. Sc. in Medical Laboratory Technology are eligible for admission.

The course is run by the Vector Control Research Centre, which is one of the permanent research institutes of the Indian Council of Medical Research and is also supported by the UNDP/World Bank/WHO Special Programme for Research and Training in Tropical Diseases. The Centre has excellent facilities for research and training in vector borne diseases and their control. The faculty includes both the staff of the Centre and invited Guest lecturers from research institutions in India and abroad.

Six candidates (one seat reserved for SC/ST candidates) will be selected on the basis of a written test. Another three candidates will be admitted from among inservice candidates nominated by State/Central Governments and another three seats are reserved for WHO sponsored candidates. The qualifying degrees of foreign srudents will have to be recognized by the Central University, Pondicherry. For the six open seats, only first class graduates will be called for the written test (SC/ST candidates securing II class in the qualifying degree are eligible to appear for the written test).

Candidates selected for admission on Open General Quota are likely to get a monthly fellowship of Rs. 800/- for 2 years from the ICMR.

Application forms and prospectus can be obtained from, "**The Director**, Vector Control Research Centre, Indira Nagar, Pondicherry 605 006" on or before **15th June 1988** on payment of Rs. 15/- by a crossed Indian Postal Order drawn in favour of the "Director, Vector Control Research Centre, Pondicherry-605 006". The last date for receipt of completed application form is **10th July, 1988.**

CLASSIFIED ADVERTISEMENTS

NATIONAL METALLURGICAL LABORATORY

Council of Scientific & Industrial Research

JAMSHEDPUR-831007

NML Advertisement No. 1/88

Applications are invited to fill up the following vacancies for Scientists at the National Metallurgical Laboratory (NML), Jamshedpur 831007, in the grades and disciplines mentioned against each. NML's objective is 'pursuit of excellence in research in the preparation and properties of engineered materials and the application of the results of the research for the benefit of the Society'. The applicant's background, commitment and career goals should commensurate with the achievement of NML's objective.

I. Scientists

Category—I : Scientist 'EI/EII —3 Posts

Scale of Pay —Rs. 3700-125-4700-150-5000 (EI) Rs. 4500-150-5700 (EII)

Scientist C —6 Posts
Scale of Pay—Rs. 3000-100-3500-125-4500

The above positions are available in the Sectional areas indicated against the following 7 R & D Divisions of the Laboratory :

1. **Computer Applications** : Numerical Methods/Process Simulation
2. **Corrosion Projection** : Inhibition
3. **Ferrous Process** : Process Development/Refratories
4. **Material Evaluation** : Fatigue & Fracture/Non-Destructive Evaluation
5. **Material Processing** : Casting & Powder Processing / Mechanical Shaping
6. **Mineral Processing** : Mineral Beneficiation/Agglomeration
7. **Non-Ferrous Process** : Smelting & Refining / Extraction & Electrowinning

Essential Qualifications

Either a First Class Bachelor's Degree in Engineering or a First Class M Sc., Degree in a relevant discipline, excellent achievement record in research and its application with hands-on R&D experience (12 years for Scientist EI/EII and (6 yeaes for Scientist C)— in any of the above mentioned areas

OR

Either a Post-graduate Degree in Engineering or Ph.D. in Science in a relevant area; excellent achievement record in research and its application with hands-on R&D experience (10 years for EI/EII) and (4 years for C)—in any of the above mentioned disciplines.

Category—II : Scientist B —6 Posts

Scale of Pay : Rs. 2200-75-2800-EB-100-4000

The above positions are available in the Sectional areas indicated against the following six R&D Divisions of the Laboratory :

1. **Analytical Chemistry** : Instrumental/Standard Sample
2. **Computer Applications** : Process Simulation/Systems
3. **Corrosion Protection** : Protection & Coatings/Corrosion Behaviour
4. **Ferrous Process** : Ore reduction
5. **Material Process** : Physical & Structural Characterization
6. **Mineral Processing** : Mineral Characterisation

Essential Qualifications

Either First Class Bachelor's Degree in Engineering or a First Class M.Sc., Degree in a relevant area. Excellent achievement record and Post Graduate Degree in Engineering or Ph.D. in Science in a relevant field will be preferred.

II. Fellow Post 6 Nos

(Quick Recruitment of Scientists for Major Projects)
Duration—for a maximum period of 3 years

Level of Emoluments :

Range-1 : Rs. 2400 / 2500 / 2600/2800/2900/3000
Range-2 : Rs. 3000 / 3100 / 3200/3400/3500/3600/3800/4000
Range-3 : Rs. 3600 / 3800 / 4000/4300/4600/4800/5000

The above positions are available in the Sectional areas indicated in Category I & II above R&D Divisions of the Laboratory.

Essential Qualifications

(i) **Range-I** : M.Tech. or equivalent degree/Ph.D. (Science) with uniformly outstanding academic record, & clear potential for high quality R&D work.
(ii) **Range-2** : M.Tech, or equivalent Degree with three years experience / Ph.D. (Science) / Ph.D. (Engg.) / with outstanding academic record and proven ability for high quality R&D work.
(iii) **Range-3** : M.Tech. / Ph.D. or equivalent Degree in respective discipline, with original work as evidenced by highly innovative patents or outstanding publications — evidence of leadership, with minimum of 5 years' R&D experience.

III. System Analyst —1 Post

Scale of Pay : Rs. 3000-100-3500-125
4500

Essential Qualifications

First Class Bachelor's Degree in Engineering/Computer Science or Post Graduate/Master's Degree in Mathematics/Statistics / Physics / Business Administration / Management with 6 years experience in design and development of application softwares in BASIC/FORTRAN/PASCAL/COBOL.

OR

Post Graduate Degree in Engineering/ Computer Science with 4 years experience in Design & Development of application Softwares as above.

General Information

1. All posts other than Fellows carry usual allowances as admissible under the Central Government Rules. Fellows are entitled to consolidated amounts only, plus the usual House Rent Allowance and Medical benefit as per rules.
2. Upto 5 advance increments could be recommended by the Selection Committee for candidates with truely exceptional credentials and performance.
3. Application form for all posts are obtainable by post (Free of cost) from the Administrative Officer, National Metallurgical Laboratory, Jamshedpur-831007, by sending self-addressed and stamped envelope (Rs. 1.80 paise) of 28 x 13 cm. Completed application forms together with non-refundable application fee of Rs. 8.00 (Rs. 2.00 for Scheduled Caste/ Scheduled Tribe candidates) in the form of a **Demand Draft on the State Bank of India, NML Branch, Jamshedpur, drawn in favour of the Director, National Metallurgical Laboratory, Jamshedpur,** alongwith attested copies of certificates/ testimonials etc., should reach the Director, National Metallurgical Laboratory, Jamshedpur-831007, on or before **Ist June, 1988.**
4. Candidates applying for more than one post should submit separate applications along with the prescribed application fee specifying No. of advertisement and post applied for.
5. Incomplete applications and those received after the last date will not be considered.
6. Details of the job description/ requirements, salary allowances, perks and scope of advance increments will be made available along with the Application Form on request including general conditions of service.

UNIVERSITY OF LUCKNOW

Advertisement No. 1/1988

WANTED

1. Dean / Director / Coordinator of College Development Council in the grade of Rs. 1500-60-1800-100-2000-125/2-2500 (unrevised).

Qualifications

Candidates must have hold the post of Professor/Principal/Director or an equivalent position in a University, College or Institute for at least five years. Candidates possessing administrative experience and familiarity with the functioning of a University vis-a-vis colleges and with their development will be given preference.

Age : Not above 62 years on 1.4.88.

2. One Reader for Academic Staff College in the grade of Rs. 1200-50-1300-60-1900 (unrevised)

Qualifications

(a) Good academic record with a doctorate degree or equivalent published work and active engagement in research or innovation in teaching methods or production of teaching materials ; and

(b) Five years' experience of teaching or research including at least three years as Lecturer or in an equivalent position.

Candidates with experience of organising orientation-training programmes will be preferred.

3. One Lecturer for Academic Staff College in the grade of Rs. 700-40-1100-50-1600 (unrevised)

Qualifications

(a) A doctorate degree or research work of an equally high standard; and

(b) Consistently good academic record with first or high second class Master's degree or an equivalent degree of a foreign University.

Candidates with experience of organising orientation/training programmes will be preferred.

General

The posts are temporary upto March 1990 but are likely to continue thereafter. The tenure of appointment will initially be upto March 1990.

The prescribed application forms can be obtained free of cost by sendinga self-addressed envelope size 23 x 10 cm. with postage stamp worth Rs. 5.50. Last date for submission of applications duly completed in all respects with recent testimonials, publications etc. and Bank Draft for Rs. 5/- (drawn in favour of the Registrar, Lucknow Universitty, payable at any Bank in Lucknow), is May 23, 1988.

Applications without Bank Draft will not be entertained. Candidates who are in service should send their applications through proper channel. Application forms to outstation candidates will be sent upto **May 16, 1988.**

B.M. Singh
REGISTRAR

OFFICE OF THE MEMBER-SECRETARY

MANIPUR AGRICULTURAL COLLEGE SOCIETY

IROISEMBA, IMPHAL-795 001

Advertisement No. Agri-College/I/2/79, Vol-5,

Dated : The 6th April '88.

Applications from intending candidates on plain paper giving full bio-data as per following items and accompanied with crossed Indian Postal Order for Rs. 7.50 (Rs. 1.90 in case of SC/ST candidates) drawn in favour of Member Secretary, Manipur Agricultural College Society, Iroisemba, Manipur are invited for the post of Principal of Manipur Agricultural College, Iroisemba in the Pay scale of Rs. 1500-60-1800-100-2000-125-2500/- (Pre-revi sed) plus Special Pay of Rs. 250/- p.m. with usual allowances as admissible under rule of the Manipur Agricultural College Society.

Qualifications

Essential : (1) Bachelor's Degree in Agriculture followed by Master's Degree in any branch of Agriculture Science.

(2) Doctorate Degree in any branch of Agriculture Science.

(3) At least 10 yrs experience in teaching/research and extension of which at least 3-yrs. in the rank of Professor or equivalent grade.

Desirable : (1) Intimate knowledge of educational system, functioning of Agricultural University/College and problems of Indian Agriculture.

(2) Evidence of initiative, leadership and capacity to plan, organise, co-ordinate and supervise the teaching, research and extension programme.

(3) Ability to conduct research work as evidenced by published paper in standard journals.

Age : Maximum age limit is 45 yrs. which is relaxable by 5 years for ST/SC candidates and 7 years for the employees who are working on regular basis under the Central or State Government or Recognised Institution/University/Agricultural Colleges.

ITEMS OF BIO-DATA TO BE FURNISHED : (1) Full Name (2) Permanent address (3) Present/Postal address (4) Father's Name (5) Father's permanent address (6) Nationality (7) Religion (8) Date of Birth and place of birth (9) Marital status (10) Whether belongs to SC/ST (certificate to be submitted if belongs to any of the said category) (11) Academic and Professional attainment (12) Experience (13) Research work as evidenced by published papers (copy to be enclosed) (14) Name and address of at least 2 (two) referees (not related to the candidates) (15) Any other information which the candidate wants to furnish but not covered by the above items.

Candidates who are willing to work on transfer or deputation or contract may also apply accordingly.

Higher start of pay can be given depending upon outstanding qualifications, experience and achievement. Benefits of Contributory Provident Fund, Leaves, House rent etc. should be available as per rules of the college.

Application complete in all respect alongwith attested copies of the certificates, marksheets, testimonials and publications must reach the office of the undersigned on or before 26th May, 1988.

Candidates who are called for interview will be given first class railway fare for to and fro journey from the place of origin and air fare from Calcutta/Gauhati to Imphal and back or actual expenses on fare, whichever is less.

S. Bapu Singh
MEMBER SECRETARY

MEERUT UNIVERSITY
MEERUT

Applications are invited for the following teaching posts. The application on prescribed form should reach the REGISTRAR, MEERUT UNIVERSITY: MEERUT-250005 latest by 15.6.88.

A. One Post of Reader in each subject
(1) Botany (Leave vacancy)

(2) Education (temporary likely to continue) in the grade Rs. 1200-50-1300-60-1900 (Revised grade Rs. 3700-125-4950-150-5700)

Minimum Qualifications

1. Good academic record with doctorate degree of equivalent published work and active engagement in research or innovation in teaching methods or production of teaching materials, and
2. Five years experience of teaching or research including at least three years as Lecturer or in an equivalent position, provided that the requirement contained in clause (2) may be relaxed in the case of a candidate who in the opinion of the selection committee, has outstanding research work at his credit.

B. One Post of Lecturer in eache subject. (1) Maths (Leave Vacancy likely to continue) (2) Russian Languages in the grade of Rs. 700-40-1100-50-1600 (Revised Grade Rs. 2200-75-2800-100-4000).

Minimum Qualifications

1. (i) A doctor's degree or research work of an equally high standard in the relevant subject; and

(ii) Consistently good academic record with First or High Second class Master's degree or an equivalent degree of a foreign University in the relevant subject.

2. Where the Selection Committee is of the view that the research work of candidate as evident either from his thesis or from his published work is of very high standard it may relax any of the qualifications prescribed in 1 (ii) above.

Note : Other things being equal, preference will be given to the Scheduled Caste/Tribe candidates who are considered fit. Such candidates should attach certificate to that effect from the District Magistrate.

Prescribed application form can be obtained by sending a request to the Dy. Registrar (Accounts), Meerut University, Meerut-250005 along with a self-addressed envelope of size 23x10 cms. and stamped worth Rs. 2-40 accompanied by a Bank Draft of Rs. 15/- in favour of the Finance Officer, Meerut University, Meerut or by Cash Payment of Rs. 15/- at the cash counter of the University.

I.P.Os or M.Os are not acceptable. While requesting for application form please mention "Application for Teaching Post" on the envelope.

The candidates who have already applied in reference to our previous advertisements for the post of lecturer in Maths and Russian Language need not apply again but they must request the Registrar, Meerut University, Meerut for confirmation of the receipt of their previous application in the University.

NATIONAL METALLURGICAL LABORATORY

Council of Scientific & Industrial Research

JAMSHEDPUR-831007

NML Advertisement No. 2/88

Applications are invited to fill up the following vacancies at the National Metallurgical Laboratory (NML) Jamshedpur-831007, in the grades and disciplines mentioned against each. NML's objective is 'pursuit of excellence in research in the preparation and properties of engineering materials and the application of the results of the research for the benefit of the Society'. The applicant's background, commitment and career goals should commensurate with the achievement of NML's objectives.

The positions advertised here are in the divisions primarily committed to providing infrastructure and support for R&D work at NML. But Scientists recruited in these divisions, if capable, are encouraged to use 30% of their time in participating in R&D projects of NML.

I. Scientists

Category—I : Scientist EI/EII —1 Post

Scale of Pay : Rs. 3700-125-4700-150-5000 (EI) Rs. 4500-150-5700 (EII)

Scientist C —3 Posts

Scale of Pay : Rs. 3000-100-3500-125-4500

The above positions are available in the Sectional areas indicated against the following Infrastructural Divisions of the Laboratory :

1. **Construction & Maintenance:** Construction & Contracts/Maintenance of Buildings

2. **Instrumentation & Electronics :** Electronics/Instrumentation.

3. **Process & Project Engineering :** Project Engineering/Process Engineering/Workshop & Design.

Essential Qualifications

First Class Bachelor's Degree in Engineering (Electrical / Mechanical/ Instrumentation/Electronics/Metallurgy/ Chemical) with excellent achievement record in the respective areas of engineering operation with 12 years experience for Scientist EI/EII and 6 years for Scientist C. User knowledge of Computers is desirable.

OR

Post Graduate Degree in Engineering; excellent achievement record in the respective area of engineering operation with 10 years experience for EI/EII and 4 years for C. User knowledge of Computers is desirable.

Category—II : Scientist B —2 Posts

Scale of Pay : Rs. 2200-75-2800-EB-100-4000.

The above positions in the areas mentioned above under 1, 2 & 3 category-I

Essential Qualifications

First Class Bachelor's Degree in Engineering in the relevant areas with excellent achievement record. Post Graduate Degree in Engineering will be preferred. User knowledge of computers is desirable.

II. Scientist EI/EII —1 Post

Scale of Pay : Rs. 3700-125-4700-150-5000 (EI) Rs. 4500-150-5700 (EII)

Essential Qualifications

First Class Bachelor's Degree in Engineering / Architecture, preferable with M.B.A.

OR

M.Tech/ME/Ph.D. or equivalent/Post Graduate Degree in Industrial Design, preferably with M.B A./Diploma/Degree in Mass Communication. Should have flair for writing scientific & technical articles with 12 years' experience in editing, Publication and production of periodicals/journals/technical brochures and making of video films/models/ exhibits/posters.

Job Requirements

1. Preparation and production of Annual Reports, NML Technical Journals, NML News Letter, Technical Brochures/Leaflets.
2. Projection of R&D work and publicity through Press/Radio/TV/Video films/models/exhibits/Posters.
3. Preparation and production of video films describing the laboratory's project activicies.

The selected candidate will have to take charge of the Publication, Photography and Printing Section at NML.

III. Photographic Officer 'B' (Group-III (4) —1 Post

Stale of Pay : Rs. 2200-75-2800-EB-100-4000.

Essential Qualifications

Degree/Post Graduate Degree in Science/Photography or related fields with 8-10 years experience if Degree holder or 4-6 years' experience if Post-Graduate in the latest techniques in colour printing/developing/bloek making/ preparation of colour slides and preparation & production of video films.

Sould be able to take independent charge of a modern Photography Unit.

IV. Scientist C —1 Post

Scale of Pay : Rs. 3000-100-3500-125-4500

Essential Qualifications

First Class M.Sc./B.Tech. followed by MBA Degree with 6 years' experience in Project Management, Monitoring & Evaluation and in organising technical meetings.

V. Senior Security Officer —1 Posr

Scale of Pay : Rs. 3000-100-3500-125-4500

Essential Qualifications

A Degree in Science/Arts/Commerce from a recognised University with at least 10 years experience in a similar position in large industrial undertaking/ research laboratory / Police / Defence Services. Candidate should be conversant with modern methods of security and fire prevention. Should be able to handle fire arms, and should possess good physique and personality.

Age 35 years. Relaxable for departmental candidates and in the case of Scheduled Caste and Scheduled Tribe candidates and other specified categories as per Govt. of India instructions

Job Requirements

Will be responsible for Security, Watch and Ward, fire fighting arrangements of the Laboratory/Pilot Plants and its residential colonies; liiason with the local police authority and any other work of responsibility assigned by the Head of the Laboratory.

General Information

1. All posts carry usual allowances as admissible under the Central Government rules. **Upto 5 advance increments** (except for Sr. Security Officer) could be recommended by the Selection Committee for candidates with truely exceptional credentials and performance.
2. Application form for all posts are obtainable by post (Free of Cost) from the Administrative Officer, National Metallurgical Laboratory. Jamshedpur-831007, by sending Self-addressed and stamped envelope (Rs. 1.80 paise) of 28 x 13 cm. Completed application forms together with non-refundable application fee of Rs. 8.00 (Rs. 2.00 for Scheduled Caste/Scheduled Tribe candidates) in the form of **a Demand Draft on the State Bank of India, NML Branch, Jamshedpur, drawn in favour of the Director, National Metallurgical Laboratory, Jamshedpur,** alongwith attested copies of Certificates/Testimonials etc., should reach the Director, National Metallurgical Laborarory, Jamshedpur, on or before **1st June, 1988.**
3. Candidates applying for more than one post should submit separate applications alongwith the prescribed application fee specifying number of advertisement and post applied for.
4. Incomplete applications and those received after the last date will not be considered.
5. Details of the job description/requirements, salary, allowances, perks and scope of advance increments will be made available along with the Application Form on request including general conditions of service.

KOTA OPEN UNIVERSITY

KOTA (RAJASTHAN)

No. F2/KOU/Estt./Adv. Teaching/88/3/1078

Dated : 8.4.1988

Applications are invited for the following posts to reach the office of the Registrar on or before **May 15, 1988.**

1. Professor

Economics—one, Management—one, Political Science—one, Life Science—one, Physics—one, Commerce—one, Indian Tradition and Culture—one, Mathematics—one, Education—one.

Scale of Pay : Rs. 1500-60-1800-100-2000-125/2-2500.

2. Director

Regional Service & Study Centre—one, Material Production & Distribution—one, Planning & Development—one, Science and Technology—one.

Scale of Pay : Rs. 1500-60-1800-100-2000-125/2-2500.

3. Associate Professor
(Economics)—one.

Scale of Pay : Rs. 1200-50-1300-60-1900.

Those who have applied in response to advertisement No. KOU/Estt./Teaching/88/2 dated 1.3.1988, need not apply afresh.

In pursuance of the Court directive reservation for S.C./S.T. categories shall be made as per provisions of Section 10, of the Rajasthan University Teachers and Officers Act of 1974.

The revised U.G.C. grades are likely to be implemented soon.

Prescribed application form and information regarding prescribed minimum qualifications and other particulars may be obtained from the office of the Registrar, Kota Open University, Arora Bhawan. Opp. D.I.G. (Police) Office, Collectorate Circle, Kota at a price of Rs. 11/- (Rupees Eleven) only, personally or by sending self-addressed envelope of 23 x 10 cms. and crossed Postal Order(s) of Rs. 17/- (Rupees seventeen) only in the name of the Registrar, Kota Open University, Kota.

REGISTRAR

BANASTHALI VIDYAPITH

The Vidyapith invites applications for the following positions :

1. LIBRARIAN

Qualifications : (a) First or Second class M.Lib. Sc. or M.A./M.Sc./M.Com. with I/II B.Lib. Sc. or Diploma Lib.Sc.

(b) Minimum 10 years experience as Librarian or in responsible professional capacity in a University Library.

(c) Ph.D. Degree or equivalent research work in the relevant field.

(d) Training in Computerization/Information Technology desirable.

2. DEPUTY LIBRARIAN

Qualifications : As above with minimum experience of 7 years.

Grade : LIBRARIAN : 4500-150-5700-200-7300.
DEPUTY LIBRARIAN : 3700-125-4700-150-5300.

DEARNESS ALLOWANCE, CONTRIBUTORY PROVIDENT FUND, GRATUITY-CUM-INSURANCE AS PER VIDYAPITH RULES. RESIDENTIAL ACCOMMODATION AT SUBSIDIZED RATES.

Notes : 1. Workers must become habitual wearer of KHADI on appointment.

2. Selection Committee may recommend higher start in exceptional cases on merit.

3. The Vidyapith reserves the right to reduce or increase the number of vacancies or not to fill-up any post advertised.

Applications on prescribed forms (seven copies) must reach the Secretary, Banasthali Vidyapith, P.O. Banasthali Vidyapith (Rajasthan) 304022 by **31st May, 1988.** Forms can be obtained by sending self-addressed stamped envelope of 16 x 23 cm. size with Rs. 4.20 stamps or 9.20 stamps for registered post in favour of Secretary, Banasthali Vidyapith. However, for Librarian's post, Bio-data on plain paper (seven copies) may be sent to the Secretary in confidence. No. 4/88.

Shri G. S. Randhawa, Vice-Chancellor, Guru Nanak Dev University receiving the Maulana Abul Kalam Azad Trophy from Shri R. Venkataraman, President of India.

COUNCIL OF SCIENTIFIC AND INDUSTRIAL RESEARCH

ADVERTISEMENT No. 8/88

The Council proposes to appoint four Scientist 'G' at the Secretariat of the Council of Scientific & Industrial Research. The Council is a premier R&D organisation with 40 national laboratories situated all over the country. The CSIR Hqrs. overviews the major R&D areas and identifies and formulate specific R&D programmes as Missions/Thrust areas, arranges Technology Utilisation of the Expertise and Technical know-how developed by the laboratories; interaction with various agencies/departments to catalyze development plans to S&T and in general the promotion of Science. These are leadership positions and call for long years of experience, sound knowledge and expertise, maturity of judgement, initiative and organisational capabilities.

Qualifications & Experience : High academic qualifications in any discipline of Science or Engineering and at least 12 years experience in an R&D institution, university department, scientific agencies in identification, execution, planning, monitoring and co-ordination of research projects, utilisation of technological know-how and its marketing or technical forecasting and scientific collaboration with various departments and agencies, etc.

Job Requirements : The selected Scientists will be required to head any of the groups in the field of Research & Planning, Technology Development, or to provide necessary secretarial Scientific and Technical inputs to various high powered bodies and Advisory Boards, etc.

Age : Below 50 years, relaxable in deserving cases.

Scale : Rs. 5900-200-6700 plus allowances at Central Government rates.

This is a contractual appointment for a period of six years. A share in Institutional consultancy upto Rs. 50,000/- per year is allowed. The selected candidates are eligible for accommodation as per rules.

Scientists/Technologists interested may obtain two copies of the standard proforma for sending their curriculum vitae from the Joint Secretary (Admn.), CSIR, Rafi Marg, New Delhi-110001. The completed curriculum vitae proforma should reach this office on or before **20th June, 1988**.

UNIVERSITIES
Management in Non-Profit Organisations

S. D. Tripathi*

Non-profit organisations and service institutions, like Universities, hospitals,, research laboratories, health care institutions, clubs, professional and trade associations etc., have become an increasingly necessary concommitants of our social system. They are the main pillars of a modern civilization, embodying the values of developed societies. They have to perform, if society and economy are to function efficiently. While every citizen in the contemporary industrialised and urbanised societies depends for survival and growth on the performance of public service institutions; in every country there are ever-increasing complaints against bureaucracy and mismanagement in such institutions.

The present paper, based on the setting of university as a social organisation in particular, attempts to focus on the problems of management in non-profit organisations in general.

Universities, though non-profit organisations in nature, are as much institutions as are business firms and are equally in need of management. They all have people. who are designed to exercise the management function and who perform management jobs, even though they may not be called managers, but as registrars, administrators, directors, or some other titles. Like profit-oriented organisations, they have objectives and one of their important management functions is an efficient and effective use of available orgnisational resources—human, financial and material. In the process of managing, business, firms have developed a number of valuable tools for analysing effectiveness or otherwise of management—budgets, responsibility centres, cost analysis, m.b.o., linear programming, profitability analysis etc., most of which can be used or adopted for use in non-profit organisations like universities also.

Nonetheless, university, as a public service institution, is in a fundamentally different business. It is different in its purpose; it has different values; it needs different objectives; and it makes different contributions to the society. 'Management for performance' is one of the areas in which service institutions like universities differ significantly from business.

By and large, management of service institutions in general and universities in particular is mediocre. There are three popular explanations for the common failure of universities as service institutions to perform : (i) their objectives and results are intangible; (ii) their basic problem is not high cost, but lack of effectiveness/efficiency; and (iii) their managers are not businesslike and they need better men.

University as a non-profit organisation exists to render a service; its success is measured primarily by how well it renders this service. There are six possible reasons for the present deplorable state of affairs :

(i) The absence of the 'measure of efficiency'
(ii) The lack of competition
(iii) Politics
(iv) Weak Governing Boards

---

*Professor, Department of Commerce & Business Management, Panjab University, Chandigarh-160 014.

(v) Traditions; and
(vi) Compensation system

While a profit-oriented organisation exists to earn a profit and its success is measured primarily by the amount of profit, in the case of non-profit organisations, service is a fuzzy concept. No one can establish a mathematical relationship between money spent and benefits received in the university system. The difficulty of defining objectives; of deciding on the resources required to reach objectives; and of measuring the efficiency and effectiveness with which the organisations perform to meet objectives, is the most serious management problem in a service organisation like universities. There is no foreseeable way of developing a control structure in a non-profit organisation that is as good as a structure that can be built around the profit measure. The unique problem is to develop better measures of output—what the organisation does and how well it does it.

Service institutions like universities are typically paid out of a budget allocation. 'Results' in a budget-based institution mean a bigger budget. Performance is the ability to maintain or to increase one's budget. And the budget is by definition, related not to the achievement of any goals, but to the intention of achieving the goals. The efficiency and cost control, however, much they are being preached are not really considered virtues in the budget-based institutions. The importance of a budget-based institution is measured essentially by the size of its budget and the size of its staff. Dependence on a budget allocation militates against setting priorities and concentrating efforts.

What is the alternative objective/purpose against which a non-profit service institution like university may be evaluated? Charles W. Eliot (President Harvard 1869-1909) saw the purpose of the university as that of 'educating a leadership group with a distinct style'. N.M. Butler (President Columbia 1902-1945) and W.R. Harper (President, Chicago 1892-1904) saw the function of the university as 'the systematic application of rational thought and analysis to the basic problems of modern society from education to economics, from domestic government to foreign affairs'. D C. Gilmen (President John Hopkins 1876-1901) maintained that 'university has to be viewed as the producer of advanced knowledge'. A.D. White (President Cornell 1868-1885) felt that 'university aimed at producing an educated people'. To make service institution perform, does not require 'great men'; it requires instead a 'system'. What has to be learned is to manage service institutions like universities for performance.

In many a non-profit organisations, particularly universities, the new client is not an opportunity; he is a problem. He is not a source of revenue; he is a source of headaches. Most universities have no motivation because they have no competition. Their revenues are allocated from a general stream of revenues of the state that is not tied to what they are doing, but is obtained by tax, levy or tribute. Furthermore, a typical service institution like university is endowed with monopoly power; the intended beneficiary usually has no choice.

Not all the public service organisations are political, but in those that are like universities, political considerations impede good management. Politics is inevitable, but there are opportunities to lessen the political influence in such organisations. One of the desirable ways is to reduce the number of officials elected and to increase the number of those who are appointed through a rotational system. In all organisations, the top man is responsible to some policy-making and review body. In universities, there are syndicates, Executive Councils or a body with a similar title. Its function is to set policy and to check up how well this policy is carried out. By and large, these bodies do not do a good job; generally they tend to rubber stamp the policies of the institution's to executive. They have neither the time nor competence to do otherwise.

The tradition that the head of an organisation should be a technical specialist disappeared from business companies early in the 20th century. It still persists in non-profit organisations like universities and results in selection of top men, who simply are not qualified to manage. They would be happier working at the specialities. A second influence of tradition is that these organisations have been slow to adopt modern management techniques. Non-profit organisations do differ from profit-oriented companies, but they have much in common also. They both have objectives and in both cases an important management function is to see to it that the organisation uses its resources efficiently and effectively.

The mere statement of the problem suggests the solution. Get rid of the traditional way of thinking about the management; recognise the management function for what it is; and use the modern management techniques that are available. This is the course much easier said dthanone. It requires education; it requires pressure and this is where the revitalised top management in the universities can play a key role.

Above all, a new breed of managers is needed in non-profit organisations like universities. In order to get them, the compensation system in the universities will have to be made more attractive to young people, who are choosing a career. The problems of measuring performance and the inevitable political considerations make the management job inherently more difficult in non-profit organisations. But the quality of management can be a lot better than it is now, with the adoption of modern management methods, increased competition, a new role of the top management bodies and greater public recognition of university autonomy. Non-profit organisations are now becoming more attractive and challenging place to work.

The set of interpersonal relationships which operates in the context of position, procedure, process, technology and social environment comprises of what is known as the organisational structure. The primary responsibility of educational manager is to improve the work of the people, he supervises; to improve the products (students); and to improve the team effort that makes the organisation successful. Through successful accomplishment of the above, he also improves himself. Accomplishment of an accountability concept in universities means that one must explicate clearly defined objectives and goals and have developed a management plan whereby goals can be reached in measurable ways. Universities have to adopt the strategy of organisational development as a response to change and as a complex educational strategy intended to change the beliefs, attitudes, values and structure of organisations so that they can better adopt new technologies, markets and challenges and the dizzying rate of change itself.

Non-profit organisations and service institutions in general and universities in particular have to prepare for management orientation, if they have to perform. Following steps are suggested for the purpose :

(i) Define nature and norms of their business;

(ii) Develop clear objectives and goals from the definition of functions;

(iii) Allot priorities of concentration like selection of targets, setting up of standards of performance, setting deadlines and developing accountability;

(iv) Define measures of performance;

(v) Use measurements as feedback by building self-control from results into the system; and

(vi) Install organised audit of objectives and results.

It should ever be kept in mind that university as a service organisation is the rational coordination of the activities of a number of people for the achievement of common explicit purpose or goal through division of labour and function and through hierarchy of authority and responsibility. □

RESTRUCTURING B.COM. COURSE

P. K. Nair*

This paper is confined to the restructuring of course for B Com. Degree in the light of its existing structure as provided by the university of Bombay. The details of the syllabi of each paper or subject provided in the course will not be discussed; only the pattern or arrangement of papers/subjects will be examined. First, the three year integrated course leading to the degree of B.Com. is patterned as follows :

A student for the three year B.Com. Degree Course is required to offer **18 papers** from the following **five** groups of **subjects** :

1. Foundation Course Group — Two Papers (2)
2. Applied Component Group — Two Papers (2)
3. Commerce Discipline (Compulsory) — Ten Papers (10)
4. Ancillary Subjects — One Paper (1)
5. Special Group — Three Papers (3)

The subjects prescribed for the B.Com Degree Examination and the papers assigned to each subject (the first at First Year and the Second at Second Year) are as follows :

I Foundation Course Group—Two Papers

Subjects	Number of Papers
1. (a) Elements of Social and Economic Life in India or (b) History of Modern Civilization (Asia and Africa) Any one of the following : (i) China, (ii) Japan, (iii) South-East Asia (iv) Africa	1
2. (a) Scientific Methods; and (b) Science, Technology and Development.	1

II Applied Component Group —Two Papers

Twenty one subjects are prescribed for study under the Applied Component Group out of which a student will be required to offer any two subjects, one at Second Year and the other at Third Year. There is one paper in each subject. Some of these among 21 subjects are Export Management, Marketing Research, Advertising, Labour Welfare and Industrial Relations, Management of a Small Scale Industry, Computer System etc. Some other subjects are Panchayati Raj, Physical Culture including Yoga Studies, Non-formal Education etc.

III Commerce Discipline—(Compulsory)—Ten Papers

Subject	Number of Papers
1. Commerce and Market	2 1 at S.Y. B.Com. 1 at T.Y. B.Com.
2. Business Economics	2 1 at F.Y. B.Com. 1 at S.Y. B.Com.
3. Business Law	1 at S.Y. B.Com.
4. Mathematical & Statistical Techniques	1 at F.Y. B.Com.
5. Business Communication	1 at F.Y. B.Com.
6. Commercial Geography	1 at F.Y. B.Com.
7. Accounting and Financial Management Or Actuarial Science (General) Or Law (General)	1 at F.Y. B.Com. 1 at S.Y. B.Com.

IV Ancillary Subjects—One Paper

The following are the subjects prescribed for study under the Ancillary Group from which a student should choose **any one** at Third Year B.Com. There is one paper in each:

1. Human Ecology and Environment
2. Economic History of India : 1818-1951
3. One Foreign Language other than English or Literature in one Modern Indian Language including English
4. Regional Planning including Population study
5. Sociology
6. Psychology
7. Philosophy
8. Outlines of Government and Politics in India
9. Industrial Psychology
10. Economic System

**Principal, V.K. Krishna Menon College of Commerce and Economics, Bombay-400 078.*

V Special Group

The following subjects—each subject having **three papers**—have been prescribed for **Specialisation** of which a student must choose any one at Third Year B.Com.

1. Financial Accounting and Auditing
2. Cost Accounting
3. Business Management
4. Company Secretarial Practice
5. Banking and Finance
6. Foreign Trade
7. Applied Economics
8. Actuarial Science
9. Rural Development
10. Law

The rationale of the above structure and subjects may be examined now. It seems Foundation Course group was introduced to bring into the scheme interdisciplinary approach in the sense that a commerce graduate should not be unaware of the socio-politic, economic and scientific--technological environments in which he is supposed to live and function. It seems that the first paper is supposed to make him patriotic and broad-minded if he had not yet already imbibed these qualities. The second paper is to train him in scientific reasoning and attitude so that he will be free from prejudice and obscurantism.

The intention of introducing Applied Component group is not clear. It was declared in workshops arranged for teaching these subjects that Applied Component was **not** the same as the Vocational Component. It has nothing to do with employment orientation. Applied Component was explained as applied or practical aspect of theory. One may wonder what is the applied aspect of Commerce which itself is the applied aspect of economic theory.

The Commerce Discipline group consists of some subjects like Business Law, Commercial Geography etc. How are such of these subjects within the commerce discipline itself ? They can be termed or grouped as even Ancillaries. On the other hand, in the Ancillary group there are subjects which are not directly "Supportive" to commerce (such as French, German, Marathi, Hindi etc).

Now let us discuss the syllabi of some of the subjects mentioned above.

Business Communication

Objectives of teaching this paper, as stated, are :

(a) to provide an intellectual interest to the study of Business Communication problems in the field of Commerce;

(b) to help the theoretical study with a discussion of practical situations in the business world; and

(c) to equip the students with an ability to have effective oral and written communication.

Some of the topics included are objectives, types, methods of Business Communication, Committees, public relations, interviews, Conferences, Communication log etc. The task of imparting education on these above topics has been assigned to lecturers in English literature. Naturally, the teacher who is basically trained in the grammar, idiom, usage and style and deeply immersed in literature as such is a fish out of water! She/he indeed deserves sympathy as she/he is likely to have no training in the technological instruments of communication like telephone, telex etc. This paper is supposed to help the students to improve their communication skill. But it has been a failure because the syllabus for this paper is a hotchpotch. Nothing is therein to develop command over usage of any language which is the essence of communication skill. One cannot communicate clearly and fluently without proficiency in language. Teaching of communication through any language without anything to do with grammar, usage and style is an exercise in futility. It may be clarified that it is not something pertaining to English alone. On the other hand, some other topics like writing application and bio-data, testimonials, letters of appointments and termination etc., can be taught by any teacher in English, but are thrust upon those students whose medium of instruction/learning are not English. They are not taught such topics in their own mother tongue. Is'nt it necessary to teach them how to apply for jobs in Marathi or Hindi ? Therefore, it is better to provide for a paper on English/Marathi/Hindi according to the medium of learning the student has opted for.

In the existing pattern, the papers in Economics are named "Business Economics". But it has been proved to be "Old wine of Economic Theory in the new bottle of Business". It is quite obvious the result cannot be different. Economics is indeed the study of ordinary "business of life". It seems the prefix "Business" was given to Economics in order to blunt the thoughtless criticism of Commerce/Accountancy Departments that the Commerce course was loaded with too much economics. But what is Commerce ? It is after all Applied Economics. Economics may be even called "Pure Theory of Commerce".

Some say "the contents of the papers taught in Business Economics are highly theory oriented and do not give adequate attention to applied aspects of economics". Will not theory orientation help develop analytical and abstract thinking capacity and contribute to intellectual discipline ? While "Commerce" which is itself "Applied Economics" is there, why should "Economics" be deprived or devoid of theoretical orientation ? What purpose will Commerce serve if it does not itself as such provide applied aspects of Economics ? Commerce is Applied Economics, is Business Economics, is Managerial Economics. Any adjective prefixed to Economics as theory should be avoided in the interest of clear thinking. The present paper I is overloaded with both **Micro and Macro** Economics and devoid of Indian experience. This paper should be revised as **Micro-Static Economic Theory** with reference to its application to the Indian Economy.

Foundation Course Paper-I—Social and Economic Life in India contains nothing new and challenging to the students of B.Com. as they would have studied most of the topics even in schools. Other subjects offered like Japan, China, South-East Asia, Africa are not popular with commerce students. This paper can be replaced by a **Vocational Component** paper. This **Vocational Component** is NOT Applied Component. Vocational Component requires that students should actually "Do" something. 100% marks should be assigned for practical experience. There is no need for any theory or classroom teaching. Every Saturday students should find time and situation to do something. Many things can be done even inside the College like running a canteen, a cooperative store, typing, teaching or helping to run the College office, interior decoration of the college itself. Some can work outside and bring certificates.

At present there is no paper/subject in Commerce taught at the F.Y. B Com. level. A paper on Business/Industrial Organisation can be introduced there.

At the Second year level, the present paper i.e. Business Economics Paper-II which has two sections viz 1. Public Finance ; and 2. International Economics may be replaced by **Macro—Comparative-Static Economic Theory** with reference to the Indian Economy.

The Commerce Paper-I (Business Planning) may be replaced by Principles of Management.

The Business Law paper may be broadened in content by including Company Secretary Practice, Company Law, MRTP Act. It can be renamed suitably as Commercial or Mercantile Law.

In the existing scheme, there is a paper on Applied Component group. If commerce itself is "Applied" branch of a discipline, there is no need for any "conspicuous" Applied Component group. We can accommodate the relevant subjects under the existing Applied Component group in Commerce main papers themselves.

Auditing may be taught at the Second year level instead of the existing Third year level.

Ancillary subjects are supportive or secondary to the main discipline. In the existing course, English, Sociology etc , which are themselves "Independent" disciplines, are treated as "ancillaries". Ancillaries to Economics and Commerce are Agriculture, Banking, Economic History, Economic Systems, Finance, Foreign trade, Transport, Labour and Trade Unionism etc. There is scope for providing one/two Ancillary papers at the S.Y. B.Com. level.

There can be a compulsory paper on Development Economics instead of the existing Ancillary paper. No Ancillary paper need be kept at the **Third Year** level.

The Commerce Paper—III may consist of two sections Marketing Research (the study of technique of finding out the Market) and Advertising (the study of technique of Capturing the Market). These two are at present optionals under the Applied Component Group.

Costing and Works Accounting should be compulsory subject.

Three papers may be assigned for "Specialisation" either in Financial Management or Business Management or Cost and Works Accounting or Company Secretary Practice or Banking or Insurance or Actuarial Science etc.

Any thought on restructuring of courses must start with answering the following questions : (1) What should be the specific objective of Commerce course at the B.Com Degree level ? It cannot be inculcation of patriotism, of pride in our cultural heritage, of social awareness etc., though they are important objectives from the broad view of educational policy. we should take it for granted that the students of B.Com course are already patriotic, proud of heritage and socially aware as they would have been conditioned at their schools. The objective can then be to put it crudely : **To provide** human resource material for making of Chartered Accountants, Cost and Works Accountants, Company Secretaries, Business and Industrial Managers, Entrepreneurs, Bankers, Insurers etc. To bring in idealistic objectives will be at the risk of clouding the basic and specific purpose. If we can consider "Career Courses" in C.A., C.W.A., C.S., M.B.A. etc. as specialisation, than B.Com. course should prepare the students for these courses. B.Com. Degree should be a "Gate-Way" into the same above specialisations.

The Second question then should be : What are the qualities such B.Com graduates should possess ? They are :

1. Communication Skill
2. Numerical Ability
3. Abstract (Analytical) Thinking Capacity
4. Manipulative or Organisational Faculty
5. Vocational Familiarity.

Having made some random observations, I suggest the pattern of course for the B.Com. Degree as follows :

PATTERN SUGGESTED

Objectives	First Year B.Com.	Second Year B.Com.	Third Year B.Com.
1. Communication Skill	1. English/Chosen Medium	1. Business/Commercial/ Mercantile Law including Secretarial Practice and MRTP Act	1. Marketing Research—Section-I Advertising-Section-II
2. Numerical Ability	2. Mathematics & Statistics.	2. Anciliary*-I	2. Cost & Works Accounting
3. Abstract (Analytical) Thinking Capacity.	3. Static-Micro Economics with reference to Indian Economy.	3. Comparative—Static Marco Economics with Ref. to Indian Economy	3. Dynamics of Economic Development with reference to India
4. Manipulative or organisational Faculty.	4. Industrial/Business Organisation.	4. Principles of Management Practice	4. Special Subject Paper-I
5. Basic	5. Accountancy	5. Auditing	5. Special Subject Paper-II
6. Vocational Familiarity	6. *(a) Computer Programming (b) Journalism (c) Hoteliery (d) Stock-broking and Financial Intermediary (e) Copy writing (f) Salesmanship (g) Estate Agency and Building Construction (h) Stenography (i) Market Data Collection (j) Retail Store running (k) Commercial Photography (l) Material Handling and Store-keeping (m) Interior Decoration (n) Teaching etc.	6. Anciliary* II *Any from the following : (a) Public Finance (b) International/Foreign Commerce Or World Trade—Export Management. (c) Economic Systems (d) Economic History (e) Cooperative Movement (f) Industrial Relations and Labour Welfare (g) Agriculture—Rural Economy (h) Industry (i) Transport (j) Computer System.	6. Special Subject Paper-III

WOMEN AND SOCIAL CHANGE

Basing his discourse on three recent news reports about women—An Indian Exhibition on 'Stri' at Moscow, proposal to debate 'Sati', and the call for creating conditions conducive to equality of sexes—Prof. K. Satchidananda Murty, Vice-Chairman, University Grants Commission vexed eloquent on the need to improve women's actual situation in India. He was all for condemning irrationality, inequality, intolerance and injustice wherever they may exist—in scriptures or religion as practised or in social organisation and customs, but the philosopher in him revolted against an indiscriminate fight against religion and/or tradition which was neither right nor rational. Prof. Murty was addressing the second convocation of Sri Padmavati Mahila Viswavidyalayam, Tirupati. Excerpts.

Convocation

I would like to discourse with reference to three current news items.

(1) An Indian exhibition on "Stri" (Woman) held recently at Moscow is reported to have dwelt on conceptions like woman as prakriti (nature), shakti (energy), kali (power) and matrika (universal mother), finally culminating in ardhanarisvara (male-female Lord). While such an exhibition must have been enlightening to those interested in Indian philosophico-religious ideas, profanation and secularisation of concepts like ardhanarisvara may not be justified, useful or relevant for contemporary purposes. It is true the great Yogi Siva 'established' Parvati in half his body (yamanirata dehardhaghatana, as the *Mahimnastotra*, 23, says). It is equally true that Lakshmi eternally resides in the chest of Narayana (Tadvakshasthalanityavasarasikam, as *Sri Venkatesvaraprapatti* says). Siva-Parvati and Lakshmi-Narayana are mutually inseparable. Like speech and intention, vagarthaviva, in the words of Kalidasa. But it is doubtful if these profound spiritual concepts could become instruments of social change. Conceptions like those of the Eternal Sophia or the Virgin-Mother are equally valuable in the spiritual realm. I recall C.G. Jung hailing the proclamation in 1950 of the Dogma of the Assumption of the Virgin as tne most important religious event since the Reformation. (*Antwort auf Hiob*, 1952). Similarly the Tantric conception of Shakti as Creative Dynamism, and the related techniques of autonomising sensual pleasure, attaining great happiness (mahasukha) and divinising the human body through erotic acts without consummation and physical effects, with the help of a woman who would throughout the process remain passive, impersonal and pure, appear to be based on certain metaphysical and psychological truths and experiences. But one wonders whether they may and can be justifiably and usefully pressed into service in the efforts to improve women's actual situation in India. Widespread and loose popularisation of such ideas and resort to occult practices claiming to be based on them led to the discredit of Hindu and Buddhist Tantras.

(2) A few days ago it was reported that a Swami of a Samaj had challenged the Head of a Math to a public debate on the question whether or not "Sati" has been sanctioned by the Hindu sacred scriptures. Long ago the best scholars have shown that the srutis and authoritative ancient smritis do not sanction any such thing. Reason and good sense, as well as the conscience of any contemporary civilized person, are unanimous in considering it cruel, barbarous and outrageous. Moreover, even if some dharmasastraic passage were to be produced to show that it has been sanctioned, the greatest smritis have long ago laid down what ought to be done in such cases. According to Manu, any 'dharma' which results in unhappiness and regress and horrifies the world must not be performed. (Dharmam capi asukhodarkam lokavikrushtameva ca, IV. 176.) Dharma is only that which is ever practised by the learned and the good who are free from aversion and attachment, as well as in accordance with reason. Nothing that makes one ashamed and anything which does not give one *tushti* (satisfaction/happiness/sense of fulfilment) cannot be dharma. (*Manu*, XII.35-7.) Moreover, Manu points out, dharmas differ from age to age. (Dharmah—nrunam yugahrasanurupatah, 1.85.) Yajnavalkya's view is identical. Even if something is 'dharma', i.e. even if it has been prescribed, what will not lead to heaven and what is opposed to civilised consensus or is

likely to be condemned by society, ought not to be performed. Interestingly, Vijnanesvara gives veal-offering to an honoured guest (madhuparkagovadhadikam), prescribed in some dharmasastra or by some tradition, as an example of a 'dharma' which ought not to be practised. Human sacrifice, "sati" etc. might have the sanction of some scripture or sastra, and might have been practised by some at some time. But as today they appear to us to be irrational, cruel, outrageous and barbarous, they should be eliminated from a civilised society. A public or private debate on their possible sastraic sanction has no practical relevance.

It is most gratifying that on November 16, 1987, in the Lok Sabha, Shri P.V. Narasimha Rao stated as follows :

> **Government do not want to know what Manu said or Shankaracharyas are saying on Sati. We are the modern Manus. We want to take only the progressive interpretation of Manu's teachings.**

This is a wise and courageous statement, which is important as it comes from a scholar-statesman in the cabinet, who knows deeply and loves intensely Indian tradition and has a critical and rational outlook.

(3) In a recent lecture an eminent retired judge of our highest court made a powerful plea for creating conditions necessary to achieve equality between the sexes guaranteed by the Constitution. I fully share his concern in this matter and join him and others in condemning irrationality, inequality, intolerance and injustice wherever they may exist—in scriptures and religion as practised or in social organisation and customs. But an indiscriminate fight against religion and/or tradition as such does not seem to be either right or rational.

There is much in our culture, tradition and classical literature which is glorious, and much that is outmoded, irrational, inequitous and irrelevant. We must critically appropriate the former, and fight with all our might against the latter. I would, for example, bring under the former the Nalopakhyana and Savitryupakhyana of the *Mahabharata*, Valmiki's 'great story of Sita' (Sitayah charitam mahat) and Ritadhvaja-Madalasa story of the *Markandeya Purana* under the former, while I would include in the latter category the story in the same Purana of that stupid pativrata wife of the leper Kaushika of Pratishtanapura, whom she daily used to carry on her shoulders to the house of a prostitute. As in other cultures, in ours too woman has been "empowered" as well as "enslaved", deified as well as chattelised.

Prof. K. Satchidananda Murty delivering the convocation address

One of the glories of Indian culture is its formulation of the Pativratya-Ekapatnivrata Ideal. A Pativrata is not a slave or sex-object. She is exclusively devoted to her husband (ananyabhava), is totally involved in him and his welfare (anuraktachetas). She shares his happiness and unhappiness; her mind does not think of anyone else in his place. In whatever situation he may be he is dear and desirable to her. He is her closest friend and nearest relative, as well as her collaborator in achieving dharma. She would never desire anything in which she cannot jointly participate along with him. But the necessary concomitant of this Ideal is that of Ekapatnivrata. He who follows the latter has firm and steadfast love for his wife (sthiranuraga) and would, moreover, care for her as a parent would for his offspring. She would be his companion for life and dearer to him than his own life (pranaih priyatara, pranebhyopi gariyasi). Without her he would find even heaven with its nymphs desolate. For him none else including his own parents would be dearer than her. He would not even think of enjoying any woman excepting his own wife; and if she were to predecease him he would remain chaste. (Tamrute...aham na bhokshye yoshitam kamcit, declared Ritadhwaja.) Sita of Valmiki claimed that Rama loved no one else more than her; nay, he did not even love anyone else equally ! (*Ramayana, Sundara Kanda*, XXXVI, 30.) According to Tiruvalluvar, Ekapatnivrata exemplifies 'noble manliness', 'real heroism' and perfect virtue.

According to the *Mahabharata* the wife is the husband's best friend (Suhridam vara) ordained by destiny (bharya daivakritah sakha). It further says : one's dear wife is greater than one's life (pranebhyopi gariyasi); she should be protected like one's mother and respected like one's elder sister. This Itihasa also asserts that as is oneself so is one's s on, and a daughter is equal to the son. (Putrena duhita sama). Everything must be given to a daughter; those parents, brothers, in-laws etc., who desire prosperity should treat girls/women with respect and affection. (pujyah lalayitavyah ca.) Women are indeed Lakshmis; he who desires prosperity must honour them. (Sriyah etah striyo nama, satkarya bhutimichhata.) (*Mahabharata*, Anusasanaparva, 45, 46.) At one place this work says with approval that Manu did not applaud the practice of women living with husbands whom they disliked; they can remarry, it implies. (same parva.)

Of course, the Fifth Veda has sections/passages which say that there is nothing more sinful than women, and that they are the root of all evil. (*Mahabharata, Anusasana Parva*, ch. 38.) A number of religious tracts and teachers have said that it is Kamini-Kanchana (woman and gold) which lead men astray, and that men should always avoid them. This is part of our "inglorious tradition", as are the caste system, untouchability, etc. But there is no culture or tradition in which there is not something 'inglorious'.

The composite ideal of Ekapatnivrata-Pativratya is nothing but the institution of marriage in which both the partners practise lifelong mutual mental and physical fidelity. I do not know why so great a thinker and poet with an encyclopaedic knowledge as Goethe declared "marriage is the greatest achievement of European culture", and why so eminent a scholar and well-read man as Denis de Rougemont has claimed marriage is "the institution most typical of European morals" ! Maybe Goethe did not come across characters other than those like Dushyanta in the Indian literature he was acquainted with, and de Rougemont knew well only about Tantrics from Eliade's work. While the classical Indian and European-Christian cultures acclaimed stable marriage as the ideal man-woman relationship, it is recognized as such by the Marxists also. "Monogamic unions", according to Engels, "provide the most sensible relation between the sexes in a society that has been emancipated from the restraint of money and class". Lenin strongly disapproved promiscuity and sexual lawlessness terming them "petit bourgeois". (de Rougemont, *Love in the Western World*, Rev. & Aug. Edn. with postscript, Princeton, 1983, pp. 287-3, 289.) Bela Kopeczi, a distinguished scholar who is also the Hungarian Minister of Culture and Education has pointed out, on the basis of empirical surveys, that the Family was identified as the preeminent value by Europeans in both the socialist and non-socialist countries, (his article in *The New Hungarian Quarterly*, Vol. XXVII, No. 104, 1986.) It is not surprising that Gorbachev and his colleagues as well as some American leaders are emphasizing ethics and values, especially, family integrity.

Before it came into contact with Europe, India never knew fatal passionate love *ever* unfulfilled—such as that found in the Tristan and Iseult romance, but given its final form in Wagner's *Tristan und Isolde*. It knew fickle sensuality of the type which found its most effective expression in Mozart's *Don Giovanni*. But it always condemned it. Its great ideal has been that embodied in upakhyanas like Nala-Damayanti and Savitri-Satyavan and Valmiki's great Sita charita. According to it, as a Sangam poet said, the spouses would have two bodies, but one soul and life. Let us not abandon it till a better one is found.

Present thinking in the world has gone much beyond what prevailed when Simone de Beauvoir published her *The Second Sex* and Beatty Friedan her *The Feminine Mystique*. As you will admit, the first was truly the first feminist and with the second began Women's Liberation Movement in USA. There is no one dimensional oppression in marriage as de Beauvoir thought, if marriage is understood in the way indicated above. In her very recent second book *The Second Stage*, Freidan is pleading for "the articulation of the values of family and life itself", and now thinks feminism does not require the denial of difference between women and men. Germaine Greer is doing her best to show that old Eastern societies have not marginalised women, that feminist movements (through competition with men, etc.) and governments (through family planning, etc.) might lead to weakening of family ties, loneliness of women, rejection of children, and destruction of the balance among individual needs, rights and freedom, societal natural laws and the future of civilization. (*Sex and Identity)* Lastly, the myth of women ever having had a monopoly on compassion and peace has been effectively exploded by Jean Bethke Elshtain. (*Women and War*).

It is heartening to remember that : (a) Our Sixth Five Year Plan has a chapter on "Women and Development" and the HRD Ministry has drawn up a new Perspective Plan for Women, 1988-2000, and sent it to the Planning Commission. (b) A National Committee on Women with the Prime Minister at its head has been constituted by the government. (c) The University Grants Commission has activised implementation of its programme of the Development of Women's Studies in Universities and Colleges. ☐

Higher Education Relevance and Quality

The Department of Economics of the University of Bombay recently organised a Symposium on "Higher Education in the Context of the New Education Policy" under the auspices of Department's University Leadership Programme and Economics of Education Unit. The Symposium was conducted in three Sessions : (i) Planning and Administration of Higher Education, (ii) Analytical Teaching of Indian Economy, and (iii) Role of Teacher in the Context of the New Education Policy. Over 40 teachers in Economics from the colleges/University actively participated in the discussions.

In their paper "Planning and Administration of Higher Education : The Challenge of Change". R. Bharadwaj and K.K. Balachandran analysed the apportionment of higher educational expenditure between different objects or items from the point of view of qualitative improvement. The deleterious effect of the current pattern of expenditure on real academic activities was highlighted. It was also observed that higher education in India was reeling under the mounting pressure of deepening resource crunch, and a threatening consequence of this over time appeared to be stifling of objective or independent knowledge-generating activities especially in universities. The allocations for academic activities like teaching, equipment and appliances, laboratories, libraries, etc. have naturally to be high, but these have declined over the years.

Jacob P. Verghese in his paper 'Administration of Higher Education and the idea of Autonomy' pointed out the possible dangers of granting autonomy to a few colleges on the basis of their academic reputation and sound financial position, leaving their less fortunate sister colleges to doom. He suggested instead small autonomous 'clusters' of colleges, outstanding and poor together, in a particular locality of a big university. He also proposed state-level counterpart of the UGC to supervise and regulate these clusters.

The second session concentrated on two papers : (a) "Analytical Approach to Teaching Indian Economy at B A. and M A. levels" by S.P. Padgaonkar; and (b) "Teaching of the Indian Economy : Analytically" by A.M. Pethe and A.V. Karnik. While Padgaonkar's paper examined the need for an analytical approach to teaching Indian Economy, Pethe and Karnik's paper contended with an operational definition of 'analytical teaching. It was pointed out that a change to analytical teaching of Indian Economy will require a concomitant strengthening of the quantitative apparatus of students, preparation of teaching materials, changes in evaluation procedures, etc.

Session III took up papers on (a) "The Role of Teachers in the Context of the New Education Policy" by S.M. Israney and L.H. Bagalkot, and (b) "Role of a Teacher and the New Education Policy" by (Mrs.) S.A. Nagpurkar. Israney and Bagalkot emphasised the need for active steps to upgrade the teaching-learning process with a proper measure of research guided by suitable methods of teaching. They felt there was scope under the New Education Policy for creating a conducive atmosphere, with proper incentives, for better learning and teaching. Job satisfaction is more important than anything else, and all efforts should be made to reduce intellectual alienation and narrow the gap between education and knowledge, and between educators and qualifiers, they stressed.

(Mrs.) Nagpurkar drew attention to the role of women who were coming forward in greater numbers to join the teaching profession. She also emphasised the need for better interaction among teachers through Seminars, debates, discussions, etc. Teachers' associations should take active interest in faculty development programmes and not depend too much on government agencies for this purpose, she observed.

The Symposium was marked by lively discussion and the deliberations constitute an excellent agenda for starting of further action in making the teaching-learning process of Economic Science at the University level both creative and contributive.

Superconductivity at PG Level

Prof. Yash Pal, Chairman, University Grants Commission (UGC) said in New Delhi that the Commission is considering introduction of a special paper on High Temperature Superconductivity (HTSC) at the postgraduate level as well as making changes in the curricula of the MSc and BSc students. Besides the UGC is also thinking of setting up an interuniversity centre for research in superconductivity. He was addressing a meeting of eminent scientists and coordinators of superconductivity programmes of over 25 universities of the country where some research is presently going on.

Prof. Yashpal said besides changes in curricula at the MSc and BSc level, the universities should also make an effort at planning new experiments for the physics and chemistry students which would not only interest but involve them in this area of research. He said the universities must think of setting up of special facilities or adding to the existing ones which would in turn help other institutions which did not have such facilities.

Prof. Narlikar of the National Physical Laboratory said some of the proposals for research that were made by various universities were excellent. He referred to the IIT Kharagpur, Pune, Banaras, Rajasthan, Goa and Madras universities where interesting work was going on. He said the presentations justified that the work must be encouraged and suggested that the university people visit some of the national laboratories and develop interaction to keep abreast of the latest research going on.

The UGC has so far supported research in 27 universities to the tune of Rs. 220 lakh besides constituting a standing committee on superconductivity.

Participants in the meeting included Prof. C.N.R. Rao, Prof. R. Vijayaraghavan, Prof. K.L. Chopra, Dr. A.V. Narliker and Prof. A.P. B. Sinha.

Multidisciplinary Symposium on Gerontology

Jawaharlal Nehru University proposes to organise an All-India Symposium on Biological, Medical and Social Gerontology from December 19 to 22, 1988 at the School of Life Sciences at New Delhi to coincide with the IVth National Meeting of the Association of Gerontology (India) (AGI). The Symposium will concentrate on the current researches (academic and applied) in the field of ageing (Gerontology-Senescence). Intended to make a positive attempt to integrate new knowledge about ageing and promote greater communication between the community of individuals engaged in various aspects of ageing research in the country, the symposium will focus on applications of emerging knowledge and understanding in the field of gerontology for the benefit of human society.

The AGI meeting would provide a forum where academic excellence and practical measures can complement each other, and will also make an attempt to make general public aware of the potential of ageing research : to increase the span of healthy productive life and to minimize the social, biological and clinical problems of age (senescence).

Further details about the symposium can be had from Professor Rameshwar Singh, School of Life Sciences, Jawaharlal Nehru University, New Mehrauli Road, New Delhi-110067.

Orientation Course for Teachers

Prof. S.C. Dube, Chairman, M.P. Uchcha Shiksha Anudan Ayog, inaugurated the first Orientation Course organised by the Academic Staff College of the Dr. Harisingh Gour Vishwavidyalaya at Sagar recently. He said that the Academic Staff Colleges had been conceptualised to provide a forum where teachers with different backgrounds and various age groups could interact with each other. He pleaded that such orientation programmes should not be reduced to one-man monologues. Instead, these should help raise significant questions, evolve suitable alternatives, and place relevant issues in proper perspective.

He called upon the teachers to link theoretical knowledge with realities of life around them so that the educational system could become accountable and enriching. The objective of education, specially higher education, should not only be to impart knowledge but to make students think, he added. In this context, he suggested that audio-visual aids could also be employed.

Earlier, Prof. P.D. Hajela, Vice-Chancellor, who presided, pointed out the need to make universities research-intensive. He regretted that bodies of higher learning are increasingly becoming lesson-imparting institutes. He hoped that the Academic Staff Colleges would orient the teachers to make research productive and socially meaningful.

Over 30 university and college teachers are attending this month-long course.

Courses in Atmospheric Sciences

The Center for Atmospheric Sciences (CAS) of the Indian Institute of Science, Bangalore offers postgraduate courses on Introductio to meteorology; Geophysical flui dynamics; Radiative transfer in th atmosphere; Monsoon dynamic Numerical weather prediction; Convection and clouds; Atmospher turbulence; and Meteorologic instruments

It conducts post-M.Sc. cours in atmospheric sciences, leading M.Sc. (Engg.) and Ph.D. degrees the Indian Institute of Scien The following courses are also p posed to be offered : Atmosphe thermodynamics; General Circu tion and climate : observation and theory; Waves and instabilities in the atmosphere; Climate modelling; Large scale variability of oceans and atmosphere; Turbulent diffusion in the atmosphere; Statistical methods in meteorology; Stochastic modelling and prediction; and Satellite meteorology.

Problems of Development

The Western Regional Centre of the ICSSR and the Political Science Department of Goa University organized a two-day seminar on "Problems of Development with special reference to Western India at the University Campus Bambolim. The Seminar discussed themes ranging from the concept and theories of development to such macro themes as Bureaucracy and Development and Poverty Alleviation Programmes, Study of Village Development in Goa, Development of Scheduled Castes & Tribes in Goa, and the Employment Guarantee Scheme in Maharashtra. Prof. Adi H. Doctor, Head of Political Science Department of Goa University, directed the Seminar.

Pedagogical Perspectives on Literary Language

A 2-day seminar an 'Pedagogic Perspectives on Literary Language' was recently organised by Dakshina Bharat Hindi Prachar Sabha at Hyderabad. The purpose of the seminar was to propose the models of pedagogic perspectives of aesthetics aspect of the literary language.

Dr. C.B. Rawat, Professor of the P.G. Complex, revealed the problems of literary and non-literary languages while describing their contrasts. Prof. Vijendranarayana Singh from the University of Hyderabad discussed the mutual relations of Aesthetics and Literary languages. Dr. K.K. Goswami from C.H.I., Delhi opined that it was not proper to state that language was merely a medium of literary language.

Prof. U.N. Singh of the University of Hyderabad stressed on the possibilities of literary planning by language planning. Prof. Ch. Rama Rao of Telugu University proposed that while teaching the literary language the ideological background should also be brought out.

Sri V. Anjaneya Sarma, Registrar of the P G. complex, stressed the need of discovering various models of the pedagogical perspectives on literary language.

Festival of India Participants' Workshop

Department of Youth Affairs and Sports, Government of India will organise a two day Workshop on May 9-10, 1988 at the Youth Hostel Association of India, New Delhi. Group Leaders and Participants in the Youth Programmes of the Festival of India held in the USSR have been invited to the Workshop.

Youth Programmes of the Festival of India were held at Moscow, Leningrad and Tashkent during July-September, 1987 in which about 500 youth contingent, including 108 university youth from 15 universities participated.

The participants at the Workshop would share their experiences and prepare their report at the end of the deliberations. A detailed report would be presented by Group Leaders of their respective groups. The Department has prepared a questionnaire to facilitate collection of information from various participants.

Gujarat Vidyapith Heralds Literacy Campaign

Adult Literacy Resource Centre of the Gujarat Vidyapith has launched a 'Literacy Campaign' with a target of covering 5 lakh illiterate dults of 15-35 age group through active involvement of 1000 voluntary agencies and one lakh volunteers. The campaign named 'Saksharata Abhiyan' will last from May 1 to 15th June, 1988. Every day each volunteer will go to the house of five illiterates and help them learn themselves through literacy kits. Five lakh literacy kits have been printed for them and are being delivered to 1000 villages. Realising the urgency of evolving low-cost reading material, the Gujarat Vidyapith have developed 25 lesson literacy kits of 25 loose sheets with inbuilt exercises. This costs only Rs. 2 per kit.

The campaign will be followed up by opening 1500 Jan Shikshan Centres in 1000 villages that participate in Saksharata Abhiyan.

Transportation Engineering Centre

Ministry of Human Resource Development, Govt. of India, has sanctioned a grant of Rs 10 lacs for setting up a Centre in Transportation Engineering at Thapar Institute of Engineering and Technology, Patiala. Preparations are afoot to set up the Centre. The Centre will be expected to develop manpower and conduct research in the area of Transportation Engineering.

News from Agril. Varsities

Horticultural Development in Marathwada Region

The Marathwada Agricultural University, Parbhani organised, in collaboration with the Hexamar Research and Development Foundation, Bombay, a seminar on Horticultural Development in Marathwada Region on 1-2 April, 1988 at Fruit Research Station, Himayat Bagh, Aurangabad. The objective of the seminar was to identify the problems of Horticultural Development of the region and to formulate a strategy of horticultural research and development. Dr. K.L. Chadha, Deputy Director General, Horticulture, I.C.A.R., New Delhi, inaugurated the seminar while Dr. P.V. Salvi, Vice-Chancellor, presided.

Dr. K L. Chadha, in his inaugural address, emphasised the need of research in horticultural crops as good potential existed in the region. He also assured financial support from I.C.A.R. Dr. P.V. Salvi observed that the region had very good climate, soils and local plant types available for development of the region. He emphasised the need of immediate research on survey of local mango types available in the region and strengthening of the nursery activity for the supply of plant material on large scale to the cultivators of Marathwada.

Seven lead papers on fruit growing, vegetables, floriculture, fruit and vegetable preservation, Dryland Horticulture, Nursery and Medicinal Plants were presented at the seminar which was attended by over 300 delegates from Andhra Pradesh, Karnataka and agricultural universities of the state.

Industrial Uses of Sorghum

The College of Agricultural Technology of the Marathwada Agricultural University has conducted research on sorghum processing to produce value added industrial products. A high quality starch can be produced from hybrid sorghum and the sorghum starch can be converted to sweetners like liquid glucose. I.C.A.R. sponsored a scheme on malting of sorghum. Under the scheme the process has been standardised for malt production and utilization of malt in weaning foods, bakery products and beer.

Processes have also been developed for production of sorghum flakes and sorghum pops for use in snack industry. Pearled/polished sorghum can be utilized in production of various sorghum products.

Merist Culture Techniques

The Indian Council of Agricultural Research (ICAR) has sanctioned to the Kerala Agricultural University a research project on 'Standardisation of tissue/apical meristem culture techniques in horticultural crops of Kerala', with assistance from the International Co-operation and Development, USDA. The Project, with a total outlay of Rs. 15.661 lakhs for a period of three years, will be implemented at the Department of Horticulture, College of Agriculture, Vellayani. Dr. S. Ramachandran Nair, Professor and Head, Department of Horticulture and Dr. N. Mohanakumaran, Associate Director of Research (Southern Region) will be the Principal Investigators. Under the project, a tissue culture laboratory will be established in order to standardise micropropagation techniques in cashew and nutmeg.

Sports News

Maulana Azad Trophy for Guru Nanak Varsity

Mr. R. Venkataraman, President of India, awarded the "MAULANA ABUL KALAM AZAD TROPHY" to the Guru Nanak Dev University, Amritsar for the year 1986-87 on April 19, 1988. Mr. G.S. Randhawa, Vice-Chancellor of the University received the coveted trophy on behalf of distinguished sportsmen/sportswomen of the University. Guru Nanak Dev University has won this trophy nine times

Maulana Abul Kalam Azad Trophy, the highest sports award in India, was instituted by the Ministry of Education, Government of India in 1956-57 and is awarded each year by the President of India to the Vice-Chancellor of that University which attains maximum points in Inter-University, National and International competitions.

During the year 1986-87, the Guru Nanak Dev University won seven All India Inter-University Championships in Gymnastics (Men), Cross Country (Women), Weight Lifting, Hockey (Women), Kabaddi (Women), Kabaddi (Men) and Best Physique. It was runners-up in six disciplines in Cross-Country (Men), Athletics (Women), Basketball (Women) and Football (Men) and was third in Wrestling and Kho-Kho (Women).

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

RESEARCH IN PROGRESS

A List of Research Scholars Registered for Doctoral Degrees of Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Mishra, Pawan Kumar. *Distribution theory*. BHU. Dr. R.S. Pathak, Department of Mathematics, Banaras Hindu University, Varanasi.

2. Rajoriya, Vinod Kumar. *Some results in the fixed point theory*. HS Gour. Dr. R.K. Jain, Department of Mathematics, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

Statistics

1. Singh, Khundom Kumarchand. *The applications of neighbour type designs, their analysis and methods of constructions*. Devi Ahilya. Dr. Bhagwandas, Prof. and Head, School of Statistics, Vigyan Bhawan, Khandwa Road, Indore.

Physics

1. Awana, Veer Pal Singh. *Interfacial phenomena in liquid crystals*. BHU. Prof. Y. Singh, Department of Physics, Banaras Hindu University, Varanasi.

2. Bose, Subrata. *Studies on fibre optics and microstrip antenna*. BHU. Prof. K.K. Dey, Department of Physics, Banaras Hindu University, Varanasi.

3. Chandra Bhushan. *Density functional theory of freezing*. BHU. Prof. Y. Singh, Department of Physics, Banaras Hindu University, Varanasi.

4. Jaya Raj, M.E. *Study of some metastable alloy phases produced by rapid solidification*. Devi Ahilya. Dr. Ajay Gupta, Reader, School of Physics, Vigyan Bhawan, Indore and Dr. K. Rama Reddy, Prof. Department of Physics, Osmania University, Hyderabad.

5. Kalyanasundaram, V.N. *Experimental high energy physics*. BHU. Prof. S.K. Tuli, Department of Physics, Banaras Hindu University, Varanasi.

6 Laha, Tripti. *Interface properties of Si-SiO_2 system*. BHU. Prof. R.S Srivastava, Department of Physics, Banaras Hindu University, Varanasi.

7. Mehta, Subhash Chandra. *X-ray spectroscopic studies of some rare earths and their compounds*. Devi Ahilya. Dr. S.N. Gupta, Prof., Department of Physics, Vikram University, Ujjain.

8. Mohan Das, M.V. *Solidification composites*. Kerala. Dr. Elezabeth Roschen Sasikumar, Regional Research Laboratory, Pappanamcode, Trivandrum.

9. Nagar, Vivek Chandra. *Phase transition and interfacial phenomena in liquid crystals*. BHU. Dr. Shri Singh, Department of Physics, Banaras Hindu University, Varanasi.

10. Pandey, Shreekant Tribhuwan Nath. *Some studies on determination of the structural parameters from XFS* Devi Ahilya. Dr. K.P. Joshi, Prof., Department of Physics, Vigyan Bhawan, Indore.

11. Prasada Rao, Korrapati Chandra Sekhara Vara. *Phase*

transition in liquid crystals. BHU. Prof. Y. Singh. Department of Physics, Banaras Hindu University, Varanasi.

12. Ramesh, Gandham. *Study of materials under low temperature.* BHU. Prof. O.N. Srivastava, Department of Physics, Banaras, Hindu University, Varanasi.

13. Ranveer. *Semi-conductor electrolyte interface and solar energy conversion.* BHU. Prof. S. Chandra, Department of Physics, Banaras Hindu University, Varanasi.

14. Sabitha, Pagadala. *Synthesis, characterisation and stability of amorphous materials.* BHU. Dr. R.S. Tiwari, Department of Physics, Banaras Hindu University, Varanasi.

15. Safdar—Habibi. *Study of stability and properties of some transition metal metalloid (TM-M) metallic glasses.* Devi Ahilya. Dr. Ajay Gupta, Reader, School of Physics, Vigyan Bhawan, Indore.

16. Sharma, R.K. *Studies on mercury cadmium telluride.* BHU. Dr. B.B. Sharma, Solid State Physics Laboratory, Lucknow Road, Delhi and Prof. S. Chandra, Department of Physics, Banaras Hindu University, Varanasi.

17, Singh, Arun Kumar. *Atomic vibrations in hexagonal transition metals.* BHU. Dr. S S. Kushwaha, Department of Physics, Banaras Hindu University, Varanasi.

18. Singh, Veer Pal. *A study regarding charged particle-atom (molecule) collisions.* BHU. Dr. D.N. Tripathi, Department of Physics, Banaras Hindu University, Varanasi.

19. Srivastava, Rajendra. *Studies on biomolecular structure.* BHU. Dr. P.C. Mishra, Department of Physics, Banaras Hindu University, Varanasi.

20. Ullas, G. *Molecular spectroscopy.* BHU. Dr. S.B. Rai, Department of Physics, Banaras Hindu University, Varanasi.

21. Verma, Kiran Kumar. *Investigation of energy materials.* BHU. Dr. R.G. Tiwari, Department of Physics, Banaras Hindu University, Varanasi and Prof. O.N. Srivastava, Department of Physics, Banaras Hindu University, Varanasi.

Chemistry

1. George, Santhi. *Chemistry of organic eutectic and addition complexes.* BHU. Dr. U.S. Rai, Department of Chemistry, Banaras Hindu University, Varanasi.

Earth Sciences

1. Mishra, Devesh Chandra. *Micropalaeontology.* BHU. Dr. Jagdish Pandey, Chief Geologist, Oil and Natural Gas Commission, Dehradun and Prof. M.S. Srinivasan, Department of Geology, Banaras Hindu University, Varanasi.

2. Mukherjee, Jiteswar. *Petrology and economic aspects of the pegmatites and associated rocks of pegmatites, Bihar, India.* BHU. Dr. Arup Deb, Department of Geology, Banaras Hindu University, Varanasi.

3. Singh, Pramod. *Invertebrate palaeontology and stratigraphy.* BHU. Dr. A.K. Jaitly, Department of Geology, Banaras Hindu University, Varanasi.

4. Singh, Ram Autar. *Structure and tectonics.* BHU. Dr. V.K. Gairola, Department of Geology, Banaras Hindu University, Varanasi.

5. Verma, Hargun. *Invertebrate palaeontology and stratigraphy.* BHU. Dr. A.K. Jaitly, Department of Geology, Banaras Hindu University, Varanasi.

Engineering & Technology

1. Anoop Kumar. *Fluid flow and heat transfer.* BHU. Dr. S.N. Gupta, Department of Mechanical Engineering, Banaras Hindu University, Varanasi.

2. Chaurasia, Bhanu Shanker. *Ion theory.* BHU. Prof. Ravi Prakash, Department of Bio-Medical Engineering, Banaras Hindu University, Varanasi.

3. Ganguly, Alack Kumar. *Electrical power transmission and distribution.* BHU. Dr. A.K. Mitra, Director (R & D), Electricity. Research Institute, UP State Electricity Board, Lucknow and Prof. V.S. Subba Rao, Department of Electrical Engineering, Banaras Hindu University, Varanasi.

4. Gupta, Ajai Kumar. *Vibration of geared systems* BHU. Prof. S. Kishore, Department of Mechanical Engineering, Banaras Hindu University, Varanasi.

5. Malick, M.H. *Study of holistic approach to production management and human resource interface for sustained growth in Indian engineering industry.* Delhi. Prof. Rajnish Prakash, Department of Mechanical Engineering, Delhi College of Engineering, Delhi.

6. Mehta, Arun Shanker. *Squeeze casting of aluminium alloys.* BHU. Dr. B. Chatterji, Deputy General Manager, Foundary and Forge Division, HAL, Bangalore and Prof. P. Ramachandra Rao, Department of Materials Science, Banaras Hindu University, Varanasi.

7. Mehta, Sujatha. *Deformation behaviour of aluminium alloys.* BHU. Dr. P.S Babu Ramani, Manager, Hindustan Aeronautics Limited, Bangalore and Prof. V.V. Kutumba Rao, Department of Metallurgical Engineering, Banaras Hindu University, Varanasi.

8. Paliwal, Hirendra Kumar. *Fluid flow and heat transfer.* BHU. Dr. S.N. Gupta, Department of Mechanical Engineering, Banaras Hindu University, Varanasi.

9. Patel, Arun Kumar. *Photo-chemical reaction process.* BHU. Dr. P.N. Tewari, Department of Chemical Engineering, Banaras Hindu University, Varanasi.

10. Radhakrishnan, S. *Biomedical telemetry.* BHU. Prof. Ravi Prakash, Department of Biomedical Engineering, Banaras Hindu University, Varanasi.

11. Rajagopalachary, T. *Modelling of metal working processes.* BHU. Prof. V.V. Kutumba Rao, Department of Metallurgical Engineering, Banaras Hindu University, Varanasi.

12. Ranganath, S. *Preparation and evaluation of novel composites.* BAU. Dr. J. Subramanyam, Defence Metallurgical Research Laboratory, Hyderabad and Prof. V.B. Tare, Department of Metallurgical Engineering, Banaras Hindu University, Varanasi.

13. Singh, Girish Kumar. *Optimum design of 3-phase armature wdg. for effective utilisation of supply wave form.* BHU. Prof. M. Bhattacharya, Department of Electrical Engineering, Banaras Hindu University, Varanasi.

14. Singh, Vinod Kumar. *Adaptive control strategy in power-frequency control design.* BHU. Dr. D.S. Chauhan, Department of Electrical Engineering, Banaras Hindu University, Varanasi.

15. Singhal, Dhirendra. *Structural Engineering.* BHU. Dr. Ramji Agrawal, Department of Civil Engineering, Banaras Hindu University, Varanasi.

16. Sinha, Shirish Kumar. *Mathematical modelling and computer analysis of EHV and UHV transmission grounding systems.* BHU. Dr. D.S. Chauhan, Department of Electrical Engineering, Banaras Hindu University, Varanasi.

17. Sinha, Sunil Kumar. *On-line system identification methods*. BHU. Dr. T. Nagaraja, Department of Electrical Engineering, Banaras Hindu University, Varanasi.

18. Syed Akhlaq Ahmad *Absorption of SO_2 gas in reacting and non-reacting*. BHU. Dr. V. Krishnan, Department of Chemical Engineering, Banaras Hindu University, Varanasi.

BIOLOGICAL SCIENCES

Biochemistry

1. Agrawal, Sunita. *Molecular mechanism of various phenomena associated with histone H 1*. BHU. Dr Z. Ali, Department of Biochemistry, Banaras Hindu University, Varanasi.

2. Bhalerao, Anjali. *Stress on immunity*. BHU. Prof. S. S. Dubey, Department of Biochemistry, Banaras Hindu University, Varanasi and Prof. P. C. Sen, Department of Microbiology, Banaras Hindu University, Varanasi.

3. Dash, Debabrata. *Biochemical changes in platelets in hyper aggreable condition like ischaemic heart disease*. BHU. Dr. G.N.K. Rao, Department of Biochemistry, Banaras Hindu University, Varanasi.

4. De, Amitabha. *Physico chemical studies of ribosome structure and function*. BHU. Prof. M. Charavorty, Department of Biochemistry. Banaras Hindu University, Varanasi.

5. Dey, Debendra Nath. *Mechanism of translocation in protein synthesis*. BHU. Prof. M. Chakravorty, Department of Biochemistry, Banaras Hindu University, Varanasi.

6. Mukherjee, Nivedita. *Use of recombinant DNA techniques in the study of host virus interaction*. BHU. Prof. M. Chakravorty. Department of Biochemistry, Banaras Hindu University, Varanasi.

7. Pandey, Bindu. *Molecular characterization of bacteriophage MB 78*. BHU. Prof. M. Chakravorty, Department of Biochemistry, Banaras Hindu University, Varanasi.

8. Sasane, Grace, Anant. *Cloning, sequencing and expression of genes of bacteriophage MB78*. BHU. Prof. M. Chakravorty, Department of Biochemistry, Banaras Hindu University, Varanasi.

9. Srivastava, Supta. *Effect of use of Terminalia arjuna on lipid profile and related enzymes in ischaemic heart disease*. BHU. Prof. S. S. Dubey, Department of Biochemistry and Medicine, Banaras Hindu University, Varanasi; Prof. P. N. Somani, Department of Biochemistry and Medicine, Banaras Hindu University, Varanasi and Prof. K. N. Udupa, Department of Biochemistry and Medicine, Banaras Hindu University, Varanasi.

10. Tikoo, Kul Bhushan. *Effect of sex hormones on chromatin structure in situ*. BHU. Dr. Ziledar Ali, Department of Biochemistry, Banaras Hindu University, Varanasi.

Botany

1. John, T. *Evaluation of the genotoxic potential and cytogenetic effects of spices and condiments*. Kerala. Dr. Susan Abraham, Prof. Department of Botany, University of Kerala, Trivandrum.

Zoology

1. Chandra Letha, K. *Studies on the aphids of Trivandrum District*. Kerala. Dr. N. R. Prabhoo. Prof., Department of Zoology, University of Kerala, Trivandrum.

2. Das. Aparup. *Population genetics of Drosophila*. BHU. Dr. B.N. Singh, Department of Zoology, Banaras Hindu University, Varanasi.

3. Matkar, S.M. *Pest complex of soybean; Influence of crop sowing time on the major pests under treated and untreated conditions and biology of girdle beetle*. Devi Ahilya. Dr. S.R. Deobhakhta, Asstt Prof. Holkar Science College, Indore.

4. Singh, Arun Kumar. *Mammalian reproduction*. BHU. Prof. C.J. Dominic, Department of Zoology, Banaras Hindu University, Varanasi.

5. Singh, Rakesh Kumar. *Cell biology and immunology*. BHU. Dr. A. Sodhi, Department of Zoology, Banaras Hindu University, Varanasi.

6. Vyas, Harsh. *Studies on the succession of pest complex of fruit trees and ornamental plants around Indore*. Devi Ahilya. Dr. S.R. Deobhakta, Asstt Prof, Holkar Science College, Indore.

Medical Sciences

1. Abbas, Wafa Rahmetalla. *Role of Gaba in experimental peptic ulcerations*. BHU. Dr. R.K. Goel, Department of Pharmacology, Banaras Hindu University, Varanasi and Prof. S.K. Bhattacharya, Department of Pharmacology, Banaras Hindu University, Varanasi.

2. Dikshit, Badri Nath. *Analysis of ICDS programme impact on birth and child survival upto 6 yrs. of age in rural Varanasi*. BHU. Prof. S.D. Gaur, Department of Preventive and Social Medicine, Banaras Hindu University, Varanasi.

3. Mohammad Aslam. *Phytochemical and pharmacological studies on some Indian medicinal plants*. BHU. Dr. V.K. Agarwal, Department of Pharmacology, Banaras Hindu University, Varanasi and Dr. R.K. Goel, Department of Pharmacology, Banaras Hindu University, Varanasi.

4. Pandey, Mahendra Nath. *Samaj shastriya drishtikon mein Ganga pradushan ka adhyayan*. BHU. Prof. G.P. Dubey, Department of Basic Principles, Banaras Hindu University, Varanasi and Dr. J.D. Gode, Director, Institute of Medical Science, Banaras Hindu University, Varanasi.

5. Ravinder Kaur. *Bioactive terpenoids*. BHU. Prof. S. Ghosal, Department of Pharmaceutics, Banaras Hindu University, Varanasi.

6. Sahiwal, Asheema. *Evaluation of integrated child development in urban area of Varanasi District*. BHU. Dr. (Mrs) P. Kaur, Department of Preventive and Social Medicine, Banaras Hindu University, Varanasi.

7. Shanthy, A. *Studies on shilajit*. BHU. Prof. S. Ghosal, Department of Pharmaceutics, Banaras Hindu University, Varanasi.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Goswami, Sudipkumar. *Scattering of water waves in the presence of obstacles and associated mathematical methods.* Calcutta.

2. Jacob, M.J. *Probabilistic analysis of some queueing and inventory models.* CUST. Dr. A. Krishnamoorthy, Prof. Department of Mathematics and Statistics, Cochin University of Science and Technology, Cochin.

3. Lalan Singh. *A study of camposition operators L 2.* BHU. Dr. Nand Lal, Reader, Department of Mathematics, Banaras Hindu University, Varanasi.

In Pursuit of Lakshmi : The Political Economy of the Indian State
Dr. Lloyd I Rudolph
Dr. Susanna Hoeber Rudolph

This book focuses on the modern-day manifestations of Lakshmi and offers a comprehensive analysis of the political economy of contemporary India.

It examines the character of the Indian State, its formation and analyses the declining role of party politics. The second section explores the relation between Indian politics, its economy and economic policies. It also deals with the composition and functions of diverse social groups in determining policy and State formation.

Khaja Banda Nawaz College of Engineering Rouza Buzurg : Gulbarga-585105

(Affiliated to the Gulbarga University, Gulbarga)

No. : KBNCE Admission/1988-89

ADMISSION NOTICE-1988

Applications are invited for admission to the following :
B E. DEGREE (FOUR YEAR COURSE)
(1) CIVIL ENGINEERING
(2) MECHANICAL ENGINEERING
(3) ELECTRONICS & COMMUNICATION ENGINEERING
(4) INSTRUMENTATION TECHNOLOGY
(5) COMPUTER SCIENCE

Minimum qualification for admission to the Engineering Course is pass at the Two-year Pre-University or any equivalent examination approved by the Gulbarga University with a minimum average of 50% of the aggregate marks in Physics, Chemistry and Mathematics, and with English as one of the subjects. Diploma Holders of Karnataka or Diploma holder of other States recognised by Gulbarga University with a minimum of 50% of the total marks in the final exam., in the said diploma course are also eligible.

Students desirous of seeking admission to the Engineering Courses mentioned above should immediately contact the Secretary, Khaja Education Society, in person on or before **30-6-1988.**

Note : Hostel accommodation available.

BIRLA INSTITUTE OF TECHNOLOGY

MESRA : RANCHI

Admission to 3-Semester (1½-Yr.) Postgraduate Programme—1988

Applications are invited for admission to the following 3-Semester (1½-Yr.) Postgraduate courses leading to M.E. and M. Pharm. Degree :

Courses	Specialisations	
M.E. Degree Programme		
(i) Electrical Engineering	1. Control Systems	2. Power Systems
(ii) Electronics & Comm. Engg.	1. Microwave Engg.	2. Instrumentation and Control
(iii) Mechanical Engineering	1. Heat Power	———
(iv) Space Engg. & Rocketry	1. Aerodynamics	2. Rocket Propulsion
M. Pharm. Degree Programme	1. Pharmaceutics	2. Pharmaceutical Chemistry

Eligibility Requirements

1. (i) **For M.E. Electrical, Electronics and Comm. and Mechanical Engineering**

A Bachelor's Degree in the appropriate branch of Engineering with a minimum of 60% marks in aggregate or Sec. A and B of the A.M.I.E. (India).

(ii) A Bachelor's Degree in Mechanical or Aeronautical or Chemical Engineering with a minimum of 60% marks in aggregate or Sec. A and B of A.M.I.E. (India) or A.M. Aero.S.I. or A.M.I.Ch.E. or equivalent.

(iii) **For M. Pharm**

A Bachelor's Degree in Pharmacy with a minimum of 60% marks in aggregate.

2. Must have qualified at the Graduate Aptitude Test in Engineering (GATE)

Note : SC/ST candidates having a minimum of 55% aggregate marks are eligible.

15% seats are reserved for Scheduled Caste candidates and 7½% for Scheduled Tribes candidates. However, to be considered for admission they should have qualified at the GATE.

Students admitted to the above courses will receive Ministry of Human Resource Development Training Fellowship @ Rs. 1,000/- per month.

Application forms can be obtained from the Institute Office by sending a Postal Order for Rs. 25/- payable to the Registrar, Birla Institute of Technology, Mesra, at Mesra Post Office and a self-addressed envelope of size 280 mm. x 125 mm. having Rs. 1.80 stamp. Forms will be issued upto June 20, 1988. The name of the course for which a form is sought must be distinctly mentioned in the letter.

Applications complete in all respect should rerch the Registrar, Birla Institute of Technology, P.O. Mesra, Ranchi-835 215, latest by **June 30, 1988.**

J.B. Saksena
REGISTRAR & OSD

CLASSIFIED ADVERTISEMENTS

The Maharaja Sayajirao University of Baroda

NOTIFICATION No. ADE/1/1988-89

Applications are invited for the following posts in prescribed forms which can be obtained from the University Office on or before **31st May, 1988** by sending a request to the Registrar, M.S. University of Baroda, Vadodara-390002, alongwith a self addressed envelope of size 30 Cms. x 12 Cms. accompanied with a Demand Draft drawn in favour of the Registrar, M.S. University of Baroda of Rs. 2/- (Re. 0.50 paise for members of Schedule Caste & Scheduled Tribe) or by producing receipt obtained for payment in Cash from Accounts Section of University Office for the same during working days only between **11.00 a.m. and 2.00 p.m.** No amount will be accepted either by M.O. or by Postal Order except in cases of SC/ST where they can send Postal Order of Re. 00.50 Paise or pay the amount in cash as stated above. The SC/ST applicants will produce a copy of the Certificate to the effect at the time of requesting for application form. The ST/ST candidates coming from outside Gujarat State will also have to produce a Certificate from the competent authority of the Gujarat State mentioning that the Gujarat State has recognized them as SC/ST for the purpose.

Faculty of Arts

Professor of : (1) English

Reader in : (2) English, (3) German, (3a) Sociology, (4) Gujarati (VIIth Plan post), (5) Economics (Two posts) (6) Philosophy.

Faculty of Science

Professor of : (7) Physics (VIIth Plan post), (8) Biochemistry.

Reader in : (9) Microbiology, (10) Mathematics (VIIth Plan post), (11) Geology (Two posts) 11(a) Chemistry (Physical) 11(b) Physics.

Desirable : Knowledge of Computer Programming Stochastic process and design of experiments.

For 2 Essential Econometrics and Stochastic Processes.

Chemistry

For Reader, Specialisation in Organic Chemistry in Natural Products.
For Lecturers one in Physical Chemistry, & other for Inorganic Chemistry.

Home Science

Lecturer—8 posts.

1. M.Sc. in Bio-Chemistry with Ph.D. special paper in Microbiology.

2. M.Sc. in Food and Nutrition or Physiology with Ph.D. special paper in Nutrition or in Bio-Chemistry.

3. M.Sc. in Physiology with Ph.D. Special Paper in Nutrition or Bio-chemistry.

4. M.Sc. in Chemistry with Ph. D. special paper in Organic Chemistry.

5. M.Sc. in Food and Nutrition/ Chemistry Organic/Food Technology with Ph.D. Special Paper in Food Chemistry, 5 years teaching experience at P.G. level.

6. M.A in Bengali, Ph.D. or at least 10 years teaching experience at Under-Graduate level.

7. Master's Degree in Arts & Crafts specialisation in Visual or Fine Arts, 5 years teaching experience at U.G. level.

8. Master's degree or equivalent in Textile and Laundry. 5 years experience at U.G. or equivalent level.

Applied Psychology

Reader—1 post

Psychometry/Management Psychology and Organisational Behaviour.

Physics

Lecturers—for one post in 'X' Ray and Crystallography and the other post in 'Electronics'. Both the incumbents should have background in the Solid State Physics.

Group—C

Specialisation

Medical Microbiology & Phrasitology

Reader—1 post

"Bactriology, Immunology Mycology".

Pharmacology

Reader—1 post

Lecturer—1 post

M.D. (Pharmacology) D.M. (Chemical Pharmacology) will be additional qualifications.

Bio-chemistry

Lecturer-3 posts.

1. Clinical Biochemistry (One Post)
2. Molecular Biochemistry (One Post)
3. Nutritional Biochemistry (One Post)

For Group A B C

The selected candidates will be placed on probation for one year which may be waived in exceptional cases. The appointment shall be subject to the rules laid down for the teachers from time to time.

Applications (Seven copies) in prescribed form (obtainable from the University Sales Counter on payment of Rs 10/- or by post on sending a self-addressed Re. 1/- stamped envelope of 28 cm x 12.5 cm. size with a crossed I.P.O. of Rs. 10/- payable in the name of Calcutta University) should reach the undersigned not later than **27th May, 1988**.

For persons applying from abroad, submissions of applications in the prescribed form is not necessary. Such candidate may submit seven typed copies of detailed biodata with an application fee of Rs. 10/- within **27th May, 1988**.

Candidates who had applied in response to previous advertisements of 1984 and 1985 need not apply again in the prescribed form but they are advised to send on plain papers additional information, if any, together with a fresh biodata in support of their respective candidature indicating therein the exact post(s) for which they had applied and now desire to be considered

P.K. Chowdhury
DEPUTY REGISTRAR (Admn.)

S.K. PATIL SINDHUDURG MAHAVIDYALAYA
&
RAMBHAU PARULEKAR JUNIOR COLLEGE, MALVAN
Dist. Sindhudurg, Pin-416 606
WANTED

Applications are invited for the posts of lecturer in the following subject in the Degree College :

Sr. No.	Subject	No. of Posts	Full time/ Part time	Posts reserved for SC/ ST/DT/NT	Dereserved after three advertisements	Open
1.	MARATHI	1	Full time	SC	1	—
2.	ECONOMICS	1	Full time	—	1	—
			Part time	Likely depending on number of students.		
3.	GEOGRAPHY	1	Part time	ST	1	—
			(Likely to be made full time depending on work-load)			
4.	BUSINESS LAW	1	4 periods Hourly Basis (Likely to be made part time)	SC	—	—
5.	ACCOUNTANCY	1	C.H.B.	—	—	—
6.	ECONOMICS	1	Full time	—	—	—
			(Substitute Appointment for one year under U.G.C. FIP.)			

Total number of posts advertised : 07

Though the posts are reserved as above, B.C. candidates will be preferred for all the posts (except No.6) as the backlog is to be filled in.

The last date for receipt of applications is the date after **fifteen days** of publication of this advertisement.

(a) The qualifications and pay-scale(s) for the post(s) are as prescribed by the University of Bombay. The details of qualifications, pay-scales and allowances will be supplied on request.

(b) Applicants who are already employed are required to submit their applications through proper channel.

(c) Applicants are required to account for breaks, if any, in their academic career.

In case candidates from reservation category are not available, candidates from open category will be considered for temporary appointment.

Applications with full details (Bio-data, Caste-certificate and true attested copies of marklists of H.S.C., Graduate & Post-Graduate Degree Examinations) should reach the undersigned as above.

NORTH EASTERN HILL UNIVERSITY
LOWER LACHAUMIERE : SHILLONG

No. Advt/P-1/88-1060
Dated : the 21st April, 1988

Applications on prescribed form are invited for the following posts in the Computer Centre of the North-Eastern Hill University, Shillong so as to reach the Registrar, NEHU. Shillong-793001 alongwith a crossed Indian Postal Order of Rs. 10/- (not applicable for SC/ST candidates) payable to the North-Eastern Hill University, Shillong-793001 by **31st May, 1988.**

1. **Prof. of Computer Science**
   Rs. 4500-7300/- (Revised).

Educational background required : Ph.D. in Computer Science/ Technology; Experience in hardware or software.

Or

Ph.D. in Electronics, Elec. Engineering, Physics or Mathematics may be considered provided they have good computing experience.

2. **Systems Engineer (2)**
   Rs. 1100-1600/- (Pre-revised).

Educational background required : (1) (Master's level degree in Computer Technology or Electronics with specialisation in Computer hardware; with experience.

(2) Master's level degree in Computer Science with specialisation in software engineering; with experience.

3. **System Analyst :** Rs. 700-1300/-
   (Pre-revised).

Educational background required : Graduate in Mathematics/Physics Statistics/ M.C.A. with experience in FORTRAN—IV/77 preferably in main frame computer systems, knowledge of JCL of IBM 370 series computer statistical package is desirable.

4. **Programmers** : Rs. 700-1300/-
   (Pre-revised),

Educational background required : (1) Master's/Bachelor's level degree in software engineering.

(2) Master's level In the applications area.

5. **Computer Operators**
   Senior—Rs. 550-900/- (Pre-revised).
   Junior—Rs. 425-700/- (Pre-revised).

Educational background required : (Senior).

(a) Master's level degree in Science subjects with experience in the field of Computer Operations/applications.

Or

(b) Bachelor's level degree in Science subjects with experience in the area of Computer operations/applications.

(c) Bachelor's level degree in Commerce/Arts subject with a minimum of 2 years experience In the area of Computer operations/applications.

(Junior)

(a) Bachelor's level degree in Science with experience in the field of Computers.

Or

(b) Graduate in Commerce/Arts subjects with experience in the area of computer operations/applications.

6. **Key Punch Operator : Rs. 260-400/-**
   (Pre-revised).

Educational background required : High School with special training in Key Punch Operation necessary.

7. **One Trainee Programmer**
   Rs. 1000/- p.m. fixed (ordinarily for one year but not more than two years)

   Educational background required : P.G. Diploma in Computer Programming. Knowledge of FORTRAN-IV, COBOL, etc. Degree in any discipline.

8. **Two Trainee Operators** : Rs. 800/- p.m. fixed.

Educational background required : Graduate in any discipline.

NOTE : Candidates already in service should send their applications through proper channel. An advance copy may however be sent direct.

Applications received after the due date will not be entertained. A person applying for more than one post should send a separate application for each post.

The University reserves the right to negotiate with suitable persons who may not have applied formally. The University also reserves the right to fill up or not to fill up the post or to call only selected candidates for interview. The number of posts may vary

Application forms can be obtained from the Section Officer, Establishment I (B) Branch, North-Eastern Hill University, Shillong-793001 personally on payment of Rs. 2.00 or by mailing a written request to him accompanied by self-addressed stamp envelope of 23 x 10 cm. and a Postal Order for Rs. 2.00 drawn in favour of North Eastern Hill University, Shillong-793001.

D.C. Pant
REGISTRAR

PANJAB UNIVERSITY
CHANDIGARH

(Advertisement No. 5/1988)

Applications are invited for the following posts so as to reach the Registrar' Panjab University, Chandigarh along with postal orders of Rs. 10/- by **3.6.1988.** Fourteen days extra time is permissible to persons who have to submit their applications from abroad.

I. **Professors :** Rs. 4500-150-5700-200-7300 (Revised)
   Botany-2, Anthropology-1, Chemical Engineering & Tech.-3 (Chemical Engineering-2; Chemical Tech.-1).

II. **Readers :** (Rs. 3700-125-4950-150-5700) (Revised)
   Botany-2, Zoology-2, (Cell Biology-1, Parasitology/Fish & Fisheries-1), Physics-1, Chemical Engineering & Tech. (Chemical Engg.)-1, Pharmaceutical Sciences-2 (Pharmacognosy-1, Pharmacology-1).

III. **Lecturers :** (Rs. 2200-75-2800-100-4000). (Revised)
   Chemistry (Organic Chemistry)-1, Anthropology (Social Anthropology)-1 (Temp.-Leave vacancy), Chemical Engineering & Technology (Chem. Tech.)-1

IV. **Lecturer-cum-Assistant Librarian:** (Rs. 700-40-1100-50-1600) Library Science-1.

V. **Research Associates:** (Consolidated emoluments ranging between Rs. 1400/- and 2000 p.m. (fixed) depending upon the qualifications and research experience and contingent grant of Rs. 5000/- per annum for approved contingent expenditure).
   Zoology-2, (Aquatic Biology, Limnology and Ichthyology-1 and Parasitology)-1.

VI. **Senior Research Fellows:** (Rs. 1200/- p.m. (fixed) with an annual contingent grant of Rs. 3000/-)
   Chemical Engineering & Tech.-1

Note 1. The Vice-Chancellor could place before the Selection Committee names of suitable persons for its consideration alongwith the applications received in response to the advertisement.

2. It is not obligatory on the part of the University to call for interview every candidate who possesses the essential qualifications.

3. The number of vacancies may change.

4. The University may also prepare panels of suitable candidates for appointment against vacancies occurring within a specified period.

10% of the Fellowships will be reserved for Scheduled Castes and Scheduled Tribes candidates provided they fulfil the minimum qualifications laid down for the award of such Fellowships. In case qualified candidates are not available the reserved Fellowships will be treated as unreserved. **The candidates for Fellowship whose results for the qualifying examinations are not declared by the closing date, may also apply. Howeuer, they must intimate their results (if otherwise eligible) to the concerned Department before the date fixed for selection.**

Candidates for the posts of Professors and Readers who do not possess a dotoral degree are required to submit 10 typed cyclostyled copies of brief resume of their published work. The candidate has the option to fill this form in all respects on both sides and to attach 9 photostat copies thereof. The candidates are also required to attach 10 copies of the list of their research publications with their 'summary Biodata'.

15% posts of Lecturers will be reserved for the members of the Scheduled Castes and $7^1/_2$% for the members of the Scheduled Tribes, but these will be treated as unreserved if no suitable Scheduled Castes/Scheduled Tribes applicant is available.

Persons already in service must route their applications through proper channel. They may, however, send an advance copy of their application, on the prescribed proforma, direct to the University. They will be allowed to present themselves for interview only on the production of a 'No Objection Certificate' from their employers. Incomplete forms will not be considered. Forms received after the due date are liable to be rejected, unless the Vice-Chancellor condones the delay by a special order. Attested copies of certificates in support of qualifications for Matriculation/School Leaving, Graduation, Post-graduation examination as also for Doctorate degree, be attached to the application. Canvassing in any form will disqualify the candidate.

Application forms, along with detailed qualifications can be obtained from the Cashier, Panjab University, Chandigarh, personally, on payment of Rs. 2/- or by making a written request to the Assistant Registrar (Estt.), Panjab University, Chandigarh, accompanied by a self-addressed stamped (worth Rs. 3.40) envelope of 23 x 10 cm and postal order of Rs. 2/- drawn in favour of the Registrar, Panjab University, Chandigarh.

ASSAM AGRICULTURAL UNIVERSITY

ADMISSION NOTICE No. 1/88

Applications in prescribed Forms are invited for admission into the following degree programmes of the University in the Faculty of Veterinary Science, Assam Agricultural University, Khanapara, Guwahati-781 022 under course credit system for the session 1988-89 commencing from the 27th July, 1988.

(A) M.V.Sc. Degree Programme in the Disciplines :

1. Animal production and Management
2. Animal Genetics and Breeding
3. Animal Nutrition
4. Veterinary Surgery and Radiology
5. Animal Gynaecology, Obst. & A.I.
6. Veterinary Medicine, Public Health & Hygiene
7. Animal Physiology
8. Animal Pathology
9. Animal Parasitology
10. Veterinary Microbiology
11. Extension Education
12. Veterinary Pharmacology
13. Veterinary Anatomy & Histology

(B) Ph.D. Degree Prrogramme in the Subjects :

1. Animal Production and Management
2. Animal Nutrition
3. Animal Gynaecology, Obst. & A.I.
4. Veterinary Medicine, Public Health & Hygiene
5. Veterinary Microbiology
6. Veterinary Parasitology
7. Veterinary Pathology
8. Veterinary Physiology
9. Veterinary Surgery & Radiology
10. Anatomy & Histology

Minimum Qualification for Admission

(A) M.V.Sc. Degree Programme

A candidate must have passed the B.V.Sc. & A.H. degree examination of this University or any other recognised University securing minimum OGPA of 2.60 in 4.00 scale or its equivalent or minimum of 50% marks in aggregate (In traditional system) in the qualifying examination (s). This requirement is however, relaxable to an OGPA of 2.50 or 45% marks in the case of SC/ST candidates and for candidates having atleast 2 years of professional experience provided further that the minimum OGPA may be relaxed for candidates who are deputed from the State Govt. of Assam and who have atleast five years of service experience after obtaining B.V.Sc. & A.H. degree which shall either be an OGPA of 2.30 in 4.00 scale or 42% marks in aggregate (In traditional system) in the B.V.Sc. & A.H. examination.

Ph.D. Degree Programme

A candidate must have passed the M.V.Sc. degree examination of this University or any other University recognised by this Uniersity. A candidate must have obtained a minimum OGPA of 3.00 in 4.00 scale or 55% marks in aggregate under traditional system in the M.V.Sc. examination. This requirement is however, relaxable to an OGPA of 2.85 in 4.00 scale or 50% marks in aggregate under traditional system for the deputed candidates having 5 years of service experience after obtaining Master's Degree.

How to Apply

Application forms of the above degree programmes may be obtained from the Office of the Director of Post Graduate Studies, Assam Agricultural University, Khanapara, Guwahati-781022 on payment of Rs. 5.00 (Rupees five only) in terms of crossed Indian Postal Order drawn in favour of the Director of P.G. Studies, Assam Agricultural University, either personally or by sending a self addressed stamped envelope of size 10 x 22 cm. affixing postal stamp of Rs. 1.50 (Rupee one and paisa fifty) only.

Last Date of Receipt of Application

The application in prescribed Form complete in all respect must reach the Director of Post Graduate Studies, AAU, Khanapara, Guwahati-22 on or before **31st May, 1988.** Candidates who are employees of the State Govt. or any other organization must apply through proper Channel.

Interview

Candidate fulfilling the minimum academic requirements shall have to appear before Selection Committee as and when called for at their own expenses.

Selected candidates who are employees of the State Govt. or any other organisations shall have to furnish a copy of the order of deputation/or release from the Govt./Employer at the time of admission.

In connection with Ph.D. programme, the University reserves the right to refuse admission in the Subject (s) in case there is shortage of qualified teachers in the concerned department at the time of admission.

Application for admission into University Hostel shall have to be made in separate prescribed Forms. Admission into Hostel shall be subject to availability of Seats.

Sports in Society and Higher Education

G .S. Sivia*

Introduction

Sport is a social phenomena. To quote New Encyclopaedia Britannica, "History of Games is a part of the history of man as a social animal." Many phrases like : hitting below the belt, the games they play, this is not cricket, I had my innings, have their origin in the field of sports. In ancient Greece, wrestling was governed by conventions and not by written rules. Like in Love and War, everything was fair except hitting below the belt. From there, the phrase began to be used for unfair means or fraudulent practices. Now about games, historically speaking, 'game theory' was evolved in 1921 by a French Mathematician, Emile Berel. seeking to analyse and solve the problems arising in economic, business and military situations, each participant adopting strategy to maximise gain and minimise loss. In due course of time, the term trickled down as a sport terminology and is now used to mean a sport event, though in its original sense, it is a strategy or an abstract mechanism evolved for winning a match. In its contemporary usage the term is also being applied for 'intrigues' and manipulations when it is used in the phrase, 'games they play'.

Society, as MacIver put it, "is an ever changing complex system interwoven into a web of social relationships". It is a wide ranging intricate spectrum of social relationships which is undergoing a constant process of change under the influence of a multitude of factors like geography, biology, genetic changes, means of production, science and technology, culture etc. The social changes bring in changes in beliefs, customs, traditions, philosophy, concepts etc. From pre-historic cultures to contemporary times, concepts of many social and cultural terms have drastically changed. Since sport is an integral component of society, what it stands for in the current usage is entirely different from what it stood for in the primitive cultures.

Changing Concept of Sports

Pre-historic Man lived in what Hobbs, Lock and Rousseau called as the "State of Nature". Survival depended upon his mastery of skills, like, running, stone throwing, jumping, hunting, skipping etc. Personna Year Book of Sports, 'described the art of jumping rushing waters, wielding spear etc. as tools of survival. Sport in the pre-historic cultures, therefore, filled up the industrial void and played the role of 'means of production'.

When nomadic tribes settled down permanently within a certain territorial jurisdiction they developed their identifiable culture. The most classical example is that of the ancient Greeks. At that period of History, Man was too superstitious, believed in the predetermined destiny and was extraordinarily fearful of goods and deities. He believed prosperity came as a result of pleasing the natural objects which for

---

Deputy Secretary (Sports), Association of Indian Universities.

him were synonymous with God. Sport and dance in those days began to be organised as a part of the religious ceremonies and rituals celebrated to honour the gods. Besides, sport, in the ancient Greek culture, was used as media of brotherhood, fraternity and friendship. The ancient Olympic Games, organised at a periodicity of 4 years, in honour of Zeus (the most powerful Greek God) and as platform of ending hostilities by signing 'Truce' for the period of the Games is a living example of this place of sport in the ancient times.

During the period of the Roman Empire social ethics had degenerated to the lowest ebb. The social evils had infiltrated into the field of sport also. Homer in one of his literary works, remarked, "Of all the evils in Hellas, the athletes are the worst". Indulgence in malpractices in sports led to the closure of the Olympic Games by the Roman Emperor, Theodosius-II in 374. Abandoning of the Olympic Games, therefore, was of social consequence.

In Medieval period social structure horizontally divided into feudal lords and the serfs. Knighthood was an integrated institution of the society. The young ones of the feudal lords were conferred 'Knighthood' through a ceremonial procedure. Before that they were given training in chivalrous sports like horse riding, archery, sword fighting, mace wielding etc. The lords and the kings took interest in hunting. The Middle Ages sport, therefore, had a different complexion. It was a recreational pursuit for the lords and the kings and a hard training in chivalry for the youth. The focus, however, shifted to 'pastime' during the 19th century Industrial Revolution era. Scientific inventions revolutionised the production system and considerably reduced the working-hours. As idle brain is a Devil's workshop, need to engage the industrial workers in meaningful activity during the leisure time arose. It resulted in a tremendous growth of club activity and, through the club system, of the modern competitive sport; though sport during those days remained only a pastime engagement. Contemporary social environments, particularly its value scales, have drastically changed under the impact of science and technology and its application in industry. Every human activity is measured in terms of monetary returns. Human relations have become impersonal. Concept of sports is in a transitional phase because of these changes in the social relations. Modern sports has multi-dimensional facts :

(a) for children it is play;

(b) as a club activity, it is recreation;

(c) it is a leisure pursuit for the spectators and for those who watch sport programmes on television or read 'sports columns';

(d) it is a business for sponsors and sports goods manufacturers;

(e) it is a vocation for those who take up sports seriously for international achievements.

Modern sports, therefore, has taken roots in different areas of social life with different focus in every case. It is no longer a mere pursuit only of those who take part in sport as competitors. The historical introspection of the place of sports in the social structure leads to the conclusion that 'sport' is an integrated component of society and its concept and role in the society has been changing with the changing times.

Sports in Higher Education

Higher Education as a phenomenon is mainly a growth of the 16th and 17th century renaissance period which conceived universality of Man and regarded human personality as an embodiment of multifarious talents and interests in art, literature, science and other social pursuits like sports. Renaissance, which is considered as a wave of revival of the classics of the ancient Greeks whether art, literature or philosophy viewed education as a system of harmonious development of the above mentioned faculties. Sport as a component of higher education, therefore, has been considered as a contributory discipline for the allround development of human personality. Even contemporary system of education in India believes in this philosophy. Aurobindo Ghose provided equal weightage to art, science, philosophy and sports in his education system. The curriculum of his Pondicherry Ashram school is devised on this basis. For Rabinder Nath Tagore, there is a deep connection between the body and the mind and the rhythm of life was broken if harmony was not developed between the two. India has inherited the British-system of higher education of the 18th and 19th century industrial revolution which revolved round the philosophy of education as advocated during the renaissance movement. Obviously, the role given to sport in India in the higher education sector is that of an integrated component aiming at coordinated development of mental, physical and spiritual aspects of personality. With this in view, New Education Policy

1986 lays great emphasis on the role of sports in higher education and regards sport as an integral part of the learning process. To achieve this objective, New Education Policy envisages a nation wide infrastructure of sports and games as also insight for the encouragement of those talented in games and sports. To realise the aims and objectives of sports, within the framework of Higher Education and the objectives enunciated in the New Education Policy, a number of sports schemes have been floated :

(i) A substantial layout has been provided in the 7th Plan period for the construction, development and improvement of sports facilities in universities and colleges.

(ii) The scheme of Sports Talent Scholarships (S.T.S.) provides for awarding 300 fresh scholarships per year of the value of Rs. 3,600/- each to talented university students. These scholarships are renewable in subsequent years subject to maintaining the level of performance.

(iii) There is a scheme which provides for organising 80 coaching per year camps at the University level.

(iv) Financial assistance is available for organising inter university tournaments and for selection and training of Indian Universities teams.

(v) Services of coaches who are on the pay roll of the Govt. of India are available to coach talented university sportspersons through the system of Field Stations.

AIU has proposed a couple of new schemes, in the light of the emphasis given to sports in the N.E.P. These are :

(a) Introducing physical fitness programme in universities and colleges.

(b) Building University Sports Hostels.

(c) Organising Training Camps for university teams prior to their participation in the Inter-University Tournaments.

Contemporary Sport

In contemporary times sport is becoming a big commercial venture. A beginning was made in this direction about 100 years ago when spectators began to be charged gate entries. By the middle of 19th century, gate collections began to be a big income, Modern sport, however, has still two distinct categories: professionalism and amateurism. Sports like horse racing involving a sizeable army of professionals—jockeys, trainers, trappers etc., are organized exclusively on commercial lines. Advocates of the other category which includes disciplines mostly of the Olympic Umbrella, however still continue to support the ideology of 'amateurism' and are reluctant to admit them as business ventures, though sizeable commercial enterprise is involved in organization of these games as well. Recent developments have created a nexus between sport and industry. Factors like sponsorship, media, technology and even the law have combined to bring about a radical change in the economic structure of sports. The high cost of running a modern sport event is met mainly by massive income from sponsorship, television and broadcasting rights, gate collections, hoardings, logos, Video screens and Government grants. Income from non-sport sources is increasing and in western societies it has become more than 50% of the total receipts. Sponsorship now brings huge returns to the international super stars. Many big industries are spending millions of dollars in sponsoring almost all the sporting events from Golf and Car Racing to Woodchopping and Darts. Briefly summed up, commercialism has greatly increased the market value of sport and its main characters such as players, referees, administrators etc.

Conclusion

As detailed in the foregoing paragraphs, concept of sport and its role in the social structure, of which, higher education is an important part, has been changing with the changing social structure during the course of history. In the modern life, industrial and commercial houses are playing increasingly important role in the sports structure. In the Western culture, their role has already gone deep rooted in society but in countries like India, it is growing as an emerging force. Professionalism in sport, regarded as that worst evil at one time and which destroyed the ancient Olympic Games, is now being accepted as a reality. In fact, in some of the important sports today such as Cricket, Basketball, Tennis, Badminton, Boxing etc., professionalism has made deep inroads. In other sports which are still characterised as amateur, it is coming up in a big way. The direction is unmistakably in favour of professionalism. We have, therefore, to revise our concept of sport in contemporary social structure and have to define it within the framework of the emerging influence of science and technology in the sports spectrum. ☐

BANASTHALI VIDYAPITH
Origin, Growth and Present Position

P.N. Mathur*

Banasthali's (Banasthali Vidyapith's) origin lies in pathos which aroused the purest and the tenderest emotion of paternal love vitalised by Shastriji's (Hira Lalji Shastri's) will-power and courage of conviction and his practical wisdom and capacity to transform a vision into actuality. This concept of Banasthali took form in an ethos of love, devotion and dedication for the Nation whose pressing need at that particular time was attaining freedom. Another thing that from the very beginning pervaded Banasthali-thinking was Indian Culture.

Concept and Importance of love for the Nation are self-evident and need no elaboration. But the importance and concept of culture require some elucidation. Culture is an overall approach to life which is expressed in civilization. Culture is the spirit and civilization is the form. A people's approach to life evolves on the basis of several factors dealing with its natural environment, its history, its problems, opportunities, potentialities, its ambitions and the actions and interactions of the people to these various factors. Naturally all people in the world cannot have one culture. Living cultures are not exclusive but inclusive and a process of give and take always takes place between them. And it is this inclusive nature of cultures which makes it possible for them to live together in an overall harmony.

So Banasthali was, on the one hand, established in a nationalist ethos which manifested urge for India's freedom and, on the other, it also had before it a vision of Indian culture. Thus Banasthali's whole architecture stood upon the two foundational pillars of National spirit and Indian culture. And the educational thought and programme that Banasthali has developed kept before it the above two strains of thought : Love for the Nation and Values of Indian Culture.

Now it was on this basis that Banasthali thought of a comprehensive educational programme known as Panchmukhi Shiksha (five-fold education). Indian culture being in its nature inclusive, Banasthali's five fold education accords due place to all aspects of life and considers moral-spiritual attitude as the right attitude to life. Indian culture stands for the full richness of life and not for a dry and austere existence where life in the world is taken as a burden and the aim of life is to get relieved of it. In the four stages of life (Brahmacharya, Grihastha, Vanprastha and Sannyas) conceived by India, the Grihastha Ashram, where one lives a balanced but rich worldly life conscious of one's duties and responsibilities towards society, has a pivotal importance. And it is preparing for such a full and devoted life that Banasthali's Punchmukhi Shiksha (five-fold education) was planned. This Panchmukhi Shiksha envisages physical education aiming at the full care and development of man's body, practical education aiming at the full care and development of man's vital part of life, aesthetic education aiming at proper care and development of man's sense of beauty, moral education aiming at proper care and development of man's goodness and intellectual education aiming at proper care and development of man's mental powers. The whole emphasis of Vidyapith's Panchmukhi Shiksha is on the development of an all-round personality.

The Challenge

So long as India was groaning under the pangs of slavery, love for the nation and working for its independence had an overall priority in its education. But after independence Indian education faces new challenges. Besides preserving and safeguarding country's integrity and independence and transforming the nation into a really free society in which freedom, dignity and equality of an individual are guaranteed, it has also to reorient itself to our cherished ideals in all fields of life, especially in the field of different branches of knowledge including social life and physical sciences.

In our programmes of physical, practical, aesthetic and moral education, from Vidyapith's very inception we have preserved the Indian contributions in these fields. And we are keen that these contributions in the flood of the 'new' do not go into oblivion and

Conflict Resolution in Management of Colleges

R. Kanagasabapathy*

Principals, when appointed from among the teachers of colleges, may be said to have changed their roles from technical to managerial. As teachers, they are mainly concerned with giving lectures, setting question papers, valuing answer papers, doing research, etc......all under technical role, and now as Principals, they have to manage men, money and material. The basic difference between the two roles is accountability. In a technical role, one is accountable for his performance only; but in the managerial role, he is accountable for the work of all under his control. For the colleges to function effectively, Principals should well play their leadership role :

> "Leadership is an important aspect of management and it is defined as the art or process of influencing people so that they will strive willingly, enthusiastically towards the achievement of organisational goals......leaders do not stand behind a group to push and prod, they place themselves before the group as they facilitate progress and inspire the group to accomplish organisational goals. An example is that of an orchestra leader, whose function is to produce co-ordinated sound, correct tempo through the integrated effect of the musicians. Depending upon the quality of the director's leadership, the orchestra will respond" (Koontz et al, 1982).

The fundamental principle of leadership is said to be : to provide sufficient motivation to all the people working under him. A College Principal may have to motivate the teaching staff, the non-teaching staff, and the students. There are several theories of motivation. One common theory is "The carrot and stick" (Reward and Punishment). Reward can be given to different categories of personnel in different forms. It is well to remember that though money is not the only motivating force, it continues to be an important one. Altuism is also an important motivating power among teachers. For the non-teaching staff, job-security and esteem needs may be good motivating factors (Maslow's hierarchy needs). The 'stick' continues to be a good motivating power, yet it is admitted that it is not the best kind. For the students, besides the carrot and stick, Vroom's theory of motivation may be applicable. In its modified form, motivation is the product of the vision one has and the confidence that he develops that he could achieve the vision.

When speaking of motivation, one has to imagine the position of the Principal who is bogged down by the daily occurrences in the college and then one is tempted to murmur : Running the college smoothly for a day is a problem......when struggling to maintain the status quo, how do we aim at excellence ? Conflicts between students and teachers, students and non-teaching staff, students and the public, students and students, etc. etc. are to be tackled periodically in colleges.

What is conflict ? If two persons disagree, it is not conflict. If the two always disagree, it is conflict. Disagreement recurring is known as conflict. Conflict is inherent in human life and it is a part of life itself. It is said that conflict and collaboration are parts of the organisational process and are two sides of the same coin.

Conflict may be functional or dysfunctional. It is only through divergent and conflicting views and disagreement that creative work takes place, particularly in educational and research institutions. In that case, the conflict is functional. It is dysfunctional if it reduces the productivity.

It is classified that generally conflict arises due to the following factors :

(a) Lack of resources or having limited resources with competing demands
(b) Differences in values/goals—ideological conflicts
(c) Lack of proper communication
(d) Ambiguity in role and responsibility
(e) Certain roles have built-in pre-dispositions for conflict.

In my experience as the Principal of a Postgraduate college affiliated to Madurai Kamaraj University for about 23 years, I have faced many problem situations and I have given serious thought to the problem of conflict resolution. I have read theories of conflict resolution as applicable to business and industrial establishments, and the following theories given by Stephen (1977) appeal to me, as the best suitable for

---

Principal, Aditanar College of Arts and Science, Tiruchendur, Tamil Nadu.

ducational institutions :

> "There are five basic theories, as those appearing at the four corners and the centre of the diagram depicting the conflict Grid. When these basic styles are understood, one can predict for each how a man operating under that style is likely to handle conflict. No one style is exclusively characteristic of one man in comparison with another although one style may be dominant in a man's actions. Furthermore, even though one may be dominant for a time, it may be abandoned and replaced by another when the first has been ineffective in achieving the resolution".

Conflict can be controlled by overpowering it and suppressing one's adversary (9,1 in the lower right corner of the Grid). An ultimate expression of this is in the extremes of police power and military action. Extracting compliance by authority—obedience is possible when rank is present. The conflict can be cut off and suppressed in this way, "Yours is not to question why !"

Another strategy is to smoothen conflict by cajolery, by letting a man know that with a little patience he will find that all is right (1,9 in the upper left corner). The assumption of sweetness and light often leads to resolution by people's retracting from previously held positions, preferring personal acceptance to solution validity. This can promote accord and harmony, but it sacrifices conviction and insight into difference, while decreasing the likelihood of achieving valid solutions.

Staying out of situations that provoke controversy or turning away from topics that promote disagreement represents a set of assumptions about how to live in a conflict-free way (1,1 in the lower left corner). Then one need not be stirred up even though the issue may need resolution. A man can remain composed if he does not let himself be drawn into controversy; he avoids it by remaining neutral. This kind of "see no disagreement, hear no disagreement, and speak no disagreement" represents a withdrawal from social responsibility in a world where the resolution of differences is key to finding sound solutions. It is the ultimate in alienation.

Another set of assumptions leads to middle-of-the road solution to differences throught accommodation and adjustment. Disagreement is settled through bargaining a compromise solution (5,5). The assumptions underlying compromising one's convictions are at the root of this approach. It means agreeing so as to be agreeable, even to sacrificing sound action; settling for what you can get rather than working to get what is sound in the light of the best available facts and data.

Under a (9,9) approach, disagreement is valued as an inevitable result of the fact that strong-minded people have convictions about what is right. A man says, "Nothing is sacrosanct. What are the facts ? What are the causes? What are the conclusions ?" Reservations and emotions that interrupt agreement based on logic and data are confronted through candid discussion of them directly with the person involved in the disagreement. Insight and resolution are possible but involve maturity and real human skill. This approach may be time-consuming in the short run but time-conserving over the long term. It permits men to disagree, to work out their disagreements in the light of facts, and ultimately to understand one another.

Men capable of resolving their conflicts thus would forward human progress with a dramatic thrust—and on a far more fundamental and therefore enduring basis.

The problem of conflict resolution was discussed at a workshop for Hostel Wardens organised by the Department of Youth Welfare of Madurai Kamaraj University at Madurai during January 1987. The hostel wardens present were of the unanimous opinion that the (9,9) approach is an ideal one. However they felt that most of the time they had to be content with a (5,5) approach. Periodically they had to resort to (9,1) approach also.

Imperfect human beings as we are, we may resort to various approaches due to circumstances and our mood. But our perpetual aspiration should be to resolve conflicts through the (9,9) approach. It will be apt to remember Gandhiji's ideas in this context. We are all seekers of truth. When persons or groups clash, the clash involves a conflict between different sets of relative truths. In order to resolve the conflict, these sets of relative truths are to be synthesised so that it becomes an improvement upon each of its constituents and this will result in progress towards absolute truth.

(1,9)
Disagreements are smoothed over or ignored so that surface harmony is maintained in a state of peaceful coexistence.

(9,9)
Valid problem solving takes place with varying points of view objectively evaluated against facts, emotions, reservations, and doubts are examined and worked through

(5,5)
Compromise, bargaining, and middle ground positions are accepted so that no one wins--nor does anyone lose. Accommodation and adjustment lead to "Workable" rather than best solutions.

(1,1)
Neutrality is maintained at all cost. Withdrawal behind walls of insulation relieves the necessity of dealing with situations that would arouse conflict.

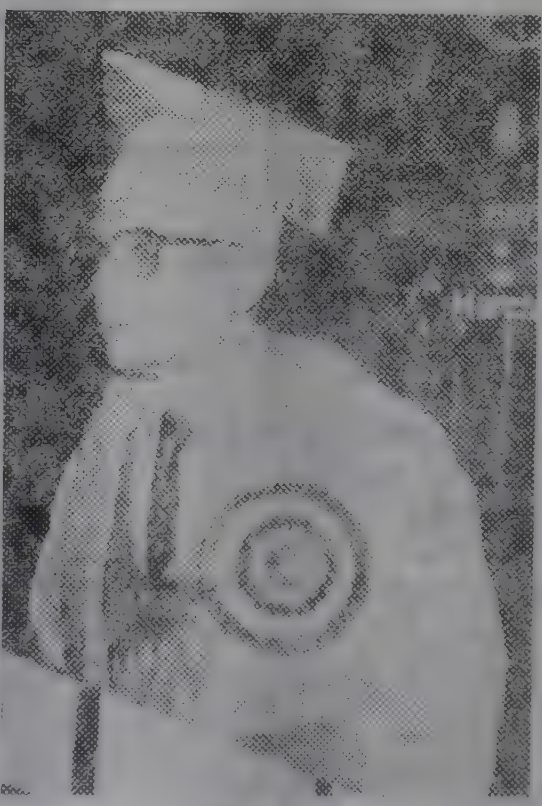
(9,1)
Conflict is suppressed through authority obedience approach.

THE CONFLICT GRID (Stephen, 1977)

THE UNMET CHALLENGES

"The agricultural sector now indisputably occupies a prime status in the economy of this country," observed Hon'ble Justice P.S. Shah of the Bombay High Court while delivering the Convocation Address at the 14th convocation of Mahatma Phule Agricultural University, Rahuri (Maharashtra). Justice Shah paid handsome tributes to agricultural scientists when he said, "It is a matter of pride that the agricultural graduates and the scientists have been able to reach the agriculturists at the grassroot level and have been rendering to them valuable guidance and the help needed by them to increase productivity". He however reminded them of the unmet challenges of halting of the rate of growth of population by popularising the concept of small family, growing ecological imbalance and pollution. Excerpts.

Ours is a country largely dependent on agriculture. As a matter of fact, agriculture has been a source of livelihood for more than half of the world's population. In some countries more than 75% of the inhabitants support themselves by farming, though in the more industralised countries the proportion ranges even lower than 7%. For instance; it is less than 7% in the U.S. and lesser still in the U.K. Though we have made significant progress in the non-agricultural sectors of economy and industrial growth, agriculture still remains not only a source of livelihood for the majority of our people, but also influences our economy as a whole. Indeed, there has been in the recent past a growing realisation of the importance of agriculture in our economy as a whole. The agricultural sector now indisputably occupies a prime status in the economy of this country. The development in the industry and agricultural sectors must go hand in hand. We have seen that if there is a failure of crop in a year that does affect the industrial sector as well.



Justice P. S. Shah delivering the convocation address

After we attained intependence, steps have been taken to enact various laws affecting the landlords and the tillers of the soil. As far as our State is concerned, the two important legislations which made a considerable impact on the agriculturists are the Bombay Tenancy Act and the Ceiling on the Agricultural Holdings Act. By other enactments the various Inams and Watans were abolished. Rights of ownership were conferred on the tenants who were tillers of soil. The age old absentee landlordism was brought to an end. Restrictions were put on the extent of holding of land by a person and the excess land was distributed to the landless farmers. The fears that the reduction in the holding of a land-holder would result in lower production were belied and the tenant who became the owner was in a position to produce much more than what used to be produced by him in the land earlier. The reason for this change was obvious. The landlords were ordinarily not interested in the development of their lands either because they were unable to invest the necessary funds or the tenants themselves lacked initiative because of poverty and also because he was required to share the produce with the landlord or also because his primary needs were more or less satisfied by whatever was produced in the land. The other factor which helped the agriculturists in raising the farm produce was the new scientific methods and technology which were being made available to them and also the use of fertilisers and pesticides. It is a matter of pride that the agricultural graduates and the scientists have been able to reach the agriculturists at the grassroot level and have been rendering to them valuable guidance and the help needed by them to increase productivity. The 'green revolution' ushered in the new era of hope and agricultural production has increased manifold.

However, though on one side we see the spectrum of increased agricultural produce, this is offset to some extent by the rate of growth in population. With the continuous increase in the number of mouths to be fed, it is paramount that greater efforts for much higher production must be made. More important, of course, is the halting of the rate of growth of population by popularising the concept of small family and benefits arising therefrom, particularly with the rural masses.

We are facing the worst drought of the century. It is easy to lay the blame on the vagaries of the nature and the failure of the monsoon. Who have brought us to this situation? It is our own people who for personal gains have destroyed our forests. This is one of the prime causes of the failure of rains. Pollution is another contributory factor. The air is polluted; the water is polluted. Pollution which may be considered as the 'monopoly' of the big cities, is now spreading fast into the rural areas by reason of industrialisation even in non-urban areas, without taking adequate steps to check the pollution caused by these factories. These and other various challenges are before us. It is you as agricultural scientists who should be able to find out solutions for these problems.

Fortunately, this University is well equipped to make effective contribution through high quality of research and service for the advancement of agriculture. You have several research centres which work on different crops, different systems of farming and maintenance of the soil fertility. It is you who can take the results of the research to the farmers by demonstrations and various other means. I must mention that the media and in particular radio and television have immense role to play to create an awareness and spread up knowledge for those who are engaged in agriculture.

In the background of the severe drought condition prevailing in the country, the large number of various kinds of beautiful trees which have been planted here show how the micro-climate of a place can be changed by planting trees and crops mainly under rainfed conditions. It is a matter of satisfaction that the campus here has set an example of what can be done even under difficult terrain and limited use of natural rain and protective irrigation. I am happy to know that the University is planning to start a forestry department which I have no doubt in the course of time will grow into a separate fullfledged college of forestry.

Before I come to a close, it would not be out of place for me to recall the words spoken by Mahatma Gandhi. He said "knowledge without humility is a curse." Your behaviour as the citizens of this country and your attitude towards your fellow country men is as important as tne knowledge acquired by you. Be humane; be considerate; be tolerant; be receptive; be broad-minded and above all practice what you teach to others. It is most unfortunate that while our country has made great progress in various spheres whether science, technology or agriculture and while our country is on the threshold of attaining supremacy in every field, the virus of communalism, casteism, regionalism and petty differences are eating into the very vitals of our Nation and are even a threat to the unity of our country. Let us not forget the founding fathers of our country like Mahatma Gandhi, Lokmanya Tilak, Dr. Ambedkar, Jawaharlal Nehru, Mahatma Phule and several others who sacrificed their lives for attaining independence and for keeping our country united. Their sacrifice should not go in vain. □

Banasthali Vidyapith . . .

(*Continued from page 4*)

ultimately get lost. However, we do not attach any less importance to the new and in all these fields the new is equally attended to.

But coming to the intellectual aspect of our education, we have to accept that all the knowledge we have been providing to our students so far has come fromthe West, whose history begins in the West and whose growth and achievements as well as failures also have first been seen in the West. Ancient Indian contributions to knowledge in all fields, both spiritual and secular, have been totally ignored. This is the greatest academic challenge to free-India and the most depressing and shameful fact is that our intellectuals have been fully ignoring their responsibility in this respect at the cost of national pride and prestige. This is a work which no single educational institution, including a University, can do. Big and small all have to join hands. Banasthali Vidyapith has been quite conscious of it from very beginning, but now, ever since it has become a university, it has been much more conscious of it. And it is in this context that I draw the attention of our universities, the Association of Indian Universities and all academicians to this important academic challenge that faces us. On behalf of Banasthali Vidyapith I can only give the assurance that within our capacity and limits of our resources and facilities we will not be found wanting in doing all that we can do in this respect. Let us hope and trust that this appeal coming from a rather unexpected quarter will be given all the attention it deserves. □

Redressal of Grievances Bill

The Hospitals and other Institutions (Redressal of Grievances of Employees) Bill passed by the Rajya Sabha on 28th April, 1988 (but yet to be placed before Lok Sabha) seeks to provide a mechanism and machinery for redressal of both individual and collective grievances of the employees of hospitals; educational, scientific, research or training institutions; cheritable, social or philanthropic services; and institutions engaged in khadi and village industries. Educational institutions defined in the Bill are reported to include any university; any college, whether or not affiliated to a university; any school, whether or not recognised or aided by Government; and any scientific institution.

The Bill provides for the appointment of a person as a Grievance Redressal Authority and the Appellate Authority, for every establishment covered under the Bill. Employees having individual grievances will apply to the Grievance Redressal Authority which will endeavour to pass a final order within a period of 60 days of the date of application. If the Grievance Redressal Authority fails to pass the final order within the stipulated period of 60 days, or if the party is aggrieved by the final order, it can prefer an appeal to the Appellate Authority within a period of 45 days. The Appellate Authority after giving reasonable opportunity to the parties to the dispute will endeavour to pass a final verdict within 90 days from the date the appeal is made. Further, in case the Appellate Authority does not hand down the final order within this period or the party is aggrieved by the order, a further appeal can be preferred within 45 days with the one man Tribunal constituted by the Government. The Tribunal will be expected to pass the final order within 90 days of the appeal. The Bill provides that during the period the grievance is under consideration of any of these authorities, no employee shall go on strike or resort to other means of protest like work to rule, go slow, gherao, etc., as also no employer shall lock-out his employees.

As regards collective grievances, which are reported to include wages including period and mode of payment, compensatory and other allowances, hours of work and rest intervals, leave with wages and holidays, and retirement benefits, the Bill provides for the appointment of a Management Council of not less than 2 and not more than 10 members representing both the employer and the employees in equal number. While the employer's representatives will be nominated by the employer, the employee's representatives shall be chosen by the registered unions or associations on the basis of their proportionate membership of the employees in the establishment, and only such unions or associations will be eligible to do so who have not less than 10 per cent of the membership of the employees. Meetings of the Management Council shall be presided over alternatively by a member representing the employer and a member representing the employees. The Council, it is further reported, shall promote harmonious relations between the employers and employees and shall advise the employer to frame by-laws regarding conditions of service, etc. A collective grievance can be referred for settlement to the Management Council at the instance of not less than 10% of the employees in the establishment. The Management Council shall be expected to settle the grievance within 90 days of the reference made to it, failing which either party can refer the grievance for arbitration to an Arbitrator agreed to by the parties or where the parties fail to agree, the Government will constitute a Board of Arbitrators on a request made to it by either party. The Arbitrator or the Board of Arbitrators shall be expected to submit its award within the period specified in the reference made to it. The Arbitrator shall be appointed from a list of panelists maintained for the purpose by the Government. However, the Government reserves the right to wholly or partially reject or modify the award if it feels that it will not be expedient, on public grounds affecting national economy or social justice, to give affect to the award.

The Bill provides that while the collective grievances are under consideration of the specified authorities, no employer shall alter, to the prejudice of the employees, their conditions of service nor will the employees resort to strikes or other protest measures. The Bill provides elaborate penalties for both the employees and the employers for violation of different provisions of the Bill. Imprisonment for one to three months with fine up to Rs. 1000/- is the punishment provided for an employee resorting to strike and other protest measures during the proceedings of the specified authorities, while the punishment for the instigators ranges from 2 to 6 months imprisonment with fine up to 10,000/- rupees. An employer resorting to lock-out during the proceedings can be punished with 1 to 6 months imprisonment with fine up to Rs. 50,000/-.

The Bill is also reported to provide that no court shall take cognizence of any offence punishable under this Act once it comes into force. □

Communal Harmony An Agenda for the Academia

The Department of Economics of the University of Bombay organised a symposium on "The Role of Academics in Communal Harmony" at the Vidyanagari Campus on March 28, 1988. Over 100 teachers from the University/affiliated colleges participated. It was presided over by the eminent scholar, Professor (Miss) Aloo J. Dastur. Professor Ram Joshi, ex-Vice-Chancellor, University of Bombay, Mr. Ashgarali Engineer, eminent social scientist and a noted social reformer and Mr. Achin Vanaik, Assistant Editor, Times of India, were the main speakers.

Professor Ranganath Bharadwaj, Diretctor of the Department of Economics, University of Bombay, at the outset stated that a realisation is emerging among the academic community that while pursuing their studies and teaching in various conventional subjects, they should simultaneously give some serious thought to the issues and problems of society. An important area of concern these days in the country was the possibility, and actual reality, of conflicts arising from linguistic, religious and caste differences. The academics owed to the nation the responsibility of studying and analysing the sources of these conflicts in the proper perspective and even suggest remedial action, in addition to their prescribed duties and responsibilities, since these problems were of national importance.

The stimulating discussions underscored, how, basically, the power-structure served as a motivation force for actual disharmony. Therefore, there was a general feeling that unless we have decentralisation of power in the true sense, bringing about communal/linguistic/caste harmony would not be an easy exercise. In this context, the role of politics and political parties was considered to be extremely important. However, there were also deeper aspects to the question of creating such an egalitarian power-structure where each individual would be as powerful or as powerless as the other—an ideal which is difficult to attain but would ensure communal harmony.

It was observed that given the general socio-political milieu operating under severe constraints of economic opportunities, the role of teachers, specifically, would be marginal in nature, though not altogether insignificant. Teachers could play their intellectual "subversive role constructively". This could provide leads as to the way in which the issues could be formulated and debated so that a more meaningful and educative dialogue towards eventual harmony could take place.

Seminar on Futurology

A three-day seminar on futurology was recently held at the Guwahati University. Sponsored by the Department of Science and Technology, Govt. of India, the seminar was attended by a galaxy of working scientists, educationists, industrialists, administrators and postgraduate students.

The deliberations were held under five different sessions, namely, (1)development of human resources, (2) eco-development and water and soil management, (3) science and technology, (4) health and social welfare, and (5) food and agriculture—life style in 21st century.

The following recommendations emerged at the conclusion of the seminar.

- A futurology centre should be established in Assam in order to educate the people to think about the future and steps should be taken for studying life and society in coming years.

- Some Centres of excellence should be set up in the state at least in a few subjects so as to come nearer to advanced nations of the world. For this sufficient funds should be made available either by the Central or the State Government, so that it is possible to produce personnel of excellence to carry out first quality research and developmental work including seismicity and water management.

- States of North Eastern region should start perspective planning, not merely linear extrapolation methods of planning based on the past achievements. It is extremely necessary for this Region to set up a data-base with all modern gadgets so as to help the people of the region.

- Public sector undertakings either State or Centre should come forward to set up in future coal, gas or oil based and other big scale industries.

- Rural work for medical students for a fixed period should be made obligatory. Para-medical persons should be brought to medical profession. Training facilities for para-medical persons should be started.

- A commission on futurology should be set up by the State Government immediately to act as a think tank of the society and the people of Assam.

IRRI & Assam Agrl. Varsity Collaborate

Assam Agricultural University is reported to have collaboration with the International Rice Research Institute, Manila for Ph.D. Programme. After completion of the degree course at the Assam Agricultural University, one or two candidates will be awarded fellowship with travelling expenses for doing research work to Manila for three year Ph.D. Programme. The degree will be awarded by the Assam Agricultural University.

The Ministry of Agriculture has permitted the University for starting a full-fledged Institute of Extension Education at Jorhat.

The Department of Biochemistry, Government of India, have also accepted the proposal of the University for starting Master degree programme in Agricultural Biochemistry. Assam Agricultural University is one of the three Agricultural Universities in India to be selected for starting Master degree course. The programme will be started from the beginning of the next year.

Orientation Programme for Principals

Jiwaji University proposes to organise an Orientation Programme for Principals of the colleges affiliated to the university. from 15th to 20th May, 1988 The topics proposed to be discussed includes (i) Orientation to the College Principals regarding the New Education Policy thrusts; (ii) Interaction by mutual expertise and experience; (iii) Implementation strategies for (a) Improving Efficiency and Academic Standards, (b) Institutional Management. (c) Autonomous Colleges, and (d) Making the System Work.

Dr. S.C. Saxena, Dean, College Development Council of Jiwaji University, will be the Director of the Programme.

Addl. Resources for TIET Libraray

The University Grants Commission (UGC) has provided an additional sum of Rs. 7 lacs for strengthening of the library of Thapar Institute of Engineering & Technology (TIET), Pataila during the remaining 7th plan period. This is in addition to Rs. 7 lacs provided for the Library for the 7th plan period.

News from Agril. Varsities

Oilseed Thrust Programme

The Indian Council for Agricultural Research (ICAR) has decided to launch special oilseed thrust programme (OTP) in Ranchi, Gumla & Nalanda. An amount of Rs. 14.40 lakh has been earmarked for growing groundnut in this kharif season. This was disclosed by Dr. P.V Shenoi, Additional Secretary, Union Agriculture Ministry and Dr. Mangla Rai, Officer on Special Duty, ICAR on the conclusion of four-day 32nd annual kharif oilseeds workshop organised at Patna recently. Dr. V. Ranga Rao, Project Director, Directorate of Oilseeds Programme, Hyderabad and Dr. Gopalji Trivedi, Vice-Chancellor, Rajendra Agriculture University were also present on the occasion.

Dr. Trivede said that there was great potentiality of growing groundnut in nearly 50000 hectares of land in Kosi area during February and June which would provide 2 lakh tonnes of oil. He said Bihar had been divided in six zones where thrust would be on growing groundnut, sesame, niger sunflower and castor.

The Agriculture Commissioner Mr. Sinha said Bihar would spend Rs. four lakh on developing base seeds and Rs. 1.5 lakh on certified seeds under national oilseed programme.

Dr. Shenoi said the workshop also decided to prepare 5500 quintals of breeder seeds meaning that each and every seed would have to be viable.

Dr. Rao was apprised of the research going on groundnut and rapeseed oil in BAU and mustard and castor at RAU. He said that the Birsa Agriculture University had developed a rare variety of groundnuts in plateall area and in view of its large size the yield may compete in international market.

The four-day workshop discussed at length the breeding agronomy entomoly and pathology and agro climatic aspect while growing oilseeds in the country.

Promoting Biofertilizers

Realising the importance of biofertilizers for supplementing the use of chemical fertilizers, Department of Agriculture and Co-operation, Government of India in the Ministry of Agriculture, has started a National Project on Development and Use of Bio-fertilizers with one

National Centre at Ghaziabad and six Regional Centres at Jabalpur, Hisar, Pune, Bangalore, Bhubaneshwar and Shillong and 40 subcentres of blue-green algae productions including two sub-centres at Raipur, and Jagdalpur in M.P. The major functions of these Regional Centres are to produce, distribute and promote the use of effective and quality biofertilizers, to organise field demonstrations and training programmes on effective use of fertilizers to State, Central Govt., Agricultural Officers, Farmers and all those who are associated in agricultural production to test the quality of biofertilizers produced by private and co-operative plants and to provide technical support to institutions.

College of Agriculture at Latur

Marathwada Agricultural University, Parbhani has started a new Agricultural College at Lature to impart training leading to B.Sc. (Agr.) Degree to inservice candidates of the Department of Agriculture, Maharashtra State. Those who have completed two years Diploma course in Agriculture after Matriculation are eligible for this programme. This degree programme is of 3 years duration and would enable the candidates to transfer new Agricultural Technology effectively to the farmers.

Hon. Vilasraoji Deshmukh, Minister for Revenue and Cooperation, Maharashtra State, recently inaugurated the College. In his address the Minister emphasized that University should do the research work on dryland agriculture and find out a suitable technology of low cost inputs. He complimented the University for carrying out excellent research work, particularly on Sorghum, Pulses, Rice, Oilseeds and Vegetables. Whenever a new technology is evolved by the Agricultural University it should be transferred to the farmers efficiently and immediately, he added.

Dr. P.V. Salvi, Vice-Chancellor, who presided, said that the University had opened a new avenue for imparting training to the inservice candidates working in Agriculture Department with a view to upgrade their knowledge and help them in disseminating the new agricultural technologies developed by this University to the farmers in this region. He also said that this was the only agricultural college in the State for the inservice candidates for higher education. The intake capacity of the college is 32 candidates.

AIU News

Training-cum-Orientation Programme

The Association of Indian Universities (AIU) will organise a five-day training-cum-orientation programme on 'Financial Administration in Universities' at University of Poona, from 6-10 June, 1988. Intended for Finance Officers of Indian Universities, the programme will include keynote presentations, case studies and discussions on problems of financial management, budgetary reforms including performance and zero based budgeting, computers in financial accounting and university administration, and effective utilisation of resources. Prof. P.V. Salvi, Vice-Chancellor, Marathwada Agricultural University and President, AIU will preside over the Inaugural Function while Shri Veeraraghavan, Secretary, Ministry of Human Resource Development will deliver the Veledictory Address.

A novel feature of the programme would be a programme of yogic exercises conducted by Dr. M.L. Gharote, Principal, G.S. College of Yoga and Cultural Synthesis, Kaivalyadhama, Pune. Visits to local institutions will also form a part of the programme. For effective participation, it is proposed to restrict the number of participants to 30 only. The last date for receipt of nomination together with a Registration Fee of Rs. 1000/- is May 20, 1988.

AIU Seminar at Manipur

The second three-day seminar of of the AIU Seminar Series on 'Implementation and Monitoring of National Policy on Education' is being organised at Manipur University, Imphal on 19-21 May, 1988. The Seminar will include keynote addresses on improvement in efficiency, mobility of teachers and students, making the system work, and language development and cultural perspective. In addition to the Veledictory Session, there will be plenary sessions on the mornings of May 20 and 21, 1988 for reporting the discussions of the previous day and formulating directions for further discussions.

We Congratulate....

(1) Prof. R C. Patel who has taken over as Vice-Chancellor of the M.S. University of Baroda, Baroda.

(2) Lt. Gen. (Retd) G.C. Agarwal who has taken over as Vice-Chancellor of the Maharshi Dayanand University, Rohtak.

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

CURRENT DOCUMENTATION IN EDUCATION

A List of Select Articles culled from periodicals received in the AIU Library during April, 1988

EDUCATIONAL PHILOSOPHY

Dube, S.C. Education for an unknown future. *New Frontiers Edu.* 18(1); Jan-March 1988. 51-5.

Ediger, Marlow. The great debate in education. *New Frontiers Edu.* 18 (1); Jan-March 1988. 1-7.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities

BIOLOGICAL SCIENCES

Anthropology

1. Chopra, Parvesh Kumar. *Behavioural profile of free ranging rhesus monkeys.* Delhi.

2. Verma, Rashmi. *A study of obesity and leanness among the Punjabi families.* Delhi.

Biochemistry

1. Bhattacharyya, Debdas. *Agricultural evaluation of mycobacillin, an antibiotic and mycoversilin producer Aspergillus versicolor, an antagonist.* Calcutta.

2. Chakrabarti, Ranjan. *Studies on the effect of reserpine on the peroxidase activity of submaxillary gland.* Calcutta.

3. Manga, V. Alivelu. *Phytochrome mediated β-amylase activity in mustard, Sinapis alba L cotyledon.* Hyderabad. Dr. R. P. Sharma.

4. Mukhopadhyay, Arindram. *Studies on metabolism of polyamines and their role in protein synthesis in relation to loss of viability of rice seeds, Oryza sativa L.* Calcutta.

5. Sapru, Mohan K. *A study on the molecular (biochemical) basis of major psychiatric disorders.* Bangalore. Dr. B. S. Sridhara Rama Rao, Prof. and Head, Department of Neuro Chemistry, National Institute of Mental Health and Neuro Sciences, Bangalore.

6. Subbaramaiah, K. *β-amylase from mustard, Sinapis alba cotyledons : Purification, molecular characterisation and photoregulation during seedling development.* Hyderabad. Dr. R.P. Sharma.

7. Sureshkumar, G. *Biochemical studies on heart muscle : Studies on lysosomal β-hexosaminidases from human heart muscle.* Kerala. Dr. Debkumar Basu, Prof., Department of Neurochemistry, S.C.T.I.M.S.T., Trivandrum.

8. Unnikrishnan, V.S. *Biochemical investigation on proteoglycans in liver.* Kerala. Dr. P.R. Sudhakaran, Reader,

Department of Biochemistry, University of Kerala, Trivandrum.

Botany

1. Barui, Nimai Chandra. *Quaternary pollen analysis in relation to dating, vegetational history and biostratigraphy of West Bengal Basin.* Calcutta.

2. George, Mohan P. *Impact of thermal power stations on the distribution and bioaccumulation of aquatic invertebrates.* H.S. Gour. Dr. K.S. Unni, Prof., Department of Botany, Govt. Post-Graduate College, Chhindwara, M.P.

3. Goel, Neera. *Growth, and biochemical changes in groundnut, Arachis hypogaea L. under saline conditions.* Rohilkhand. Dr. K.A. Varshney, Bareilly College, Bareilly.

4. Jhansi, P. *Pollen analysis of honey from Andhra Pradesh.* Osmania.

5. Kashyap, Satya Dev. *Studies on dry matter production, nutrient accumulation and wood characteristics in Populus ciliata Wall. Ex. Royle.* H.P.

6. Kundu, Samiran. *Aerobiology of pollen grains in Darjee ling with reference to environmental pollution and respiratory allergy.* Calcutta.

7. Meenakshi. *Induced chromosomal mutations and degree of susceptibility towards various radiomimetic substances in Indian charophyta with special reference to their phylogeny, speciation and evolution.* Rohilkhand. Dr. S.K. Bhatnagar, Bareilly College, Bareilly.

8. Paul, Mahima. *Studies on pathology disorders in seed of paddy from tribal areas of Rajasthan.* Rajasthan. Dr. Dalbir Singh, Prof., Department of Botany, University of Rajasthan, Jaipur.

9. Ram Chandani, Ratna. *Ecological studies of selected leguminous and non-leguminous weeds of rabi and kharif crops of Pant Nagar Farm.* Rajasthan. Dr. B.V. Ratnam, B-42 Prabhu Marg, Tilak Nagar, Jaipur and Dr. G.B. Nathawat, Director, Indira Gandhi Centre for H.E E.P.S. University of Rajasthan, Jaipur.

10. Ramani, Vidya. *In vivo and in vitro studies on the leaf rachis cells of Prosopis cineraria (Linn.) Druce induced by insect.* Rajasthan. Dr. Uma Kant, Dapartment of Botany, University of Rajasthan, Jaipur.

11. Richa. *Studies on growth, development and yield components of Indian mustard, Brassica juncea in relation to applied growth regulators.* PAU.

12. Sardar, Asit Kumar. *Cytogenetical investigations on induced mntations and polyploids in Trichosanthes anguina Linn.* Calcutta.

13. Satappa, Giriyappanavar Basavaraj. *Studies on the blue green algae and the effect of certain chemicals on them.* Karnatak. Dr. S.G. Bharati, Retd Prof., Department of Botany, Karnatak University, Dharwad.

14. Sharma, Mani Shanker. *Effect of growth regulators and retardants on growth and sex expression and yield of bottlegourd.* Ravishankar.

15. Sharma, Rajni, *Ethnobotanical and pharmacological studies of some selected xerophytic plants.* Rajasthan. Dr. S.C. Jain, Department of Botany, University of Rajasthan, Jaipur.

16. Singh, Chandra Bhushan. *Physiological studies on the cyanobacterium, Nostoc calcicola under mercury stress.* BHU. Dr. S.P. Singh, Reader, Department of Botany, Banaras Hindu University, Varanasi.

17. Soni, Jeev Raj. *Studies on morphogenesis and differentiation in cell, tissue and organ, cultures of fennel, Foenicum vulgare Mill and cumin, Cuminum cyminum L.* Rajasthan. Prof. Naresh Chandra, Department of Botany, University of Rajasthan, Jaipur.

18. Subramanjam B. *Biology of Rhizobium from subtropical Himalayan legumes of potential economic importance.* Delhi.

Agriculture

1. Akhtar Ali. *Effects of certified gram, Cicer arietinum Linn seeds and its manifestation on the productivity.* CSAT. Dr. A.S Warsi.

2. Attarde, Devidas Ramdas. *Study of nitrogen and P_2O_5 fertilizer use efficieney in relation to time of planting of groundnut; Arachis hyphogaea L as an intercrop in maize, Zea mays L with different planting patterns and plant densities.* M.P. Agrl. Dr. B.V. Mohite, Prof., Department of Agronomy, College of Agriculture, Kolhapur.

3. Barwad, Wamanrao Laxmanrao. *Efficacy of synthetic inseticides against cotton bollworms and their impact on the predominant natural ememies.* Marathwada Agrl. Dr. A.K. Raodeo, Assoc Dean (Instruction), Marathwada Agricultural University, Parbhani.

4. Bhagwandin. *Effect of seedbed configuration and mulches on crops yield in sole and intercropping systems under rainfed condition.* CSAT. Dr. K.S. Bhatia, Assoc Prof. Department of Soil Conservation, Chandra Shekhar Azad University of Agriculture and Technology, Kanpur.

5. Bhatia, Hardev Singh. *Standardization of tissue sampling techniques and critical nitrogen level in pecan, Carva illinoensis Koch.* *YS Parmar.* Dr, V.P. Bhutani, Department of Fruit Culture and Orchard Management, College of Horticulture, Solan.

6. Bhattacharya, Rahul. *Phytoionic role of granular pesticides on some crop plants and their effect on important soil microflora.* Bhopal. Dr. B.P. Shrivastava, D-49 Hauz Khas, New Delhi and Dr. (Mrs) S.D. Belsare, Reader, Department of Bio-Science, Bhopal University, Bhopal.

7. Dwivedi, Brahma Swaroop. *Studies on zinc status of soils and requirements of zinc for different crops based on soil testing in Uttar Pradesh.* CSAT. Dr. K.N. Tiwari.

8. Gupta, Devendra Kr. *Studies on seed-borne fungi of some cruciferous vegetable seeds grown in Sikkim.* BHU. Dr. K.C. Basuchaudhary, Prof. Department of Mycology and Plant Pathology, Banaras Hindu University, Varanasi.

9. Hari Ram. *Forms of sulphur and its role on the yield and quality of chickpea, Cicer arietinum L in central alluvial soils of Kanpur district (Uttar Pradesh).* CSAT. Dr. K.N. Dwivedi, Assoc Prof, Department of Soils and Agricultural Chemistry, Chandra Shekhar Azad Uuiversity of Agriculture and Technology, Kanpur.

10. Indulkar, Bhagwat Sambhaji. *Management of zinc using various inorganic organic zinc carriers in rice gram and sorghum wheat cropping systems.* Marathwada Agrl. Dr. G.U. Malewar, Head, Department of Agricultural Chemistry and Soil Science, Marathwada Agricultural University, Parbhani.

11. Katiyar, Subodh Kumar. *Behaviour of nitrogen, phosphorus and sulphur in soils and legume-oilseed crop sequence.* CSAT. Dr. R.M. Upadhyay, Assoc Prof, Department of Soils and Agricultural Chemistry, Chandra Shekhar Azad University of Agriculture and Technology, Kanpur.

12. Lukade, Gafoor Mohammad Haji. *Studies on the root rot of safflower caused by Rhizoctonia bataticola (Taub.)*

Butler. M.P. Agrl. Dr. M.S. Rane, Ex-Prof, Department of Plant Pathology, College of Agricultuje, Pune.

13. Mani, Buddhesh. *Nutritional studies in linseed, Linum usitatissimum L.* CSAT. Dr. K.N. Dwivedi, Assoc Prof, Department of Soils and Agricultural Chemistry, Chandra Shekhar Azad University of Agriculture and Technology, Kanpur.

14. Mohinder Singh. *Forms and distribution of sulphur in different soils and their behaviour in soil plant* system. HAU.

15. Mohla, Ajmer Singh. *A study of genetic architecture of quantitative traits of economic importance in upland cotton, Gossypium hirsutum L.* HAU.

16. Pandita, Vinod Kumar. *Role of ethylene in the translocation and metabolism of radioactive auxin during growth and abscission of apple.* Y.S. Parmar. Dr. K.K. Jindal, Chief Scientist, Regional Forest Research Station, Mashobra Shimla.

17. Ramesh Kumar. *Water use and relay cropping studies in spring potato, Solanum tuberosum* H.P. Krishi. Dr. I.S. Chakor, Department of Agronomy and Agrometeorology, College of Agriculture, Palampur.

18. Ray, Uma. *Genetical and breeding studies in ridge gourd, Luffa aculangula Roxb with special reference to sex expression and hybrid vigour.* Calcutta.

19. Sarawgi, Arvind Kumar. *Partial diallel cross analysis of yield and its component in rice.* JN Krishi, Dr. S.P. Singh, Dean, College of Agriculture, Jabalpur and Dr, P.S. Shrivastava, Prof. and Head, Department of Plant Breeding, Indira Gandhi Krishi Vishwa Vidyalaya, Raipur.

20. Sharma, Kailash Nath. *Metabolism of phosphorus of different growth stages of rice during normal and stress conditions.* BHU. Dr. B. Singh, Prof. and Head, Department of Soil Science and Agricultural Chemistry, Banaras Hindu University, Varanasi.

21. Sharma, Ram Parkash. *Reciprocal influence of rootstock and scion on growth and mineral composition of stone ftuits.* Y.S. Parmar. Dr. R.L. Sharma, Chief Scientist, Regional Horticultural Research Station, Bajaura, Distt. Kullu, H.P.

22. Sidhu, Amrik Singh. *Diallel analysis over environments in tomato, Lycopersicon esculentum Mill.* PAU.

23. Singh, Bharat. *Transformation and availability of nutrients under submerged and upland condition of paddy.* CSAT. Dr. O.P. Srivastava.

24. Singh, Binay. *Studies on certain micronutrients and NAA on acid lime, Citrus aurantifolia Swingle.* CSAT. Dr. A. Prasad, Assoc Prof. Department of Horticulture, Chandra Shekhar Azad University of Agriculture and Technology, Kanpur.

25. Singh, Dinesh. *Mutagenesis in lentil, Lens culinaris Medic.* BHU. Dr. R.M. Singh, Prof. and Head, Department of Genetics and Plant Breeding, Banaras Hindu University, Varanasi.

26. Singh, Gaj Raj. *Effect of methods of irrigation, dates of planting and nitrogen fertilization on emergence, growth and development, yield and quality of potato, Solanum tuberosum L. HAU.*

27. Singh, Ghan Shyam. *Physiological studies on uptake and assimilation of nitrogen and its relationship to grain yield of wheats, Triticum aestivum L. under rainfed conditions.* CSAT. Dr. R.D.L. Srivastava, Assoc Prof., Department of Crop Physiology, Chandra Shekhar Azad University of Agriculture and Technology, Kanpur.

28. Singh, Ram Pratap. *Comparison of single seed descent and bulk methods in mungbean, Vigna radiata (L.) Wilczek.* BHU. Dr. B.D. Singh, Reader, Department of Genetics and Plant Breeding, Banaras Hindu University, Varanasi.

29. Thakur, Khyal Chand. *Studies on the development of true potato seed technology.* HP.

30. Vardani. *Effect of cultural practices on soil and moisture conservation and yield of crops under rainfed condition in sole and inter-cropping systems.* CSAT. Dr. K.S. Bhatia, Assoc Prof., Department of Soil Conservation, Chandra Shekhar Azad University of Agriculture and Technology, Kanpur.

31. Virender Singh. *Heterosis and combining ability studies in okra, Abelmoschus esculentus (L) Moench.* HAU.

32. Yadav, Lalla Singh. *Evaluation of some crop management practices for the integrated control of pod borers, Heliothis armigera Hubner and Melanagromyza obtusa Malloch in pigeonpea.* HAU.

Zoology

1. Bandyopadhyay, Debasish. *Role of hormones in the pressor homeostasis in birds.* Calcutta.

2. Gurudeo, Anant Swarup. *Studies on the structure and behaviour of the chromosomes in some fresh water fishes with special reference to effects of some drugs and antibiotics.* H.S. Gour. Dr. H K. Saksena, Reader, Department of Zoology, Dr. Harisingh Gour Vishwavidyalaya, Sagar.

3· Kannan, K. Navaneetha. *Light relations of the circadian rhythm in the palm squirrel, Funambulus palmarum.* Madurai.

4. Kharbanda, Kusum. *Studies on the rat ventral prostate as an extragonadal source of inhibin.* Delhi.

5. Malhotra, Pawan. *Bovine seminal plasma inhibin revisited.* Delhi.

6. Meshram, Premanand Balkrishna. *Insect pests of important local forest tree species in nursery and their* control. Durgawati. Dr. S.C. Pathak, Department of Bio-Science, Rani Durgawati Vishwavidyalaya, Jabalpur.

7. Mishra, U.K. *Acute toxicity of certain pesticides to a freshwater teleost, Glassogobius giurts Name.* Bhopal. Dr. Santosh Kumar, Prof and Head, Department of Bio-Science, Bhopal University, Bhopal and Dr. O.P. Jain, Asstt. Prof., Department of Zoology, M.V.M, Bhopal.

8. Naidu, R. Sridevi. *Studies on the nucleic acids, proteins and changes in some enzyme activities in the testes, fat body and accessory glands and their hormonal regulation during development in the males of Spodoptera litura (Noctuidae : Lepidoptera).* Hyderabad. Prof. P.S. Rama Murty, Department of Life Sciences, University of Hyderabad, Hyderabad.

9. Naithani, Sangeeta. *Studies on biology, bionomics and control of a major pest of mustard, Brassica spp. oilseed crops.* Rohilkhand. Dr. R.K. Sharma, Bareilly College, Bareilly.

10. Pattnaik, Subasini. *Chromosomal organisation of culex.* Berhampur. Prof. C.C. Das, Head, Department of Zoology, Berhampur University, Berhampur.

11. Rajnesh Kumar. *Histochemical and lectin staining studies of carbohydrates in the rat ovary.* PAU.

12. Rajwant Kaur. *Response of the mouse genome on its exposure to certain agricultural chemicals and heavy metal compounds.* Panjab.

13. Ray, Prajna Paramita. *Physiological studies of the adrenal gland in turtles.* Calcutta.

14. Relia, Shashi Bala. *Studies on encystment and excyst-*

ment in Stylonychia mytilus Ehrenberg and Pseudourostyla levis Stokes. Delhi.

15. Sarkar, Soma. *Genome organization in the mole cricket, Gryllotalpa fossor.* Delhi.

16. Sarma, S.S.S. *Experimental studies on the ecology of Brachionus patulus Muller (Rotifera) in relation to food, temperature and predation.* Delhi.

17. Sharma, Rewa. *A study of ecology of four common species of fruit flies (Tephritidae : Diptera).* Panjab.

18. Siva Prasad, R. *Studies on the effects of some non-steroidal antifertility drugs on the reproductive organs of the male rat.* Hyderabad. Dr. E. Vijayan, Reader, Department of Life Sciences, University of Hyderabad, Hyderabad.

19. Subrahmanyam, Madhavapeddi Naga Venkata. *Studies on some aspects of water quality and phytoplankton in Visakhapatnam Harbour. East Coast of India.* Andhra.

20. Sud, Sangeeta. *Study of pathogenesis in relation to helminth infections in some fishes of Gobind Sagar Lake and its associated waters.* Panjab.

21. Urfi, Abdul Jamil. *Histophysiological studies on muscles of certain freshwater teleosts with special reference to fibre distribution and muscle growth.* Delhi.

Medical Sciences

1. Baral, Rames Chandra. *Biochemistry of amniotic fluid in relation to some aspects of carbohydrate metabolism.* Calcutta.

2. Chauhan, Shyam Singh. *Cytotoxicity of inhaled coal fly ash : Biochemical studies in lung and liver of rats.*

3. Garg, Meenakshi. *Immunological aspects of human breast secretions in relation to the nutritional [status of Indian mothers and its effect on growth and development of children.* Delhi.

4. Gupta, Suresh Chandra. *Neuro physiological adaptation following stress in relation to personality types.* BHU. Dr. G.P. Dubey, Reader, Department of Basic Principles, Banaras Hindu University, Varanasi.

5. Hota, Vijayalaxmi. *Histological study of pancreas with particular reference to the islets of Langerhans : A comparative study.* Sambalpur. Dr. L.K. Tripathy, Ex-Prof, Department of Anatomy, V.S.S. Medical College, Burla.

6. Jyothisri, Akkineni. *Pathogenesis of Giardia lamblia infection.* Delhi.

7. Rajasekaran, N. *Nutritional aspects of hookworm anaemia.* Madurai.

Veterinary Science

1. Agarwal, Sushil Kumar. *Evaluation of response in selection for five week body weight in Japanese quality.* Rohilkhand. Dr. S.C. Mohapatra, Central Avian Research Institute, Indian Veterinary Research Institute, Izatnagar.

2. Arun Kumar. *Studies on the process of reproduction, reproductive capacity and extra gonadal sperm transit time in buffalo-bulls.* HAU.

3. Garg, Satish Kumar. *Pharmacokinetic and toxicological studies of gentamycin in buffaloes and domestic fowl.* HAU.

4. Jeshvantrai, Derasari Hareshkumar. *Kinetics of spermatogenesis in bucks, Capra hircus, duration of seminiferous epithelial cycle, extragonadal sperm reserve and transit time.* H.A.U.

THE ULTIMATE IN EDUCATION IS CHARACTER BUILDING
—Mahatma Gandhi

GUJARAT VIDYAPITH : AHMEDABAD-380014

Courses for Training in Work-Oriented Social Reconstruction

Admission for Academic Year 1988-89

(1) Rural Service College—Shri Mahadev Desai Gramsewa Mahavidyalaya, Sadra (Dist.: Ahmedabad) and Randheja (Dist.: Gandhinagar) for training in Rural Services according to Gandhian ideals through a 3-year degree Samaj Vidya Visharad (equivalent to B.A.) course following Standard XII or equivalent certificate. The new academic year commences on 15th June, 1988. Women candidates can apply to College at Randheja and the men at Sadra. Admissions to the first year is open to those who have completed Higher Secondary Standard XII or its equivalent or Primary Teachers' Training or Physical Education or I.T.I. or Drawing Teachers' examination—two years training after Standard X or Pre-University examination. Candidates can also apply pending their results. Besides academic subjects productive work in Agriculture as prinicipal and Animal Husbundry, Ambar Spinning, Rural Technology, etc. as subsidiary subjects for men and Home Science as principal subject and Ambar Spinning, etc. as subsidiary subjects are obligation. The third year of the degree course is devised as a eight month full-time block placement in institutions in rural areas. The project report which all students submit is based on field work during the block placement. The course is residential and stay in hostels and participation in Community life is evaluated and will be necessary.

(2) Parangat (M.A.) in Rural Management and Rural Development and Home Science.

These two courses will commence from June 1988 at the Panchayat Training Centre at village Sadra. Admission open to those who have completed B.A. in IInd class in any of the Social Sciences. Residence and participation in Community life campus—hostel is necessary and will be evaluated. Likewise Parangat (M.A.) in Home Science is a 2-year full time residential course at village Randheja.

(3) Mahatma Gandhi Campus, Ahmedabad (Post-Graduate Courses).

(1) Gujarati (including Linguistics); (2) Hindi (including Hindi as functional language); (3) History and Culture, Archival Studies, (4) Social Anthropology, Social Reconstruction; (5) Rural Economics; (6) Gandhian Thought; (7) Adult Education and Population Education—both 2-year full time and week-end courses leading to Parangat (M.A.); (8) Kannada, Malayalam and Sindhi for those who have these as mother-tongues, as Sunday courses leading to Parangat (M.A.) and (9) **Parangat (M.A.) in Social Work (Rural)** as 2-year full-time courses. Applications will be accepted till 15th June, 1988. Admission qualifications : a graduate degree in IInd class in the same or related subjects. The Social Work (Rural) course is whole-time and residential with stay in hostels and participation in Community life is necessary and will be evaluated. As the course is rural-oriented, those with experience in rural reconstruction work will be preferred. Admission open to those with a degree in rural institutes or B.A. in IInd class in one of the Social Sciences. Besides the above, 2-year week-end courses leading to Anuparangat (M.Phil.) are offered in Archival Science, Peace Research, Science and non-violence and Buddhist Studies. Admission open to those with M.A. or equivalent degree in IInd Class. Two-year Vidyavachaspati (Ph. D.) Course for those with M. Phil. is also available in those subjects. A new degree course Vidyavaridhi (D. Lit.) will commence this year for those with Ph. D. Students in week-end courses also are expected to attend community-living exercises, camps and study tours.

(4) Correspondence Courses : Parangat (M.A.) in Gandhian Thought and in Education to M.Ed.

(1) Two-year course leading to Parangat (M.A.) on Gandhiji's life and work and the Gandhian Thought including social, economic, political, religious, spiritual and educational aspects. Admission open to those with graduate or an equivalent degree. A one-year Diploma Course with four papers is also offered. Those who do not have graduate degree, but are above 21 years in age can enrol in the diploma course.

(2) Shikshan Parangat (M.Ed.)

Admissions open to those with B. Ed. or equivalent degree. Those working as teacher-educators in primary teachers' training college can apply for correspondence course. Besides this, week-end courses of two years duration and full time courses of one year duration can also be taken.

(5) Granthalaya Visharad (B. Lib.) in Library Science

A full time course will start from June, 1988. Those with B.A. with second class are eligible to apply. Two-year course leading to Parangat (equivalent to M.Lib.) in Library Science is open to those who have completed B.Lib. All candidates are expected to read books (1) Gandhiji's life in his own words; (2) Community living—Babalbhai Mehta; (3) Revolution Through Education (Abridged); (4) The Nector of Indian Culture (The books are in Gujarati, Hindi versions may be available). These books will be sent on payment alongwith the application forms. The selection test will comprise two question papers of 200 marks of two hours each. Short objective questions would include questions on aims and objects of the Basic education (Nai Talim), Gandhiji's life and Thought, Ideals of Indian culture, questions on the subject in which the admission is sought and community living. The candidates will be informed of the dates of examination by mail. All students on admission, are expected to wear Khadi, participate in daily community congugation and community spinning and in all such programmes organised on the lines of Gandhian way. Duration of vacation and holidays are much less in comparison to other universities. Any student who remains absent for more than ten days in a term will not be eligible for granting the term. The students should buy three pairs of clothing of certified khadi. Those who are admitted in the hostel will bring their own beddings. Please write alongwith Rs. 3/- stamp to the concerned Principal or the Co-ordinator for application forms and details about the selection test.

Vinod Tripathi
REGISTRAR

National Council of Educational Research and Training

(ii) At least 3 years of working experience in TV/Radio Studio or similar recording set up in any organisation.

11, **Marketing Executive**: [One post]: Qualifications as prescribed at S No.2.

Note: Posts at S.No. 10 and]11 are un-reserved.

SCALE OF PAY AND AGE LIMIT AS ON 1.5.1988

1. Senior Technical Officer : Rs. 3000-4500 Below 45 years.
2. Marketing Executive : Rs. 1640-2900 Below 30 years.
3. Make-up Artist : Rs. 1640-2900 Between 21 & 30 years.
4. Film Producer : Rs. 3000-5000 40 years.
5. Assistant Engineer : Rs. 2200-4000 35 years.
6. Audio Radio Producer Gr. 1 : Rs. 2200-4000 35 years.
7. T.V. Producer Gr. II : Rs. 1640-2900 35 years.
8. Chief Editor : Rs. 3000-5000 Below 45 years.
9. Script Writer : Rs. 1640-2900 35 years.
19. Engineering Assistant : Rs. 1640-2900 35 years.

Note: (a) Some of these posts are temporary but likely to continue on year basis. (b) There is no age limit for the employees of the Council. Age concession allowed for SC/ST candidates as per Govt. of India instructions. (c) The number of vacancies is tentative and is liable to change. (d) The selected candidates can be transferred to any of the establishments of the Council, any where in India. (e) If a candidate is found to be of exceptional merit, relaxation of qualifications, experience, age, etc. may be given by the Selection Committee in its discretion. (f) The prescribed qualifications are minimum and mere possession of the same does not entitle candidates to be called for interview. When the number of applications received in response to the advertisement is large, it will not be possible or convenient for the Council to interview all these candidates. The Council may then restrict the number of candidates for interview to a reasonable limit, on the basis of qualifications and experience higher than the minimum prescribed in the advertisement.

Application forms can be obtained from the Secretary, (Recruitment-III), Vth Floor, Room No. 8, National Council of Educational Research and Training (NCERT), Sri Aurobindo Marg, New Delhi-110016, enclosing an unstamped envelope (23cms × 10 cms) giving name of the post, serial number and advertisement number. The outer cover should be marked 'Request for application Form'. Separate application should be submitted for each post.

Those employed in Govt./Semi. Govt./Autonomous Organisations should send their applications through proper channel. They may, however, if they so desire, submit advance copy of their application direct to the Council enclosing the application fee, if applicable.

Completed application form alongwith attested copies of certificates of qualifications and experience etc., and a crossed Indian Postal Order for Rs. 8/- (no fee for SC/ST candidates) in favour of Secretary, NCERT, should reach him by **15th June, 1988**. Applications received without prescribed fee and/or received after the closing date will not be entertained. (Advt. No. TR-1).

Secretary.

National Council of Educational Research and Training,
Sri Aurobindo Marg, New Delhi-110 016

REGISTRAR

REGIONAL ENGINEERING COLLEGE
HAMIRPUR (HP)-177 001.

Applications are invited for the following posts :

1. **Professors in the Pay Scale of Rs. 1500-2500 UGC (Un-revised)**

(1) Civil Engineering (Two Posts)

(a) Structural Engineering 1 No.

(b) Geo. Technical Engineering 1. No.

(2) Mechanical Engineering (Two Posts)

(a) Thermal Engineering 1 No.

(b) Design of Machines 1 No.

(3) Electronics & Communication Engg. (One Post)

(4) Computer Science and Engineering (One Post)

(5) Architecture (One post)

Educational Qualifications

Essential

1. Basic : Bachelor's Degree in appropriate branch of Engineering recognised by the University with atleast Ist Class at Bachelor's Degree and/or Master's Degree level.
2. Doctorate Degree in concerned branch of engineering/specialisation of subject in appropriate branch of engineering recognised by the University.
3. Atleast 10 years experience in teaching and/or Research in an Institution of University standard.
4. Experience of guiding research at Doctorate level.

Desirable

1. Professional/Scientific/Research work of outstanding merit.
2. Experience in curriculum development.
3. Published work of high standard.
4. Membership of professional bodies.
5. Age between 35 to 50 years.

II. **Assistant Professors in the Pay Scale of Rs. 1200-1900 (Un-revised)**

(A) Engineering & Technology Departments

1. **Civil Engineering (Two Posts)**

   (a) Environmental Engineering 1 No.

   (b) Structural Engineering 1 No.

2. **Electrical Engineering (Three Posts)**

   (a) Electrical Machines Design & Analysis 1 No.

   (b) Electrical drives or Computer application or Instrumentation Engineering 1 No.

   (c) Control System Engineering or Bio-Medical Engineering 1 No.

3. **Electronics & Communication Engg. (Three Posts)**

   (a) Digital Electronics and Digital Instrumentation. 1 No.

   (b) Micro Wave Engineering. 1 No.

   (c) Electronics & Communication Engg. 1 No.

4. **Computer Science and Engineering (Two Posts)**

   Thorough knowledge of both Software and Hardware.

(B) Applied Sciences Department

5. **Mathematics (One Post)**
6. **Chemistry (One Post)**

Educational Qualifications

Essential

(A) Engineering and Technology Departments

(1) A first class (or equivalent) Master's Degree/Doctorate Degree in appropirate field of Engineering/Technology.

(2) Consistently good academic record with a Bachelor's Degree in appropriate branch of Engineering / Technology. Ist Class at Bachelor's Degree and/or Master's degree level.

(3) Atleast 5 years experience in teaching/research in an Institution of University standard.

Desirable

(1) Professional / Scientific/Research work of outstanding merit.

(2) Experience in curriculum Development.
(3) Published work of high standard.
(4) Membership of Professional bodies.
(5) Age below 45 years.

(B) Applied Science/Humanities Departments

Essential

(1) A first class Master's Degree with M.Phil in the subject concerned of a recognised University/Doctorate degree in the appropriate subject of a recognised University.
(2) Atleast 7 years experience in teaching/research in an Institution of University standard.

Desirable

(1) Professional/Scientific Research work of outstanding merit.
(2) Experience in curriculum development.
(3) Published work of high standard.
(4) Membership of professional bodies.
(5) Experience of guiding research.
(6) Age below 45 years.

III. Lecturer in the Pay Scale of Rs. 700-1600 UGC (un-Revised)

(1) Civil Engineeing (One Post)
(2) Electrical Engineering (One Post)
(3) Mechanical Engineering (Two Posts)
(4) Electronics & Communication Engineering (Two Posts)
(5) Computer Science & Engineering (Two Posts)
(6) Economics (One Post)

Educational Qualifications for Engineering & Technology Deptt :

Essential

(1) Master's Degree in appropriate field of Engineeing/Technology.
(2) Consistently good academic record with a Bachelor's Degree in appropriate branch of Engineering/Technology. Ist class at Bachelor's Degree and/or Master's Degree level.
(3) One year's experience in teaching/research in an Institution of University level.
(4) Age below 45 years.

Educational Qualifications for Lecturer in Economics

Essential

1. A first class Master's Degree with M.Phil in the subject concerned of recognised University.
2. Atleast two years experience in teaching/research in an Institution of University level.
3. Age below 45 years.

Note

In the case of appointment of Lecturer (Engineering & Technology), if the candidate of requisite qualifications are not available, a candidate with first class Bachelor's degree in appropriate branch of Engg/Technology with consistently good academic record will be considered.

Such a candidate should obtain Master's Degree in Engineering/Technology within a period of 5 years failing which his service shall be terminated.

Other things being equal, preference will be given to the candidates belonging to SC/ST categories for appointment to the posts of Lecturers.

IV. Lecturer in Physical Education in the Pay Scale of Rs. 700-1600 UGC (One Post)

Educational Qualifications

Essential

1. A first class or 2nd class Master's Degree in Arts or Science with M.Phil from a recognised University.
2. Master's/Bachelor's degree in physical education from a recognised University.
3. About two years experience in the line in University or College.
4. Age below 45 years.

V. Assistant Horticulturist in the Pay Scale of Rs. 700-1200 (One Post)

Educational Qualifications

1. M.Sc. Horticulture or B.Sc. Agriculture with specialisation in Horticulture.
2. Two years working experience.
3. Age below 35 years (Relaxable upto 5 years in the case of SC/ST candidates).

VI. Junior Stenographers in the Pay Scale of Rs. 510-880 Plus Rs. 30/- Special Pay (Three Posts) One Reserved for SC. IRDP, One for General IRDP and One for Scheduled Tribe.

Educational Qualifications

Essential

1. Matric with two years experience with a minimnm typing speed in English and Hindi of 35 and 30 w.p.m. respectively and Shorthand in English with speed of 100 w.p.m. and in Hindi 80 w.p.m.
2. Age between 18 to 32 years (Relaxable upto 5 years in the case of SC/ST candidates).

VII. Technician Grade-III in the Pay Scale of Rs. 570-1080 (Four Posts) Reserved for SC-1, Genl-1, Ex/SM-1 & ST-1

(a) Civil Engineering Department (Hydraulic/Structural) 1 No.
(b) Elect. Engg. Deptt. (Machine installation & Related works) 1 No.
(c) Mechanical Engg. Deptt. (Welding) 1 No.
(d) Electronics & Communication Engg. (Testing and Use of Electronic Instruments) 1 No.

Educational Qualifications

Essential

(1) Matric with Certificate/Diploma from ITI or any equivalent/higher Institution recognised from University/Govt./Board in the respective Trade.
(2) 5 years experience in any Engineering / Technology Institution or University or equivalent Institution. This can be relaxed in exceptional cases.
(3) Age between 18 to 32 years (Relaxable upto 5 years in the case of SC/ST candidates).

VIII. Semi-Professional Assistant in the Pay Scale of Rs. 570-1080 (One Post)—Reserved for SC.

Educational Qualifications

Essential

1. B.A./B.Sc./B.Com.
2. Certificate Course/Diploma in Library Science of minimum one year duration.

3. Knowledge of English Type-writing at the speed of 30 w.p.m.

4. Minimum one year working experience in a College/Technical Library.

5. Age : 18 to 32 years. (Relaxable upto 5 years in the case of SC candidates).

VIII. Computer Operator in the Pay Scale of Rs. 570-1080 (One Post)

Educational Qualifications

Essential

(1) B.Sc. With Diploma in Computer Programming (atleast one year's duration from a University or an Institution of equivalent standard.

(2) Atleast 5 years experience preferably in a recognised University/Institution. This can be relaxed in exceptional cases.

(3) Age between 18 to 32 years (relaxable upto 5 years in the case of SC/ST candidates).

IX. Draughtsman in the Pay Scale of Rs. 570-1080 (Two Posts) Reserved for SC-1, Genl-1.

(a) Civil Engineering (One Post)

(b) Electrical Engineering (One Post)

Educational Qualifications

Essential

(1) Matric with Science and Math from recognised School Board of Education or Equivalent.

(2) National Trade Certificate in the Trade concerned.

(3) 3 years experience in the line in a reputed Engineering establishment or Government Engg. Department.

(4) Age between 18 to 32 years (Relaxable upto 5 years in the case of SC/ST candidates).

X. Steno Typist in the Pay Scale of Rs. 400-600+ Rs. 25/- SP

Educational Qualification

Essential

1. Matric with knowledge of typing in English with a speed of 30 w.p.m. and Shorthand in English with a speed of 100 w.p.m.

2. One year experience in the line preferably in a University or College.

3. Age between 18 to 32 years,

XI. Clerks in the Pay Scale of Rs. 400-600 (Posts Likely to be created) Reserved (One each for SC, SC. IRDP, BC, BC.-IRDP, ST, ST.-IRDP, General, Genl. IRDP).

Educational Qualifications

Essential

1. Matric with typing speed in English and Hindi of 30 w.p.m. and 25 w.p.m. respectively.

2. One year experience in the University or College.

3. Age between 18 to 32 years (Relaxable upto 5 years in the case of SC/ST candidates).

Qualifications

B.A./B.Sc, with B.Ed. or equivalent degree in Education. One year teaching experience of a recognised English Medium School—NCERT/CBSE syllabus. In the case of Hindi, the candidate must have offered Sanskrit as one of the subjects at graduation level.

Fxperience relaxable in the case of candidates with good public school education background and higher qualifications.

Assistant Teachers-2 (University Campus School) for Nursery/K.G. Classes (Rs. 1200-30-1560-EB-40-2040)

Qualifications

B.A./B.Sc. with Nursery/Montessory/Pre-School training Certificate / Diploma with one year experience of handling small children in a recognised English Medium School.

P.T.I. (One) (University Campus School)

(Rs. 1200-30-1560-EB-40-2040)

Qualifications

A Bachelor's degree in Physical Education of three years' duration of a recognised University;

OR

Degee of B.P.Ed. of a recognised University;

OR

D.P.Ed. awarded by a recognised University/Institution after training of a minimum one academic session, provided that the admission qualification for the Diploma is atleast a University degree.

Age for all posts not below 18 years.

Other allowances and benefits of contributory Provident Fund for all posts admissible as per University Rules. Higher start admissible in deserving cases. Knowledge of Hindi essential for all posts. Number of posts is liable to be increased or deereased. Qualifications relaxble for internal candidates.

The applications will be screened by a Committee to be approved by the Vice-Chancellor. The Screening Committee will be competent to screen applicants and classify them on the basis of qualifications and experience and call for interview only the selected candidates.

Reservation for Ex-Servicemen/BC/SC/ST candidates as per rules. However, where the candidates under reserved categories are not available, the posts will be filled up from amongst the general category's candidates.

Application forms can be had from the Manager (Printing & Publication), M.D. University, Rohtak on payment of Rs. 2/- at the counter or Rs. 3/- by ordinary post. Applications, complete in all respects, supported by attested copies of testimonials and Crossed Indian Postal Order(s) for Rs. 10/- in favour of the Finance Officer, M.D. University, Rohtak payable at Post Office, Rohtak be sent to the Registrar, M.D. University, Rohtak by **27th May, 1988.** However, no application fee from the candidates belonging to SC/ST/BC/Ex-SM is required.

REGISTRAR

GUJARAT AYURVED UNIVERSITY

ADMINISTRATIVE BHAVAN HOSPITAL ROAD
POST BAG No. 4,
JAMNAGAR

Applications are invited for the following posts in the University:

Sr. No.	Name of the Post	Pay Scale Rs.	
1.	Director of Botanical Garden	1500-2500	(Likely to be revised)
2.	Professor Basic Principles	1500-2500	,,
3.	Lecturer Basic Principles	700-1600	,,
4.	Leeturer Kaumarbhritya	700-1600	,,
5.	Clinical Registrar—Kayachikitsa	500-900	,,
6.	Reader Dravyaguna (U.G.)	2500-4200	
7.	Pharmacognocist	3000-4500	
8.	Biochemist	3000-4500	
9.	Pathologist	3000-4500	
10.	Darshanik	2500-4200	
11.	Bhashashastri	2500-4200	
12.	Pharmacy Superintendent	2500-4200	
13.	Director of Physical Education	3000-4500	
14.	Chief Accounts Officer	3000-4500	
15.	Deputy Registrar	3000-4500	

Details of pay scale, qualification, age and experience in the above posts sho be submitted in the prescribed form which can be had by post from the Regist Gujarat Ayurved University, Jamnagar by sending a self addressed 11" x 5" si duly stamped of Rs. 1.90 ps. alongwith a request indicating the name of the so as to reach on or before 25.5.88. The last date for receipt of complete appli tions is **10-6-88.** Only Indian National need apply.

The University reserves the right to fill up or not to fill up the post adve and/or to call only selected candidates for interview.

FACULTY AND OTHER POSTS

Recruitment Advt. No. FR/1/88

Applications are invited for faculty positions at various levels (Professors, Associate Professors, Assistant Professors, Lecturers, Assistant Lecturers and Teaching Assistants). Appointments are proposed to be made at all levels in the following disciplines : chemical, civil, electrical and electronics and mechanical engineering; computer science, instrumentation, pharmacy, management, biosciences, chemistry. economics, mathematics, physics; science and technology development, museum studies, engineering technology; humanities and social sciences; and English.

2. Applications are also invited for the posts of Workshop Superintendent, Maintenance Officer, Registrar, Librarian, and Admissions, Training and Placement Officer, (in the salary scales of Professors) where invariably the persons selected would be required to do teaching and other academic duties in addition to normal duties attached to these posts.

3. A certain number of faculty is required for the Institute's Local Study Centres under the Distance Learning Scheme in Delhi, Calcutta, Madras, Bombay and Neyveli.

4. Applications are also invited for the post of two Deputy Directors in a scale of pay higher than that of the Professor, from academic persons with experience in educational planning and administration.

5. All the necessary details are available in the free booklet entitled "Introducing BITS to Prospective Faculty", which can be obtained by writing to the undersigned marking your request 'FR/1/88' enclosing a self-addressed envelope (30 x 25 cms.) with stamps worth Rs. 5.00. For outside India Air Mail, enclose a Bank Draft for Rs. 33/- or equivalent foreign currency payable to BITS on UCO Bank, Pilani/State Bank of Bikaner and Jaipur, Pilani.

6. The deadline for application for posts in paragraphs 2, 3 and 4 is 5 P.M. **July 1, 1988**. For posts in paragraph 1, this Advertisement will be valid for one year from the date of issue and the Institute will review more than once all cases that accumulate during this period.

SHORT CYCLE EDUCATION

R. Dhandapani*

The Twin Challenge

Unemployment and poverty are the two key fields wherein the country could not make adequate headway since independence. To quote one of the recent World Bank Reports on Developing Countries, India continues to remain at the bottom among the world's poorest countries even after over three decades of continuous and serious planning. As a matter of fact, 5 per cent annual growth rate continues to elude us even today.

Right perspective and right sense of priorities are all the more important and necessary for a quantum-jump. Economic independence which could banish the twin challenges before the country viz. unemployment and poverty calls for bold and radical departures from the beaten track.

Development, though until recently stood for a rise in the per capita income on the rapid growth of industrialisation, of late, is increasingly realised that it is not just growth, but growth centred around man. Being an integrated whole, development starts not with goods but with people and their education without which all resources remain latent and untapped. 'The focus has to be not on machines or institutions but on people', as rightly observed by the Willy Brandt Commission on International Development issues.

Human Resource Imbalance

The defect and deficiency in the strategy of development is the lack of building up the human resources within the existing value system for effective motivation and involvement in development. The only alternative to correct the human resource imbalance is to serve the society with a proper educational base that would play its part to meet the vital and varied challenges of development.

To look at education, particularly higher education, in isolation can no longer be valid; rather the inter and intra linkages between education and employment; education and agriculture; education and trade; education and industry and so on need a closer scrutiny in order to reform education itself so that this sub-sector will be more responsive and alive to the intricacies and demands of the other sub-sectors. When the sub-systems do not remain exclusive but mutually reinforcing, the total system tends to become well knit and also ensures a smooth sailing of different sub-sectors between and among them. Besides, the world of education should be opened up fully to the world of employment, if specialisation is to be successful with its dual educational and employment implications.

While the enrolment in higher education during the year 1985-86 was 35.71 lakhs, 1986-87 saw an enhanced enrolment of 36.82 lakhs and a still further encouraging trend is noticed in 1987-88. But, over the years, it has been conclusively proved that a rise in enrolment has invariably resulted in a corresponding increase in unemployment. The problem persists on two counts : firstly, a lack of foresight and seriousness, if not inability, to design and offer need-based courses in anticipation of the new and emerging demands; and secondly, a strategy to keep off a sizeable section of students from aimless overcrowding of universities/high educational institutions.

Manpower Assessment

The unprecedented explosion in higher education has left us with no other option except to make a proper assessment of manpower requirements in tune with the growth of economy, pace of technology, mobility of labour force, availability of infrastructural facilities and human resources and to effectively relate these estimates of manpower needs to educational inputs. A considerable measure of imaginative planning is required to ensure the employability of end products at every level and to identify further slots for employment besides opening up new avenues.

The inevitable question that follows is the role of education in such a fast changing scenario and other attendant factors upon its role. Should not the priorities of education synchronise with the challenges in the offing ? If so, to what extent ? And to what extent, the planners are justified in making education subject to the demands of economy ? Can the over-riding interest of society be equated with the desire for productivity ?

While estimates of these manpower requirements could help plug the loopholes, care should be taken that the end products would assume personal and collective responsibilities on the basis of a thorough understanding of the techniques used in the economy and the ways of life which the economy tends to impose on society in the normal course of events.

Without sacrificing the quality of the each individual item, a car or television set can be mass-produced by machinery when a new model is perfected. But the same curricula and the same methods practised by different teachers with different pupils seldom produce identical results. The human factor with all the diversity and uncertainties counts much. Models must be sought in the world of education itself in order to ensure that the University remains attuned to the specific nature and character of the social/economic surroundings.

Short Cycle Education

The short cycle education has a two fold aim o preventing overcrowding of Universities and to provide employment by awarding degrees which are o immediate value in the labour market. Introduced by the United States and followed by Canada, France Japan and certain European countries such as Norwa and Yugoslavia, the common feature in all these systems is to offer short cycle education lasting two o three years for students who are unable to take lon courses, either for reasons of aptitude or because the cannot afford it.

No doubt, the short cycle education makes it possible to overcome many known difficulties but the assurance of immediate employment was not enough provide an incentive. Young people are much mor concerned about their career advancement than abo the first job they take. But we may have to impr vise and build an indigenous model, based on the e periments already undertaken, that would effective respond to the actual needs in tune with Alwin T ffler's dictum "tomorrows development strategies w be indigenous, matched to actual local needs".

The Central Council of Rural Institutes

As envisaged by the National Policy on Educati and in pursuance of the policy directives on ru education, a Working Group was constituted by t Ministry of Human Resource Development under t chairmanship of Dr. M. Aram to formulate detail schemes for the development of a pattern of educati related to the needs of rural communities and to cha out a well planned programme of encouragement. T Government of India is also committed to set u Central Council of Rural Institutes "which will ta the initiative in the implementation of the above p gramme by providing resource support both for development of infrastructure as well as conceptu methodological and academic inputs in design structure of programmes, development of teaching learning materials, evaluation procedures, etc." as the Programme of Action of the Ministry of Hum Resource Development, Govt. of India. Several mea res to be taken up by the Central Council include the strengthening of the content of the rural inst tions already in the field with emphasis on scie and technology; and (ii) designing a variety of cou at tertiary level around emerging rural occupati besides starting new Rural Universities/Institutes ed on the concept of micro-planning and tomorro technology for rural development.

Issues in College Planning and Management

Manju Narula*

In order to study the problems of Planning, Finance and Administration faced by the college principals, we analysed 160 case studies prepared by college principals who in previous years attended programme at National Institute of Educational Planning and Administration (NIEPA) during 1982-83 to 86-87. Out of 160 case studies, 60 are of co-education colleges, 57 of women's colleges, and 43 are of colleges having concentration of SC and ST students. The problems which have been highlighted by the college principals are grouped under following broad heads :

1. Administration
2. Planning for Development
3. Curricula
4. Research
5. Conduct of Examination
6. Finance
7. Other Issues

Administration

The salient points which emerged from the case studies regarding administrative practices are :

1. There should be some coordination between the college, university and government, because college administration and management are controlled by both the university and the Government; University has academic control while Government has financial control. Both of these function at cross purposes and the college has to work under both. The college should have some autonomy especially in matters of restructuring of courses and in conducting examinations.

2. There is no coordination between the State Govt. and the UGC even in policy matters. The State Govt. assigns 24 teaching periods (tutorial included) to every teacher whereas UGC specifies 18 periods.

3. UGC lays stress on staff improvement and teacher orientation programmes but the State Govt. does not extend any help. In fact, most of the UGC schemes cannot be implemented because of the apathy of the State Govt. The salary payment is undertaken by the State Govt. The UGC is supposed to look after the development aspects. Often, screening of the proposals for development grants takes a long time in the UGC offices, delaying the projects and posing further problems due to the escalation of prices of building material.

4. Even in the matter of appointment of staff, a lot of time is wasted and teaching suffers. The process is tedious and long winding, starting with advertisement in Newspapers, screening of applications, issuing call letters, fixing the date of interview to suit the employment exchange officer, and finally approval is to be sought from relevant bodies. If there is any hurdle in between, the process comes to a halt at the expense of the teaching or office work of the college.

5. There should be uniformity in administrative practices between private colleges and Govt. colleges.

6. Administrative procedures are not simplified and restrictions imposed by Govt. are too many. If one wants to open any new courses like electronics, fisheries, agriculture, paper pulp technology, industrial chemistry, etc. based on the socio-economic needs of the region, one faces many difficulties because the state Govt. takes very long time (4-5 yrs.) to sanction the posts of teachers in these new courses and the college has to fall back upon its inadequate resources to pay the lecturers for a considerable period of time.

7. Too much decentralisation at Govt./university levels has made it difficult for the principal to take quick decisions. Owing to small number of administrative staff there has been increased workload on the employees; resulting in slow communications and poor feedback to the office.

**National Institute of Educational Planning and Administration, New Delhi.*

8. Admissions are not done taking into consideration the infrastructural facilities, generally there are difficulties regarding library and laboratory facilities. Uniform rules and regulations should be framed for admission. Merit should be the basis for admission. There should not be any attempt to accommodate favourites.

9. The recruitment of teachers is not rationalised resulting in very high proportion of ad hoc teachers, sometimes as high as 50%. These teachers do not devote their time to teaching with full vigour due to frustration.

10. Student unrest is due to student union elections, as well as interference of local politicians. Sometimes weak administration at the university level also creates student unrest. It was suggested that if the student unions are formed on the basis of the excellence of students in academic as well as curricular activities, the role of student unions will be constructive; university should check the political interference in the college administration.

11. Students, hailing from different strata of society represent different socio-economic backgrounds. The principal has to cope with their guardians, which form a heterogenous group. The teaching staff have an ethos of their own. It is the task of the principal to coordinate these diverse agencies.

12. Most of the colleges are not sent the various guidelines issued by the UGC and as a result thereof these are not benefited by the UGC assistance. Most of the funds released to the university by the UGC are spent on the development of the University campus and the colleges remain starved.

Suggestions

1. There should be liaison officers appointed in the Secretariat or the Directorate of Higher Education whose main job should be to visit the colleges to find out their problems and to suggest to the Govt. the ways and means to solve these problems. They should enjoy the status of a Senior Professor/Principal of a college and should be able to pay attention to the bottlenecks and get the various sanctions for expenditure expedited. Whenever any college principal has any difficulty, he should contact the liaison officer and get the required expenditure, approval of lecturers and other facilities sanctioned for the college.

2. The University Professors should not live in their own ivory tower thinking that they are superior to all the college lecturers. They should often visit the colleges to give extension lectures to them. This interaction between the university and college teachers will go a long way not only in widening the mental horizon of the colleges but also in keeping them acquainted with the latest information; such visits of the university professors to the colleges and vice versa should be made compulsory.

3. The unhappy state of affairs as it prevails today regarding the fight between the university and the govt. should stop at once. If the govt. and the university come to terms, a healthy tradition will be set up. The officers of these two agencies should often meet and take stock of the situations and things.

4. The Govt. should devise such a formula as may enable the colleges to receive the various grants in time.

5. Govt. should set up separate Boards of Higher Education which should look after the educational needs including the conduct of examinations of the Degree colleges in States.

6. Every state should have its own UGC. This state UGC should finance the plans of the colleges and issue guidelines for their development.

Planning for Development

Expertise for planning is very important in the institution. Educational planning should be done at all those levels of administrative set up where decisions are taken. No comprehensive programme of educational development can be put across unless planning is done at all the three levels.

Financial handicaps create a lot of obstacles in the steady growth of academic life. However, with Govt. & UGC aids the most common needs are met and without looking into the individual needs of a college, the Govt. has generalised the needs of the colleges in the state as a whole. Therefore planning, for development of the college initiated by the principal concerned is always neglected.

Lack of planning may be due to the fact that it is not conceptualized. In some of the colleges even the staff committees or planning cell did not exist.

Curricula

Almost each end every principal faces the problems as to how to make curricula meaningful and relevant. Following are some of the specific points which emerged from the case studies :

1. If a college is surrounded by a village where agriculture is considered as the main source of income and livelihood, then the curricula should be based on agriculture. In the curricula there must be provision for proficiency in English language, science, fine arts, etc. If facilities for such courses are provided, those who want to interact with development agencies and seek employment in this field later, will not face any problem.

2. During the three years' course, the students should undergo in addition to the usual curricula, a course in some trade, like tailoring, laundry, stitching, carpentary, bee-keeping book binding, poultry farming, etc. summer vacations can be utilized for this purpose.

3. In changing socio-economic pattern, it would be better to introduce typing/secretarial course, business management, banking, accountancy, sugar technology, which are relevant to local development needs. Alongwith humanities and science or social science courses for the local students, curricula must be supplemented with practical training for livelihood.

4. Short and intensive job oriented course should be introduced instead of lengthy and often not too relevant courses as prevailing at present.

5. Medium of instruction for colleges in rural areas; there is more demand for instruction in vernacular, whereas in urban areas the demand is for English.

6. Where there are tribal and non tribal students together, the dichotomy becomes very obvious; the tribals have a rich cultural heritage, the students with urban background seem to do better academically.

7. Schemes like "Earn, While You Learn" when introduced, channelise students' energies and also increase student loyality to the institution.

In this way education given to students would be well rounded which would enable them to shoulder whatever respsonsibilities come their way with determination, courage and discipline.

These curricula, based on socio-economic background would be successful only when teachers are given an opportunity to update their knowledge in their specific subjects, and also get orientation in the role of education in national development.

According to principals' view this can be done by :

—introducing short duration post-diploma or certificate courses relevant to needs of the region, to make students fit for self employment.

—organising orientation courses under faculty improvement programme for teachers; and

—arranging larger number of workshops/orientation courses for faculty members so that they are exposed to the most advanced knowledge in their field.

Research

Generally the institutions do not provide any research facilities and the teachers do not get an opportunity to attend the orientation courses. Most of them are not aware of the modern methods of teaching learning and are reluctant to work beyond office hours.

But some college principals expressed that, if the existing staff is engaged in research work, either in doing their Ph.D. or M. Phil on a part time basis, they experience practical difficulties. They are not able to do full justice to their teaching work and to their research activities. Quite frequently they are forced to take leave, which affects academic work. Research should not be at the cost of teaching/learning programmes of the institute. Teachers doing their M. Phil/Ph.D. should be given fellowship or study leave facilities; and substitutes appointed in their place.

Some college principals feel that research facilities in the colleges are negligible. Because funds for a recognised centre for research are not available they do not get sufficient grant for purchasing instruments glassware, chemicals, etc. either from the govt. or from management.

Due to lack of incentives, inclination towards higher studies especially in research is declining day by day. Minor projects are available from UGC for which teachers can get Rs. 10,000 but very few teachers avail of them.

Conduct of Examination

Examination is an integral and essential part of education. The quality aspect even at present depends largely upon the system of examination. Management of examination therefore is very important. The examination system is facing multi-dimensional problems. All sorts of malpractices are being resorted to. The examinations are not being held in time. The evaluation has become very subjective. It is very unfortunate that in some parts of country examinations are not held properly. The whole concept of education is spoiled. When the learners are not evaluated properly we should suggest some ways and means at this level, so that examination could be conducted fairly. Checking unfair means in examinations leads to students getting lower marks as compared to those institutions where they are not so particular, and as a result students resent this and feel bad.

In order to avoid the undesirable developments in the system, the UGC, the central and the state Govts. and even the teachers' organisations have given serious thought to it. Some new strategies have been evolved by the UGC. It has suggested that the quality of assessment should be improved. The examination papers must cover the complete syllabus. The system of internal assessment should be evolved.

Finance

Most of the problems of colleges arise due to lack of adequate financial resources needed for their day to day functioning and future development. Adequacy of grant is divided into two parts :

1. Non-recurring and Development Grant
2. Recurring Grant

Non-recurring grant is generally not sufficient to meet the needs of the college development activities.

Following are some of the specific problems that emerged from the case studies :

1. Maintenance grants or block grants are paid by the state government but in some states, these are paid at the end of the year and in the meanwhile institutions have to bear such expenditure themselves. No uniform pattern is adopted by state government for assessing and disbursing the grants.
2. If a college does not have its own building, then they face many problems. Construction of college teaching block has become a difficult task because the registered societies looking after the college, do not get any financial help from State, Central Govt. or from UGC, for this purpose.
3. It is very difficult to raise the funds from private donations and deposits as the philanthropic inclination for giving such donations is diminishing.
4. Colleges are not in a position to increase the fees charged from the students as per the requirement of colleges, because universities have laid down restrictions about charging the fees. The consideration being that increase in fees adversely affects the weaker sections.
5. The UGC should arrange to send its officers to the colleges applying for development grants to make an on-the-spot study of the actual needs of the colleges taking into consideration actual physical surroundings in which they are situated. Otherwise some colleges shall always remain deprived of UGC grants for no fault of their own.
6. Most of the colleges are not able to get development grants from UGC or such other institutions as they cannot fulfil the rigid norms laid down for [such fundings. There is also a ceiling to such grants. Even if some colleges have managed to get such grants, they are not available timely. There is a long procedure to be followed resulting in avoidable delays.
7. The Govt. should give liberal grants to small rural colleges under a separate category. The UGC should also come to their rescue by sanctioning bulk grants, specially to colleges situated in tribal areas, for construction of

buildings, improvement of laboratories, libraries, play-fields and hostels.

To overcome such difficulties if following measures are adopted, the financial strain will be reduced to some extent :

1. Since we are facing the problem of knowledge explosion, college libraries have to be brought up-to-date, each year. Similarly science laboratories have to be equipped with new apparatus. Norms for giving non-recurring grants by UGC are very specific. They give grant to only those colleges which were established before 1972. The colleges which were established after 1972 face, many difficulties regarding finances for library building, books for library, equipment for laboratory, furniture, etc. if basic grant for improving library and laboratory facilities could be made available to these colleges, it would help in improving their standards substantially.

2. Some colleges could not get various UGC grants due to the condition of minimum enrolment of 300 students in a degree college. These norms are fulfilled only by colleges situated in big towns or cities. A college situated in a small town or rural area cannot fulfil the enrolment norms. These should be relaxed in favour of such colleges.

3. According to the needs of the socio-economic situation, if college principals feel encouraged to introduce some new courses, grants should be sanctioned for these new courses and lecturers should be appointed without inordinate delay.

4. An institution should be allowed to start new subject as per rules only when sufficient funds are provided either by UGC or the State Government.

5. Book bank with the help of UGC grants, should be established in each college.

6. An Institute, like a training centre for research should be initiated by the government with financial assistance from the UGC.

7. Due to lack of funds for purchasing instruments, glassware and chemicals research facilities in science disciplines are seriously affected. A small amount under the head of research fund must be allocated for this purpose.

8. Colleges face acute problems in financing sports and games programmes. As the cost of sports goods has gone up extraordinarily, these cannot be purchased with the fees raised from the students only, so grant under this head should be raised.

9. Govt. should give ad hoc and deficit grant to the colleges.

10. The procedure for getting government grants which have been sanctioned and released is very cumbersome and expensive and it must be simplified.

11. As the fees cannot be raised, a ceiling should be imposed on the strength of the growing colleges, so that small colleges can get an increase in the number of students and are able to raise funds. Restrictions should be imposed on the opening of new colleges to restrict nonviable units. New colleges should be opened on educational needs only, in places and disciplines where these are needed.

Mobilization of Additional Resources

One of the important problems faced by the college principals is mobilization of financial resources. The problem is more with the private colleges than with the Govt. colleges. Govt. colleges are able to get their resources from the public exchequer. But the private colleges are left in lurch to find their own resources.

The main sources of additional resources are :

1. Private endowments
2. Donations from public
3. Student fees including special fees
4. Arranging variety shows, etc.

The private endowments are already created and the amount got by way of interest or rent from these endowments is used by the colleges. This amount is not sufficient for the growth of colleges with the expansion of educational system and number of colleges. The importance of endowments is dwindling day by day.

In some of the States donations play an important role. Particularly in Kerala the seats of management quota are offered to those persons who get donation. It ranges from Rs. 1000 to Rs. 1500 per seat depending upon the subject.

In Kerala private colleges, even the appointments are made after receiving a large amount as donation. For teaching posts the amount varies from Rs. 25,000 to 75,000. From administrative posts it varies from Rs. 500-12,500. This has become a main source of resource and it is utilized mainly for the construction of buildings and hostels. But this system is not prevalent in all the States and this type of donation often brings down the standard of education. Teachers who get job after paying a large sum are not as efficient as those who are appointed solely on merit. Even the students are 3rd rate students. There may not be qualitative improvement.

Student fees are collected on the old rates fixed some 25 years ago. Once fees rates are raised there is hue and cry, and agitations leading to the closure of the educational institutions. Special fees though collected, are utilized for the specific purpose. By arranging variety shows some colleges collect some resources.

Other Issues

1. State level Council of Higher Education should work for coordinating UGC schemes and funds. It should be a professional body.
2. There should be horizontal linkage between different colleges regarding subjects having small enrolment. Thereby there will be specialisation of subjects and duplication can be avoided. This is possible in case of colleges located nearby or in the same city.
3. There should be linkage between educational institutions and industrial or economic sections. The structure of course should be social and need oriented; so that funds can be attracted from industrial sector towards education.
4. The governments should give special attention to education as an important function of nation building. If a uniform formula is adopted in the country for giving maintenance or block grants, such grants should be available to colleges timely, and in full. States should adopt a liberal policy in case of educational expenditure and payment of grants.
5. For development grants, the norms, and conditions should be relaxed and liberalised by UGC or such institutions, so that most of the colleges are able to get the benefit of support and financial help. Development grants should be increased in view of increasing cost of construction. Special attention should be given to colleges in backward areas. These grants should also be made available at the proper time.
6. Of course, while adopting any financial measure, importance should be given to the quality of colleges and education. It does not imply provision of funds without any result in view. Therefore efforts should be made to help quality colleges to grow as well as to help weaker colleges to fulfil the educational needs of their community and to sustain their activities.
7. There should be central level body for the development of curriculum, teaching learning procedures etc. A college should be of practical use to the community. It should keep in close contact with society at large and extend its educational services to the society by way of adult education programme and such other programmes which lead the public to realise the need of education for all round progress. Rural public should be encouraged to participate in various national programmes. Some college principals feel that this aim can be fulfilled only if 80% of the students are residential, then they may be able to do co-curricular activities, social service and educate the people living in nearby villages. Students waste time as well as energy, daily commuting from home to college and back. Therefore provision of hostel accommodation is very necessary.
8. Some of the women's colleges face some serious problems. If they want to start programmes like correspondence courses and continuing education, etc. many teachers have to be involved but they are reluctant to take an additional burden. Women teachers' work becomes almost double; at home and in the Institute. No solution for this problem has been thought out.
9. Special concession should be given to women's colleges to extend their facilities regarding the

construction and improvement of facilities in existing hostels.

10. If teachers make some effort and start writing correspondence lessons or participate in other activities like NCC, NSS, NAEP, they are not given due recognition at the time of assessment for promotion to the postgraduate department, hence the really sincere and hardworking teachers are dissatisfied.

11. Financial assistance being given to SC/ST students should be more realistic in view of rise in cost of living.

12. There should be coordination between university, state govt. and UGC regarding policies and procedures. For example :

    —student teacher ratio, norms of teaching hours;

    —appointment of teaching and non-teaching staff; and

    —implementation of the scheme of restructuring of courses and conduct of examination.

13. Counselling and vocational guidance centres may be opened not only in the educational institutions but in big cities and taluka towns.

14. Establishment of women organisations in all parts of the country should be encouraged by the central govt. as well as by the state govt. With these voluntary organisations, programme of eradicating illiteracy can also be very well implemented.

15. Academic services should be given by the universities to the colleges. University laboratories and library should be thrown open to the use of the affiliated colleges. ☐

SHORT CYCLE EDUCATION

(*Continued from page 2*)

Facility to 'Come Back'

In a way, the Central Council of Rural Institutes will promote a new pattern of education, as an improved model of the short cycle education, wherein high quality instruction, sufficient weightage to the degrees and diplomas awarded, and parity of standards to other universities are embedded. A facility for students to 'come back' to the University for improvement of their qualifications and further career prospects after gaining on-the-job experience and after definite intervals, is one of the most significant features of the new pattern. Yet another noteworthy feature is that the curriculum of the course-content would be dovetailed with the development process of the district in which the University is located in order to ensure a simultaneous development of the locality.

Rural Transformation, the Thrust

It is most likely that the new pattern of education would concentrate in areas such as micro planning, agriculture and animal husbandry, rural health and hygiene, rural banking and cooperation, rural engineering and transportation, rural industries and administration, rural credit and economics, rural entrepreneurial development, rural housing, appropriate technology, alternate energy resources and other emerging disciplines in order to ensure a fair mix of demand and supply. Training for self-employment will be another distinct feature of the new pattern.

A Milestone

The speed of progress in Science and Technology, the mobility of the needs of the economy and the resulting instability in employment and the compelling pressures of rural development demand the new pattern of education on Gandhian lines which would provide human resources in consonance with the manpower needs and yet strive to ensure the full development of the faculties of each individual. The Central Council of Rural Institutes will be a milestone in our search for new solutions to banish poverty and unemployment from our land. ☐

THE JUDICIOUS THIRD PARTY

Anand P. Srivastava*

Present Position

The profession of teaching has always been a 'call to service'. It was never an 'invitation to poverty' but it certainly required indifference to the attitude of 'material prosperity'. Now, unfortunately, the reputation is different. Jajaprakash Narayan once defined a professor as one who comes to work at noon and retires before the afternoon. Most of the teaching institutions at various levels have become like large public corporations polluted by slogans on walls, frequent dharnas and strikes and the teacher's traditional image has undergone a complete metamorphosis. While educational scene has globally improved, it has deteriorated in our country after independence and the law of decreasing ability and narrower knowledge is operative in successive generations of teachers. Our teachers being unaware do not practise the basic modern educational philosophy that "education is human endeavour in which the preceding generation attempts to develop the succeeding generation into abler people for better living". After independence the educational institutions have become mighty dens for political parties and their leadership. Teachers are required to be educational leaders. This alone is a full time challenging task. Any deviation to politics is bound to be at the cost of the educational excellence. There should be no doubt about it. Political aptitutes and the absence of real modern educational innovations have made our education a total failure. The school system has deteriorated because college education has failed to give anything except a degree(s) to persons who eventually work as school teachers. Then poorer quality of students start coming to college and very soon less able persons start becoming even college teachers. A vicious circle is thus formed. Politics and unions rule the institutional life and there is no real continuing education of and learning by teachers, who largely spend their total working life with a limited knowledge-capital largely acquired when they passed their own examinations for a degree(s). A microscopic analysis will reveal that largely the union leaders of teachers and karamcharis work for their personal interests and once they achieve those objectives they either leave the union(s) or lose interest. It will also be seen that strings of unions are held by a group of teachers or officers to harass the authorities for personal interests and/or to have a powerful shield or cover for their own corrupt practices. These unions have not at all contributed towards academic innovations and excellence. Instead they have largely hindered them. All over the country no rich 'give and take' academic activities are taking place amongst the teachers and an individual teacher thus compared to developed world stands and lives all his life on a very weak and narrow academic platform. The result is that the quality of learning suffers. The academic life has its own thrills, joys and professional satisfaction. Politicisation through unionisation spoils these scholarly characteristics and contributes to deterioration of learning and human resource in our country. Edward Shils describes Indian scholarship as the paradox of success in failure. Sir Ashby notes that three major commissions have failed to innovate. Altbach states, 'teachers do not regard themselves as independent intellectuals with self imposed responsibilities for teaching and academic life but rather as employees of large bureaucratic structures that they fear! Union activities, politics, strikes, dharnas, etc. in the absence of innovative group endeavours appear at the root of these phenomena. These adverse and subversive trends must be checked and an atmosphere generated for an academic life in our educational institutions.

The Prescription

The Hospitals and other Institutions (Redressal of Grievances of Employees) Bill, 1988 is a welcome effort to eliminate parasites and bacteria ridden strikes, dharnas, lockouts, work to rule, go slow, and gherao by duly providing for separate standing 'Grievance Redressal Authority' and 'Appellate Authority' both for individual and collective grievances. There shall be Management Councils, provision for arbitration through a Board of Arbitrators, and finally where necessary the placing of an award (with Government's orders on public grounds affecting national economy or social justice) before the State Legislature or the two houses of the Parliament for consideration and disposal. Unfortunately, so far, through the absence of these machineries the affairs were practically decided between the two parties on brute lines of settling quarrels on streets or on the lines of the details of the 'state of nature'. The nation has suffered a great deal

---

Fellow, Indian Institute of Advanced Study, Shimla : 171 005* so far due to the consequences of these vital gaps of judicious mutual consultation and arbitration. Youngsters in the country have enriched their vocabulary, as compared to their ancestors, by shouting words like **hai hai, **murdabad**, **zindabad**, etc. Establishment of these bodies will be on the lines of establishing local courts, high courts and the Supreme Court exclusively for harmonious employer-employee relationship. It will not be like a hate-relation, rather it will become a rational relation. Instead of telling one's argument to the other party, arguments will be submitted to the judicious third party.

In the process, some faculty members, officers and others (who are currently working as union brokers) will lose their business of promoting self interests indirectly and in a clandestine manner. There shall be checks and balances for employees and employers in addition to penalties like imprisonment and fines, etc. It is only short sightedness, ignorance and one's self interest that will label it to be a Black-Bill. For people who are objective and keen to see that Indian education attains international standards, this Bill will be a great milestone in the growth of scholarship and learning. The teaching profession will be provided with valuable peace and time where mutual group learning processes, 'give and take' sessions of faculty members, personal contacts with students and better services in libraries etc., will be available. Otherwise, it is either a vacation, or a holiday, or a strike, or a dharna, and if none of these, there is incubation atmosphere for these or the after effects of agitations. Finally, the Bill does not provide for scrapping of unions from campuses. It just curbs their roles of direct action type and provides for much needed civilised, sober and conducive steps, by creating a democratic machinery where the final authority rests with the elected representatives of the citizens of India both in State Legislatures and the Parliament at the Centre.

Presently, we find that the sovereignity which is essential for an organised life and fruitful results, in our educational institutions is not in a compact form and located where it should be. It is scattered and major bits are in union offices, largely due to fears of agitations and threats, considering which authorities develop their plans and activities. Vice-Chancellors and Principals succeed in some ways but all have failed in making the faculty to go for academic modernisation and develop better learning processes. The faculty gets together only in opposing the authorities and plans for innovation, like the concept of Autonomous colleges, but not for constructive purposes of modernising teaching-learning processes and general academic curiosity. This Bill is likely to convert these negative tones into positive approaches of assembling for academic betterment, where personal interests will be taken care of by a judiciary-type-arbitration. Restoration of peace is certainly the prerequisite of progress which our educational institutions must endeavour. ☐

INDIAN INSTITUTE OF SCIENCE
BANGALORE- 560 012

Invites

Applications from candidates with a PhD in Biological or Chemical Sciences or MD Degree with aptitude in Bio-medical Research for the award of **Research Associateships**, sponsored by the Department of Bio-technology, in the areas:

(1) Recombinant DNA technology
(2) Immunochemical technology
(3) Protein and Enzyme technology
(4) Microbial technology
(5) Tissue and Cell culture technology
(6) Bio-molecular structure, conformation and interaction.

Candidates who have submitted thesis for the PhD can also apply, but they should have completed all the formalities for the award of the Degree.

Associateship: Ranging from Rs. 1400/- to Rs. 2000/- P.M. (consolidated), subject to enhancement as and when notified by the Government of India.

The programme consists of two components: (a) Training in one or more of the above areas depending upon the background of the candidate; and (b) Research in a chosen area. The duration of the programme scheduled to start by **August 1st, 1988** is for two years, to be suitably formulated for each candidate by an Advisory Committee.

Candidates will have to appear for an interview in the **latter part of July, 1988**.

Candidates should send applications on plain paper to Prof. G. Ramananda Rao Department of Microbiology and Cell Biology of the Institute **on or before June 6th, 1988** giving atleast three areas of their choice in the list, in order of preference alongwith their biodata and two reference letters.

The candidates have to give an undertaking that they will not leave the programme in the middle.

R(IA) 195-1/88 **REGISTRAR**

Convocation

The Challenge

"Scientific agriculture has transformed Indian agriculture from subsistence type to commercial farming, But the ever-increasing population, depleting land fertility and shrinking renewable energy sources continue to pose serious problems. Therefore, the priorities and thrust areas would be on improving the productivity of crops, animals and fisheries and ensuring stability in production", observed Dr. N.S. Randhawa, Director General, Indian Council of Agricultural Research and Secretary, Department of Agricultural Research and Education, Government of India while delivering the Convocation Address at the Narendra Deva University of Agriculture and Technology, Faizabad. He said, "This is a great challenge which the agricultural scientists should always keep in view. Excepts.

Natural Calamities

Agriculture is the backbone of the Indian economy. It has been receiving priority attention of the government since independence of the country. Inspite of best efforts of the policy makers, agricultural scientists and farmers, we have not been able to insulate our agriculture against the vagaries of weather. Floods and droghts continue to bring devastation and untold misery in several regions of the country.

These natural calamities are the main stumbling blocks in achieving stability in our agricultural production. In 1987 several north western parts of the country experienced an unprecedented drought whereas floods affected adversely the agriculture and life of human beings in the eastern part of the country. Thirty four million hectares of Uttar Pradesh, Bihar, West Bengal and Assam had faced serious floods endangering human life, cattle and crop wealths. A large area within the jurisdiction of your University also experiences both the types of natural calamities almost regularly. I would, therefore, appeal to the scientific community to make concerted effort on the management of these disasters.

India is a vast country with variations of natural endowments such as soil, climate, flora and fauna. This diversity has made Indian agriculture one of the most difficult, yet most promising propositions in the world. Inspite of fluctuations in the climate and recurring natural calamities experienced in the country, the agricultural production has been progressively moving up. From 51 million tonnes in 1950-51, the food production recorded an all time high record of 152 million tonnes in 1983-84. However the production, since then, has been fluctuating due to continuous droughts and floods. The drought of 1987 is the worst of its kind in the last 100 years. Even then, the production is expected to be around 135-140 million tonnes (A decade ago such a calamity would have forced us to seek massive food assistance). Thanks to the buffer stock built over the years that has provided a food security to our affected populations. This growth trend in food production has been achieved through application of science and technology. Scientific agriculture has transformed Indian agriculture from subsistence type to commercial farming. But the ever-increasing population, depleting land fertility and shrinking renewable energy sources continue to pose serious problems. Therefore, the priorities and thrust areas would be on improving the productivity of crops, animals and fisheries and ensuring stability in production. This is a great challenge which the agricultural scientists should always keep in view. Thus, the immediate need is to channelise all the resources and efforts not only to wipe out the deficit of food production due to natural calamities but also to increase it further to achieve the 175 million tonnes target set for the terminal year of this plan period.

The area jurisdiction of this university consisting of fifteen districts of Uttar Pradesh present considerable variations in soil and climate. Floods and droughts are quite common in this region. The rainfall is erratic and ranges from 639 to 1105 mm. Though some parts of this region have soils with fairly good water retention capacity and moderate fertility, majority of the area has soils with poor soil fertility and interspersed with 'usar' lands. The irrigation facility in this part of Uttar Pradesh is not so well developed as in the western part. Some districts like Baharaich, Mirzapur, Pratapgarh, Ballia, Sultanpur have very meagre irrigation covering only about 1.4 lakh hectares in each of these districts. The fertiliser consumption in the eastern part of the Uttar Pradesh is also very poor. These factors are largely responsible for the poor productivity of the region.

Agroclimatic Zones

The area lying under the jurisdiction of the university has been categorised into three agroclimatic zones, viz., Eastern plain zone, North-eastern plain zone and Vindhyan zone. General constraints in increasing the agricultural production in these zones have been identified as flood proneness with periodic droughts, lesser fertiliser and its low efficiency, lack of irrigation facilities, lack of improved implements, poor socio-economic conditions of the farmers, lack of awareness about scientific agriculture among farmers and their adherence to grow traditional varieties of crops. I am aware that this university is striving hard to sort out the problems of the farmers by conducting location—specific researches and transferring the appropriate technologies to the farming community. This is quite a challenging task and it would require continuous support from the State Govt. and ICAR to overcome the above constraints.

You may well be aware that the ICAR has launched a Nationwide "National Agricultural Research Project" to establish/strengthen the regional research stations in each of the 127 identified zones to conduct locationspecific, need based and production-oriented research in agriculture and allied sciences. The emphasis during phase 1 of the project was on foodgrains (cereals and pulses) and oilseeds, especially those grown under rainfed conditions and to the integration of cropping patterns and animal husbandry practices. The phase II of the project, effective from April 1986 for a period of 7 years, includes new areas of research such as irrigated farming, animal drawn farm implements, horticulture and commercial food crops, agro-forestry and animal nutrition. You would be happy to know that the Council has already approved two projects, namely, strengthening of Directorate of Research at the headquarters, of your University and strengthening of the research stations at Ghagraghat with an outlay of Rs. 62.76 lakhs. Other two projects at Kumarganj with substation at Masodha and at Ghazipur are under active consideration of the Council. The University may take maximum advantage of this project by formulating suitable sub-projects for other stations of the agro climatic zones. This would certainly improve the research capabilities of this university which would be able to serve its clientele more effectively. Though the Council would help the university in strengthening these sub-stations, the blessings of the State Government would be required in their functioning on long term basis.

Achievements of the University

I am happy to note that in a short span of its existence, your university has made significant research contributions on rice, vegetable crops, fruit crops and agroforestry. It has reclaimed about 300 hectares of land which was not suitable for raising crops. It is now supporting excellent arable crops and fruit and forest plants. The varieties of paddy namely 'Sarjoo S-2', 'Narendra 1' and 'Narendra 2', evolved by this university, are becoming popular with the farmers. Recognizing the importance of deep water paddy in this area, the Council has decided to strengthen the research on this crop at Ghagraghat under IFAD supported project. Similarly, due to importance of Diaraland in the region, the Council has sanctioned two centres of the Diaraland Improvement project for Rapti and Ganga 'Diara'.

You are all aware that this university is currently operating 57 research projects, out of which 32 are funded by the ICAR. The Council is always interested in the overall development of the State Agricultural Universities. But we have also to ensure that we take full advantage of the central/national institutes located in the region. There are eleven National Research Institutes and three National Research Centres in the State of U.P. are of one of these, the Indian Veterinary Research Institute, Izatnagar has been granted deemed to be university status. Though these Institutes have the national mandate, the location advantage can be taken by the state of U. P. and especially by all the three agricultural universities in the State. I am sure, these Universities would develop effective linkages with these institutes and derive maximum advantage from them. The State Government of U.P. is also requested to provide adequate financial support to the State Agricultural Universities, because universities can only develop and fulfil their objectives if adequate financial support is ensured by the State Government as has happened in Haryana and Punjab.

Quality Seeds

Seed of good quality is the cheapest and pivotal input for increasing production. The discovery and introduction of high yielding varieties and hybrids in sixties marked the beginning of the era of 'Green Revolution' in India. In order to maintain the tempo of gains in production, we need to intensify our efforts on high quality seed generation and multiplication. It is inspiring to learn from the Vice-Chancellor's report that the university has the credit of producing quality seeds of high yielding varieties of crops, especially of paddy for various agro-climatic conditions which have found wide acceptance among the farmers for their high yield potential. I am sure, the scientists of this university will keep on endeavouring to develop promising varieties equipped with high quality characters and tolerance to stress is both biotic and abiotic.

Agro-Forestry

There is a conviction held throughout the human history that the trees and forest canopies sustain life in a healthy and balanced condition on our planet. The forest conservation and agriculture are closely interlinked. It is a pity that the forests which served as original source of food and shelter for the man and his animals, became the worst victim of fire and axe on the pretext of increasing area for agriculture. Due to denudation of forests, the ecological balance has been disturbed. Afforestation on a large scale has to be done to revive this balance.

The ICAR has decided to establish a department of forestry in each of the agricultural universities during VII plan. I am happy that such a department has been established in this university also. I appreciate that your university has developed a cheap, feasible and accepted technology for utilisation of user and wasteland through plantations of fruit, fuel and forage trees. This technology must reach the entire region in your jurisdiction as early as possible.

Farm Women Training

The contribution of women in developing and building up our society has been applauded since time immemorial. However, desired attention towards thier welfare seems to be lacking. It is estimated that women are involved in more than 60% of the agricultural operations right from sowing to post-harvest operations. After the day long drudgery, they are also required to undertake kitchen responsibilities and provide nutritional diet from the resources available in the house. As such, training of farm women is absolutely essential. The establishment of department of Home Science in this University with the help of the ICAR is a right step to help the rural women. I am told that the university has started formal training leading to B.Sc. (Home Science) programme. Apart from this academic advancement, the university should also arrange short-term skill training for rural women. This will help the women to equip much better to perform their duties in their day to day life.

Fisheries

Eastern Uttar Pradesh where a vast reservoir of water bodies exist in the form of ponds and lakes, the farmers can make fortune by rearing fish which are a rich source of animal protein. Thus, apart from improving their financial position, fish production will also make their diet rich and nutritive. It is now well established that with the help of composite fish culture technology, more than ten thousand kg. of fish can be harvested from one hectare of pond every year. I am glad that your University has started a department of fisheries and courses on fisheries sciences are offered as electives to the students of Agriculture and Home Science. The ICAR would like to strengthen this programme.

Agricultural Education

The unique feature of the agricultural university system is the complete integration of teaching, research and extension education. The concept of this system envisages education of all disciplines at monocampus with complementarity between different faculties as constituents units. I am happy that this university has been established completely on the land grant pattern and formal instructions are restricted to one campus only.

National education policy adopted by Government of India has aimed at National integration and adherence of certain national values and concerns through introduction of a national core curriculum; an insistence on observance of secular, scientific and moral values; inculcation of an understanding of our composite culture within rich diversity; creation of an awareness of the importance of protection of environment and stress on commitment of the youth to manual work and social service. Reorganisation of the course contents and process of education in state agricultural universities on the above lines should, therefore, be a matter of foremost priority.

Excellence of institutions of higher education is a function of many aspects; self evaluation and self improvement are important among them. The universities should set up such mechanisms which would encourage self assessment and accreditations. This will help the universities to monitor the programmes closely and the quality of education would improve.

It has been observed that in recent past academic inbreeding has increased in our education system. The National policy visualizes measures to facilitate inter-regional mobility of staff and students. There is a need to develop procedures which would permit the universities to relax the restrictive policies of admission of students and recruitment of staff members. The Universities should advise the students not to take all the three degrees from the same university.

In the State of Uttar Pradesh, besides three agricultural Universities, about thirty three private colleges are imparting Undergraduate and Postgraduate formal teaching with inadequate resources and infrastructures. These are affiliated with general universities and are adding to the number of unemployable graduates. This has adversely affected the academic standards of agricultural graduates. Some of the States have started derecognising the degrees of some of the institutions of Uttar Pradesh. In 1975 when two of the state agricultural universities at Kanpur and Faizabad were in the process of establishment, a high powered committee had recommended that those private agricultural colleges which have better resources and achievements may be brought under the fold of the agricultural universities and others which are below the mark may be converted into vocational training centres. This has not been achieved as yet. It is high time that the State Government and Agricultural Universities of Uttar Pradesh, review the academic programmes of these colleges and reorient them in such a way that some of these colleges could be brought under the aegis of the universities. This will be a right step in the right direction. The Dean's Committee of the ICAR has recommended a set of course curriculum for undergraduate degree programmes in agriculture with four years' duration. This has also been adopted by the Association of Indian Agricultural Universities. But some of the agricultural universities and the private colleges still do not follow the recommendations. This should be followed in order to fall in line with other agricultural universities.

The competitive demands for the limited financial resources are growing with time. It is becoming difficult for the Central and State Governments to support the unplanned academic programmes. If these resources are spread thinly, the objective of the agricultural universities would not be fully achieved. The proliferation in agricultural education system has to be discouraged. I have been observing that in some states there is a tendency to start too many academic programmes in the universities without adequate preparations and resources. The professional degrees have to be linked with job opportunities. It would be absolutely necessary to assess the manpower requirement of a particular discipline before starting the new academic programmes. For a properly planned growth of the universities, a long term perspective plan would be absolutely necessary.

The Council had been suggesting to establish a statutory coordination committee in the states where more than one agricultural universities exist. Though it was initiated in U.P., but it needs to be more effective. I would urge the State Governments and the State Agricultural Universities to establish such a committee which will work as a liaison between the State Agricultural Universities in the state, between the State Agricultural Universities and the State Government and Indian Council of Agricultural Research. This committee would help in the utilisation of resources in a meaningful manner and avoid duplication in teaching and research efforts in the State agricultural universities.

Transfer of Technology

We are proud of scientific and technological innovations in the field of agriculture. But all these are meaningless if not transferred to the farmers who are their ultimate users. It has been estimated that nearly 60-70% of research findings are not adopted by farmers on account of several constraints. The directorate of extension of this university is doing very useful work in transferring the appropriate technologies to the farmers. Two Krishi Vigyan Kendras at Bahraich and Basti and four operational research projects on watershed, general agriculture and for scheduled castes and tribes have been demonstrating the effective modes of the transfer of technology. I am informed that the University has earmarked a special fund for lab to land programmes to benefit more than 1000 small and marginal farmers and landless agricultural labourers. I am happy to learn that you are helping the landless agricultural labourers by providing technical and financial resources for goatary, poultry and bee-keeping. □

We Congratulate...

(1) Prof. Kuthati Venkata Reddy who has been appointed as Vice-Chancellor of the Sri Krishndevaraya University, Anantapur.

(2) Prof. G.S. Marwaha, former President, AIU & Director, Indian School of Mines, Dhanbad, who has been appointed by the Govt. of India as the Chairman of the Advance Environment Planning Group for WCL's Wardha Valley Coalfield.

(3) Shri M.N. Desai who has taken over as Vice-Chancellor of Gujarat University, Ahmedabad.

Universities & the National Literacy Mission

A one-day Zonal Workshop for making recommendations to revise the Training Manual prepared for functionaries of Adult Education in 1985, was held at the SNDT Women's University, recently. Sponsored by the University Grants Commission and directed by Smt. Kamalini Bhansali, Vice-Chancellor, SNDT Women's University, the workshop was attended by 24 participants, representing 15 universities. Prof. Ramlal Parikh, Vice-Chancellor, Gujarat Vidyapith, Ahmedabad, Smt. Kumud Bansal, Secretary, Technical & Higher Education, Government of Maharashtra Bombay, and Dr. S.C. Bhatia, Director, Department of Continuing and Adult Education, University of Delhi, Delhi acted as Resource Persons.

The objectives of the Workshop were (a) to review the present Training Manual for Adult Education Functionaries; and (b) to make recommendations for revising the Training Manual in the light of the revised guidelines with special reference to Area Development Approach and National Literacy Mission.

In her welcome address, Smt. Bhansali focussed on the need of revising the Training Manual in the light of the new approach to the Adult Education Programme covering area development and the establishment of the National Literacy Mission.

Prof. Ramlalbhai hoped that this workshop would act as a re-inforcement and replenishment to the Adult Education movement. He said that adult education has now become a movement with the widest possible ramifications. The movement has a catalytic role resulting in mass awakening by going to the widest corners. Universities also need to network with other universities on the one hand and planned process of development on the other hand. He wanted that the approach to the entire movement should be non-cliental, unlike, in the social service approach, which is clinical one with a cliental system. The clients of adult education programme are many times unknown, but they all share a common perception for a common endeavour. Although the input and the output would differ from programme to programme they would be within the common perception.

Area Development Approach

Referring to the Area Development Approach Prof Parekh clerified that : (1) Area Approach was a community approach dealing with an area with composite group or groups of people working for social development. It woulds therefore, deal with human resources.

(2) As far as methodology was concerned, he stressed micro-planning through micronising national problems. National plans give us macro-developments but micro-plans would enrich the macro scenes. The focus here should be planning around learning need of people through multi-dimensional learning programmes with enormous diversity giving opportunity for local initiative. He emphasised the partnership concept through learning needs. The methodology thus should be micro-planning for micro-communities through partnership roles.

(3) The major instrument of human resources is the resource map of the community showing the physical, natural and human resources. This would have to be chalked out for effective planning and implementation.

(4) The method of clusterisation was more suitable in the area approach, e.g. a group houses or a group of families.

(5) Harmonising clusters was the only way of eradicating communalisation of society. What we needed was 'communitisation' and not 'communalisation'.

(6) The operational aspect should be through a community committee comprising representatives of the local community giving adequate representation to women, in the development of programmes. For this purpose it was necessary to prepare community profiles to determine the types of meaningful programmes for the area.

(7) Universities should co-ordinate with sub-structures in a triangular form comprising grass-root level educational activites at the Adult Education Centres, the Jana Shikshan Nilayam and the Non-formal Education Centres.

He felt that the community approach would bring the programme closest to the life of the people. A block could be of 100-150 villages of average size of 50-75 villages of a bigger size. The students could be involved in identifying the learning needs of the community and preparing community profiles through preparation of records of families and the MPFL can act as a powerful instrument for collecting the data as well as spreading the message.

National Literacy Mission

Smt. Kumud Bansal highlighted the various facets of National Literacy Mission (NLM) asunder :

—NLM is one of the five crucial areas for national development to be tackled with a missionary approach together with other missions; namely—drinking water, immunization, literacy, oilseeds and telecommunications.

—It would involve people's participation through programmes like Padyatra, Gnanagatha, identification of youth who can be activists for education, organisation of local people for the purpose.

—Creating awareness by involving all categories and sections of people.

—Giving visibility to the message through hoardings, public media and so on.

—**Communication :** University Departments would have an important role to play in this. She illustrated this aspect by referring to the efforts of the IUACE in disseminating information about new programmes, new trends, through the Newsletter, which acted as a very powerful instrument of communication for the University network.

—**Training :** Training of Instructors is the weakest link although he is the crucial key worker and this problem requires to be tackled on priority basis.

—**Techno-pedagogic inputs :** NLM envisages techno-pedagogic demonstration first in 40 selected districts in the country. This would include installation of solar power packs and improved petromax/lanterns in the 40 districts in the adult education centres for better lighting and using electronic media like T.V. etc.; improvement in the learning material; improving the pace and quality of learning; use of electronic media for training; and use of computer in the management of NLM by preparing data base information through checking progress of learners maintaining records of learners and periodical evaluation.

The evaluation will start with 40 districts and after checking the results, the application will be extended.

—Provision of Continuing Education through Jana Shikshan Nilayams by providing one JSN for about 8 Adult Education Centres in either rural areas or urban slums;

—Restructuring of courses to enable students to be exposed to the theory and practice of Adult Education;

—Different models should be worked out all over the country; and

—Creation of a positive approach to extension which has been accepted as the third dimension.

Dr. S.C. Bhatia emphasised that a revolutionary concept for social development was introduced by accepting extension as the third dimension within the University system. This had a great impact on involvement of students in this work. The University system has worked as an innovator of ideas in this field by adding new facets under Adult and Continaing Education and Extension work, like Population Education, Science for the People, Legal Literacy and so on. He strongly advocated that the NLM should accept the different roles of university system in the process. To illustrate—training, research, awareness, co-ordination and so on should be the definite functions which must be assigned to the universities through the University Grants Commission (UGC).

He suggested that the Area Development Approach should be multidimensional and the university system, besides the regular UGC programmes, should build a bigger campaign within itself by taking advantage of other developmental programmes and schemes to the maximum thus linking up adult education programmes with developmental activities. He added that the roles of universities in NLM needed to be defined asunder :

(1) Utilizing media and communication for environment building, preparation of training packages, and preparation of learning materials;

(2) Staff Development training for adult education personnel, instructors, students, supervisors and others, preparation of training manuals, review and evaluation of training programmes, and use of electronic media for training purposes;

(3) Model Building in Adult Education Programme Management at village level, district level, and setting up AECs and JSNs;

(4) Technological Demonstration of computer aided literacy package for self-learning, linking technology transfer with adult education, and through technical support;

(5) Research and Development Efforts to achieve rapid literacy, and literacy in the Indian socio-cultural scene; and

(6) Social audit of efforts under NLM in respect of learning process, management models and programme monitoring, and evaluation, and learner achievement.

Recommendations

The following recommendations emerged at the conclusion of the workshop :

A. Area Development Approach and NLM

1. Role of universities in the functioning of the NLM should be clearly defined as they can make definite contribution in this work.
2. Short term and long term Literacy roles should be defined describing involvement of universities in the NLM.
3. There should be three main sub-agencies for implementing the NLM Programmes, namely, State Government, Voluntary Agencies, and Universities and Colleges.
4. The UGC should be entrusted with the responsibility of at least 5000 JSNs since the coverage indicated for universities and colleges in the NLM document is 250 centres in 1988-89 and 30,000 centres in 1989-90.

B. Training Manual

(i) Guidelines should include, training content, strategy and methodology of area approach.

(ii) Training strategies of functionaries in the light of revised guidelines should cover following categories at different levels :

(A) Training and orientation of functionaries at the levels of: (i) Instructor, (ii) Supervisor, (iii) Project Officer, (iv) University Department Staff,

(B) In-Service Training

(C) Staff Development (Fresh)

(iii) The Manual should be called the Staff Development Manual in Extension.

(iv) UGC should constitute a group to undertake the revision of the earlier Training Manual.

Alagappa Varsity Plans New Courses

The Alagappa Unixersity, Karaikudi, plans to introduce M.Com. (Entrepreneurship), M.A. (Adult Education), M.Sc. (Instrumentation and Electronics) and M Sc. (Applied Mathematics) from the academic year 1988-89. The university has also decided to introduce M.B.A. with emphasis on Small Business Management from the academic year 1988-89.

The university proposes to set up a 'School of Management Sciences' integrating the existing Departments of Commerce and Corporate Secretaryship and the new Department of Business Administration. A 'School of Natural Resources' with specialisation in Applied Geology, Water Resource Management and Oceanography is also planned. A 'Department of Fine Arts and Culture' would be set up from 1988-89 which would offer postgraduate courses in Performing Arts like Fine Arts, Music, and Sculpture.

The university has a long term plan of establishing a 'School of Bio-Technology' in which specialisations in Bio-Physics, Molecular Biology, Micro-Biology and Immunology are aimed at. All the above new departments would offer M.Phil. and Ph.D. programmes also.

Bihar Shree Awards

Four students of Patna University are to be honoured as 'Bihar Shree' in recognition of their services in the promotion of Indian art and culture. The students are Santosh Nahar (Violin), Raj Kumar Nahar (Tabla), Madhukar Anand (Classical Dance) and Shambhavi (Fine Arts). All the four students have participated in the Inter-University Youth Festivals and other cultural activities organized by AIU and won laurels for their university. The Nahar brothers also participated in Festival of India in the USSR in September 1987.

'Bihar Shree' has been instituted by the Govt. of Bihar and the Times of India Group of publications. The award includes a 'Shawl' and 'Tamra Patra'.

IGNOU to Offer New Courses

The Indira Gandhi National Open University proposes to introduce special programmes of continuing education for defence services and women in pre-school education, nutrition and dietetics, child psychology and counselling. This was stated by the Human Resource Development Minister Shri P.V. Narasimha Rao, while presiding over the consultative committee meeting held in New Delhi recently.

According to the Minister, the priority is being given to the target groups belonging to less-privileged and under privileged sections of the society, including women, particularly in the rural and slum areas, scheduled castes and tribes, dropouts, unemployed youth, handicapped persons, workers in unorganised sectors, teachers of primary and secondary schools and university students from the underprivileged rural groups for imparting continuing education to overcome their deficiency, both in knowledge and skill.

Yoga University

A residential Yoga University is proposed to be set up soon in Bihar. Dr. Phulgenda Sinha, Director, Indian Institute of Yoga who is also the Secretary of the Yoga University Foundation Committee, said that a site is being selected and the proposed university is expected to start functioning by the end of 1989.

The university would admit students from all over the world on quota reservation basis. It would confer degree in Yoga, namely, Bachelor of Yoga, Master of Yoga and Ph.D. in Yoga. The university would train students in Yoga-Therapy.

Some unique features of the proposed University would be that every student admitted would have to do physical labour for two hours a day. The university would open one industrial unit for producing consumer goods, where the students would work and earn. The University will produce most of its food from its own land with the help of its students. There would be Yoga hospital of one hundred beds where patients of various chronic diseases would be treated through Yoga therapy. All clinical examinations and services would be provided by the hospital.

Planetarium Course

The B.M. Birla Planetarium Hyderabad, proposes to introduce a postgraduate diploma course in planetarium techniques and management. According to Mr B.G. Siddharath, Director, the two-semester course was aimed at training personnel for the various planetaria coming up in the country.

Latin American Studies Programme

The University Grants Commission (UGC) is reported to have approved Goa University's programme for Latin American Studies and earmarked Rs. 4.60 lakhs for it. This was disclosed by Shri L.P. Sahi, Union Minister of State for Education in Lok Sabha recently.

News from Agril. Varsities

National Workshop on Sunflower Cultivation

Dr Sukhdev Singh, Vice-Chancellor of the Punjab Agricultural University, who presided over the concluding function of a 13-day National Workshop on Sunflower Cultivation, said that the production of oilseeds should be geared up to save foreign exchange to the tune of Rs 1000 crores being spent annually to import edible oils from abroad. Sunflower was a new crop for this country and when a new crop was introduced, its seeds may bring some disease, insect-pest or weeds with them which might pose problems at the later stage. The success of a new crop depended on its proper marketing otherwise the farmers would be disheartened and give up its cultivation. He urged the extension workers to immediately contact the PAU when they notice attack of any disease, insect-pest on the crop. He also suggested that sunflower should b grown in big blocks instead of small patches as this crop is badly damaged by the birds.

Dr A.S. Dhaliwal, Professor and Head of the Department of Extension Education said that sunflower crop was introduced in India as an edible oilseed crop. The advantages of polyunsaturated fats in human diet had enhanced the use of sunflower oil in edible and processed food. He observed that the oil content in sunflower seed was as high as 65 per cent with an average of 42 to 45 per cent and protein content of 15 to 20 per cent.

Thirty-four participants from Punjab, Haryana, Himachal Pradesh, Gujarat and Andhra Pradesh attended the Workshop which was sponsored by the Union Ministry of Agriculture and Co-operation.

'Kiran'—New Linseed Variety

A new linseed variety 'Kiran' has been developed recently by Indira Gandhi Krishi Vishwavidyalaya, Raipur under oilseed development programme. This variety matures early and is multi-resistant for rust, wilt and powdery-mildew and highly tolerent against linseed bud-fly and thrips attack. It gives 45 per cent higher seed yields with maximum potential of 1118 kg/ha under rainfed cultivation as compared with cultivator's local seed. This variety was tested for last three years under all India coordinated testing programme at 37 locations as RLC-6 and was identified for pre-release multiplication last year at Pantnagar during rabi oilseed workshop. Besides Madhya Pradesh, this variety has proved outstanding in yield at Maharashtra, Rajasthan, Orissa and Karnataka against local Zonal and National checks. This variety is also suitable for late sowing up to 2nd week of November, and performs well under irrigated and Utera cultivation.

'Parbhani Kranti'

Marathwada Agricultural University has evolved 'Parbhani Kranti' a yellow vein mosaic resistant variety of Bhendi by crossing Pusa Savani Manihot, a yellow vein mosaic resistant Japanese wild Bhendi. 'Parbhani Kranti' gives 84 and 115 quintals of green fruit yield per hectare in summer and kharif season respectively (8 to 10 quintals per hectare higher green fruit yield than Pusa Savani). This variety is having succulent, green, long fruits tapering towards end and is recommended by the Central Govt. for cultivation throughout the country.

News from UGC

INSAT-1B Programme of UGC

Between 1st June to 15th June, 1988 the following schedule of telecast on higher education through INSAT-1B under the auspices of the University Grants Commission will be observed. The programme is of one hour duration every day from 12.45 p.m. to 1.45 p.m. (Repeated from 4 p.m. to 5 p.m.) and will be available on the TV Network throughout the country. For the viewers in Delhi and surrounding areas these programmes can be seen on the second channel.

Communication

Dear Sir,

There is a necessity of introducing employment oriented courses in the Degree level, to create self confidence among the degree class students.

Under 'Restructuring of courses' the UGC recommends electronics as a core subject alongwith Mathematics and Physics. But the department of electronics, Govt. of India, in order to prevent proliferation in the course of study, has discouraged the universities in granting affiliation for such courses.

I feel that such courses of study on employment oriented subjects be framed by the A.I.U. and circulated to the Universities/Colleges for implementation.

Awaiting your opinion.

Yours sincerely,
D. Panigrahy

News from Abroad

Business/Higher Education Cooperation

Business Council of Australia, the Australian Vice-Chancellors' Committee and the Australian Committee of Directors and Principals in Advanced Education have set up a Council for Business/Higher Education Cooperation to review existing links, particularly in applied research and technology, and investigate how effectively each sector uses the expertise available in the other. The Council is made up of Vice-Chancellors and Directors of universities and colleges and senior excutives of Australian companies. Among the issues which are to be examined by the Council are :

—The need for business and industry to make full use of the research carried out in Australian institutions;

—The need to develop a culture in Australia which will encourage co-operation between the sectors;

—The development of a register of qualified business people able to serve on councils and committees of the institutions;

—Support for the National Teaching Company Scheme as a mechanism for developing co-operation between the sectors. The scheme involves graduates employed by companies on specific projects; and

—The need to encourage more interaction between the institutions and industry through the use of the 150% R & D tax incentives scheme in universities and colleges.

University of East-West Unity

Foreign students need no longer feel lost upon arrival in the high tech. US Society because of the cultural shock. The University of East-West Unity in Monroe, New York now offers a two to six week orientation programme specially designed for Indian students and teachers in United States. The programme includes teaching of scientific systems and cultural enrichment which integrates western materialism and eastern spirituality and culture, programme in yoga, meditation, comparative religions and spiritual psychology. The programme also has a component of Seva which provides an opportunity to participants to interact with the residents, staff and other guests in a way that helps them adjust to western culture. The university also maintains an Ashram which is open to students at any time for a retreat. Further details can be had from the University of East-West Unity. Shri Ramamurti International Center, Anand Ashram, R.D. 3 Box 141, Monroe, New York 10950.

INDIAN INSTITUTE OF SCIENCE
BANGALORE-560 012
Requires

Senior Scientific Officer in the Department of Physics.

Qualifications and Experience :

Essential : ME/M Teach in Electronics/Electrical Engineering/Computer Science or Engineering/Physical Engineering with Electronic Instrumentation or equivalent Degree with good background in Electronics including Microprocessors with 5 to 8 years experience in the field of Electronics Instrumentation.

Desirable : Experience in the design and servicing of Electronic instruments/Micro-computer/Computer systems.

Relaxation : The requirement regarding number of years of experience is relaxable at the discretion of the competent authority.

Emoluments : Rs. 4,090/- p.m. in the pay scale Rs. 3000-4500.

Details and prescribed application forms can be obtained on request from the Registrar, Indian Institute of Science, Bangalore-560012, accompanied by a crossed Postal Order for Rs. 5/- (free of cost to SC/ST on production of Caste Certificate from a competent authority) drawn in favour of him alongwith a self-addressed Rs. 5.40 stamped envelope of the size 21 x 18 cms. **on or before 3rd June, 1988.**

Notes :

1. Abbreviations Used :

C—Date of commencement of tournaments run straightway on All India Basis.
CE—Last date of closing the entries.
CIZ—Commencement of Inter-Zonals
IZ—Inter-Zonals
N—North Zone
E—East Zone
S—South Zone
W—West Zone
NE—combined North and East Zone
SW—combined South and West Zone

2. These tournaments shall be played on league basis from the zonal Semi-Final Stage.
3. Inter-Zonals of the tournaments in the games of Basketball (W), Handball (M&W), Hockey (W), Kabaddi (W), Kho-Kho (M&W) and Volleyball (W) run on two-zone basis shall be played on league basis.
4. Inter-Zonals of the tournaments in the games of Basketball (M), Football, Hockey (M), Kabaddi (M) and Volleyball (M) run on Four-Zone basis shall be played on league-cum-knock out basis.
5. Inter-Zonals in respect of cricket (M) shall be played on knock-cum-knock out basis.
6. Inter-University Rowing competition shall be organised on knock-out-cum-league basis. League system shall apply from the semi-final stage.
7. Universities standing in arrears by 15th August on account of annual subscription or any other AIU dues may be debarred from participation in the Inter-University Tournaments.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through inter library loan for which requisition must be made through your Librarian.

1. Readers (Grade : Rs. 3700-125-4700-150-5700 (U.G.C.)

(i) Physics—(1) Preference will be given to the candidates possessing specialisation in Semi-conductor Electronics.

(ii) Education—(2) (Programme of Dept. of Special Assistance—Participation of Education Dept.)

Specialisation

(One each in Thrust Area (A) & (B).

Thrust Areas

- (a) Educational Management (Economics of Education, Managing Organisation Human Resource Development, Policy Research, Comparative Education, Motivation).
- (b) Education Technology (Science Education, Psychological Basis of Educational Technology.

2. Lecturers (Grade : Rs. 2200-75-2800-100-4000) (U.G.C.)

(i) Management—(1) **Reserved for Scheduled Caste.**

Specialization : Personnel Management with some background in Marketing Management.

(ii) Social Work—(1)

Specialization : Family & Child Welfare.

(iii) Psychology—(2) (One with specialization of Mental Ability).

(iv) Music—(1)

Specialization : Vocal

(v) Institute of Sanskrit & Indological Studies.—(1)

Preferable knowledge of Tibetan Language.

(vi) French—(1)

Specialization : Theoretical : Contemporary Literature with special reference to surrealism. Practical : Familiarity with technical and Scientific Vacabulary for conversation.

(vii) Mathematics—(1)

Specialization : Algebra and Theory of Numbers.

(viii) Computer Science & Application—(1).

(ix) Education—(2)

(Programme of Dept. of Special Assistance—Participation of Education Dept.)

Specialization

(One each in the Thrust Area (a) & (b) as required above in the case of Readers for this department).

(x) Physical Education—(1) **Temporary but likely to continue.**

Specialization : History and Principles of Physical Education; and Sports Psychology/Techniques of officiating and coaching.

(xi) Education—(2) (One reserved for Scheduled Caste).

3. For University College of Education.

(i) Lecturer in Teaching of Mathematics—(1)

Grade : Rs. 2200-75-2800-100-4000 (UGC).

(ii) Lecturer in Music (Leave Vacancy—(1)

Grade : Rs. 2200-75-2800-100-4000 (UGC).

4. For University College Kurukshetra

(i) Lecturer in history—(1)

Grade : Rs. 2200-75-2800-100-4000 (UGC).

(ii) Director of Physical Education —(1)

Grade : Rs. 700-40-1100-50-1300-Ass.-50-1600

5. For Depariment of Geography

(i) Research Assistant—(1) (on temporary basis in leave vacancy).

Grade : Rs. 1600-50-2300-EB-60-2660.

Qualifications : Consistently good academic record with first or High Second Class (55% marks or Grade-B in the seven point scale) in Master's Degree.

6. Publication of Digest

Research Assistant—(1)

Grade : Rs. 1600-50-2300-EB-60-2660.

Qualifications : (a) Consistently good academic record with first or High Second Class (55% marks or Grade-B in the seven point scale) in Master's Degree in Sanskrit :

(b) Good knowledge of English and use of diacritical marks in transcribing Sanskrit words into English.

7. Finance Officer—(1)

Grade : Rs. 3000-100-3500-125-4500.

Qualifications : Either (1) A Bachelor's Degree with Chartered Accountant/SAS or 2nd Class Master's Degree in Commerce.

(2) Five Years' Supervisory experience in Accounts/Budgeting etc. OR B(1) A second class Master's Degree or LL B. degree (Degree being relaxable in case of internal candidates with especially good record of service).

(3) At least 10 years' supervisory experience (not below the level of Assistant Registrar) of which at least 5 years' supervisory experience should be in Accounts/Budgeting etc.

8. Deputy Librarian (1) Temporary in the leave vacancy upto 29.1.89 in the first instance.

Pay Scale : Rs. 1200-50-1300-60-1900 (UGC-pre-revised).

Qualifications : (a) First or second class M.A./M.Sc./M.Com. plus a first or second class B. Lib. Sc. or Diploma in Library Sc. The degree of M.Lib.Sc. being a preferential qualification.

(b) At least 7 years' experience as Librarian or in a responsible professional capacity in a Library.

(c) Good academic qualifications and research experience (with publications). The qualifications must be in general comparable to those of Readers in the Universities.

Qualifications for the teaching posts are as prescribed by the University Grants Commission. Details of qualifications for posts at Sr. Nos. 1 to 4 alongwith the prescribed application form (for the posts from Sr. Nos. 1 to 6 can be had from the Manager, Printing & Publications, Kurukshetra University Press, Kurukshetra on payment of Rs. 10/- on the counter or by making a written request accompanied by self-addressed envelope (23 cms x 10 cms) duly stamped for Rs. 8 for sending by registered post alongwith Bank Draft for Rs. 10 drawn in favour of the Registrar, Kurukshetra University and payable at the State Bank of India, University Campus, Kurukshetra.

For the posts at Sr. No. 7 & 8 the applications should be on plain paper in the following proforma : (1) Name (2) Father's Name (3) Date of birth (4) Permanent Address (5) Correspondence

Address (6) Schedule Caste/Schedule Tribes/Backward Class/Ex-servicemen (7) Qualifications : (i) Name of the Examination passed (ii) University/Board (iii) Marks obtained (iv) Division (v) Subjects. (8) Experience : (a) Post held (b) Employer (c) duration (d) Reasons for leaving. (9) Total present pay and pay scale. (10) Pay acceptable. (11) General remarks, if any.

Applications in the prescribed proforma complete in all respects duly forwarded by the competent authority (in the case of those who are in service), should reach this University by **6-6-1988** along with Bank Draft for Rs. 15 drawn in favour of the Registrar, Kurukshetra University, Kurukshetra and payable at the State Bank of India, University Campus, Kurukshetra or the amount may be deposited with the Cashier of this University and the original receipt be enclosed with the Application Form.

The applications not in the prescribed proforma or received after the last date or incomplete applications are liable to be rejected. The candidates who have already applied for the post of Reader in Physics in response to Advt. No. 3/87 and for the post of Finance Officer in-response to our Advt. No. 1/87, need not apply again.

REGISTRAR

UNIVERSITY OF NORTH BENGAL

No. F. 22/Advt./Estt./17/R-88

Dated : 5-5-88.

Applications in preseribed forms are invited from Indian Citizens for the following posts :

1. **Professor** at the Centre for Himalayan Studies : Post one. (Specialisation: Sociology/Social Anthropology). (Reserved for S.T.)

Reader at the Centre for Life Science (Botany) : Post one. (Specialisation : Plant Physiology; Preference will be given to one who can also teach Phycology/Pteridology / Palaeobotany / Anatomy).

Lecturer at the University College of Law : Post one. (Preference will be given to S.C. candidate for the post provided he fulfils the essential qualifications laid down and found suitable. If S.C. candidate is not available or not found suitable, post will be filled up from general category. Hence non-S.C. candidates may also apply.)

Scales of Pay : Professor Rs. 1500-2500/-, Reader : Rs. 1200-1900/- respectively with other allowances and benefits as per University rules. Lecturer in Law : Rs. 700-1600/- with other allowances and benefits as per rules.

Qualifications as prescribed by the University Grants Commission. Details of qualifications for **Professor, Reader** and **Lecturer** may be obtained with application forms.

Choice of selection committee may not necessarily be confined to those who apply formally. No application except in prescribed application forms will be considered.

Prescribed application forms may be obtained from the office of the Registrar personally on payment of Rs. 5/- (Rs. 3/- for S.C./S.T.) in cash at the University Cash Counter or by sending a self-addressed envelope of 25 x 13 cms. affixed with stamps worth Rs. 3/- accompanied by crossed I.P.O./Bank Draft of Rs. 5/- (Rs. 3/- for S.C./S.T.) in favour of the University of North Bengal. Filled in application forms (7 copies) along with one self-addressed unstamped envelope must reach the office of the Registrar, P.O. North Bengal University, Dt. Darjeeling, Pin : 734430 on or before **2-7-88.**

REGISTRAR

MANIPUR UNIVERSITY
CANCHIPUR : IMPHAL

Advertisement No. 6/88

Dated the 7th May, 1988.

Applications are invited for 1 (one) post of **Controller of Examinations** in the Scale of Pay of Rs. 4500-150-5700/- p.m. plus admissible allowances.

Essential Qualifications and Experience

(i) First or high Second class Master's Degree or equivalent qualifications; (ii) Considerable experience in academic administration in a responsible position in a University or in an institution of higher learning with particular reference to : (a) Formulation and implementation of development schemes/programmes; (b) Up-keep and maintenance of students' academic performance records preferably through modern management techniques; (c) Students' affairs in general, like assisting and co-ordinating in admissions, institution and award of scholarship/fellowships, academic matters pertaining to recognised/maintained institutions, academic linkages/collaborative programmes; (iii) Ability to take organisational charge of meetings and academic affairs in the University; (iv) Adequate experience in Semester system, letter grading and continuous evaluation techniques; or Experience of conducting University examinations and other allied work at the executive level for at least 10 years; (v) should have a record justifying entrusting of confidential work.

The University may appoint any person who is found suitable for the post in consideration of his/her previous experiences and other qualifications. It will also be open to the University to consider the names of suitable candidates who may not have applied.

Candidates invited for interview will be given second class railway fare by the shortest route on production of travel documents.

Applications on plain paper (in duplicate) along with attested copies of Certificates in support of qualifications and experiences showing candidate's name, date of birth, mailing & permanent address, father's name, academic and professional attainments, administrative/teaching/ research experience, field of specialization, publications (to be enclosed with reprints), Seminars/Conferences attended, details of visits to foreign countries and assessment reports from at least two persons well acquainted with the candidate's professional work should reach the Registrar, Manipur University, Imphal-795003 on or before **6th June, 1988.**

Applications received late or incomplete in any respect may not be entertained. Persons already in service must apply through their employers so as to reach this office on or before the last date fixed. No candidate will be considered for appointment unless he/she produces a 'No Objection Certificate' from his/her employer at the time of interview.

MONDAY, MAY 30, 1988 Rs. 1.50

NDHRA PRADESH OPEN UNIVERSITY
SECOND ANNU CONVOCATION
APR 30. 8.

Second Convocation of the Andhra Pradesh Open University. (From L to R) : Prof. K. Satchidananda Murty, Vice-Chairman, UGC, who delivered the convocation address, Smt. Kumudben Joshi, Governor of Andhra Pradesh and Prof. C. Narayana Reddy, Vice-Chancellor of the University.

SCHOOL OF PLANNING AND ARCHITECTURE

(Deemed to be a University)

4-BLOCK-B, INDRAPRASTHA ESTATE, NEW DELHI-110 002

APPLICATIONS ARE INVITED FOR ADMISSION TO ACADEMIC PROGRAMMES FOR THE SESSION 1988-89

A. Bachelor of Architecture Programme

Architecture (5 Years), Full-Time, 68 Seats.

Admission Qualifications

Pass in Senior School Certificate Examination (on completion of the 10+2 pattern, 12 Year Course) of Central Board of Secondary Education, New Delhi or any other examination recognised as equivalent with

(a) General Science including Chemistry at the 10th Stage.

(b) 60 percent of the aggregate marks or more in English (core or optional), Physics, Mathematics and any other optional subject where the candidate has secured maximum marks at the 10+2 stage.

For candidates belonging to : (i) Scheduled Caste, (ii) Scheduled Tribes, (iii) Children/Widows of Armed Personnel killed/disabled in action during hostilities, (iv) Physically Handicapped, with 55 percent or more of the aggregate marks as in (b) above.

Selection Procedure:—Selection for admission to the Bachelor of Architecture Programme will be made through an Entrance Examination comprising (i) General Awareness and Scholastic Performance Test and (ii) Aptitude Test—to be held on 9th July, 1988 at School of Planning and Architecture, New Delhi, and at other Selected Centres in Delhi.

Reserved Seats:—SC-15 percent, ST-7½ percent, Children/Widows of Armed Personnel killed/disabled in action-5 percent, Physically handicapped-5 percent, and candidates belonging to educationally deficient States-10 percent of the total sanctioned intake.

General Information;—(i) Medium of Entrance Examination and instruction is English. (ii) Foreign nationals are required to apply to the Government of India through their diplomatic channels.

B. Master's Programmes (3 Semesters) In:

(i) **Planning** with specialisation in Urban Planning, Regional Planning, Transport Planning, and Housing (Open to Architects/Engineers/Social Scientists).

(ii) **Building Engineering and Management** (Open to Engineers/Architects).

(iii) **Architecture** with specialisation in (i) Urban Design (ii) Architectural Conservation (Open to Architects).

(iv) **Landscape Architecture** (Open to Architects/Landscape Architects/Town and Country Planners).

C. Pre-Landscape Architecture (2 Semesters) with Scholarship of Rs. 600/-p.m.

This is a preparatory Course which enables admission to the Master's Programme in Landscape Architecture to Candidates having Master's qualification in Agriculture/Horticulture/Forestry/Botany/Ecology/Geography.

Eligibility: With Scholarship of Rs. 1000/- per month for Master's Programmes.

(a) Candidates having Architecture/Engineering background must have valid GATE SCORE.

(b) Candidates with Social Science background must have qualified in the U.G.C. (NET) examination.

Note: Candidates with 60% of the aggregate marks or more at the qualifying examination and who have not qualified in GATE/U.G.C. (NET) examination are eligible to apply for admission without Scholarship.

Candidates who are awaiting the results of the qualifying examination are also eligible to apply provided they complete the admission requirements by 4th July, 1988.

Sponsored Candidates: 25% of the sanctioned intake in case of Master's Programme in Building Engineering and Management and 50% in respect of other courses are open to candidates sponsored by Central Government, State Government, Statutory Organisations as well as public institutions.

Reservation of Seats: Five percent of the sanctioned intake is reserved for SC/ST candidates. Seats are also reserved for candidates sponsored by the Central/State Governments, Statutory Organisations as well as Institutions.

Selection Criteria: Selection of the candidates shall be made on the basis of the performance of the candidates at the interview. Candidates appearing for interview scheduled to be held on 4th, 5th & 6th July, 1988 will be reimbursed one way second class railway fare by the shortest route.

Foreign Nationals: Foreign nationals are required to apply to the Government of India through their diplomatic channels.

Important Dates

Bachelor's, Master's Programmes

I (i) Issue of Application Forms commences:	
(a) **UCO Bank Branches at Delhi**— I.I P.A. Extension Counter (I.P. Estate), Defence Colony, Shahdara, Mukherjee Nagar and Mayapuri against payment of Rs. 30/- in cash. (During Banking Hours only)	**30.5.1988**
(b) By post from School only against payment of Rs. 30/- by D.D. on SBI/UCO Bank in favour of School of Planning and Architecture, payable at New Delhi.	**30.5.1988**
(ii) Last date for issue of Application Forms by post from the School	**20.6.1988**
II. Last date for issue of Application Forms from UCO Bank Branches	**24 6.1988**
III. Last Date for receipt of Application Forms by the School (by Regd. Post)	**27 6.1988**

Continuing Education with Special Reference to Science & Technology*

P. N. Srivastava**

In the history of mankind, education has formed a continuum and a basis for the development of human society. Through development of attitudes, values, capabilities both of knowledge and skills, education provides strength and resilience to people to respond to changing situations and enables them to cause and contribute to societal development. It is only education that can imbue people with the knowledge, the sense of purpose and confidence essential for building a dynamic, vibrant and cohesive society capable of providing its people with the wherewithal for creating better, fuller and more purposeful life.

Higher education is meant to provide ideas and men to sustain development of any nation or society. No programme of high quality education can be implemented if the faculty themselves are not creative or are devoid of the excitement of innovation. With the explosion of knowledge, change of curricula etc. will have to remain to be very frequent. A teacher himself will have to remain a student to be up-to-date for which he will have to learn continuously. In science and technology things are developing and changing very fast and if a person does not resort to continuing education, he will be no where within no time.

It is very hard for developing countries in particular that even before they could cope up with the first industrial revolution of the nineteenth century variety, they were forced with the challenges of chemical technology, followed by micro-chip technology, biotechnology and the forthcoming technology of superconductors. The task has become very difficult because there has been a tremendous shortening of the time between the development of an idea and its useful application industrially. The time lag between the development of the principles underlying the combustion engine and their application in automobiles was relatively long. The time lag between the publication of Einstein's papers (1905) and the development of atomic energy was about four decades. But the period required for the advancement of electronic computing from idea into a major industry has been much shorter. Scientific principles and ideas are now moving to useful applications in only a few years and to product manufacture in only a few years more. It was only 14 years back that Stanley Cohen and Herbert Boyer, the Californian scientists, discovered restriction enzymes to cut the DNA and DNA ligase to join them in 1973 and we have already produced industrially Humulin (to replace insulin), human growth factor, several interferons, monoclonal antibodies in the market for a few years now. At the moment, biotechnology is being presented as potential cornucopia and the individual countries must provide backing to compete and to stay competitive. The possibilities which will be practical within a few decades in the area of health and medicine; food and agriculture; energy; raw materials; chemicals and environmental management are unlimited and unbelievable.

**Paper presented at the 14th Quinquennial Commonwealth Universities Congress, 7-12 February 1988.*

***Member, Planning Commission and Former Vice-Chancellor, Jawaharlal Nehru University.*

During the last ten years or so, the entry of computers into the ordinary house in developed countries has sustained one of the fastest growing consumer markets. Their use is limitless. They replace the telephone directory, give scientific, political, business, sports information, etc. You ask for any information and the computer will provide the data. All these applications arise from extremely low cost of microprocessors—electronic circuits providing in a tiny volume, the basic logical functions of a computer. The processing power of these components is constantly being increased, while at the same time their cost and size plunge down. Today we see before us the information revolution and the coming of an information society. Information and communication technology make it possible to strengthen man's intellectual ability in a way that other revolutions could not accomplish. In the years to come, however, software will prove to be an even more important problem. Software is in effect "intangible material" and software technology will be crucially important to information revolution. The maxim, "Those who dominate materials, dominate the technology" is being changed to "Those who dominate software will dominate the world".

It is hard to believe but it is true that it has been only a year and a half that we first heard news of the startling breakthrough in superconductivity by two German scientists (Bednorz, J.G. and Muller, K.A.) working in the IBM's laboratories in Zurich. It is extremely rare for the Nobel Committee to recognise the event so fast and award the Nobel Prize to the two scientists within one year of their achievement. Breakthroughs in superconductivity bring us up to the threshold of a new age. We must recognize that recent breakthroughs in superconductivity have outrun existing theories and brought us to the threshold of a new world of opportunities. The world around us is in the process of a radical transformation, a revolution of shattered paradigms and long-held certainties. This transformation is opening for us new horizons of possibility. Some future superconductor applications include ultrafast shoe-box size computers; smaller and cheaper medical scanners and magnetic resonance imaging machines; sensors to analyse the Earth's magnetic field to find oil and mineral deposits: magnetic "bottles" that store electricity indefinitely; power lines that transmit electricity with no loss of energy (conventional loss of energy being upto 25 per cent); high-speed trains being levitated above the tracks etc.

We are increasingly moving, and moving faster and faster from an age of things to an age of thoughts, an age of mind over matter. In this new age, it is the mind of man, free to invent, free to experiment, free to dream, that is our most precious resource. The value of a silicon chip does not lie in the sand from which it comes, but it is in the microscopic architecture engraved upon it by ingenious human minds. The most promising superconductors are made from ceramics—their value does not come from their material, but from the brilliant inspiration of a few scientists. It is human imagination that is going to build the 21st century out of sand and clay.

The world of tomorrow, which would usher in an information-rich and technology-intensive society calls for new approaches to learning. Developing the capacity to learn would be more important than what is learnt. Life-long and recurrent education will have to be the order of the day. Herein lies true importance of continuing education which will have to play a greater and more important a role in future. It is rather unfortunate that most of the universities have not yet realised the intensity of its importance and that is why perhaps greater attention is not being paid to this. The facilities for continuing education will have to be provided for working personnel in most of the universities and technical institutions. At present they are almost non-existent.

For continuing education communication technology will have to be profitably used for instructional purposes. The development of new softwares will also have to be very fast which should compare well with the fast developments in Science and Technology. It has already been demonstrated that given a reasonably favourable situation, people will learn from any medium—television, radio, programmed instruction, film strips, tape recording or others. In general the things that control the amount of learning from the teacher face-to-face also control the amount of learning from educational media. What is necessary and important is individual abilities and motivation to learn. Choice of instructional media, therefore, depends on socio-economic and geographical factors, accessibility, convenience, etc. of the students.

In this respect universities which have better facilities have to help and assist universities which lack them. Similarly, universities of the developed and advanced countries should assist others in the developing and less advanced countries. It is imperative that cooperation at least amongst the universities of Com-

Individual, Society and Citizenship Development

G.B.K. Hooja*

Man and Environment

The relationship of the individual and environment (which includes society) is best described in the Pursha Sookta of the Atharva Veda as follows :

> *Mattra bhoomi, putroham prithivyaah*
> (Land is my mother; I am the son of Earth)

In other words, it means that man is the creature of his environment. He is created by his environment; he is sustained and nourished by his immediate family and surroundings; however, as he grows and gains strength and self-confidence, he is in a position to strike on his own and to charter his own path. Nevertheless, his past clings to him and determines the parameters of his evolution. The geo-political setting and the socio-economic environment in which a child is born and grows up have a life long influence on his career and track record.

According to Arnold Toynbee, environment is a relative term. It implies the existence, the presence, and the action of some other party. This other party is some living creature, and the environment of every living creature is, the sum total of the rest of the universe. For instance, a human being's environment consists of the whole of non-human Nature, both inanimate and animate, together with all his fellow human beings (including the dead as well as the living). Above all, a person's environment includes the human nature of the person himself. Toynbee hits the nail on the head, and is in line with the ancient seers of India, when he adds that this last-mentioned constituent of a human being's environment—the internal spiritual constituent—is the key to the person's relations with all the rest of his constituents: for if a human being fails to master Nature within himself, he will fall to master it in the rest of the Universe that lies outside him. He may understand all mysteries and all knowledge, but the most highly accomplished technical expertise will gain him nothing if he is not also in command of himself. In Man he goes on to say, the decisive factor—the factor that tips the balance either towards success or towards failure—is not race, and it is neither skill either, it is the spirit in which Man responds to the challenge of the sum total of Nature that has become Man's environment as a result of Man's own appearance in the Universe. This sum total includes the nature of Man himself, as exemplified in Homo sapiens and in the individual representatives of this species—that is to say in particular persons.

Man and Society

Man is a gregarious animal. He habitually moves in flocks and herds and seeks to form communities/societies of like-minded persons for it provides him with a sense of security and well-being. Thus man and society are coeval and they evolve a set of social values and a code of conduct which binds them together. Situations, however, arise in which restrictions become unbearable and this leads to disharmony, rebellion or recession.

Toynbee defines society as the total network of relations between human beings. Thus components of society are not human beings, but relations between them. In a social structure, individuals are merely the foci in the network of relationships. He points out that the famous frontis piece of Hobbes's Leivathan, displaying society as a gigantic human figure composed of a multitude of life-sized human figures is an anthropomorphic misrepresentation of reality. A visible and palpable collection of people is just a crowd: it is not a society.

MacIver also endorses this view and holds that a society is 'a system of usages and procedures, of authority and mutual aid, of many groupings and divisions, of controls of human behaviour and liberties'. Thus a society is a group or an association of people bound by some common purposes, common values, common frame of references, certain well-defined relationships. Their activities supplement each other's activities, the whole constitution a vital mechanism.

Generally, people living together are said to live in a society or a community and these two words are often used loosely in almost the same sense. But there is a clear distinction between them which arises from the type and degree of organisation in the group and the extent to which the people are conscious of their social mode of life. A community denotes a

---

Former Vice-Chancellor, Gurukula Kangri Vishwavidyalaya, Hardwar.

body of people living in the same place under the same conditions, while society is a particular type of community. The latter includes everybody, adults and children, social and non-social persons, living in a certain territory where all share a mode of life but not all are conscious of its organisation of purpose. On the other hand, a society is a kind of community (or a part of a community) where members have become socially conscious of their mode of life and are united by a common set of aims and values. Thus a society may be defined as a group of persons who have come together with a common purpose and who are conscious of this purpose and work for its fulfilment. In this category fall a family, a church, a school, an association of individuals in a co-operative or a corporation, a state comprising of citizens bound by a common objective and a common set of rules and regulations governing their conduct and mutual behaviour. This implies privileges and obligations, rights and duties.

In the course of history, with the gradual development of the means of transportation and communication, societies have come to function in ever-widening and expanding circles of influence. The clans, the tribes and congeries of tribes, as we know, have yielded place to, or are in the process of yielding place to nation states or associations of nation states in the political field or multinational corporations in the economic field. There is a greater give and take and mutual sharing of ideas in the cultural and religious spheres too; and the wide world is in a state of flux and ferment as never before. Societies are breaking their protective/insulating shells and are advancing towards the evolution of a universal state. The big wide world has now become almost a global village; and man is poised for a leap into the stars beyond. He has already stepped on the moon, which no longer remains an object of poetic wonder or metaphysical fantasy. All this has been attained by the cooperative endeavour of seekers of Truth, inspired researchers in fields and laboratories and the spirited men of adventure, operating in various corners of the globe, transcending differences of class, creed, caste, community or colour. The common bond which binds them is the bug of curiosity, the urge and the courage to know and the daring to do.

Of course, over the millennia, the journey has been tortuous, and there is no reason to hold that the worst is over and it shall be smooth sailing hereafter.

Role of Creative Personalities

Toynbee, who has made a life-long study of civilisations, their growths, breakdowns, and disintegrations, finds that in a general way, a society in the process of civilisation articulates itself through the individual human beings who 'belong' to the society, or to whom the society 'belongs'. Society itself, as we have noted earlier, is not a collection of persons but is a network of relations; it is the field of interaction of two or more agents. It is not itself the source of social action, for a source is **ex hypothesi** other than a field. A society is a medium of communication through which human beings interact with each other, and it is human individuals and not human societies that 'make' history.

From this, it is but a short step to Bergson's **elan vital** or Carlyle's Heroes. These are the souls who feel obliged to work under the impulse of internal necessity to set the imprint of their **elan** upon their fellow men, to transfigure them by converting them to their own insights. Such individuals who influence/transform societies in which they arise are, as Toynbee observes, superhuman in a very literal sense, for they have attained a supreme self-mastery which manifests itself in a rare power of self-determination. The emergence of a creative personality of this kind whether the Buddha, the Christ or the Mohammad in the religious field or a Lenin, a Gandhi or a Hitler in the political arena inevitably precipitates a social conflict, as society struggles to cope with the disequilibrium produced by his creative energy.

Mimesis, too, is a generic feature of social life. In static societies, it is directed towards the older generation of the living members and also towards the dead ancestors, who stand unseen but not unfelt, at the back of living elders, reinforcing their power and prestige. In dynamic societies, in the process of growth, however, mimesis is directed towards creative personalities which command a following because they are pioneers on the road towards the common goal of human endeavours. History is evidence that static societies, thus dominated by the shadow of custom, tend to degenerate, while dynamic societies, motivated by the spirit of change and modernity and aided by expanding knowledge, scientific discoveries and advanced technology surge forward into uncharted areas of action.

Role of Education

It is in this perspective that the value and role of education for the common man, as well as the leaders of society has to be assessed. **Yena gataah mahaajanaah sa panthaa**—the path traversed by the leader is the path—is an old saying. At the same time, it is equally true that a people get a government which they deserve. The rulers and the ruled interact on each other, and tend to balance and counter-balance each other's decisions and actions. Hence the necessity of informed and enlightened citizenry. More so, in a democratic set-up, where the levers of government finally rest in the electorate. As pointed out by the international Commission for development of Education, there is a close correlation, simultaneous and delayed, between changes in the socio-economic environment and the structures and forms of action of education, which makes a functional contribution to historical movements. Thus through the knowledge it provides of the environment in which it operates, education seeks to held society to become aware of its problems, and, provided that efforts are centred on training 'complete men' who will consciously seek their individual and collective emancipation, it should greatly contribute to changing and humanising societies. The word to mark here is, 'humanising'. Change is the law of nature. Individuals as well as societies continue to change, for better or worse, as Time flows past. What is desirable is that change should be informed by humanising and not cannibalistic mores and values.

Humanising Values

We may now consider what are these "humanising" values and how they may be acquired.

In his scholarly and very illuminating treatise on integral Education—Thought and Practice, R N Pani has drawn attention to a list of 84 social, moral and spiritual values, prepared by the National Council of Educational Research and Training in alphabetical order. It is based on the recommendations of numerous Commissions and Committees on Education and a study of Gandhian literature, and is given at the end of this paper. It will be seen that it is a very formidable and fairly exhaustive list and it would be difficult to improve on it. Broadly, these values may be classified as mutual aid, team spirit, cooperation, courtesy, due consideration for others, discipline, dutifulness, good manners, honesty, courage, and perseverance. In fact, these values may be categorised as perennial values which have never fallen forward looking development oriented, progressive societies.

Faced with the challenge of foreign domination, Gandhiji set out to mould his people into an army of disciplined *satyagrahis* (soldiers of Truth). He established an **ashrama**, a retreat-cum-training centre at Sabarmati, near Ahmedabad; and later shifted it to Wardha. He expected the inmates of his *aashrama* to observe eleven vows, namely, truth, non-violence, celibacy, non-theft, non-acquisition, body-labour, control of the palate. fearlessness, equal respect for all religions, *swadeshi* and refusal to treat anybody as untouchable. He enjoined upon the *aashramites* to clean the *aashrama* latrines. He held the view that private morality had public consequences and, therefore, stressed the importance of 'inner' over the 'external' restraints of persons in positions of authority, relying upon ethical sanctions to guarantee public obligations. Satyavadi Harishchandra was his model.

When Gandhiji spoke of political goal of *Swarajya*, he clearly meant that only those who could rule themselves in the sense of self-restraint, could rule themselves in the sense of controlling the political apparatus. He metamorphosed the Indian nation.

The mantle of Gandhiji would seem to have fallen on the 73-year old Jain saint, Acharya Tulsi. 36 years ago, he launched a self-improvement movement, called the *Anuvrata Aandolana*. He calls upon his followers, and indeed on all others who may, to undertake to observe eleven small vows as follows :

1. I shall not kill any innocent being.
2. I shall not attack anyone. I shall not support aggressive policies. I shall work for world peace and disarmament.
3. I shall not participate in violent agitations, nor in destructive activities.
4. I shall repose faith in human integrity. I shall not discriminate against anyone on the ground of caste, colour, etc., nor deem anyone to be untouchable.
5. I shall observe religious tolerance; and shall not generate communal tension.
6. I shall observe rectitude in my business and conduct.
7. I shall try to inculcate celibacy and self-restraint.
8. I shall not indulge in unethical practices in elections.
9. I shall give no quarter to social evils.
10. I shall not consume intoxicants like liquors, **ganja**, heroin, etc.
11. I shall shun evil and shall be alert in regard to environment.

Simple vows and a practical code of conduct.

As a matter of fact, these vows flow from the rules of conduct prescribed for the practitioners of Patanjaliyoga, namely, *5 yamaas*, and *5 niyamas*. The 5 *yamas* are rules of social conduct. These are : Truth, Non-violence, celibecy, non-theft, non-acquisition. Non-violence includes non-hurt by deed, speech or even thought. Non-theft means not only non-stealing, but also includes punctuality, non-absence from work and duty payment of due taxes, in short, non-cheating of any kind. Non-acquisition would mean curbing the acquisitive tendencies, non-accumulation of excessive wealth, a spirit of charity, fellow-feeling and holding of wealth as a trustee on behalf of the have-nots, as expounded by Gandhiji. The 5 *niyamas* are rules of personal conduct. These are : Cleanliness, austerity, self-study, contentment, and self-surrender. Gandhiji lay great emphasis on cleanliness, which according to him covered physical, moral and financial cleanliness both in the personal and social fields. He abhorred pollution of any kind. He worried a good deal about accounting for the public funds with which he was entrusted. "People never cared to have receipts for the amounts they paid, but we always insisted on the receipts being given. Every pie was thus accounted for and I dare say the account books for the year 1894 can be found intact even today", wrote Gandhi about his days in Natal. A story is told that when Gandhi established his Sabarmati *Aashrama*, he placed Manilal, his second son, in charge of the *aashrama* funds. When Manilal heard that Harilal, the unhappy first son, was without money in Calcutta, he borrowed money from the *aashrama* to forward to his brother. Gandhi's discovery of the irregularity led to his banishing Manilal from the *aashrama* It is on record that when Gandhi found insanitary conditions prevailing at a Congress session, he organised a scavenging squad, and set about the task with great aplomb. Self-study also does not mean merely study by oneself, but also study of good, healthy literature and study of self. In the ultimate analysis, knowledge of and watch over self is the key to all progress, individual or in the aggregate, according to these savants.

Human Resource Development

Every generation has a new set of problems to face; of course, the genesis of most of them may be traceable to historical reasons; nevertheless, they have to be tackled, and in good time; otherwise the consequences may be unpalatable. The ultimate weapon, in any struggle, however, is the man behind the machine; and it is, therefore, heartening to note that the Government of India has rechristened the Ministry of Education as the Ministry of Human Resource Development to lay the focus of emphasis clearly and unmistakably on the development of the people, the citizenry. A skillful, competent, devoted and patriotic workforce is the *sina qua non* of success in every endeavour.

India today is faced with many problems. To name a few, 2/3rd of population is illiterate; 1/3rd of population is living below the poverty line; and to it, large-scale unemployment and under-employment population explosion, low per capita income (notwithstanding leap in agricultural and industrial productivity) threat of national disintegration, environmental degradation, fall in ethical standards, degeneration of socio-political institutions, and we have a handful of agenda.

Citizenship Development Society

Our best hope rests on human resource development, based on a multi-faceted programme of education, at the kernel of which would be all-round, integral, man-making, citizenship education. It is in this context that the importance of organisations like the Citizenship Development Society emerges. This society can act as a catalytic agent, as a centre for research in the art and science of citizenship and as a resource bank for collection and dissemination of relevant material on this critical issue. As a voluntary agency and pressure group, it is bound to exercise healthy, modernising influence on governmental, semi-governmental and other autonomous agencies engaged in the nation-building task of value-oriened education, as it gathers strength and expertise. It can run a training/orientation course in citizenship for persons in various walks of life and to set up a Training and Orientation Centre for this purpose. The Society can help develop course material for various categories of trainees/participants. Association of universities and other educational institutions is bound to give strength to the Society for indeed all educational institutions are the reservoirs of youthful energy and spring boards for a dynamic nation's ever lasting quest for onward march towards a better future.

SOCIAL, MORAL AND SPIRITUAL VALUES

1. Abstinence
2. Appreciation of cultural values of others
3. Anti-untouchability
4. Citizenship
5. Consideration for others
6. Concern for others

7. Cooperation
8. Cleanliness
9. Compassion
10. Common cause
11. Common good
12. Courage
13. Courtesy
14. Curiosity
15. Democratic decision-making
16. Devotion
17. Dignity of the individual
18. Dignity of manual work
19. Duty
20. Discipline
21. Endurance
22. Equality
23. Friendship
24. Faithfulness
25. Fellow-feeling
26. Freedom
27. Forward look
28. Good manners
29. Gentlemanliness
30. Gratitude
31. Honesty
32. Helpfulness
33. Humanism
34. Hygienic living
35. Initiative
36. Integrity
37. Justice
38. Kindness
39. Kindness to animals
40. Loyality to duty
41. Leadership
42. National unity
43. National consciousness
44. Non-violence
45. National integration
46. Obedience
47. Peace
48. Proper utilisation of time
49. Punctuality
50. Patriotism
51. Purity
52. Quest for knowledge
53. Resourcefulness
54. Regularity
55. Respect for others
56. Reverence for old age
57. Sincerity
58. Simple living
59. Social justice
60. Self-discipline
61. Self-help
62. Self-respect
63. Self-confidence
64. Self-support
65. Self-study
66. Self-reliance
67. Self-control
68. Self-restraint
69. Social service
70. Solidarity of mankind
71. Sense of social responsibility
72. Sense of discrimination between good and bad
73. Socialism
74. Sympathy
75. Secularism and respect for all religions
76. Simple living
77. Spirit of enquiry
78. Team work
79. Team spirit
80. Truthfulness
81. Tolerance
82. Universal truth
83. Universal love
84. Value for national and civic property

Continuing Education with Special Reference to Science & Technology

(*Continued from Page 2*)

monwealth countries should be started, earlier the better.

It is very timely and heartening that one of the decisions taken at the last Vancouver (Canada) summit of the Commonwealth Heads of the States was to set up a Commonwealth University and College Network for promoting Distance Education cooperation among Commonwealth countries. This decision is based on the Lord Briggs Committee appointed in 1985. The University envisaged by the Expert Committee was not a degree-giving institution, it was in the form of a resource centre for Distance Education Institutions throughout the Commonwealth facilitating exchange of programmes, transfer of students, mutual recognition, etc. The offer made by Government of Canada is to set up a Network which may in course of time become the University of the Commonwealth for cooperation in Distance Education. It may also be desirable to develop linkages with the U.N. University in Japan. The proposed Network will have its headquarters in Canada with various regional units in Britain, the Mediterranean, the Caribbean, Eastern and South Africa, West Africa, South Asia and the Pacific, etc. Canada has already offered funds to the extent of £ 2 million towards capital cost and an additional £ 4 million towards recurring cost over a period of five years. India too has offered £ 1 million and Nigeria £ 1.5 million over a five year period. Additional funding is expected from other Commonwealth countries such as Britain, Australia, New Zealand and other countries from Africa and West Indies. It is a development in the right direction and the Association of Commonwealth Universities should make the best use of it. □

A Common Learning Society

Prof. K. Satchidananda Murty, Vice-Chairman, University Grants Commission, gave a fervent call for the emergence of a common learning society. He said, "Aware of what man's existence is in the social and natural world today and foreseeing as it will be tomorrow, education, whether formal, non-formal or informal, should now enable all to acquire and enhance enlightenment in the different stages and spheres of life". Prof. Murty was delivering the Convocation Address at the 2nd Annual Convocation of the Andhra Pradesh Open University. Excerpts

Convocation

Our National Open University, this pioneering State Open University and others like it established subsequently may continue to provide distance education at various levels, applying a multi-media approach during the entire learning process, based on the planning, guidance and tuition of a number of academics. In addition to this, it may be appropriate for them as well as all concerned with education in our country not only to be aware of, among others, ideas subsumed under the rubric Lifelong Education, but to attempt to implement them insofar as they are found acceptable and good. One need not exclusively and for ever depend on John Dewey, Paulo Freire and Ivan Illich, nor even on Tagore and Gandhi, or on Radhakrishnan and Zakir Hussain, in the formulation of educational ideals and practices. No mortal is omniscient and infallible, and there can be no policies and programmes which are perfect and immutably correct. Practical wisdom is often the result of a heated and direct clash of many different viewpoints.

The idea of a permanent, free and continuing education is as old as Plato. The important thing now is to make it universally accessible. The world around is changing rapidly, thereby affecting men's relationship with it. Consequently, men do not know how to maintain harmony within themselves, with others and with nature, as the atrophied and unsuitable education systems in vogue are unable to show them ways of transcending changes and leading whole lives. The need is to equip men individually and collectively to understand, control and dominate politico-economic development as well as technological progress. Aware of what man's existence is in the social and natural world today and foreseeing as it will be tomorrow, education, whether formal, non-formal or informal, should now enable all to acquire and enhance enlightenment in the different stages and spheres of life. It is not mere extension of education that is required, but its qualitative transformation. It is not enough to learn how to earn; it is necessary to learn how to learn as long as one lives.

Learn to be what and to do what, and how? This should be through all possible methods and techniques which will engender in all unquenchable thirst for more and more knowledge not for accumulation, but for integration, deriving satisfaction only in perpetual inquiry and discovery, with a view to enrichment of life. This means a democratic and lifelong education, through contacts with reality, which will develop individual autonomy as well as potentiality for cooperative and harmonious living. It should result at least in the increasing awareness of human unity, if not of the unity of all existence, and in the enhancement of the quality of life of both individuals and their collectives.

It should be suffused with a concern for the needs of the disadvantaged, oppressed, excluded or exploited groups. The gulf between the cultures of the landless labourers and industrial workers, and the disparity between the rural and urban people, and such other contradictions, should be overcome: the best type of education must be available to all. Whatever comes in the way of this—division of labour, specialisation, dependence, alienation and corporate subservience to economic systems, must be done away with.

For achieving what has been indicated above, the available material and human resources as well as the accumulated cultural experience of mankind must be organized so that everyone throughout his life continues to develop his capacities in order that he may first of all achieve inner harmony and contribute to the well-being and development of the nation of which he is a citizen, as well as of the universal Human Society of which too he is a member.

Apart from the usual type of universities, with or without correspondence courses, and open universities, there are a number of informal agencies that shape every society's thought, character and sensibility. For example, the family is an important agency through which a culture transmits itself across generations. Similarly, churches or religious orders, museums, radio and newspapers also educate people in different ways. In every case it is possible that education is socially controlling, manipulative or tranquilizing. So care must be taken that nonformalisation, vocationalisation or any such innovation would not result in differential education and categorization of recipients of education. Unless there is an effort to have common objectives and to have coordination of different methods to achieve them, there will not emerge a common learning society. This implies that people who receive non-formal education and formal education, and those who graduate from different sorts of universities (universities like Madras, "rural universities" or "Sanskrit/Telugu universities") and from institute of science/technology, should share a common worldview, if their thinking and action have to contribute to the harmonious development of individuals and the nation. One is not certain that this is being taken care of now; but it is important that this should be done if a common national consciousness is considered desirable. ☐

Indian Music Congress

The Indian Music Congress (IMC) patterned after the Indian History Congress and the Indian Science Congress was formally inaugurated recently. The objectives of the IMC are to work for the creative development of South Asian including Indian music both in its musico-academic and performing aspects; foster the aesthetic and scientific study of and research in such music and promote its perceptive cultivation on the basis of the much-needed dialectical unity of theory and practice; campaign for the adoption of a comprehensive national policy on music education beginning with the kindergarten stage; safeguard and promote the professional interests of musicians, music teachers and others involved in the work of music production; publish the transactions of the IMC's annual Congress and other conferences as well as works of significant value including recording good music in tapes, discs and cassettes; work for the preservation of valuable recorded music; interact with foreign organizations of like nature; in short, work for the promotion of such conditions as are conducive to the creative development and all-sided dissemination of Indian music.

Dr. Mahamahopadhyay R. Sathyanarayana of Mysore, who delivered the Inaugural Address, briefly analyzed the objectives of IMC and dwelt upon several interconnected themes—the role of music in building bridges between man and man, overthrowing the man-made divisive forces of caste, class and community; the task that has befallen Indian musicians to formulate the problems of their own music including the problems of music education; and the need for collective self-reliance on the part of Indian musicians. Once the musicians and music educators are united for the cause of creative music, no agency, governmental or otherwise, would be in a position to ignore the many requirements of Indian music and the Indian musicians.

On this occasion a seminar on Problems of Formal Music Education in India Today was also organised. Ms. Jayasri Banerjee, Secretary of the IMC, invited the attention of the participants to the urgent need of finding a viable alternative to the *gurukula* system of music instruction which has almost broken down due to reasons of history and wondered whether the *conservatory* style of music education, with some

C.T.R.I. MYSORE

Communication

Dear Sir,

I am subscribing to 'University News' to see advertisements for the last two years. It is becoming increasingly difficult to apply and costlier. Can the A.I.U. recommend to the U.G.C. to tell all Universities to have a uniform prescribed application form ? Some Universities ask for application on plain paper while others have a simple format but insist on **8 copies** together with all sorts of enclosures for **every application.** Added to this, there are universities that will accept only Bank Drafts, others M.O. or D.D. and still others cheques also. Most Post Offices do not have Postal Orders of the desired denominations. Will the A.I.U. please endeavour to simplify all these ?

The aim should be to enable speedy application without straining too much on the pocket and time of the applicant. I suggest A.I.U. supplies 'Application formats' together with 'Fee-coupons' which unemployed aspirants can buy and use as and when required. For the time being A.I.U. could at least provide application formats, without having to be 8 copies.

Yours etc.

(Dr.) V. Subramoniam

necessary modifications to suit the Indian musical milieu, cannot provide the major answer. She also stressed the urgent need to clearly formulate the *principles* of a scientific *methodology* of teaching Indian music, especially Indian classical music.

Several papers were presented at the Seminar. Dr. (Ms.) Subhadra Chaudhary of Indira Kala Sangit Visvavidyalay, Khairagarh, argued for an ecclectic synthesis of the best elements of the *gurukula*, institutional and textual traditions in restructuring the system of our music education. Ms. Sudha Srivastava, Principal, Savitri Girls College, Ajmer, stressed the importance of evolving a uniform national policy to ensure academic and performing excellence growing out of intellectual, critical and creative efforts in music education. Dr. Chintamani Rath of Rabindra-Bharati University drew attention to the cognitive, affective and psychomotor behaviour in the learning process and made out a strong case for promoting the four major aspects of music education, namely performance, composing, musicology and criticism. Ms. Tatyana Morozova of the USSR spoke of the need for inter-cultural diffusion of music. Professor R. Visweswaran of Mysore University and Professor Debu Chaudhuri, Dean of Music & Fine Arts, Delhi University dealt with certain immediate problems of music education-and suggested some remedial measures.

In his concluding remarks Dr. R. Sathyanarayana, suggested a broad-based and inclusive approach to the problems of formal music education, bringing into bold relief the need for establishinga viable infrastructure especially at the lower rungs of the educational ladder. He underlined the importance of evolving a comprehensive policy of music education at the national level, for the primary objective of music education is the pursuit of excellence, both in music and in life.

The IMC proposes to organize its first three-day annaul Congress this winter at the University of Delhi to consider, among others, the problems confronting the state of music and musicians and the state of music education in the country.

The IMC's first Executive Committee (1988-89) consists of 20 members with the following office bearers :

President : Dr. R. Sathyanarayana, Director, Regional Centre for R & D at Mysore, Karnataka Sangita Nritya Academy;

Vice-President : Professor Debu Chaudhuri, Dean, Faculty of Music & Fine Arts, Delhi University;

Secretary : Ms. Jayasri Banerjee, Padmaja Naidu College of Music, Rajbati Campus, Burdwan University; and

Treasurer : Professor Ramakanta Chakrabarty, Department of History, Burdwan University. ☐

National Seminar on Juvenile Delinquency in India

A National Seminar on Juvenile Delinquency in India—The Problem, Legal Aspects and Remedies was held on April 23-24, 1988 in Nanakchand Anglo Sanskrit College, Meerut under COHSSIP Scheme of U.G.C. The Seminar was inaugurated by Hon'ble Justice D.A. Desai, Chairman, Law Commission of India, while Sri Vijay Sharma, I.A.S., District Magistrate, Meerut presided. Dr. R. B. L. Goswami, Vice-Chancellor of Meerut University also addressed the inaugural session.

The Seminar was divided into four sessions and the topics discussed inciuded Juvenile Delinquency in historical perspective; Incidence of Juvenile Delinquency in India: Causes and the Magnitude of the Problem; Legislative Measures and Juvenile Justice; and Remedial Measures: Preventive and correctional.

In his inaugural address Justice Desai said that mere legislation on Juvenile Delinquency was not sufficient. There must be general awareness to tackle this problem. The fundamental reasons for Juvenile Delinquency are functionally inadequate family atmosphere, illiteracy, defective juvenile laws and their implementation, economic disparity and polluted social environment. He insisted that a psychological viewpoint be adopted towards juveniles to know why a child commits offence? Only then we can successfully eradicate the evil of juvenile delinquency.

Sri Vijay Sharma, also opined that inadequate family background particularly breakdown of joint families, inadequate education, child labour, problems of farmers in villages, poverty, T.V. Programmes and films were some of the causes for increasing juvenile delinquency. The problem in India differs from what it is in U.S.A. and other western countries. Social atmosphere should be taken into consideration while dealing with the problem of juvenile delinquency.

Dr. R.B.L. Goswami, considering the tensions spreading in the social atmosphere as basic cause for Juvenile Deliequency said that till the inequalities existed in the society it was not possible to control juvenile delinqnency.

Dr. S.C. Sharma, Principal of the college, observed that teachers are neither judges nor policemen. Like a parent, teacher should try his utmost to reform a delinquent student by understanding his socio-psychological needs.

It was felt at the Seminar that the new legislation, The Juvenile Justice Act, 1986 was a distinct improvement in so far it provided for uniformity all over the country, time bound investigation and justice and public participation. But still a deep insight into the real and basic causes and remedies of the problem were called for. The problem has to be tackled sociologically, psychologically and economically in a multi dimensional manner. The basic factors responsible for Juvenile Delinquency must be eliminated. The Juveniles should be looked after and treated properly within 2-3 years from the first detection of the delinquency. When they commit some deliquent acts they must be diagnosed and treated like a patient and be cured with love, sympathy and humanity. A joint effort of family, school, community and state is needed in this direction. Teachers, of course, can play a very positive role as they are not only socialising agents of the future generation but are also its guardians.

About 100 delegates from Jammu and Kashmir, Punjab, Himachal Pradesh, Haryana, Rajasthan, Maharashtra, Madya Pradesh, Orissa, Pondicherry, Uttar Pradesh, and Delhi participated. Narly 40 papers were presented at the seminar.

Bhavnagar Varsity Holds First Convocation

The first Convocation of Bhavnagar University was held exactly a decade after its inception. Dr. S.Z. Qasim, Secretary, Department of Ocean Development, Govt. of India, who delivered the convocation address, highlighted the skills, diversity and natural resources of the country. He believed that the Indians had the capacity to be self sufficient in many fields and added that the eighties and beyond would be the age of space technology and oceanic sciences. The universities therefore, he said, should lay stress on these subjects and ensure that technical manpower is trained in these fields.

Referring to education, he said that although achievements in the field of education were indeed impressive, the stagnation and dropout rates at primary level were very high. So we have to carefully minimize this phenomenon by providing opportunities for vertical mobility in education to the children coming from the poor and uneducated families.

In his welcome address Mr. Dolar Vasavada, Vice-Chancellor, traced the history of the University and said that it had at present 12 colleges having 7000 students mainly in commerce, arts and science faculties affiliated to it. It has seven postgraduate departments one each in Chemistry, Mathematics, Life Sciences, Education, Economics, Commerce and Adult and Continuing Education, beside having one Engineering College and a prestigious Rural Institution known as "Lok Bharati" Sanosara.

The new Department of Adult and Continuing Education, which came into existence recently plans to establish 200 centres for adult education so that the light of knowledge can reach the illiterate and poor population of this part of the country. The University is also likely to open a new Department of Gujarati language very soon.

A new Department of Marine Sciences is also proposed to be set up which will include teaching and research in Chemical, Biological and Physical Oceanography. The International Foundation for Science, Sweden has sanctioned US $ 28,000 and the CSIR, New Delhi Rs. 75,000 to the University for research projects on coastal vegetation of this area.

Junior Colleges in Coop. Sector

The Andhra Pradesh Government is reported to have finalised a scheme for starting junior colleges in cooperative sector, to provide comprehensive education combined with vocational education with appropriate training infrastructure at the grass roots at mandal levels. There will be one college for each mandal in the State. The institution will be established through a registered cooperative society comprising parents of students and other members of the public as members.

The Government is prepared to make available land to the extent of five acres at concessional rates wherever government land is available. Each junior college will have an attached I.T.I. so that in keeping with the policy of accent on vocationalisation starting at the 'plus stage' opportunities could also be provided in every mandal for continuing vocational education in the junior colleges.

Vocational education will be imparted for half the time by providing workshop facilities as the government are doing in vocational education.

The institutions will not receive any grant-in-aid now or in future.

Promoting Women's Studies

The University Grants Commission (UGC) has identified seven universities to prepare draft syllabi on women's studies for incorporation in the undergraduate programmes. The universities are: Kerala, Punjab, NEHU, Ranchi, Banaras, South Gujarat and SNDT Women's University

The objectives of the programme include promoting awareness of the multi-dimensional roles played by women in society and the processes of social, technological and environmental changes, pursuit of human rights, investigating the causes of gender disparities, empowerment of women for effective participation in all areas of social development.

The UGC has framed guidelines for development of women's studies in universities and colleges in the country. The specific programmes and activities suggested in the guidelines are preparation of appropriate course materials, critical studies and analysis of the existing theories, concepts and practices which affect the status of women, organisation of seminars/workshops/orientation programmes for development of research methodology and course materials, extension activities, production and publication of relevant literature.

The UGC will also provide financial assistance involving the salary of 2-3 senior teachers, at least two fellowships, a recurring grant of Rs 50,000 per annum, and a non-recurring grant of Rs 40,000 for books, equipment and furniture to universities which undertake these programmes.

Statistical Tools in Research

The Department of Commerce, Alagappa University, Karaikudi organised a two week Advanced Level Course on "Statistical Tools and their Applications in Research" from 2-16 May, 1988 under the UGC Visiting Fellowship Programme for the benefit of the Research Scholars and Research Guides of the university. Dr. K. Palaniappan, Visiting Professor from P.S.G. College of Arts and Science, Coimbatore delivered a series of Lectures on Research Methodology; Correlation and Regression Analysis—Simple, Partial and Multiple; Probability and Probability distribution; Test of significance—Large Sample Test, Exact Sample Test; Nonparametric Test; Multivariate Analysis; and Time Series Analysis.

Fifty participants comprising Research Scholars, Research Guides and Faculty members from the Departments of Commerce, Education and Physical Education attended the course.

AGE Reference Centre

Asian Institute of Technology, Bangkok (Thailand)—a prestigious Institution which houses Asian Information Centre for Geotechnical Engineering (AGE)—has selected Thapar Institute of Engineering and Technology (Deemed University) Patiala, (TIET) as an AGE Reference Centre. The TIET Library will receive AGE Basic Library. It has already received :

(a) AGE Digest 1—4 vols (Group A to K)

(b) Proceedings of the 7th Southeast Asian Geotechnical Conference 1-2 Volumes

This offer to TIET is sponsored by the International Development and Research Centre (IDRC), Canada.

Queries by scholars for geotechnical information and literatures on Geotechnical Engineering may be addressed to the Librarian, TIET, Patiala.

National Seminar on Ram Manohar Lohia

Prof. Adi H. Doctor, Head of the Political Science Devpartment of Goa University, inaugurated the National Seminar on "The Contribution of Ram Manohar Lohia" on the campus of Mangalore University. The seminar was sponsored by the UGC and the Political Science Department of Mangalore University. The discussions ranged from Lohia's conception of History and Lohia as a representative of Indian Renaissance to Lohia's understanding of Gandhi and his critique of Nehruvian socialism. Prof. K. Raghavendra Rao, Head of the Political Science Dept of Mangalore University was the Director of the Seminar.

Facets of Mathematics

The Mathematics Department of Goa University organised a one day symposium on Facets of Mathematics. The Seminar focussed on recent developments in Mathematics and its appilcation in computational mathematics, biological systems particularly to functions of the human heart and ocean sciences. A panel discussion on recent developments in Mathematics initiated by Prof. S.G. Deo and Prof. A.S. Mudbidri was also held on the occasion.

News from UGC

INSAT-1B Programme of UGC

Between 16th June to 30th June, 1988 the following schedule of telecast on higher education through INSAT-1B under the auspices of the University Grants Commission will be observed. The programme is of one hour duration every day from 12.45 p.m. to 1.45 p.m. (Repeated from 4 p.m. to 5 p.m.) and will be available on the TV Network throughout the country. For the viewers in Delhi and surrounding areas these programmes can be seen on the second channel.

16.6.88

Fellowships and Visitorships in U.S.A.

The University Grants Commission (UGC) has invited the Universities to nominate senior teachers in Universities and their affiliated colleges for some fellowships and visitorships for post-doctoral research work at the universities and other institutions in the United States.

Teachers with a minimum of 10 years' teaching experience and published research work are eligible for these fellowships and visitorships. The fellowship will be for a period of one academic year (6-10 months), while the visitorship will be for a short period (2-3 months). The UGC will provide international air-fare from India to U.S.A. and back. In addition, the U.S. authorities will also provide allowance for maintenance, books and study-related travel in that country.

The fellowships/visitorships are for fundamental studies in frontier areas in Physics, Chemistry, Mathematics, Life Sciences, Earth Sciences and Bio-Technology, Laser Technology, Marine Resources Development, Computer Science and Technology, Semi-Conductor Technology, Micro-Processors applications and Micro-Electronics, Communication Technology, Educational Technology and Mass Media, Renewable Energy Studies, Environmental Sciences and Technology, Urban Development and Planning, Transport Studies and Social and Economic History (including Histriography), Science-Technology and Society, Comparative Literature, Literature and Society, Performing Arts, International Economic Co-operation, Money and Finance, Economics of Energy, Policy Sciences and Comparative Ethnography, Education, Planning and Management, Philosophy of Sciences, Social and Political Philosophy.

Last date for receipt of nominations by the UGC is 31st July, 1988.

News from Abroad

Third World Fellowship 1988

The Association of Commonwealth Universities invites applications from the staff or the graduate student body of any member university in the developing countries of the Commonwealth for award of Times Higher Education Supplement Third World Fellowship 1988. The fellowship is intended to support an applicant from one of the member universities in the developing commonwealth or from the Secretariat of the inter-university body in such a country, in a visit to another developing country of the Commonwealth to study or acquire experience of techniques of a kind which would be of developmental benefit to his/her own university or country. The award may take any one of the following forms:

1. the attachment of a member of staff, academic or administrative, to another university in the developing Commonwealth for specific experience or training of a developmental character,
2. a short study tour to other developing universities in the Commonwealth for purposes of professional and developmental importance to the candidate and his/her university,
3. exchange of staff between such universities for a particular developmental purpose,
4. an attachment to another developing university in the Commonwealth of a graduate or advanced student for research projects or training programmes with a particular developmental objective.

Last date for receipt of applications duly endorsed by the sponsoring university/body is 29/7/1988. Further details can be had from your university or Mr. P.B. Hetherington, Deputy Secretary General, (Commonwealth Awards and Appointments), John Foster House, 36 Gordon Square, London WCIH OPF.

Inter-University Tournaments 1987-88

RESULTS

A. GAMES PLAYED ON ALL INDIA BASIS

S.No.	Games	Venue (Org. Univ)	Winner Univ.	Runners Up Univ.	Winner of 3rd Place	Winner of 4th Place
1.	Athletics (M)	Punjabi	Punjabi	Panjab	GNDU	Allahabad
2.	Athletics (W)	Punjabi	Calicut	Nagpur	Mahatma Gandhi	GNDU

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
June 27-July 8, 1988	Short-term Intensive Training Programme on Abstracting & Indexing	To train the participants in the application of abstracting and Indexing methods and construction of an indexing language (Thesaurus).	National Institute of Small Industry Extension Training, Hyderabad.	Mrs. K. Subhashini, Course Director, NISIET, Yousufguda, Hyderabad-500045
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis.**	**University of Hyderabad in collaboration with the Indian Society of Andrology.**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667**
October 27-29, 1988	National Seminar on Statistics in Medicine, Health and Nutrition.	To discuss Data-Base and Analysis in Health and Nutrition—Present and Future.	Department of Statistics National Institute of Nutrition, Hyderabad.	Dr. K. Visweswara Rao, Organising Secretary, National Seminar on Statistics in Medicine, Health and Nutrition, Department of Statistics, National Institute of Nutrition, Indian Council of Medical Research, Jamai Osmania, Hyderabad-500 007
December 13-17, 1988	**International Seminar on Education and Training in Water Resources in Developing countries.**	**To assess the requirements of manpower, education and training in Water Resources Sector upto the year 2025 in the developing countries.**	**Central Board of Irrigation and Power, New Delhi.**	**Mr. C.V.J. Varma, Organising Secretary, International Seminar on Education and Training, Central Board of Irrigation and Power, Malcha Marg, Chanakyapuri, New Delhi-110021**
Dec. 15-17, 1988	National Conference on Fluid Mechanics and Fluid Power	To provide a forum for exchange of information on topics in flcid mechanics and design, research and development activities in areas like power generation, aerodynamics, fluidics, biomechanics, etc.	Harcourt Butler Technological Institute, Kanpur.	Dr. N.L. Kachhara, Organising Secretary, 16th National Conference on Fluid Mechanics and Fluid Power, Mechanical Engineering Department, Harcourt Butler Technological Institute, Kanpur-208002

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month, while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through inter library loan for which requisition must be made through your Librarian.

INDIAN INSTITUTE OF SCIENC

BANGALORE-560 012

Requires

PRINCIPAL SCIENTIFIC OFFICER

R(IA) 308-20/88

II. SENIOR SCIENTIFIC OFFICER

R(IA) 308-21/88

For the Distributed Information Centre (DIC under the Bio-technology Information System (BTIS located at the Physics Department.

The principal objective of this facility is to provid ready access to users of computer based informatio on resources and data bases in fields related to Biotechnology.

Qualification and Experience

Post I Essential : (1) Ph.D. in the area of Physical or Life Sciences/Information or Computer Science or any related Branch. Familiarity with Compute programming and knowledge of Biology essential.

(2) 8-10 years experience in managing project and Personnel required. Evidence of ability to shoulde responsibilities such as planning and execution of the activities related to the Bio-informatics Centre.

Desirable : Experience or knowledge of modern micro/mini/supermini computers, Computer Networking, development of computer programmes for Biological Applications.

Post II Essential : Ph.D. in Physical or Life Sciences/Computer or Information Science or Post-graduate in Physical or Life Sciences/Computer or Information Sciences with atleast 5-8 years experience in the relevant field.

Desirable : Experience or familiarity/knowledge of Computer Networking, development and management of related software. Persons with Life Sciences background must have an aptitude for Bio-informatics.

Emoluments

Post I : Rs. 5,055/- p.m. in the scale of
Rs. 3700-125-4700-150-5000

Post II : Rs. 4,090/- p.m. in the scale of
Rs. 3000-100-3500-125-4500.

Relaxation : The number of years of experience is relaxable at the discretion of the competent authority in case of candidates possessing exceptionally good record and outstanding capabilities.

Details and prescribed application forms can be obtained on request from the Registrar accompanied by a crossed Postal Order for Rs. 5/- (free of cost to SC/ST or production of Caste Certificate from a competent authority) drawn in favour of Registrar, Indian Institute of Science, Bangalore-560012 alongwith a self-addressed stamped Rs. 5.40 envelope of the size 28x18 cms, **on or before 13th June, 1988.**

REGISTRAR

CENTRAL DRUG RESEARCH INSTITUTE

(Council of Scientific & Industrial Research)

ADVERTISEMENT No. 6/88

Applications are invited for the following posts in Central Drug Research Institute, Lucknow :

1. Scientist 'C'

Four posts : (Rs. 3000-100-3500-125-4500
Post No. (i) (Medical Mycology)

Ph.D. with 2 years experience in Mycology. Preference will be given to persons with research experience in relation to immunology of fungal infections and **evaluation of potential antifungal drugs in vitro and in experimental animals.**

Job requirements : To study the immunology of human pathological fungi **and to evaluate potential antifungal drugs against human pathogenic fungi**.

Post No. (ii) (Information)

First Class Master's degree in Natural Sciences/Statistics/Mathematics/Economics/Commerce/Operational Research Computer Science.

Experience : Atleast six years experience in planning, monitoring and evaluation and budgeting and cost accounting of R & D projects. **Desirable** : Experience in a biomedical research institution and technical report writing.

Job requirements : To implement modern methods of R & D project management; to advise the management in the formulation, budgeting and cost accounting of R & D projects; to monitor and evaluate projects' technical and financial performance; to prepare technical and annual/five-year plan documents. These assignments require regular interaction with R & D and other technical departments of the Institute, CSIR Headquarter and it's laboratories.

Post No. (iii) (Process Development)

Ph.D. in Organic Chemistry in Chemical Engineering with 2 years experience in Scaling up preparation of Organic Compounds to at least Kilogram Scale.

Job requirements : To provide innovations in synthesis and on Kg. scale or larger of institute's compounds taken up for drug development.

Post No. (iv) (Chemistry)

Ph.D. (Organic Chemistry) with 2 years research experience in the chemistry of natural products/ medicinal chemistry as evidenced by good publications.

Job requirements : To conduct research in the area of biologically active natural products, including marine natural products/synthesis of heterocyclic compounds of biological interest.

2. Scientist's 'B'

Three posts : Rs. 2200-75-2800-EB-100-4000)
Post Nos. (i) & (ii) (One post reserved for S.C.)

Ph.D. (Organic Chemistry). **Desirable** : 2 years research experience in medicinal chemistry which have provided publications of good quality.

Job requirements : To synthesise compounds of biological interest.

Post No. (iii) (Microbiology) (Unreserved)

M.Sc. Ist class or Ph.D. in Zoology/Microbiology. **Desirable** : 3 years research experience, candidates with Ph.D. in any area of Malaria Research will be given preference.

Job requirements : To conduct research in the field of Chemotherapy of Malaria/Development of new experimental models for malaria/gametocytocidal activities/cerebral malaria.

3. Junior Technical Assistant

One post (S.T./General (Rs. 1400-40-1800-EB-50-2300)

B.Sc. with Chemistry as one of the subjects. **Desirable** : Experience in Research/Development of processes for synthetic drug intermediates or chemical process industry.

Job requirement : The incumbent will assist in scale up studies concerned with R & D programme in the field of drug and drug intermediate. Has to work in shift for operation of chemical plants. Has to carryout literature survey and help in preparation of technical reports.

General Conditions

1. All the above posts carry usual allowances as admissible under the rules of Govt. of India. Total emoluments at the minimum and the maximum of the grades including H.R.A. at present are as follows :

Scale	Minimum	Maximum
Rs. 3000-4500	Rs. 4065/-	Rs. 6030/-
Rs. 2200-4000	Rs. 3011/-	Rs. 5330/-
Rs. 1400-2300	Rs. 1867/-	Rs. 3124/-

2. Candidates belonging to S.C./S.T. communities should invariably enclose an attested copy of original caste certificate issued by a competent authority with their application failing which they will not be entitled to the concessions otherwise admissible to them. In the event of non-availability of S.C./S.T. candidates for the post of Scientist 'B' the post will be filled up by general candidates by following the prescribed procedure.

3. Since it is not possible to call all the eligible candidates for the interview, the applications will be shortlisted for the purpose and the decision of the Director will be final.

4. Applicants called for attending interview will be paid single second class rail fare to and fro the actual place of undertaking the journey or from the normal place of residence as mentioned in the application whichever is earlier to Lucknow Railway Station.

5. The prescribed application form may be obtained from the office of the Controller of Administration, Central Drug Research Institute, Chatter Manzil Palace, P.B. No. 173, Lucknow-226001 (U.P.), by sending a requisition duly indicating the post and advertisement number alongwith a self-addressed envelope of viz. 23x10 cm. Any request for application form received after 15.6.88 will not be entertained for supply by post. Application duly completed (supported by the attested copies of certificates and testimonials) alongwith a non-refundable fee of Rs. 10/- (no application fee is prescribed for S.C./S.T. candidates) in the form of crossed Indian Postal Order drawn in favour of the Director, Central Drug Research Institute, Lucknow should reach Director, Central Drug Research Institute, Lucknow on or before **5.7.1988**. Applications received after this date will not be considered.

6. Separate application for each post alongwith requisite postal order in a separate envelope indicating the advertisement number and post applied for should be sent.

7. The candidates in Government/Semi-Government Organisations, Public Undertakings and Autonomous Bodies should route their applications through proper channel.

8. The number of vacancies to be filled may vary at the time of actual selection and due consideration for reservations of posts will be given where necessary.

9. Persons selected for the posts of Scientist 'C' and Scientist 'B' will be appointed on Contract for six years including probationary period of two years. The other posts are temporary but likely to continue year to year basis.

10. The Institute has a system of periodical assessment promotion on merit.

11. The post no. 3 (JTA) is being readvertised 2nd time and is also open for general candidates. The general candidates would, however, be considered only if no suitable S.T. candidates are still available for appointment to the vacancy reserved for them.

12. Canvassing in any form and/or bringing in any influence political or otherwise, will be treated as a disqualification for the post.

Interim Inquiries will not be Entertained.

CLASSIFIED ADVERTISEMENTS

UNIVERSITY OF LUCKNOW

Advertisement No. 2/1988

WANTED

Professors : (Rs. 1500-60-1800-100-2000-125/2-2500 (unrevised)

1. One in Linguistic.
2. One in Ancient Indian History & Arch.,
3. One in Physics.
4. One in Constitutional & Administrative Law.
5. One temporary in English.

Readers : (Rs. 1200-50-1300-60-1900 (unrevised)

6. One in Zoology.

Lecturers : (Rs. 700-40-1100-50-1600-unrevised).

7. Two temporary in Ancient Indian History & Arch.
8. One temporary in Political Science.
9. One in Chemistry.
10. One permanent and one temporary in Botany.
11. One in English.
12. One in Business Administration.
13. One temporary in Physics.

Minimum Qualifications for Professors

Eminent scholarship with published work of high quality and active engagement in research and ten years' experience of teaching or research and experience of guiding research at doctorate level.

OR

Outstanding scholarship with established reputation for significant contribution to knowledge.

Minimum Qualifications for Readers

(a) Good academic record with a doctorate degree or equivalent published work, and active engagement in research or innovation in teaching methods or production of teaching materials; and

(b) Five years' experience of teaching or research including at least three years as Lecturer or in an equivalent position.

Provided that the requirement contained in clause (b) may be relaxed in the case of candidate who in the opinion of the Selection Committee has outstanding research work to his credit.

Minimum Qualifications for Lecturers

(a) A doctorate degree or research work of an equally high standard in a relevant subject; and

(b) Consistently good academic record with first or high second class Master's degree or an equivalent degree of a foreign University in a relevant subject.

GENERAL

Benefits of Provident Fund/Pension available as admissible under the rules. Period of probation for permanent post is one year.

It is not necessary to fill any/all of the advertised posts. Canvassing will be disqualification.

Prescribed application form can be obtained, free of cost, by sending a self-addressed envelope size 23 x 10 cm. with postage stamp worth Rs. 6.00 to cover registration charges, from the office of the Registrar. Last date for submission of application duly completed in all respects with recent testimonials, publication etc. and Bank Draft for Rs. 5/- drawn in favour of the Registrar, Lucknow University (Postal Order or Money Order will not be accepted) payable at any Bank in Lucknow, is **June 24, 1988.**

Application without Bank Draft will not be entertained. Candidates who are in service should send their applications through proper channel. Application form to outstation candidates will be sent upto **June 17, 1988.**

Essential Qualifications for

Professorship : An eminent Scholar with published work of high quality actively engaged in research. Ten years' experience of teaching and/or research. Experience of guiding research at doctoral level.

OR

An outstanding scholar with established reputation who has made significant contribution to knowledge.

Readership : Good academic record with at least second class Master's degree in a relevant subject with a doctoral degree or equivalent published work. Evidence of being actively engaged in (i) research or (ii) innovation in teaching methods or (iii) production of teaching materials.

5 years experience of teaching of undergraduate/post-graduate classes and/or post-doctoral research work with evidence of published work.

Note : Second class would mean at least 50% marks in the subject or equivalent grade.

Lecturership : (Other than those in Foreign languages, Music, Management Studies, Law, Part-time Lecturers in Law and Lecturer-cum-Community Organiser).

(a) A Doctorate degree or research work of an equally high standard; and

(b) Good academic record with at least second class (C in the seven point scale) Master's degree in a relevant subject from an Indian University or an equivalent degree from a foreign University.

Having regard to the need for developing inter-disciplinary programmes, the degree in (a) and (b) above may be in relevant subjects.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax the requirement of "at least second class in Master's degree examination" in terms of level achieved at the said examination as prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, a person possessing good academic record (weightage being given to M.Phil. or equivalent degree or research work of quality) may be appointed on the condition that he will have to obtain a Doctor's/M. Phil. degree or give evidence of research of high standard within fourteen years or till he reaches the stage of Rs. 3400 in the pay-scale, whichever is earlier, from the date of his appointment failing which he will not be able to earn future increments until he fulfils these requirements.

Explanation :

1. For determining 'good academic record' the following criteria shall be adopted :
   (i) A candidate holding a Ph.D./M.Phil. degree should possess at least a second class Master's degree; or
   (ii) A candidate without a Ph.D/M.Phil. degree should possess a high second class Master's degree and second class in the Bachelor's degree; or
   (iii) A candidate not possessing Ph.D/M.Phil. degree but possessing second class Master's degree should have obtained first class in the Bachelor's degree.
2. Persons having secured at least 55% marks or more shall be deemed to have passed the examination in the high second class.

Lecturership in Italian, French, Swedish, Japanese Languages and Part Time Lecturership in Slavic Studies

(a) A Doctor's degree or research work of an equally high standard; and

(b) Good academic record with at least second class (C in the seven point scale) Master's degree or M.Phil degree from an Indian University or an equivalent degree from a foreign University. Having regard to the need for developing interdisciplinary programmes, the degrees in (a) and (b) above may be in relevant subjects.

Provided that if the Selection Committee is of the view that the Research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (a) and (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, a person possessing a good academic record may be appointed on the condition that he will have to obtain a Doctor's/M.Phil degree or give evidence of research work of equivalent high standard within fourteen years of his appointment failing which he will not be able to earn future increments until he fulfils these requirements.

Explanation :

1. For determining 'good academic record' the following criteria shall be adopted :
   (i) A candidate holding a Ph.D./M.Phil. degree should possess at least a second class Master's degree; or
   (ii) A candidate without a Ph.D./M.Phil. degree should possess a High Second class Master's degree and second class in the Bachelor's degree; or
   (iii) A candidate not possessing Ph.D./M.Phil. degree but possessing second class Master's degree should have obtained first class in the Bachelor's degree.
2. Persons having secured at least 55% marks or more shall be deemed to have passed the Examination in the High Second Class.

Lecturership in Management Studies

A Master's degree in Business Administration or M. Tech. in Engineering with first class with the provision that the incumbent would acquire a doctorate degree within a period of fourteen years.

In the case of allied subjects like Industrial Psychology, Personnel Management, Business Statistics, Cost Accountancy etc. where Lecturers are required to be recruited with qualifications other than M.B.A. or M. Tech. the minimum qualifications shall be the same as prescribed for the Faculties of Arts, Social Sciences including Commerce and Sciences.

Lecturership in Music

(a) Good academic record with at least second class (C in the seven point scale) Master's degree in a relevant subject or an equivalent degree or diploma recognised by the University; and

(b) Two years research or professional experience or evidence of creative work and achievement in the field of specialization or a combined research and professional experience of three years in the field as an artist of outstanding talent.

OR

A traditional or a professional artist with highly commendable professional achievement in the subject concerned.

Lecturership in Law

Good academic record with at least second class (C in the seven point scale) Master's degree in Law from an Indian University with the relevant specialization or equivalent degree from a foreign University.

Part Time Lecturership in Law

Must be enrolled as an advocate of a High Court and should have actually practised at the bar for not less than five years.

Lecturer-cum-Community Organizer

Good academic record with a first or high second class Master's degree in Social work or an equivalent degree of a foreign University (second class would mean atleast 50% marks in the subject or equivalent grade).

Research Associate

Consistently good academic record with first or high second class (B^+) Master's degree or an equivalent degree of a foreign University in the subject concerned.

Note : Initial appointment will be for a tenure period of 3 years extendable by another 2 years only. In no case the tenure wiil extend beyond 5 years in all

Professional Junior

(a) Good academic record with at least a high second class Master's degree in a subject other than Library Science.
(b) Master's degree in Library Science with first class or high second ciass.

Assistant Registrar/Administrative Officer/Assistant Controller of Examinations

(a) A Master's degree or LL.B. or Post-graduate diploma of two years' duration in any of the fields in Public Administration/Management/Computer Application of a recognised University or its equivalent.
(b) At least three years' experience in supervisory or equivalent Cadre in a University, Educational or Research Institution.
(c) Those who have teaching or research experience alongwith proven administrative capabilities are also eligible to apply.

The candidates will be required to appear in a written test to adjudge their ability of expression and knowledge of the administrative aspects relating to educationai administration, the selection being based on the performance of the candidates in written test and the interview.

The prescribed application forms can be had from the Room No. 205, Estab. IV. Section of the University either personally or by sending a self-addressed envelope (size 13 cm x 28 cm) with postage stamps worth Rs. 6/-.

The candidates will have to produce the original documents relating to their age, qualifications, experience etc. at the time of interview.

Applications (separate for each post) accompanied by attested copies of Degrees. other certificates, marksheets, published research articles etc. should be addressed to the Registrar. The last date prescribed for receipt of the application **is 13th June, '88.**

Note :
1. It will be open to the University to consider names of suitable candidates, who may not have applied. Relaxation of any of the qualifications may be made in exceptional cases, in respect of all the posts on the recommendations of the Selection Committee.
2. Canvassing in any form by or on behalf of the candidate will disqualify,
3. Candidates from outside Delhi when called for interview will be paid to and fro single seeond class rail fare.
4. The University reserves the right not to fill up any of the vacancies advertised if the circumstances so warrant.

Madan Mohan
REGISTRAR

TATA INSTITUTE OF SOCIAL SCIENCES

DEONAR, BOMBAY 400 088

REGISTRAR

"सबसे बड़ा शिक्षण चारित्र्य-निर्माण है"
—महात्मा गांधी

गुजरात विद्यापीठ :

अहमदाबाद-380014

शैक्षणिक सत्र 1988-89 में प्रवेश प्राप्त करने के लिए आवेदन

1. ग्रामसेवा महाविद्यालय :—श्री महादेव देसाई ग्राम-सेवा महाविद्यालय, सादरा : जि० अहमदाबाद : तथा रांधेजा : जि० गांधीनगर . में महात्मा गांधी के आदर्शो के अनुसार कार्यकर्ता तैयार करने के लिए "समाज-विद्या विशारद" की बी.ए. के समकक्ष पदवी के लिए कक्षा 12 के पश्चात् तीन

वर्ष के लिए नए अभ्यासक्रम के नए सत्र का प्रारंभ 15 जून 1988 से होगा। गांधी नगर जिले के रांधेजा गांव में लड़कियों के लिए और अहमदाबाद जिले के सादरा गांव में लड़कों के लिए की गई अभ्यासक्रम-व्यवस्था में नए शैक्षणिक वर्ष से प्रथम वर्ष में प्रवेश प्राप्त करने के लिए उच्चतर माध्यमिक कक्षा-12 अथवा उसके समकक्ष परीक्षा दी हो। प्राथमिक अध्यापन मंदिर, व्यायाम, आई. टी. आई. अथवा चित्र-शिक्षक की दसवीं कक्षा के बाद की दो बर्ष की तालीम अथवा प्रि. युनिवर्सिटी की परीक्षा में उत्तीर्ण हों, ऐसे भाई-बहन प्रवेश प्राप्त करने के लिए परिणाम से पहले भी अर्जी कर सकते हैं। बौधिक अभ्यासक्रमों के उपरांत भाईयों के लिए मुख्य विषय के रूप कृषि विज्ञान और गौण विषय के रूप में पशुपालन, अम्बर यंत्र विज्ञान तथा बहनों के लिए मुख्य विषय गृह विज्ञान और गौण विषय में अम्बर जैसे उत्पादक कार्य की तालीम लेना अनिवार्य है। अंतिम तीसरे वर्ष में ग्राम्य विस्तार की किसी संस्था में वर्षभर कार्य करना होगा। और ग्राम्य विस्तार के प्रत्यक्ष कार्य पर आधारित "शोध-निबंध" लिखना होगा। छात्रालय जीवन सबके लिए अनिवार्य है और उसका भी मूल्यांकन किया जायेगा।

2. ग्राम व्यवस्थापन और ग्राम विकास पारंगत (मास्टर ऑफ रूरल मेनेजमेन्ट और रूरल डेवलेपमेन्ट) तथा गृहविज्ञान पारंगत : उपर्युक्त विषय का पारंगत : एम.ए. : कक्षा का दो वर्ष का नया अभ्यासक्रम जून 1988 से सादरा पंचायत राज केन्द्र में शुरू होगा। इसमें उन लोगों को प्रवेश मिल सकेगा जिनके पास समाज-विद्या सम्बन्धी किसी विषय में द्वितीय श्रेणी की बी.ए. और समकक्ष डिग्री होगी। छात्रालय जीवन अनिवार्य रहेगा। इसी प्रकार गृह-विज्ञान पारंगत (एम.ए., होम सायंस) का पूरे समय का दो वर्ष अभ्यासक्रम रांधेजा में शुरू किया जाएगा।

3. महात्मा गांधी परिसर, अहमदाबाद, अनुस्नातक (पोस्टग्रेज्युएट) अभ्यासक्रम : 1. गुजराती भाषा शास्त्र सहित और 2. हिन्दी (प्रशासन की हिन्दी सहित) 3. इतिहास और संस्कृति तथा दफ्तर विज्ञान। (आर्काइव्ज)। 4. समाज-मानवशास्त्र (सोश्यल ऐन्थरोपोलोजी)। 5. ग्राम अर्थशास्त्र (रूरल इकोनोमिक्स)। 6. गांधीविचार। 7. प्रौढ़ शिक्षण और जनसंख्या शिक्षण दो वर्ष का पूरे समय का तथा स्वाध्याय पद्धति का साप्ताहिक वर्गों का पारंगत (एम.ए.), 8. जिसकी मातृभाषा कन्नड़, मलयालम तथा सिंधी है उनके लिए मातृभाषा के भाषा साहित्य में पारंगत (एम.ए.) के लिए रविवार के वर्ग रखे जायेगे। 9. समाजलक्षी पारंगत (ग्रामलक्षी) दो वर्ष के अनुस्नातक अभ्यासक्रम में प्रवेश के लिए अर्जी ता. 15 जून, 1988 तक स्वीकार की जाएगी। पारंगत अभ्यासक्रम में प्रवेश के लिए प्रस्तुत अथवा आनुषांगिक विषय की द्वितीय श्रेणी की स्नातक पद्वी आवश्यक है। समाज कार्य के अभ्यासक्रम में छात्रालय जीवन अनिवार्य है, और उसे शिक्षण के अंतर्गत भाग मानकर मूल्यांकन किया जाएगा : ग्राम विस्तारों को प्रधानता देने की दृष्टि से समाज कार्य पारंगत के अभ्यासक्रम की रचना की गई है। इसलिए ग्राम विस्तारों के रचनात्मक कार्यों को महत्व दिया जाएगा। ग्राम विद्यापीठों की पद्वी वाले अथवा बी.ए. में द्वितीय वर्ग वाले छात्र ही प्रवेश के योग्य होंगे। उपरोक्त विषयों के उपरांत अनुपारंगत (एम. फिल) दफ्तर विज्ञान, शांति-संशोधन, विज्ञान-अहिंसा तथा बोद्ध दर्शन के दो वर्ष के साप्ताहिक अभ्यासक्रम के लिए वे लोग प्रवेश-पात्र गिने जाएँगे जिन्होंने पारंगत (एम.ए.) के समकक्ष परीक्षा द्वितीय श्रेणी में पास की होगी। विद्यावाचस्पति (पी.एच.डी.) के दो वर्ष के अभ्यासक्रम के लिए अनुपारंगत की द्वितीय वर्ष की पद्वी आवश्यक है। विद्यावाचस्पति (पी.एच.डी.) हुए लोगों के लिए विद्यावारिधि (डी. लिट.) की पद्वी का नया अभ्यासक्रम इस वर्ष से शुरू होगा। स्वाध्याय पद्धति के अभ्यासक्रमों में भी समूह जीवन का अभ्यास कराने के लिये शिविरों तथा अभ्यास प्रवासों का आयोजन किया जाएगा जो कि सबके लिए अनिवार्य होगा।

4. पत्रव्यवहार द्वारा गांधीविचार पारंगत (एम.ए.) और शिक्षण पारंगत (एम.एड.)

गांधीजी के जीवन और कार्य के संबंध में तथा गांधी विचार के सामाजिक, आर्थिक, राजकीय, धार्मिक, आध्यात्मिक, शैक्षणिक पहलुओं पर पारंगत (एम.ए.) कक्षा का यह अभ्यासक्रम दो वर्ष का होगा। जो लोग किसी विषय पर स्नातक अथवा उसके समकक्ष पद्वी धारण करते होंगे उन्हें प्रवेश मिल सकेगा। जिन्हें पद्वी न लेनी हो उनके लिए एक वर्ष के चार प्रश्नपत्रों का पाठ्यक्रम भी रहेगा। जो लोग स्नातक नहीं हैं किन्तु जिनकी आयु 21 वर्ष के ऊपर की है वे लोग भी डिप्लोमा की परीक्षा दे सकेंगे। (1) किन्तु उन्हें उत्तीर्ण होने का ही प्रमाण-पत्र मिलेगा। (2) शिक्षण पारंगत (एम.ए.) तथा बी.एड. अथवा उसके समकक्ष पद्वीधारी प्राथमिक बुनियादी अध्यापन मंदिरों में काम करने वाले शिक्षक पत्र-व्यवहार के शिक्षण के लिए अर्जी कर सकेंगे। पत्र-व्यवहार उपरांत साप्ताहिक वर्गों का दो वर्षों का और पूरे समय के वर्गों—द्वारा एक वर्ष का शिक्षण पारंगत के अभ्यासक्रम की भी व्यवस्था की गई है।

5. ग्रंथालय विज्ञान विशारद(बी.लीब) ग्रंथालय विज्ञान विशारद (बी लिब.) एक वर्ष का पूरे समय का अभ्यास जुलाई 1988 से शुरू होगा। इस अभ्यासक्रम के लिए वे लोग ही अर्जी कर सकेंगे जो बी.ए. द्वितीय वर्ग की पद्वी धारण करते हैं। इसके उपरांत ग्रंथालय विज्ञान पारंगत के दो वर्ष के अभ्यासक्रम के लिए वे अर्जी कर सकेंगे जो बी.लिब. उत्तीर्ण हैं।

सभी अभ्यासक्रमों के प्रवेश संबंधी : 1. गांधीजी नुं जीवन एमना ज शब्दोमां, 2. समूहजीवन आधार—बबलभाई मेहता, 3. केलवणी वडे क्रांति (संक्षिप्त), 4. भारतीय संस्कृति नुं अमृततत्व पुस्तको अर्जी फोर्म के साथ खरीद लेनी चाहिए। प्रवेश में दो घंटे के 200 अंक के दो प्रश्न पत्र रहेंगे, उसमें विद्यापीठ के ध्येय, गांधी जीवन और विचार, भारतीय संस्कृति के आदर्श अभ्यास के प्रस्तुत विषय की मूलभूत जानकारी और समूह-जीवन की अपेक्षाओं का समावेश होगा। दोनों प्रश्नों में हेतुलक्षी छोटे सवाल पूछे जाएंगे। प्रवेश परीक्षा की तारीख प्रवेश-पात्र उम्मीदवारों को पत्र द्वारा सूचित की जाएगी।

सभी अभ्यासक्रमों के अध्ययन काम में

प्रमाणित खादी का गणवेश पहनना होगा तथा प्रार्थना और समूह कताई में नियमित और समयसर भाग लेना होगा तथा गांधी विचार की परंपरा अनुसार जीवन व्यवस्था के सभी कार्यक्रमों में उपस्थिति अनिवार्य होगी। युनिवर्सिटियों की तुलना में वेकेशन और छुट्टियों के दिन बहुत कम रहेंगे और एक सत्र में 10 दिन से अधिक अनुपस्थित रहने वाले का सत्र मंजूर नहीं होगा। प्रवेश प्राप्त करने वाले को प्रामाणित खादी के विद्यापीठ द्वारा नियत किये गए, गणवेश तीन जोड़ियां तथा छात्रालय में प्रवेश लेने वाले को बिस्तर लाना आवश्यक होगा। प्रवेश पत्र तथा प्रवेश परीक्षा सम्बंधी जानकारी प्राप्त करने के लिए संबंधित आचार्य तथा संयोजक को तीन रु० के डाक टिकिट पत्र के साथ भेजना आवश्यक है।

Advertisement No. Est/3A/88

Dated : 19.5.1988

Corrigendum and Addendum to Advt. No. Est/3/88 Dated 27.4.88

Regarding applications for the posts of Readers and Lecturers in different Departments.

Group—A

1. Serial No. 7 : Department of Education

The number of vacant posts of Readers and Lecturers be read as Reader—5, Lecturer—2, instead of Lecturer—1 as advertised.

2. Serial No. 19 : **Department of Business Management.**

Reader—(2) Posts—For Reader (1) Post-Specialisation in Econometrics and Advanced Economic theory with teaching experience in Postgraduate classes for at least five years in the following subjects.

(1) Managerial Economics
(2) Marketing Economics and Market forecasting
(3) Quantitative Techniques

For Reader (2) Post—Specialisation in any of the functional areas of management, viz. marketing, personnel and finance.

Lecturer—(1) Post—M.A. in Economics/M.Com./MBM/MBA with good academic records with research aptitude.

3. Serial No. 15 : **Department of Language**

Lecturer 7 : One Lecturer each for German, French, Chinese. Tibetan, Spanish, Japanese, Italian.

4. Serial No. 1 : **Department of Philosophy**

The number of vacant posts of Readers and Lecturers be read as Reader—2, Lecturer—1 instead of Reader 2 only.

5. Serial No. 5 : **Department of Linguistics.**

The humber of vacant posts of Lecturers be read as Lecturer—4 instead of 3.

6. Serial No. 6 : **Department of Tamil**

The number of vacant posts be read as Reader—1 and Lecturer—2 instead of Lecturer—2.

7. Serial No. 9 : **Department of South and South East Asian Studies**

The number of vacant posts be read as Reader—1 and Lecturer—2 instead of Lecturer—1.

8. Serial No. 11 : **Department of Sanskrit**

The number of vacant post be read as Lecturer—3 instead of 4.

9. Serial No. 13 : **Department of Arabic & Persian**

The number of vacant posts be read as Reader—1 and Lecturer—1 instead of Lecturer—2.

10. Serial No. 14 : **Department of Pali**

The number of vacant posts be read as Reader—1 and Lecturer—2 instead of Lecturer—1.

11. Serial No. 15 : **Department of Languages**

The post of Reader—1 to be treated as deleted for the present.

12. Serial No. 22 : **Department of Bengali**

The number of vacant posts be read as Reader—1 and Lecturer—1 instead of Reader—1 post only.

ADDENDUM :

13. Serial No. 23 : **Department of English**

Reader—1 post

14. Serial No. 24 : **Department of French**

Lecturer—1 post

Group—B

1. Serial No. 3 : **Department of Chemical Technology**

Lecturers—2 Posts—Specialisation for Post (1)—Ceramic Engineering and Allied Technological subjects—In addition ability to teach Kinetics of high temperature operations, Heat Transfer and Mechanical operations in Industrial process.

For post (2)—Organic technology and allied Technological subject. In addition ability to teach Petrochemicals, Plant design and Project feasibility.

2. Serial No. 1 : **Department of Chemical Engineering**

The number of the posts of Reader be read as 3 instead of 2. For the additional post of 1 Reader.

Essential Qualification—Uniformly good academic career with Master's and Bachelor's degrees in Chemical Engineering/Mechanical Engineering of this University or equivalent.

Desirable—Teaching and/or research experience on subjects like machine design, Applied Mechanics Process Instrumentation and Control, Chemical Reaction Engineering, Transpost phenomenon and Process Design.

3. Serial No. 11 : **Department of Chemistry**

The Specialisation for the post of Reader (1 post) should be read—any specialisation in Chemistry (i.e. Inorganic/Organic/Physical/Analytical) insteap of 'Organic Chemistry in Natural Products'.

4. Serial No. 4 'B' —**Department of Plastic and Rubber Technology**

Lecturers—(2) Posts—Specialisation—For (1) post—Rubber Technology and for the post (2) Plastic Technology.

5. Serial No. 14. 'B'—**Department of Botany**

Lecturer—(4) Posts—(a) the distribution of the posts is as follows :

2 posts of Lecturers in the Department of Botany

2 posts of Lecturers in the Centre of Advanced Study (Cell and Chromosome Research)

(b) For the 2 posts of Lecturers in Botany—Specialisation—(1) M.Sc. in Botany with Specialisation in Microbiology and (2) M.Sc. in Botany with specialisation in Expt. Pharmacognosy.

(c) For the 2 posts of Lecturers in the

Centre of Advanced Study—(1) M.Sc. in Botany with Chromosome Research in relation to plant tissue culture, (2) M.Sc. in any branch of Life Sciences with specialisation in Chromosome Research in relation to environmental mutagenecies in higher organism.

6. Serial No. 8 **Department of Zoolozy**

Reader (2) posts—Specialisation—Animal Physiology/Malacology/Fishery/Genetics (not more than one from any of these specilisations).

Lecturer (1) post—Specialisation—Endocrinology

7. Serial No. 10 'B'—**Department of Physiology (Sc.)**

Lecturer (3) posts—Specialisation—(a) For 1 post—Sports and Exercise Physiology/Work Physiology and Ergonomics.

For the (2) post—Biophysics and Electro Physiology/Endocrinology.

For the (3) post—Biochemistry/Nutrition/Immunology and Microbiology.

8. Serial No. 2—**Department of Applied Physics.**

(a) Reader (1) post—The specialisation for the one post of Reader be read as M.Tech. in Applied Physics or M.E./M.Tech. in Electrical Engineering with specialisation either in Electrical Machines and Power system or in Measurement and Instrumentation.

(b) Lecturer (1) post—(In addition to general essential qualifications M.Tech. in Applied Physics or M.E/M. Tech. in Electrical Machines and/or power systems.

9. Serial No. 7 —**Department of Statistics**

Lecturer—2 posts Desirable—"Knowledge of design of Experiments and multivariate analysis"

10. Serial No. 6 **Department of Geography.**

Reader—1 post Specialisation for Reader preferably Bedology/Medical Geography.

Lecturer—1 Post Specialisation for Lecturer preferably Meteorology/Regional Planning.

11. Number of Lecturer's posts (Department of Anthropology) under Serial No. 5 to be read as 4 instead of 6 at present.

12. Serial No. 9 (Department of Geology) to be treated as deleted entirely for the present.

Group—C

1. Serial No. 3 **Department of Pharmacology**

For Reader (1) Post—Candidates possessing M.Sc (Organic Chemistry as specialisation) Ph.D. (Chemistry) Degree with Post Graduate teaching and Research experience in Medical Chemistry for more than ten (10) years will be preferred.

For Lecturer (1) Post—Candidate with M.B.B.S./Ph.D. (Medicine) having research experience in indegenous-Degrees and Reproductive Pharmacology will be preferred.

The last date for receipt of application has also been extended and be read as 10th June, 1988 instead of 27th May, 1988.

Those who have already applied in response to Advt.No. Est/3/88 may send additional information, if necessary.

P.K. Chowdhury
DEPUTY REGISTRAR

Jagadguru Sri Shivarathreeshwara Mahavidyapeetha

RAMANUJA ROAD, MYSORE-4.

B.Sc. Speech and Hearing

Qualification for admission

Pre-university examination or equivalent of any recognised University/Board with the following subjects with at least 50% marks in the optional subjects at the qualifying examination in these subjects (45% for SC/ST).

(a) Physics
(b) Chemistry
(c) Biology
(d) Mathematics

OR

From Universities where PCMB combination is not available the following combinations are accepted:

(a) Physics		(a) Physics
(b) Chemistry	OR	(b) Chemistry
(c) Mathematics		(c) Biology

Total seats available—23. 4 reserved for SC/ST. 3 seats are reserved for foreign nationals. The other seats are allocated on merit and on a zonal basis.

M.Sc. Speech & Hearing

Qualification for admission

B.Sc., (Speech & Hearing) or Equivalent Number of Seats : Thirteen. 2 reserved for SC/ST, and three seats are reserved for in-service personnel with 3 years experience.

Stipend

All the selected candidates (except foreign nationals) will get a stipend @ Rs. 150/- per month for B.Sc., and Rs. 250/- per month for M.Sc., for nine months in an academic year.

The medium of instruction will be English.

Last date for receipt of completed application at the Institute :

(a) B.Sc.	**10th June 1988**
(b) M.Sc.	**2nd July, 1988**

Hostel accommodation for both Gents and Ladies available.

MONDAY, JUNE 6, 1988 **Rs. 1.50**

8th Annual Convocation of the University of Poona. (From L to R) : Prof. S.N. Navalgundkar, Pro-Vice-Chancellor, Prof. V.G. Bhide, Vice-Chancellor, Dr. M.R. Srinivasan, Chairman, Atomic Energy Commission, who delivered the convocation address and Shri Shantanurao Kirloskar, Industrialist.

ANNAMALAI UNIVERSITY

ANNAMALAINAGAR

NOTIFICATION

Applications are invited for admission to the following courses for the academic year 1988 89.

		Cost of application form & Prospectus
1.	M.A. Degree **Branches :** 1. Philosophy, 2. Psychology. 3. History, 4. Political Science, 5. Economics, 6. English, 7. Tamil, 8. Sanskrit. 9. Linguistics, 10. Sociology, 11. Population Studies. 12. Develoment Studies, 13. Applied Economics, and 14. Translation.	Rs. 25/-
2.	M Sc. Degree **Branches :** 1. Mathematics, 2. Statistics, 3. Physics, 4. Chemistry, 5. Bio-Cbemistry. 6. Botany, 7. Zoology, 8. Geology, 9 Marine Biology & Oceanography; and 10. Coastal Acquaculture.	Rs 25/-
3.	M.Com. Degree (Both English & Tamil medium)	Rs. 25/-
4.	M.O.L. (Tamil) Degree	Rs. 25/-
5.	B.Ed. Degree	Rs. 25/-
6.	M.Ed. Degree	Rs. 25/-
7.	M.Phil, Degree	Rs. 25/-
8.	Post-Graduate Diploma Courses 1. Tourism, 2. Archieves Keeping, 3. Translation Administrative Drafting and Reporting in Hindi, 4. Econometrics, 5. Gandhian Thought, 6. Ramalinga Philosophy, 7. Guidance and Counselling, 8. Corporate Secretaryship, 9. Applied Linguistics, 10. Insurance, 11. Public Administration, 12. Banking Law and Practice, 13. Population Education, 14. Statistics.	Rs. 25/-
9.	Post M.Sc. Diploma Courses 1. Spectroscopy, 2. Magnetic Science, 3. Hydro Geology.	Rs. 25/-
10.	Bachelor of Library and Information Science	Rs. 25/-
11.	Certifieate Course in Library Science	Rs. 10/-
12.	Title of Isaimamani	Rs. 10/-
13.	Title of Natanamamani	Rs. 10/-
14.	B.Music	Rs. 10/-
15.	Diploma Courses 1. Tamil, 2. Advanced Diploma for Proficiency in French, 3. French, 4. Linguistics, 5. Languages (Tamil, Telugu, Kannada, Malayalam, Sanskrit, Hindi)	Rs. 10/-
16.	Certificate Courses 1. French, 2. Journalism, 3. Folklore, 4. Reprography and non-book materials, 5. Language (Tamil, Telugu, Kannada, Malayalam, Sanskrit, Hindi).	Rs. 10/-

For application form and prospectus, the REGISTRAR, ANNAMALAI UNIVERSITY, ANNAMALAINAGAR-608 002 may be addressed by enclosing (i) a demand draft to the value indicated against each course, drawn in favour of the REGISTRAR, ANNAMALAI UNIVERSITY, payable on Indian Bank or Bank of Madura at ANNAMALAINAGAR, or State Bank of India at CHIDAMBARAM; and (ii) a self-addressed envelope of size 30 cm x 13 cm stamped to the value of Rs 1.80 with the name of the course for which the application form is required superscribed boldly on the envelope. The name of the course should be clearly indicated in the requisition letter. The application form together with the prospectus will be issued from 25th May 1988.

The last date for receipt of filled in application by the University is **30-6-88**.

The University will not be responsible for any postal delay.

UNIVERSITY OF POONA

V.G. Bhide*

University of Poona hosts the Group Discussion-cum-Orientation Programme on Financial Administration in Universities being organised by the Association of Indian Universities from 6-10 June, 1988.

The part of the country wherein University of Poona is located, and over which it has jurisdiction is unique in number of respects. This region has had a glorious past in various fields such as spiritual, philosophical, social, cultural, educational etc. It produced such a galaxy of Saints such as Dnyaneshwar, Ramdas, Tukaram, Namdeo, and several others; social reformers like Jyotiba Phule, Vitthal Ramji Shinde, Mahadeo Govind Ranade, Maharshi Karve and others; political thinkers such as Tilak, Gokhale, Ranade, Ambedkar, Savarkar etc. Indeed this region provided a leadership to the country in various fields such as education, politics, etc. and has been a craddle for a number of social reforms and political struggle.

Naturally this region clamoured for a separate University long before the country got its independence. The British Government deliberately overlooked these demands. However, as a result of persistent and strong public upsurge, the Governor of Bombay appointed a committee on 7th February 1942, under the Chairmanship of Rt. Hon'ble M.R. Jayakar, to report on the question of the establishment of a University for Maharashtra. The committee submitted its report on 6th August 1943. No action could be taken on the report of this committee until after the end of Second World War had ended and a popular Congress Ministry came into power again towards the end of 1946. Shri B.G. Kher, Prime Minister and Education Minister, Government of Bombay, took keen interest in the matter and processed the bill for the establishment of this university in the State Legislature.

The First University Act was passed by the Bombay Legislature on 18th February, 1948 and on 15th April of that year, Dr. M.R. Jayakar assumed his office as the First Vice-Chancellor of the University. In the initial stages, he was assisted by an Advisory Committee appointed by the Government. The main task before the committee was to frame provisional statutes and to conduct elections to the various bodies and authorities of the University. After the completion of this process, the University of Poona was formally declared as a corporate body on the 10th February, 1949 by a Government Notification. We moved to this beautiful campus extending over 411 acres in early 1950.

Aims and Functions of the University

The Jayakar Committee outlined the aims and functions of the University as follows :

(1) To lay the foundation of a strong teaching University by creating a central organization in Pune, for conducting directly all teaching in

---

graduate and post-graduate courses and for organizing and carrying on research in the Faculties of Arts, Science, Technology, Law, Medicine, and such other faculties as occasion may require.

(2) To lay down by holding, if necessary, a matriculation examination, adequate standards for the admission of students to university courses; to link together and bring into contact with itself, institutions of higher learning in Maharashtra and to co-ordinate research facilities and activities throughout Maharashtra by associating with itself scholars and institutions and by promoting research projects through such scholars and institutions.

(3) While not losing sight of its essential character as a university i.e. a seat of universal learning which recognises no frontiers or barriers except those of the human mind itself, to keep in view the special needs, interests and traditions of Maharashtra and its people and in particular its economic resources, its special problems of agriculture, industry and commerce, and generally the various aspects of its economic and industrial life.

(4) To diffuse widely the benefits of university education among all classes by organising centres of extra-mural teaching and university extension activity and encouraging the production of popular literature on scientific and cultural subjects.

(5) To institute and award diplomas of merit and proficiency in various branches of theoretical and practical study of a standard lower than the degree standard of the university.

One must admire the foresight of the founding fathers of this University that they envisaged some 40 pears ago what appears necessary now. The University has over the years kept these objectives in view and planned its programmes of development. May I say that we in the University, have debated on several occasions as the main functions of the university and we could do no better than to spell out these functions in the following language :

(a) To carry out research to expand the horizons of knowledge both concerning the inner world and of the external world and attempt to synthesize the knowledge of the inner and the outer worlds.

(b) To disseminate the known and the acquired knowledge through educational and training programmes and to inculcate among the students the desired attitudes, outlooks and values.

(c) To apply through extension services the known and the acquired knowledge to solve the perceived problems of the society—social, economic, industrial, etc. and to provide a leadership to the society in various fields.

To nurture and nourish this University, it was our good fortune that Providence provided to us a succession of Vice-Chancellors who had distinguished themselves in several fields and they lent their distinction to the University by their association with it. The University was fortunate to have such illustrious men as Dr. M.R. Jayakar (1948-1956), Dr. R.P. Paranjpye (1956-1959), Professor D.G. Karve (1959-1961), Mahamahopadhyaya D.V. Potdar (1961-1964), Dr. Kakasaheb Gadgil (1964-1966), Dr. D.R. Gadgil (1966-1967), Dr. H.V. Pataskar (1967-1970), Dr. G.S. Mahajani (1972-1975) etc. Under the guidance of these eminent men, the University made rapid progress and has to put it in the language of Dr. G S. Mahajani "the University has today the glow of intellectual health about it and so to say it presents academically a photogenic picture. It must also be mentioned that the local ethos of Pune and its surroundings characterised by regard for scholarship and learning has contributed in no small measure to this spectacular progress of this University. Today, it is considered as one of the leading and progressive universities in the country—a seat of learning of which we are justifiably proud."

University Teaching Departments

This University is both a teaching university and an affiliating university. Dr. Jayakar emphasized the importance of university teaching departments and started establishing these on the campus of the University. With his foresight and dynamism, the University departments developed very early. The number of these University departments has been growing steadily over the years. At present, we have 32 teaching departments spread over Faculties of Arts; Science; Engineering; Law; Mental, Moral and Social Sciences; Commerce; Management, etc. With the growth of University departments, the number of faculties has also been steadily increasing. Only this year, we added a new faculty called the Faculty of Management.

These university departments are at various stages of development. There are four Centres of Advanced

20 JUN 1988
C.F.T.R.I. MYS

Studies in the University. These are: Centre of Advanced Studies in Sanskrit; Centre of Advanced Studies in Economics; Centre of Advanced Studies in Linguistics and Centre for Advanced Studies in Solid State Physics and Material Science. This last was granted by the UGC this year.

The University Grants Commission on the recommendation of the Science Advisory Committee to the Union Cabinet launched a programme called the COSIST (Committee on strengthening of infrastructure in Science and Technology) to identify a very few select departments in the Science and Engineering faculties for strengthening them by equipping them so as to make them comparable to the corresponding departments in advanced countries. The selection of these departments is rigorous and is based on quality of teaching and research programme, achievement of the staff, etc. Four of our Science Departments namely Physics, Chemistry, Statistics and Zoology have received substantial assistance from the UGC under this programme. The selection of the departments under this programme is not only an honour but is also a recognition of the quality of the work and the standing of these departments in the country.

Next in order of importance and distinction is the programme of the University Grants Commission called the Departments of Special Assistance. Five departments of this University namely Physics, Chemistry, Mathematics, Statistics and Zoology have been recognized as Departments of Special Assistance. The case of the Department of Geology is being processed.

On the Arts and Social Sciences sides, there is a programme called the University Leadership Programme. Our departments of Politics and Public Administration, Sociology, Sanskrit, Philosophy have received recognition under this scheme.

Through the assistance of the University Grants Commission, the University established recently two new departments namely (1) Department of Elecronic Sciences, and (2) Department of Computer Science. The Department of Electronics, Government of India suggested to the UGC to select four Universities for establishing Department of Electronic Science and this University has the honour of being one of these four. This department of Electronic Sciences is expected to emphasize more on Science of Electronics rather than electronics engineering and will be funded liberally by the Department of Electronics, Government of India, and the UGC. Similarly, the Department of Computer Science of this University is unique and is perhaps the strongest computer science department in the country. It provides facilities for training leading to M.Sc. in Computer Science, M.Tech. in Computer, Master in Computer Applications and Ph.D. in Computers.

The University has during this year started two new departments on its own and these are (1) Department of Economics, and (2) Department of Commerce. We are fortunate to receive the guidance of Prof. V. M. Dandekar for our department of Economics.

All the departments continually try to update teaching programmes and turn out quality research work. Many of the Professors of the University have been awarded national lectureship of the UGC and chaired national and international conferences. About 1000 research papers are published every year. The University awards roughly 250-300 Ph.D. degrees in various subjects

Linkages with National Institutions

One of the most pace setting experiments which the University launched is the one concerning organization of post-graduate teaching programmes in collaboration with National Institutes. This has helped in improving considerably the quality of post-graduate teaching in the University.

TIFR/Physics Department Programme

The most important of these experiments is the one concerning the organization of M.Sc. Physics teaching jointly by the TIFR and the Physics Department. Tata Institute of Fundamental Research, Bombay is the national centre for Physics and Mathematics. In the joint programme, the syllabus of the M.Sc. Course is jointly evolved and taught by the faculty from TIFR as well as from the Physics Department. Two senior members of the faculty from TIFR spend one semester on our campus to participate in the teaching programme. We were fortunate to have Prof. B. M. Udgaonkar, Prof. Jayant Narlikar and others participating in this programme. The admission to this programme is carried out through a nation wide competitive examination. The TIFR provides scholarship of Rs. 400/- to twenty students. The UGC has agreed to provide scholarship to another twenty students.

Joint teaching programme also aims at modernization of M.Sc. laboratories and undertaking joint collaborative research programmes Similarly, some select students carry out their project work in the TIFR. This joint teaching programme has been a great success and has produced a sea change in the quality of education. The programme is highly popular in the country and this year nearly 1500 students from all over the country competed for twenty seats.

National Chemical Laboratory and Department of Chemistry Interaction

Encouraged by the success of the TIFR-Physics Department Interaction, National Chemical Laboratory, Pune offered to participate in postgraduate teaching in Chemistry. Scientists from NCL give course of lectures along with professors from the Department of Chemistry. In this programme also, NCL gives scholarship to twenty students selected through a competitive examination. This interaction is not only restricted to the teaching but extends over collaboration in research.

Last year NCL and the Department of Chemistry installed a unique joint facility for neutron activation analysis on our campus. This is a unique facility in the country and is used to carry out nuclear chemistry research and for detection of impurities to the level of few parts per million or better.

National Geophysical Research Institute and Department of Geology Interaction

Following the footsteps of National Chemical Laboratory, National Geophysical Research Institute, Hyderabad offered to participate in the teaching of M.Sc. Geology in cooperation with our faculty. NGRI has also established some unique seismic facilities here.

India Meteorological Department and Radio and Space Physics Group Interaction

A similar joint collaboration has now been evolved between the India Meteorological Department, Indian Institute of Tropical Meteorology and our Radio and Space Physics Group. These two institutions located at Pune also participate in the teaching of few courses in the Geography Department.

This cooperation and interaction with national laboratories and institutes are the first of their kind in the country and has been deeply appreciated by the UGC, Science Advisory Council to the Prime Minister and the Academy of Sciences. More than that, our students have benefitted tremendously through these interactions.

Honorary and Emeritus Professors

In addition to the above mentioned interaction with national institutes, we have sought to strengthen our postgraduate teaching and research by introducing a system of Honorary and Emeritus Professors. We are indeed fortunate that we have such a large number of eminent men in various disciplines living in Pune. The University is convinced that if some of these eminent people come and talk with our students, it will not only help to excite the curiosity of the students, but will enable them to do better. With this end in view, we requested some of the eminent people to accept our invitation to become Honorary Professors.

Introduction and Strengthening of Inter-Disciplinary Culture

The University realized the importance and the need to introduce and strengthen interdisciplinary culture. I do not need to stress the importance of interdisciplinary effort. The borderline areas between two disciplines are always exciting and fertile. Just as it is easier to penetrate the grainboundary area between the two grains of a crystal than to penetrate the grain itself, the Q of the system is very high when one is probing on interdisciplinary area rather than probing a monodiscipline area. Indeed today, Science and Technology has no more remained monodiscipline oriented but flourish as a result of interdisciplinary effort and interaction. Realizing all this, the University has sought to strengthen interdisciplinary effort in two different ways.

In one aspect of our effort, we have grouped the departments to form schools. Thus a School of Life Sciences comprises of (1) Department of Zoology, (2) Department of Botany, (3) Department of Microbiology, and (4) Department of Biochemistry. Similar schools have been established in other areas. Thus, we have the following schools—(a) School of Life Sciences, (b) School of Earth Sciences, (c) School of Mathematical Sciences, (d) School of Physical Sciences, (e) School of Chemical Sciences, (f) School of Languages, (g) School of Social Sciences. This grouping could be possible because the University faculty realized that there is so much in common in terms of concepts' techniques and infrastructure.

Interdisciplinary Schools in Nationally Relevant Areas

In addition to the above schools formed out of grouping of various departments, the University has identified some areas of national importance such as Energy, Communication, Environment, Materials, Behavioural Sciences, Social Sciences, etc.

Each of these schools has organized their teaching programmes and have undertaking research projects. The research team, for pursuing research project, is drawn from various departments depending upon the nature of the problem. Many of the schools have done pioneering work and have made unique contributions which have been recognized all over the country.

The school of Communication deals with development of communication packages for a variety of purposes such as (a) for distance education, (b) for adult education, (c) for countrywide classroom programme of the UGC, (d) for upgrading trades etc. This school has one of the most equipped TV studios in the country. It has also the facility for outdoor shooting. The school has conducted various training programmes and has contributed the most to the countywide classroom programme of the UGC. The school has also a very prestigious programme on Development Communication Research Project. Under this programme which is funded jointly by the Government of India and United States Department of Agriculture, the School collaborates with four leading Universities in US, namely, Universities of Cornell, Stanford, Nebraska, Michigan. All these four Universities along with the School of Communication develop communication packages aimed at motivating people for rural development, population studies, public health etc.

The school is in a position to undertake work on commercial basis on behalf of industries, commercial establishments, etc. Indeed they have worked for ONGC, Nirlon and several others. Recently, the school has started screening of video films aimed at popularization of science, educational programmes for the general public. The school has received financial assistance from US Department of Commerce, UGC, British Council, DST, etc.

The School of Energy Studies concentrates on development of techniques and technologies for the utilization of non-conventional sources of energy such as solar, wind, biogas, biomas etc. The school introduced a concept of Autonomous Decentralised Integrated Energy System for Rural villages. There are a large number of villages in this country which are unelectrified. It is equally difficult to reach them with fossil fuels. Consequently, these villages have to rely on the energy sources locally available. This has led to serious deforestation threatening the ecosystem and inefficient burning of cattle waste depleting the farm of organic manure. The school of energy studies carried out a survey of nearly 100 villages in relation to energy resources and energy consumption pattern as of today and likely extrapolation five year hence. Surprisingly, the energy resources in the village are more than sufficient to meet not only the energy requirements of the village today but also of its likely requirement five year hence. The school then proceeded to develop techniques to convert the available energy resources in the village to the form in which it is needed. Then they optimized the energy system using energy mix. A pilot experiment was undertaken in a village SHIRKOLI about 30 kms away. This village has a population of 407. This village has now a gasifier with a generator coupled to it to produce 15 KW of elecrical energy, three community biogas plants, solar cookers etc. The villagers not only satisfy their energy needs for cooking, lighting, pumping but also have facilities for community Radio and Television, communication to a neighbouring town etc. There is a small workshop fitted with lathe, drilling machine etc. The school's efforts have been highly appreciated and the Government of Maharashtra decided to set up such Urja Grams at least one per district. These are in the process of development.

The school developed a variety of things such as solar cookers, solar driers, solar hot water systems etc. These have been passed on to the industry. The school set up 100 ton solar drying plant for M/s Weikfield for drying of edible strach. The school has developed the complete knowhow to convert grapes into raisins. The school is in the process of setting up two plants one at Nasik and the other at Sangli.

The school works closely with industry and has received financial assistance from a variety of sources including private and public sector industries, Government departments, etc. The school has also a few international collaborative programmes. The school acts as needal agency on the Indian side for the project on Amorphous Silicon Solar Cells undertaken under the Science Technology Initiative agreement signed between Prime Minister of India and the President of the United States.

The School of Environmental Sciences has its own teaching programmes and actively participates in Western Ghats development programme of the Department of Environment. Recently, Department of Environment expressed a desire to enter into a long term agreement with the University for undertaking Environmental Impact Assessment of various development projects.

Other schools are also equally active in their respective fields.

Establishment of National Facilities on the Campus of the University

Giant Meterwave Length Radio Telescope

The University has always expressed its deep corcern regarding the fact that various national facilities and national laboratories were established in the past outside the university system. This led to siphoning of men and resources from the universities to national laboratories. To add to this, the national laboratories being relatively new and few got funded liberally at the cost of funding the universities. The universities in the process, got impoverished. Indeed, today, the universities work on shoestring budget. Over the years, the university system has been allowed to run down so much that if nothing is done to bring back the center of gravity of academic activity to the university, the situation may as well become irretrievable.

We have been continually arguing at the national level that henceforth any national facility that may be set up should necessarily be on the campus of the University though not under the administrative control of the university. Our pleas received sympathetic consideration and it has been decided to set up some of the national facilities on the campus of our university and a few others are under consideration.

The Department of Atomic Energy, Government of India, through Tata Institute of Fundamental Research have decided to establish Giant Meter Wavelength Radio Telescope near Pune, with its academic headquarters on the campus of the university. This will be the largest radio telescope in the world. The telescope will be fabricated locally in India and University of Poona will participate in the fabrication. The academic headquarters, technical back up facilities will be located on the campus of the university. This project is going to cost Rs. 20 crores and is bound to give a tremendous boost to research in Astrophysics, Astronomy, Cosmology etc.

In order to take maximum advantage of this national facility, we have proposed to the UGC to set up a center for Astrophysics and Astronomy in the University under the joint auspices of the TIFR and University of Poona. During the recent discussions in the University Grants Commission, the Chairman accepted this proposal in principle and even suggested that the proposed center shoud be an interuniversity center. The proposed center will utilise the unique facilities at GMRT for training and carrying out research. The GMRT and the proposed center will be complimentary to each other. This is the first time in the country where such an arrangement has been evolved and worked upon.

National Biotechnology Programme

Life sciences are experiencing an excitement comparable to what Physics experienced in the early years of this century. There is an effort to synthesize various aspects of life sciences such as Molecular Biology, Molecular Biophysics, Genetic Engineering etc. and explain all of them on the basis of the behaviour of molecules. This attempt has proved to be highly successful and has brought about remarkable developments which have provided us with deeper insight into the life processes. More importantly the knowledge acquired through these studies has been put to applications in industry, medicine, agriculture etc. Realising the importance of this area, the National Biotechnology Board decided to set up national biotechnology training programme in some select universities. Our university was selected for this training programme. This programme started two years back and the first bacth is likely to come out in May-June 1988.

National Bioinformatics Center

The Department of Biotechnology, Government of India have approved of the setting of a National

Bioinformatics Center in our university. This center will be a repository of all the papers and publications in the area of biotechnology. This will be a unique facility.

National Animal Cell and Tissue Culture Facility

The University of Poona succeeded in pursuading the Department of Biotechnology, GOI and the Indian Council of Medical Research to set up national animal and tissue culture facility on the campus of this university. The objectives of the facility are :

To receive, identify, maintain, store, grow and supply, (a) animal and human cell lines, both extsting and newly developed, (b) tissues, organs and fertilised eggs and embryos, (c) Hybrid cells—including hybridomas, (d) unicellular obligate pathogens, parasites and vectors, and, (e) plasmids, genes and genomic library.

The National Animal Cell/Tissue Culture facility will be established on the campus of the university and will be administered by Indian Council of Medical Research. The funding for this facility would be received from the Department of Biotechnology. As in all other national facilities, we are stipulating that the facilities should be available to the students and teachers of the university and further senior persons in these facilities should teach in our departments.

Training cum Research and Development Center in Bipolar Integrated Circuits Technology

The University of Poona and the Electronics and Trade and Technology Corporation of the Government of India, have proposed to the Department of Electronics, Government of India the setting up of training cum research and development centre in Bipolar Integrated Circuits Technology. Electronics, Trade Technology Corporation is a public sector organisation and has undertaken in the past and proposes to undertake in future setting up of plants and carrying out turnkey projects in other countries. Only recently, they completed a project, aimed at setting up integrated circuits plant in South Korea. In undertaking projects of this type, they have to provide training facilities. The proposal to DOE is essentially meant to meet this demand. The proposed training cum research and development center will be located on the campus of the university. Our department of electronics sciences will work in close collaboration with this center utilising the facilities from this center.

Besides taking advantage of national facilities, University of Poona continually strives to establish close contacts with various national agencies. The Department of Geology has very fruitful collaboration with Oil and Natural Gas Commission. Indeed the Department has agreed to conduct training courses for the ONGC personnel. Similarly, the department of Geology trained personnel from the ground water department of Government of Maharashtra in interpreting remote sensing data and in prospecting for ground water. The department also provides consultancy services in this respect to the individual farmers and organisations.

Department of Journalism works in close collaboration with local journalists in the city. Department of History has forged collaboration with the famous Itihas Sanshodhak Mandal. Department of Sanskrit participated in the preparation of Sanskrit Dictionary and collaborates with Bhandarkar Oriental Research Institute.

In much the same way every university department has very close links with the national organisations in their respective areas.

Introduction of flexibility in the system

University strongly believes that flexibility is essential for teachers and others to innovate and experiment. Appraising this, the University continuously attempts to provide for flexibility and autonomy. Indeed, the University has now become famous on this count and our system is referred to as Pune pattern.

University departments have been given academic and financial autonomy. Indeed, heads of departments operate their departmental budgets, invite quotations, place orders etc Some select departments such as Physics, Chemistry, Statistics, Zoology have been given academic freedom in the sense that they can evolve their courses, teaching pattern, evaluate their students etc. This academic and financial flexibility has gone a long way in innovating new teaching methods and programmes and has helped in accelerating the pace of development.

Interaction with Industry :
Science and Technology Park

One of the most significant achievements of this university, for which it is not only known in the country but also elsewhere in the world, is relating to its sustained and fruitful efforts to forge interaction with industry.

The University not only took the survey of the industrial infrastructure and employment potential in the industries in and around Pune, it also identified major constraints to growth of the industries. While identifying the constraints, the university became aware of the tremendous potential for growth. The constraints to growth are:

(1) The small scale sector does not have adequate test, certification and quality assurance facilities. In the absence of test and certification facilities, the products they turn out have no market and more often the products are substandard.

(2) Unlike small scale sector, elsewhere in the country the small scale sector in an around Pune is more technologically oriented. Some four-five engineers get together and start an enterprise. They are bright people. They wish to diversify and have some bright ideas about it. However, because of the lack of developmental infrastructure, they fail to translate their ideas into industrial products.

(3) There are very bright boys in the University. They carry out some very novel and innovative work, However, they are not aware of the application of this work for industrial production. Consequently all this good work merely ends in a publication of a paper or submission of a thesis but does not lead to economic growth.

(4) There are a large number of Indians particularly from this region who are doing extremely well abroad. They wish to duplicate their operations here in Pune with the help of their relatives or friends. In this case, the technology can flow freely but even to adopt this technology to local skills, local materials, one needs a certain amount of developmental effort. In the absence of this infrastructure, this avenue of growth is also not availed of.

In order to overcome these constraints, a series of meetings were arranged and it was decided to establish Science and Technology Park on the pattern of similar parks in the USA and UK on the campus of this University. The objectives of the park are :

(1) to establish a facilitation center which will include test and certification facitities, developmental infrastructure etc.,

(2) to broaden and raise the level of small scale sector by introduction of somewhat modern techniques,

(3) to make avaitable to the industries the results of novel and innovative work being carried out in the university,

(4) to undertake short term, well defined training programmes for persons sponsored by the industry,

(5) to develop and promote entrepreneurship among young boys and girls so that instead of becoming job seekers they became job creaters,

(6) to provide consultancy and to make available to the industry the following infrastructure facilities such as, (1) computers, (2) language translation facilities, (3) audio and video recording facilities.

During the short time this park has been in existence. It has performed remarkably well. Of course, the actual work of innovation, application etc is carried out by the students and the faculty.

One of the most outstanding achievements of this activity is the use of high energy electron beam to tailor the characteristics of high power silicon devices, particularly the turn off times leakages current etc. BHEL, Bangalore and the Physics Department together evolved this technique. Today, every power device manufactured by BHEL, Bangalore, is processed in our department. The department was awarded a special award by Electronics Devices Manufacturing Association for best research. The department of electronics has recently sanctioned Rs. 40 lakhs to the department for making the machine. Similarly, a large number of processing industries are ready to use this state of the art techniques. This unique facility is the only one of its kind in the country. Department of Space has signed an agreement with the university for the use of this facility to test the space quality solar cells.

The other remarkable development is the novel work related to surface modification using ion-implantation, laser beam etc. The University has developed a unique method for modifying the surface layers without altering the bulk so that various surface sensitive properties such as oxidation, corrosion, catalysis, chemisorption etc. can be controlled. We have also evolved very novel techniques for surface hardening, preparation of superhard layers of TiC, TiN etc. These techniques have tremendous applications in number of industries. Ours is one of three groups in the entire world and that there is such a demand from all over the world even from Bell Telephones, Xerox Corporation, for collaborative work.

Similarly our work on microprocessor based instrumentation, pollution control, on biotechnology, tissue culture has attracted considerable attention.

National Science Foundation of USA, Phillips, Holland and several other agencies have evinced keen interest in this endeavour and have offered us help and assistance. Equally gratifying is the response of industries from Pune. Another significant achievement has been launching of small and young entrepreneurs.

University and Affiliated Colleges

This University is partly a teaching and partly an affiliating university. At the time of the establishment of this university, the jurisdiction of the University extended over 12 districts. However, with the establishment of Shivaji University at Kolhapur in 1964, the jurisdiction of this University was reduced to five districts namely Jalgaon, Dhule, Nasik, Ahmednagar snd Pune. In spite of this reduction in the area, the University has been making impressive quantitative as well as qualitative growth.

In the year 1950, the University had 18 colleges, affiliated to it with 8600 undergraduate students. Today, inspite of the reduction in the jurisdiction, the University has 189 colleges, spread over various faculties affiliated to it. The following table gives the growth and distribution of the affiliated colleges over the period of last six years.

TABLE I : Number of Colleges (Facultywise)

Faculty	80-81	81-82	82-83	83-84	84-85	85-86	86-87
Arts; Mental, Moral and Social Sciences; Science; Commerce							
1. Arts, Science, Commerce	32	34	34	35	42	42	44
2. Arts and Science	5	5	6	6	6	6	7
3. Arts and Commerce	40	40	44	52	53	54	57
4. Science	1	1	1	—	2	2	3
5. Commerce	7	7	6	10	14	14	15
Law	9	9	9	9	9	9	9
Engineering (including Architecture and Printing Technology)	2	2	2	16	19	20	22
Medicine (including Pharmacy)	2	2	3	3	5	5	6
Ayurveda (including Homoeopathy and Unani)	6	7	5	6	7	8	8
Education (including Physical Education)	11	11	12	12	12	12	17
Fine Arts	—	—	—	1	1	1	1
	115	118	122	150	170	173	189

TABLE II : Strength in Terms of Student Enrolment

No. of Students	80-81	81-82	82-83	83-84	84-85	85-86	86-87
Below 300	49	46	26	61	69	69	72
Between 300-500	23	22	16	35	28	30	40
Between 500-1000	13	18	36	26	34	35	38
Above 1000	30	32	44	28	39	39	39
	115	118	122	150	170	173	189

There has been a corresponding increase in the number of students enrolled and appearing at the examination. The number of students taking examinations of the University increased from 70,000 in 1979 to roughly 1,50,000 in the year 1987.

The Colleges affiliated to the University have varying sizes, standards and standing. The distribution of colleges according to the student enrolment is given in the Table II (on page 9).

Correspondingly, the number of teachers in affiliated colleges has increased from 3000 in 1970 to over 5000 in 1985-86.

Some of the colleges are highly developed and are about 100 years old, whereas some of them are one year old. The same disparity exists in relation to standards and attainment. It may be mentioned that nearly 40% colleges are non-viable colleges. Many of the colleges do not have adequate and adequately qualified staff. Similarly, these colleges have very poor infrastructure in relation to library, laboratory, hostels, play fields, etc. The geographical distribution of these colleges is more or less even and seem to cater to a variety of needs such as, (a) discipline and subjects, (b) backward classes, (c) women, (d) minority community, etc.

It must be said, at this point, that in this part of the country there is a long tradition of private enterprise in education. Indeed, all the colleges are private colleges. Some of the colleges have done outstanding work and produced a galaxy of people who have become leaders in various fields of human activity such as in Politics, Science, Commerce, Industry, Sports, Dance, Drama, Music etc. Before independence, these colleges attracted very eminent men as teachers at tremendous self-sacrifice and it is through their example they produced generations of students fired with patriotic fervour, moral texture and motivated and highly dedicated citizens. Indeed, if and when the history of freedom struggle comes to be written in all its splendour, one would realize the yeoman service these colleges rendered.

It may be noticed from Table I that, until 1983, there has been expansion only in Arts, Science and Commerce with practically no growth in professional faculties such as Engineering, Medicine etc. However, suddenly in 1983, the Government of Maharashtra, allowed sixteen engineering colleges to be opened within the jurisdiction of the University of Poona. Although the growth in engineering educational facilities was very necessary, the sudden opening of new colleges has given rise to a large number of problems.

It must, however, be mentioned that some of the recently opened colleges are highly enterprising and have done excellent work in relation to adult education, continuing education, rural development etc. These colleges have not only received acclaim locally but also at the national level.

The University undertakes periodic critical analysis of the situation in relation to the affiliated colleges and takes corrective steps. Some of these are stated below :

(1) The student enrolment has exponentially increased over the last decade and half. The doubling period of enrolment and the associated activities is roughly seven years. If this rate of growth continues, which the present conditions indicate that it may, then the enrolment by the end of the decade will be about 2,50,000 and by the end of the century, the enrolment may go upto 400,000. This exponential growth in the number of students without proportionate increase in resources—human and material, must be viewed with concern. It is almost certain that by the expansion of the conventional system i.e. formal education, opening of new colleges etc., it will not be possible to provide the students with quality education. It is our conviction and firm belief that it will become increasingly necessary to introduce and expand the system of non-formal education using modern electronic media such as the radio, television etc.

In order to partially solve this problem, the University has thought of introducing what we call Media Mediated Education. This involves getting audio and video lecture tapes prepared by eminent teachers in the University and Colleges. A set of lecture tapes would cover the entire syllabus of a given course. These lecture tapes would be duplicated and provided to the colleges. It is proposed to establish a library of tapes in every college. Through these tapes, it would be possible to provide quality education to students in distant and remote areas. In a sense; it will make available to every student the facility of listening to a best teacher in the University. The scheme does not totally dispense with a teacher but what is proposed in the scheme is to nominate one of the competent teachers to be a consultant to whom students could go to, to seek clarification or to solve their difficulties after seeing the video tape on the television screen. This will not only enrich the formal education but will also provide facilities to learn while serving or carrying out a profession or an avocation. By implication, the system also provides for teacher training because the young and inexperienced teachers would learn on seeing the tapes as to how lectures could be given.

(2) Many of the colleges particularly in the mofusil areas do not have adequately qualified staff, equipped laboratories and libraries. Efforts are being made to strengthen these colleges. One of the approaches that is being followed to strengthen the existing system is in relation to orientation and refresher courses for college teachers. It has been decided that every new teacher either in a college or in the University must undergo an orientation course, whereas the older teachers be provided with an opportunity to refresh themselves every third year. Such orientation and refresher courses have been conducted by the University for the last two years and the results are encouraging. The University Grants Commission have now approved of our proposal to establish a Staff Academy for such orientation and refresher courses.

(3) As stated earlier, some of the affiliated colleges are well established, have a good standing and are progressive. In the monolithic system of affiliated colleges, all the colleges with varying degree of attainment and standing are all bound together to follow the same syllabi, follow the same system of evaluation, etc. This stifles initiative and does not allow any new and innovative programmes to be undertaken. In order to allow flexibility in the system and give freedom to teachers to initiate novel programmes of education and evaluation, the University is proposing to give autonomy to some of the developed colleges.

(4) Some efforts are being made to pool resources on the district level to provide postgraduate education in some subjects.

(5) Undergraduate teaching programmes in the country have become stereotyped and somewhat irrelevant. There is no correlation with what the boy learns and what he is expected to do or will be called upon to do in life. All the students go through the same course which has a heavy bias on storing uncorrelated information. The University, therefore, decided to restructure the courses at the undergraduate level. This University with the help of the UGC undertook a pioneering step in this regard a few years ago.

The restructured course unlike the conventional courses has the following components : (a) a foundation course, (b) conventional disciplinary course, (c) applied course dealing with practical applications of the knowledge the student acquires in the conventional courses, (d) project work or field work, and (e) personality development courses such as NCC, NSS etc. The aim of restructuring is to develop the total personality of the student by imparting knowledge, developing skills and attitudes and promoting initiative as well as promoting socially relevant work. These restructured courses have been introduced in seven colleges as a pilot experiment. This experiment has been hailed at the UGC and it is suggested that we may expand this programme to include other colleges.

(6) The University has undertaken another pioneering experiment and that is to decentralize the University administration by creating district sub-centres.

(7) The University continually tries to update existing courses and to introduce new courses at the undergraduate level. Looking at the deep inroads which electronics is making in every branch of human activity, the University introduced electronics as a subject on par with Physics, Chemistry etc. at the undergraduate level. The University trained the teachers, developed and produced experimental kits for the colleges. This course has been very popular.

The University designed a new course leading to Bachelor in Computer Science, which was introduced in some select colleges. This integrated Bachelor in Computer Science course has become very popular. The University is also planning to introduce an integrated course in Bachelor in Life Sciences.

(8) In an effort to diversify educational programme at the undergraduate level and make education more relevant and meaningful, the University has developed a concept of community college. The community colleges are expected to train students to serve the specific needs of the community in which it operates and in turn draw its sustenance and support from the surrounding community.

(9) The University has also undertaken pioneering step to introduce a large number of training programmes leading to certificates and diplomas. The University carried out a detailed survey of the industrial infrastructure in and around Poona. The Univer-

sity has also worked out an employment opportunity profile afforded by some 5500 small-scale units and 180 large and medium scale industries. In addition, the University has introduced courses such as B.Sc. (Applied) in electronics, computers, environment, hospital management, etc. These training programmes are highly popular and supplement the conventional and broad-based educational programme.

Examination Reforms

In the opinion of the University, evaluation should form an integral part of the educational process. The University established, with the assistance of the University Grants Commission, an Examination Reforms Cell. Various progressive steps have been taken by the Examination Reforms Cell. The most important being detailing and amplifying the syllabi and preparation of question banks. Until recently, there was a stipulation that 50% of the questions in the actual examination should necessarily be from the question bank. However, last year it was decided that question banks should serve as an aid to the process of education and not a constraint on the examination.

The University introduced a system of Central Assessment in which examination papers for a given examination are assessed at one place by a number of examiners after jointly analysing the question paper and rationalizing the process of evaluation.

Only last year, the Examination Reforms Cell embarked on a novel experiment. The present examination system has essentially two drawbacks and these are : (1) the system lays too much importance on memory rather than on understanding, and (2) the system of evaluation is highly subjective. The Examination Reforms Cell identified the various qualities for which the students need to be evaluated. These are (1) capacity to analyse situation, (b) comprehension, (c) logic and reasoning, (d) memory, (e) innovativeness and model building capacity, and (f) communication skill. The examination papers were set in each subject to test these qualities. Such an examination provides a complete profile of the students. Some students are highly innovative but are weak on memory. Unfortunately, the present system of examination which lays great emphasis on memory weeds out the innovation for such innovative boys and girls who are weak on memory. The University is exploring the possibility of introducing this new system in some examinations.

Fine and Performing Arts

This part of the country has a very rich tradition in music, dance and drama. Marathi stage is highly developed because of the contributions of a large number of artists like Bal Gandharva, Hirabai Badodekar, Jyotsna Bhole, Bhalji Pendharkar and several others. Through a course of dialogue between such eminent artists like Pandit Bhimsen Joshi, Jitendra Abhisheki, Rohini Bhate, Jyotsna Bhole, Jayram Shiledar and others, it was suggested that University should introduce courses in music, dance and drama. These courses have recently been started under the guidance of these eminent men and women. In these courses, emphasis is laid on performance and practical training and both these are being carried out in accordance with the ancient Guru-Shishya Parampara.

Adult Education

The University is very actively participating in National Adult Education Programme carried out through 1,000 centres operated through the help of affiliated colleges. The work of these centres has been applauded all over the country. Similarly, University has taken a leading role in preparing material for educating the adult and in using modern electronic media such as the radio and television for eradication of illiteracy.

Sports and Corporate Life in the University

While advancing the frontiers of knowledge and applying the known and the acquired knowledge to solve the perceived problems of the society, the University attempts to promote corporate life by promoting sports and cultural activities. Our sports facilities are awefully inadequate. However, with borrowed facilities, our students have performed extremely well on the sports field and athletic ground. They have won several championship in Inter University tournaments, participated in national and international competitions This University has been adjudged on the basis of its performances as the THIRD amongst some 170 and odd universities. The University has planned, in collaboration with local industries and philanthropists, a Sports Complex and it is hoped that our dreams will soon become a reality.

Hope and Dedication

The University of Poona is marching ahead on all fronts and developing rapidly and yet there is long way to go to become a centre of learning comparable to the best anywhere in the world. Although, we are happy at the progress, we realise that there is no room for complacency. However, given the support of the society, the dedicated efforts of the faculty to excel and the motivation of the students, we have every hope that we will be able to march ahead towards excellence. □

REVIEW ESSAY

EDUCATION AND DEVELOPMENT : THE INDIAN EXPERIENCE

K.K. Balachander*

Ansari M.M., **Education and Economic Development**, Association of Indian Universities, New Delhi, 1987, pp. XVII + 57, price Rs. 25/-

---

Planning of education as a facet of economic growth was one of the important policy objectives which received particular emphasis in many countries from the beginning of the sixties. Till late fifties, physical capital was considered as the key button which, if pressed hard enough, would set in motion the economic process, which would result in raising the future output. Although the demand for education was strong, and the spread of education was thought to be an index of social advance, most governments had as yet no specific conception of the relation between education and development. As a result, allocations to education proved to be difficult to decide upon in any rational and consistent way.

A series of empirical studies carried out in early sixties on the nature and causes of economic growth over a long historical period in highly developed countries revealed that, in reality, physical investment accounted for only a part of economic growth. If the growth of national product over a (long) period is such that physical capital alone does not account for the whole increase, the remainder or 'residual' must be due to a variety of other factors. Although varying estimates were made by different economists about the components of the residual factor in economic growth, it was broadly accepted that a substantial portion of it could be accounted for in terms of a rise in productivity which in turn, was due to improvements in knowledge, skills and capacities of the people. Thus the attempts to explain the residual ended up in discovering that upgrading of human resources through education could have long-run favourable effects on the efficiency of human beings as productive agents, and that expenditure on education is analogous to investment in physical capital. By late 1960s, there was a general agreement among economists, educationists, politicians and planners that education was a key change agent for moving countries along the development continuum. A literate and educated population was regarded not only more productive but also desirable. To toletate illiteracy and under-education was to tolerate wastage of human talent potentially available for society's benefit. The post-World War II development of Japan and Germany was generally regarded as the classic example of education being deliberately utilised as a contributory factor to economic and social development.

When poor countries enter upon the process of developing their agriculture and industry, it was argued, there is a tendency to invest too little in human capital relative to what they invest in non-human capital. Skills and knowledge useful in their economic endeavour, or, in other words, the human dimensions of development, get neglected. These countries should, therefore, regard most of their outlay on education as an investment since economic development must be even more important for them than the advanced ones. It was also pointed out that it is in countries with a high degree of education that there is a readiness to accept change and development that are appropriate to a modern economy. Education enhanced man's capacity to absorb, diffuse and utilise new knowledge and is the basic key that unlocked the door to productivity.

The upshot of all this was a clear pointer to laying greater emphasis on rasing the educational level of the people in many developing countries. Education was no longer considered a 'luxury', or a privilege and pleasure of the elite, or the private concern of individuals/parents; it was accepted as the collective responsibility of the community. A new horizon in the concept of capital and the possibility of using investment in education as a parameter of growth instead of allocating resources to the sector of education on a residual basis, as had hitherto been the practice, was opened. Also the concept of education as an investment creating human resources for development emerged at a time when the idea of planning gained considerable ground in many less-developed countries. There came into vogue the integration of educational planning (or broadly human resources planning) with the overall planning.

---

The Educational Options

What are the priorities among the educational options as far as less-developed countries are concerned, and has India been able to use education as a vehicle of economic development ?

(a) Illiteracy is the real stumbling block in the way of economic progress in the less-developed countries, and hence priority should naturally be given to universal elementary education. The highest social rate of return, as many studies reveal, is to be had from additional investment in elementary education, mainly from completing the fifth to the last elementary year. This high return relative to secondary and higher education is sufficient justification for renewed emphasis on development of this level of education.

The strategy adopted by many developed countries, in their earlier stages of development, was to built their educational structure block by block, upwards from the foundation. Their first goal was the attainment of universal elementary education, meanwhile building a modest core of secondary and higher education. After reaching the stage of universal elementary education, a more generous attitude towards secondary education was taken meanwhile keeping higher education still tightly under control. Only when secondary education had become almost universal, they went about transforming their narrow or elitist system of higher education into a mass one. Once a country reaches a desirable level of education at lower levels, the expansion possibilities naturally are only in the higher stages, and that is what is being witnessed in the developed countries.

If a developing country desires that its educational system should become the handmaiden of economic development, it should first concentrate on the base of the education system, i.e. elementary education. Giving an important place to this level of education by upgrading resources to it is well-justified. The provision of minimum education and functional literacy to all promotes significant behavioural and attitudinal changes at the level of both the individual and the community which are very essential in the process of economic development, especially in low income countries. The experience especially of Japan and many socialist countries shows that literacy by itself can contribute a great deal to self-development. and provide the necessary basis for human resources development. Adam Smith, Alfred Marshall and many other earlier economists had insisted on the importance of education in the formation of human capital and the decisive nature of the latter in the working of the economic system. Smith had stated long ago that by providing education of an 'elementary' type to the mass of the people, the State could derive no inconsiderable advantage. Although it would entail some cost to the Public Exchequer, it would, according to him, surely repay that with a profit. "The more they are instructed" said Smith, "the less they are subject to delusions of enthusiasm and superstitions, which among ignorant nations, frequently occasion the most dreadful disorders. An instructed and intelligent people, besides, are always more decent and orderly than an ignorant and stupid ones.......... They are more disposed to examine, and more capable of seeing through, the interested complaints of faction and sedition and they are, upon that account, less apt to be misled into any wanton or unnecessary opposition to the measures of Government". Thus he who was against State intervention in personal and social life, except in certain well-defined spheres, had observed that education (of an elementary type) was one area where the State should intervene with finance because it developed not only 'aptitudes' but also 'attitudes' conducive to economic progress. Its priority followed naturally from the assumption that it was regarded as a matter of national concern undertaken in the interest of the community as a whole.

A minimum literacy rate of 40 per cent is considered as necessary but not a sufficient condition for a sustained level of economic growth. However, it is contended further that industrialisation and more rapid economic expansion cannot occur until 70-80 per cent of any population is literate. To this extent it seems that at least for a certain level of economic development, a fairly high level of literacy is required. (Fagerlind and Saha 1983).

(b) Since education is looked upon as a kind of economic and social equaliser, as it expands, it should be availed of by all classes of people. The whole concept of education for the elite will have to undergo a change and replaced by the concept of education for all. If the goal of education for all has to be attained, efforts will have to be directed upon enlarging the intake of lower income children (especially from the rural areas of the country) and bringing down the tremendous wastage on account of 'dropouts'. The internal efficiency of school investment process also tends to the highest when the dropout rate is near zero.

Since the main reason for the high dropout rates (and children not joining schools at all) could be the poverty of vast majority of the population, a real solution to it would, therefore, be taking some positive steps to alleviate the economic disadvantages of children/parents who find it difficult to avail of the educatioonal opportunities. External inequality does find its way into the school. Besides this, the universal access to education should be organized in such a way as would equalise education in terms of quality. Only this way school can be made an 'agent for reducing social/economic inequalities. If better education is offered only to those with most economic/social privileges, the inequalities will get accentuated.

(c) Just a large increase in facilities for elementary education may not be enough; the education provided should be of good quality. The expansion of bad education can only be counterproductive. It has also to be intimately related to real life situations—local, cultural, economic, etc.—and the problems people daily encounter. Attention needs to be focussed much more fundamentally on what is taught, and how it is taught, in order to promote economic development. The curriculum should be such that it generates among the students a positive attitude towards life and work, which certainly has economic significance. When what is taught is of doubtful value (or even disvalue), there would be little point in arguing about its equal distribution or its contribution to economic growth. The proper implementation of the programme of universal elementary education of quality will also need immense academic inputs in terms of organisation of a large band of efficient and well-trained full-time as well as part-time teachers, new teaching and learning materials, the creation of a highly decentralised system of administrative and financial support, etc. These educational programmes need to be carefully monitored and evaluated.

(d) Extending the level of facilities for education among all regions and in all parts of a region equitably also form one of the main objectives of public expenditure on education. More institutions need to be provided especially in rural/backward areas, and serious efforts be made to upgrade those of poor quality already established there so that they can attract more pupils from these areas. In many advanced countries, extension of appropriate educational facilities into the remote parts was one of the important accomplishments in the early stages of their economic development. Some developing countries like China and Cuba have also succeeded in this and their literacy rates have naturally gone up. Adequate community support was also forthcoming in implementing these tasks. (In India, in the State of Kerala, studies have shown that the existence of a community-based, voluntary and non-governmental sector for providing education at various levels and a network of roads linking rural and urban areas acted as a major determinant of the high rates of enrolment and retention in primary schools and of literacy).

(e) According to Schultz, when account is taken of the benefits bestowed on the next generation, the highest social rates of return are to be had in developing countries from investment in the education of females, and therefore this should be placed high on the agenda. In developed countries, almost virtual parity has been attained between male and female participation (Schultz, 1972). Women, Schultz adds, play an important role in 'intergenerational' transfer of acquired ability in a family. The educational attainment of the mother is among the most important determinants of a child's future and economic success; the child, in such an environment, receives a 'head start'. Even if some of them (women) are forced to withdraw from the labour market to devote themselves to their families, thus depriving society of the benefit of certain 'externalities' which education might generate, these must be set off against the 'intergenerational externalities' which may be generated by them within the family. "If the greatest single obstacle to improvement in general living conditions is the continuing population growth, and if the social, economic and educational status of women significantly affects fertility levels, then the educational opportunities available to women are of crucial importance". (World Bank, 1980).

(f) Although investment in human capital (by way of education) enhances the future economic well-being of a developing country, the 'pay off' from that investment depends upon the active setting of 'successful development' within which "the additional skills and abilities associated with more education are in demand and the rates of return to the investment in them become.........as favourable as the best investment opportunities". (Schultz, 1972). If a growing proportion of the school leavers and graduates are not assured of employment, or appropriate employment, the investment in the educational system will be an investment in idle human resources. Under such a situation, further rapid expansion of secondary/higher levels without efforts to create meaningful employment opportunities will prove to be self-defeating and a drag on the economic system. There has, therefore, to be a proper linkage between education, employment and economic policies.

(g) Since qualitative improvements in education constitute the essence of human resources development, greater attention will have to be given to this aspect. Quality should not become a casuality in the process of expansion of education. If it does, it will be really bad—especially when international competitive forces in skill-oriented activities (originating from advanced countries) are operating at full swing. Education, especially at higher levels, will be required to acquire a new role in response to the knowledge explosion in all fields. While framing the course contents, efforts should be made to move forwards, and not to slide back. Educational planning can be meaningful only when the policy makers spell out clearly the qualitative aspects. They should also indicate how, or the manner in which, excellence can be achieved, and the priority that should be accorded to it within the resources available.

The pay off from investment on education depends upon conformity of the various points mentioned above in the case of less-developed countries. The advanced countries have been successful in achieving rapid economic development by raising the educational level of their people because it took place under the above setting wherein results could be achieved. These are important factors and need to be given careful thought while planning for education in the less-developed countries. The basic mistake in the approach India adopted was that it sidetracked or ignored these stipulations. That is the reason why education is not producing that kind of a miracle, or higher economic growth, as was expected of it. The situation, evidently, calls for radical changes.

II

Literacy : Failure to Take Off

The most glaring failure of the Indian education system is evidenced in the poor literacy rates. This has left a deep scar on the nation. The Education Commission, which had looked at the problems of Indian education in a comprehensive manner, had warned as long back as in 1966 that

> "the existence of the vast masses of non-literate people in our country, which prides itself on its noble traditions of learning, is humiliating.... An effort commensurate with the magnitude of the task of eradication of illiteracy is inconceivable unless there is a clear conviction on the part of the national leadership that the education of the masses of non-literates has a direct bearing on economic and social progress and on the quality of national life.... We think that the problem must be faced resolutely, and realistically, and we are convinced that indifference to it will not remain unpunished."

The recommendations of the Commission were however not headed to and the struggle against illiteracy lost its urgency.

India had 300 million illiterates in 1951; the number in 1981 was around 437 million—with Uttar Pradesh accounting for more than 80 million followed by Bihar with 50 million. Although the percentage of literacy improved from 16.6 per cent to 36.2 per cent between 1951 and 1981, in absolute numbers the total illiterate population has grown. The most crucial segment of the population from the point of view of the 'quality' of future generation is women, but against the national average of literacy of 36.2 per cent, the rate among women was just 24.8 per cent in 1981. The situation is serious in rural India where the literacy rate is just 29.7 per cent (and among women still lower, being only 18 per cent). This underlines the magnitude of the problem and the efforts that are required to be mounted. According to the World Bank estimates, India will have the dubious distinction of having the largest concentration of illiterate population in the world by the turn of the century—500 million—and this will constitute a little over half of the world's illiterate population (currently it is one-third). Among the 34 countries in the low income group, the literacy rate in India is just 36 per cent as against 58 per cent for the group.

India has a long way to go towards the fulfilment of the constitutional directive of providing free and compulsory education upto the age of 14 (the dropouts at this level are also enormous representing a wastage of precious resources). The country is already 28 years behind the time stipulated in the Constitution (i.e. 1960) on achieving this aim. Still more serious is the neglect of adult education which is particularly important in a less-developed country. And it is needed all the more in order to make elementary schooling more effective since the dropouts are more common in illiterate surroundings.

The problems faced in higher education are precisely the opposite of those faced in lower levels of education, especially at the elementary level. There is no question here of inadequacy or slow growth; on the other hand, the entire sector of higher education has experienced unplanned expansion—without taking into account, in quantitative and qualitative terms, the manpower requirements for achieving a specific level of development. Insofar as it raises demand to levels inconsistent with labour market situations, its positive contribution to productivity is doubtful. The importance of the people as a resource can be enhanced only when they are active participants in the development process. As observed by Peter Drucker, the human being becomes a resource only if trained, developed and allocated to productive work. Little constructive effort has been made either to tackle the problem of educated unemployed or to reorient higher education to suit the needs of the economy.

There has no doubt been arise in the proportionate share of higher education (accounting now for nearly 30 per cent) in total (recurring) expenditure on education, but it loses much of its significance when it is seen in the qualitative context. With enrolments rising faster and costs escalating, there is a dilution of 'per pupil' expenditure leading to a sharp slump in academic standards. The funds are too thinly spread over too large a number (and area), and hence just not adequate. The paucity of funds has precluded the possibility of developing a system of higher education best suited to the genius of the people and the development of the country. It has forced the institutions to cut expenditures on many ongoing programmes—and the axe has fallen more on programmes that have high academic value especially pertaining to professional/technical education. A higher education system which shuns the pursuit of excellence will only take the country to mediocrity and stagnation.

Another disturbing feature is that the spread of facilities for higher education has been rather uneven in the country. There is a lack of harmony between Central agencies (including the UGC), on the one hand, and the State Governments, on the other, with regard to the growth and financing of higher education (as revealed in a study conducted by this writer in the Bombay University recently). Also the bureaucratisation and lack of dynamism, both at governmental and institutional levels, are hard to deny. Their capacity to change is slight, sometimes non-existent.

An Important Contribution

Ansari's study *Education and Economic Development* could not have been brought out at a more appropriate time. This well-documented Study pinpoints some of the major shortcomings facing the educational system in the country today which have impeded the rate of economic growth: (1) the failure to make a deep impact in the area of literacy, particularly among females; (2) non-achievement of universal primary education, and lack of incentives to attract and retain children especially from the lower income groups; (3) the failure to ensure equity in extending educational services across the regions as well as various socio-economic groups of the people; (4) fast deterioration in quality as well as irrelevance of course contents to the socio-economic. needs of the country; (5) inadequacy of facilities for education in general and elementary education, in particular; and (6) poor linkage between education-employment-economic policy. The author traces the under-performance of the education system in the above-mentioned areas to lack of political will and therefore inadequate allocation of resources to education.

The study seeks to examine the treatment given to education since the inception of planning. The author has analysed the influence of educational variables on selected indicators of development in the Indian context, and on the basis of such relationships, has tried to highlight the importance of education to social and economic development. According to him, insufficient attention to universalisation of elementary education and eradication of illiteracy—especially among those living in abject poverty—could be said to be responsible, to a significant extent, for poor performance of national economy during the past three decades. "In view of the dominance of agricultural sector in the national economy (in terms of both income generation as well as absorption of work force) one of the strategies of development should have been to improve the levels of enrolment and retention of students at the elementary stage of education so as to ensure that all the labour intensive sectors, like agriculture, agro-based industries and other small scale industrial units were provided with more literate and skilled workers." (p 20).

The study draws attention to the fast decline in financial allocation for education and calls for a deeper, more generous commitment to education. It also grapples with the task of comprehending the linkage between illiteracy and poverty. In short, the inadequate, inequitable, dysfunctional and disoriented nature of the existing educational system stands revealed in the study.

The paradox of the existence of a large number of illiterates and educated unemployed, which is an indication of an unhealthy economy and social tensions, has been well brought out. A long term education policy to deal appropriately with such problems is therefore indispensable, according to the author. The author has come out with some policy measures for effective utilisation and development of human resources through appropriate manpower planning which is in consonance with economic planning. He has pleaded for better labour absorption policies to minimise the problem of educated unemployment and associated economic losses.

Resource Crunch

Indian education is beset with major problems whose solution will surely require greater exertions—and these problems loom larger as the country has to enter more advanced stages of socio-economic development. Hence the need for a change can no longer be seriously disputed. What is becoming more evident is the serious resource crunch. The financial implications of enrolment of education, as projected by the UNESCO for 1985—goals that scarcely provided universal basic education—are that the GNP of developing countries like India should grow at least 7 per cent a year to keep the share of education at 1975 levels. The recent trends in the average annual rate of growth of GNP in India show that it is not even 4 per cent. Expressed as a percentage of the GNP, the expenditure on education rose from 1.3 in 1950-51, to 2.6 in 1960-61, and to about 3.5 per cent in 1985-86. This compares unfavourably with the corresponding figures in some advanced countries like the U.S.A., the U.S.S.R., Canada, Japan, the U.K,, France, etc., and even some developing countries, where it ranges between 6 and 8 per cent. The disparity is quite large. The Education Commission (1964-66) had recommended that the expenditure on education in India, in terms of percentage of national income, should be raised to 6 per cent by 1985-86 but the country is far behind this target. Considering India's population, the level of investment on education is shockingly low. An analysis of the behaviour of the Five-Year Plan developmental expenditure also shows that although the Plan allocation on Education increased from Rs. 153 crores in the First to Rs. 2524 crores in the Sixth Plan, the share of the educational sector in total Plan outlay has consistently declined—from 7.9 per cent in the First to 2.8 per cent in the Sixth Plan. Education has got a very low priority in the development spectrum, though it is a vital sector. Dr. V.K.R.V. Rao, in this context, poses a question: "Why people, who so readily recognize the superiority of modern techniques in industry or agriculture and are willing to find large funds that its adoption necessitates, are so blind as not to see the relevance of the extension of this attitude to education, which after all is one of our major forms of investment for economic development ?" (Rao, V.K.R.V., 1966).

There is perhaps no sector of national activity where the Government—both at Centre and the State level—has dragged its feet as in education. In fact, recourse to cut in investment on education was most often taken to counteract short-run economic fluctuations. Whenever the government budgets went away, educational schemes invariably where the first casualty of the cuts. Such short term objectives of financial policy were also proving to be detrimental to the longterm development and implementation of many decisions to which the Centre/States were already committed. Even the funds allotted to education were not fully used in some States or diverted to other sectors of State expenditure. (The State of Kerala, however, is an exception to the above rule. Despite its relatively low per capita income, this State could march ahead in educational development. Here, it has to be noted, private initiative played a significant role). Education for the weaker sections continue to be regarded by many State Governments as an activity deserving only the 'left over' funds, although it is those at the base of the socio-economic pyramid who pay a sizeable share or taxes (raised mostly through indirect taxes which impinge more on the vast mass of the poor) that goes to subsidize the education of the privileged who occupy the apex and get the best and highest paying jobs (Coombs, 1985). Much of the above problems arose in the past because education was a State subject—till the 42nd Amendment was adopted in 1976, the Centre had no *locus standi* in the matter except to determine and coordinate standards in respect of higher education. Education was however included in the Concurrent List in 1976, but there has been little follow-up action. According to Sharma, "the dilemma of the education system has been that owing to economic and social development the demand of and expectations from the education system (at all levels), both in terms of quantity and quality, have increased, but the resources made available to the education system, particularly after it is brought under the Concurrent List, has been squeezed successively. In this squeeze, the lead role has been played by the federal government and, amazingly, the federal government has also played a lead role in making the case for improvement and development of the education system." (Sharma, G.D., 1986).

Ansari is right in saying that "the approach to development planning has suffered owing to lack of proper conceptualization of the role of education in creating conditions for national progress" or, in other words, failure to understand the intimate connection between educational reconstruction and economic development. If the Government is sincere in its desire to take India to the 21st century, it will have to give a central place to education It has adopted recently a National Education Policy (1986) followed by a Programme of Action for its implementation. One redeeming feature of the New Policy is that it treats education as a crucial area of human resource development. It is considered to be a condition not only for development but also for the survival of the nation and the individual. Also the Government has (again) committed itself to the main tasks of strengthening the base of the educational pyramid, i.e. elementary education, tackling the problem of adult illiteracy, expanding the provision for vocational education, etc. Many developing countries today appear to be veering round to the view that illiteracy is the real stumbling block in the way of economic growth; and hence priority should be given to universal primary education. Besides, as Ansari states, the quality of higher education also depends *inter alia* on the inputs of elementary education which unfortunately have not been paid due attention by the policy-makers (p. 39). The new thrust emphasises two aspects : (i) universal enrolment (and retention) of children upto 14 years of age, and (ii) a substantial improvement in quality. These efforts will be coordinated with a network of non-formal education. The implementation of this programme is the challenge of today and tomorrow. In fact, the shame of having kept 64 per cent of the people unlettered has to be shared not only by the Government but also by each one of those who have had the blessings of higher education.

All these changes, which the Government hopes to pursue simultaneously during the next few years, will assuredly entail enormous expenditure. Anyway, there is no disputing the fact that the crucial areas which need first and foremost attention are elementary and adult education so that illiteracy may be eradicated by 2000 A.D. No alibi like scarcity of funds should be allowed to hold back these programmes because these represent the biggest, but long neglected, sectors and increases in allocations (as warranted by their requirements) have been stalled too long. These tasks have to be approached with an air of commitment seldom seen before. The battle against illiteracy can be the harbinger for economic, social and political stability, and most important, national solidarity. By all accounts, it should be waged as part of the anti-poverty campaign. It may be worthwhile quoting Ansari :

> "The relative growth performance of the primary level of education has been significantly lower than other levels and that the low performance is owing mainly to the lack of adequate educational facilities and incentives to attract and retain the children, especially of poor families in the schools for sufficient number of years. This by itself recommends for a reasonably higher magnitude of investment on infrastructural facilities at the elementary stage of education. Moreover, the prevailing socio-economic conditions in the country heavily demand for speedy expansion of elementary education for the following reasons. Firstly, it is largely the children of poor families who have been deprived of the fruits of education. The fulfilment of the national desire for building up an egalitarian society, therefore, requires that due attention must be paid urgently to universalisation of elementary education. Secondly, the universalisation of primary education would undoubtedly enhance the socio-economic levels of the families which fall below the poverty line Thirdly, since in all previous Five Year Plans the realization of targets has been lower than those originally set, the achievement of this objective by the year 1990, which has been presently fixed by the policy-makers, is seemingly difficult.... The target is not likely to be realised even by the year 2000 A D., unless of course, the education policy lays heavy emphasis on implementation of educational programmes through appropriate strategies." (pp. 39-40).

As far as higher education is concerned, the Government intends taking steps to transform it into a vibrant one with a commitment to development and change If this has to be fulfilled, the future policy must be related to changes of a qualitative nature, instead of quantitative expansion as in the past. This can be achieved through giving greater attention to real academic programmes, such as teaching/research, production of teaching/reading materials in sufficient numbers, teaching aids, libraries, laboratories, equipments, etc. A higher outlay for these activities is imperative, but as Ansari anticipates, with the emergence of claims from other sub-sectors of education like elementary and adult education as well as vocational and professional education which have relatively been neglected for long, necessary finances may not be in the offing for higher education as compared to the pressure of demand. As evidences show, the lower levels of education are likely to get preferential treatment, while higher education will have to compete for public funds. (p. 45). In this context, a second look at the existing pattern of financing higher education, under which across-the-board subsidies are provided to all students, regardless of income or academic background, may be necessary. How justifiable is the existing liberal subsidy when (i) primary education whose provision affect the overall development of the society, is languishing for funds, and (ii) when there is a disproportionate number of students from the well-to-do families in colleges/universities ? According to Sen, there is an enormous amount of 'primary educational sacrifice' that is involved in the policy of faster expansion of higher education. "The right to higher education is the right of the educationally privileged to study further at the expense of the society irrespective of one's academic abilities, and it is a right that is exercised by throwing children out of schools" (Sen, Amartya, 1970). By enhancing fee rates—which have remained static for a long time at least for those categories of higher education wherein employment opportunities and private gains later are higher—there would not only be more resources to reinvest in the system but to extend financial assistance to students who really need and deserve it.

Conclusion

Ansari has done well by focussing attention as to how to make education a vehicle for economic and social change. It is a good piece of research work, with new dimensions, on a livewire issue. The Association of Indian Universities has brought out a number of useful studies in the area of Economics of Education, and this well-presented, well-documented work is indeed a useful and valuable addition to it. The slim volume provides enough food for thought to planners, policy makers and educationists. The reader will find it difficult to disagree with the author's findings/conclusions, the importance of which has increased further in the light of the new National Education Policy.

KHAIRAGARH (M.P.)

No. Gen./88 **Dated the 12 May, 1988**

ADMISSION NOTICE

Admission shall be made upto the 31st July, 1988, in the University Teaching Departments for prosecution of studies in Vocal Music, Instrumental Music (Sitar, Violin, Tabla, Sarod, Flute) Musicology, Folk Music, Sugam Sangit, Kathak Dance and Bharat Natyam Karnatak Music (Vocal, Violin), from Certificate Course to Post-Graduate level courses. Bachelor and Post-Graduate Painting Courses and M.A. History of Indian Art & Culture are also available. For Foreign Students condensed courses have been framed. Separate arrangements for Girls Hostel available, Research Facilities for Ph.D./D.Mus. available with excellent library facility.

Application Form and Prospectus of General Information can be had on payment of Rs. 7/- by IPO or MO in favour of the Registrar. Few Scholarships on merit-cum-means basis are also available. One year Diploma Course in Folk Music for Basic Training school Teachers in also available

M.K. Gangajaliwale
REGISTRAR

Group Discussion-cum-Orientation Programme on Financial Administration in Universities

University of Poona

June 6-10, 1988

PROGRAMME

Monday, June 6, 1988

9.00 a.m. Registration
9 30 a.m. Inaugural Session
Welcome
—Prof V.G. Bhide
Vice-Chancellor
University of Poona

9.40 a.m. Introductory Remarks
—Prof S.K. Agrawala
Secretary, AIU

9.50 a.m. Presidential Remarks
—Dr. P.V. Salvi
President, AIU

10.00 a.m. Key Note Address
—Dr. D.M. Nanjundappa
VC, Bangalore University

10.30 a.m. Vote of Thanks
—Shri Anjni Kumar

11.30 a.m. Introduction of the participants & Preliminary discussions

2.30 p.m. Problems of Financial Management —an Overview
Dr. V.R. Panchmukhi

5.00 p.m. Discussions & finalisation of Group Report

Tuesday, June 7, 1988

9.00 a.m. Budgetary reforms—changing role of budgets in Universities
—Dr. G.D. Sharma

11.30 a.m. Computers in financial accounting & management practices
—Dr. H.N.N. Murthy

2.30 p.m. Case study
Unadjusted Advances
Redesigning of Forms
—Shri Shital Prakash

5.00 p.m. Discussion & finalisation of Group Report

Wednesday, June 8, 1988

Visit to Educational Institutions/Tata Management Training Centre/Local Excursion

Thursday, June 9, 1988

9.00 a.m. Performance and zero base budgeting
—Dr. K.L. Handa

11.30 a.m. Effective utilization of resources in New Education Policy
—Dr. K.L. Handa

2.30 p.m. Role of Computers in University Administration
—Dr. S.C. Mehta

4.30 p.m. Managerial Effectiveness—
Role and functions of Finance Officer
—Dr. S. Neelamegham

Friday, June 10, 1988

9 00 a.m. Presentation of Group Reports & discussion
11.30 a.m. Formulation of recommendations
2.30 p.m. Valedictory function
—Welcome
Dr. S.N. Navalgundkar
Pro-Vice-Chancellor
University of Poona
—Address by Chief Guest
Shri J. Veera Rahgavan
Secretary, Ministry of Human Resource Development
—Concluding Remarks
Shri Anjni Kumar
Joint Secretary, AIU
—Vote of Thanks
Shri A.H. Thorat
Registrar, University of Poona

Note :
1. Every day in the morning from 6.30 a.m. to 7.30 a.m. arrangements will be made for yogic exercises;
2. Film shows/Local visits may be arranged between 6 & 8 p.m. daily.

The Purpose of Education

"Character building is what I would consider as a prime objective of any educational programme. There is one aspect of character building which I feel has relevance in today's age and society. This is the inculcation of a value system that emphasises the pursuit of excellence, the nurturing of a scientific temper and developing a human approach to all aspects of our working life", said Dr. M.R. Srinivasan, Chairman, Atomic Energy Commission and Secretary, Department of Atomic Energy, Government of India, while delivering the Convocation Address at the 78th Annual Convocation of the University of Poona. Excerpts

It is a cliche to state that education plays an important role in the all round development of a society. In reality, education in India has generally been treated as a means to obtain an academic qualification and thereafter a job or livelihood. Given the opportunities for employment or earning a livelihood in the country, one cannot blame the younger generation for adopting this approach. But I would request the young graduates to pause and ask themselves—is that all there is to one's education. The time we spend at school and college is no doubt to be spent in enlarging our academic knowledge. But more importantly it is also to learn about our role in society and to prepare us for a constructive participation in society. In this respect character building is what I would consider as a prime objective of any educational programme. There is one aspect of character building which I feel has relevance in today's age and society. This is the inculcation of a value system that emphasises the pursuit of excellence, the nurturing of a scientific temper and developing a human approach to all aspects of our working life.

I am aware of the increase in opportunities for higher learning now existing in our universities thus obviating the need for moving to foreign universities. What is needed is to structure the type and nature of such higher education to fit into the ambit of national development to realise the hopes and aspirations of our people for a better tomorrow.

I cannot do better than to quote two important aims of this university which point in this direction. They are :

(1) While not losing sight of its essential character as a University i.e. a seat of universal learning which recognises no frontiers or barriers except those of the human mind itself, to keep in view the special needs, interests and traditions of Maharashtra and its people and in particular its economic resources, its special problems of agriculture, industry and commerce and generally the various aspects of its economic and industrial life.

(2) To diffuse widely the benefits of university education among all classes by organizing centres of extramural teaching and university extension activity and encouraging the production of popular literature on scientific and cultural subjects.

The objectives then lead me to think of the means of its implementation. It is appropriate for us to remind ourselves of the oft quoted statement of the late President John F. Kennedy : "Ask not what not the country can do for you, but what you can do for the country". This summarises the whole philosophy of the role of individuals and social groups in improving social awareness and implementing changes that are vital for protecting and preserving the bounties of nature and freeing humanity from the ills of society. We need to have a vigilant and vibrant force in the form of the young men and women such as those gathered here today to dedicate themselves to the conservation of the environment and ecosystems and to support national endeavours for eliminating poverty and improving the quality of life of our people.

While centres of excellence built around outstanding men are very important, in many fields of modern scientific endeavour, success is achieved through interactive efforts of large groups. The days ahead are for group achievements where the role of humanities and the social sciences is as important as the scientific and technical skills of the individuals in the group. I am aware of the joint TIFR/Physics Department programme run by the University and am glad that the GMRT Telescope project located close to the University will provide excellent opportunities for the students to work in the fundamental areas of astrophysics and cosmology.

In a recent interview Dr. Dhillon Ripley, a close friend of India and an associate and admirer of late Dr. Salim Ali has a word of advice to us to accept and adopt only those technologies of the developed countries which are appropriate to our needs and setting. In this context, he questions the suitability of adopting some of the agricultural practices suited for temperate climates to our environment and expresses the fear that it might even lead to problem of desertification of large tracts of land. This therefore leads to the conclusion that we should display originality in finding solutions to our problems and not merely be imitative.

Let me first tell you something about the organisation I come from, namely, the Department of Atomic Energy (DAE). Our work in the past three decades has placed India amongst a few select nations in the world that have developed expertise in a wide range of activities relating to the peaceful uses of nuclear energy. The management of science and technology in the DAE has been notable for the absence of bureaucratisation, freedom given to scientific workers to pursue their work without rules and regulations hampering them and a participative style of decision-making. A special feature has been the pursuit of excellence, ever since the organisation was founded more than three decades ago by late Dr. Homi J. Bhabha. Our effort has always been to attract the best talent, encourage and retain them so that they give their best in their respective fields. We endeavour to maintain an environment in which outstanding work is rewarded, where each person is treated as a human being who has his or her own problems, rather than as a cog in the wheel of a big machinery. As an organisation working in a field that also concerns the public, we give due attention to environmental issues and allay public misgivings arising out of lack of information. We have also maintained a continuous interaction with the industry which has helped in the implementation of our programmes and which in turn has also enabled the upgradation of the general level of technology available with Indian Industry. Recognising the importance of electrical power for the country's economic development, DAE has taken up a nuclear power programme which aims at a generation capacity of 10000 MWe by the turn of the century. In the process of carrying out R & D in atomic energy, our scientists and technologists are working in some of the cutting edges of advanced technologies—like lasers, fusion, superconductivity, electronics, materials sciences, etc. These activities have led to several spin offs which have been transferred to industry so that the society as a whole benefits from our research and development programmes.

Coming from a scientific and technical organisation, I cannot help emphasising the role of Science and Technology (S & T) in our development. Despite the pessimism one often hears, we must realise that for a country which got its independence only 40 years ago, we have not done badly. Let us look at some basic facts : From being a chronic food importing country we have reached a stage when we could manage on our own, one of the worst droughts in history. There are also several quantitative indicators : Our gross national product and national income have multiplied nearly four fold, food production has gone up by 300%, industrial production by over 700% and electricity production by an impressive 4000%. No doubt, many of these achievements have been overshadowed by a fast growing population. And further, one can always say that we could have done better. This is a healthy attitude and a good antidote to complacency. Impressive achievements come about only if we have in us the desire to excel in everything that we do in our day-to-day life.

I am laying stress on the pursuit of excellence for the simple reason that barring some exceptions, there is a tendency in our country to accept and be satisfied with the mediocre rather than strive for excellence. History has shown that development and prosperity in any society in the world has come about by the recognition given to excellence—in whatever field. This in turn requires each individual to demand the best of his or her ability in whatever activity one is engaged in.

Self reliance in technology i another ideal which I would commend to you youngmen an women. It calls for the assimilation of one's own areas of scientifi and professional expertise as wel as the recognition of the need t have it suitably meshed in with th achievements of others so as t produce strong linkages essenti for them to be effective in overa technological advancement. I is then that innovation will resu in the birth of new technology. Th interaction between science, techn logy and industry is therefor necessary for reducing the gestatio time in the conversion of a scienti principle into an object of pub utility.

Today, most people recogni the fact that the significant achie ments in India during the past fo decades is in a large part attrib able to the emphasis placed on science and technology by the country's leaders ever since it got independence. This was contrary to the conventional wisdom prevailing at that time which felt that investment in science and technology would be a luxury for a developing country like India. But more important than achievements in science and technology per se, is the need for developing a scientific temper amongst our citizens. This is easily said but in reality presents a major challenge. I recall a statement by Will Durant in his monumental "History of Civilization" on the subject. He says, "Religions are born and may die but superstition is immortal". He goes on to add, "Only the fortunate can take life without mythology. Most of us suffer in body and soul and Nature's subtlest anodyne is a dose of the supernatural". This is not a feeling only of India but manifests in varying degrees in all societies. However, we seem to have more than our share of godmen, astrologers, fortune tellers, etc. Even those who pursue science as a career are known to fall a prey to supersitions. Often we exhibit a tendency to jump to conclusions which are unduly biased by emotional considerations. We have to realise that there are many sides to any issue and balanced approach which involves some give and take, is essential. One must objectively assess the pros and cons of any view point, weigh the priorities involved and arrive at workable solutions, rather than argue endlessly and thereby expending only our energy. For a developing country which is desiring to enter the modern technological age, a scientific temper therefore becomes a pre-requisite to ensure the success of any programme.

The rapid industrialisation of our country has brought in its wake a migration of population from villages to towns and cities in search of employment. The villages are thus bereft of the young and the able bodied while the towns and cities have burst their seams for accommodating the large influx of population resulting in slums and the attendant socio-economic problems. The quality of life of the people both in the villages and cities has thus suffered. We shall have to create large scale opportunities for employment in the rural sector and develop entreprenurial skills there. We should also provide the benefits of modern science and technology such as improved telecommunication, better means of transporation and better health and educational facilities. Only then can the process of population migration to the cities be arrested. In all these programmes which involve large sections of population, the universities have a lead role to play in inculcating an appropriate value system amongst the student population.

As we develop into a technology oriented and a more industrialised society, we have to avoid some pitfalls in the process. We have seen elsewhere in the world how this has led to endless materialism accompanied by a trend to dehumanise all activities. In India, we have always had the tradition of being a human society. This has to be maintained. In concrete terms this would mean retaining the bonds of family, and concern for fellow citizens and for the future generations to come. We must address issues like environmental pollution, examine ways to conserve our natural resources and especially how to control the growth of our population. I would like to stress the imperative need of reaching a consensus in our society on the question of population control. Without it all the efforts we are making at increasing the wealth of the nation for giving a better standard of life will be nullified by the addition of many more people to feed, clothe and shelter. In this respect we have much to learn from what China has done to bring down birth rates and they are already projecting a declining population trend commencing in the next ten or fifteen years. The over-emphasis in recent times on materialistic needs has led to our best talent being devoted to science and technology. You will agree that it is very necessary that we nurture talents in the arts, literature, music, humanities, commerce, economics, philosophy, and a host of other disciplines that are essential to develop a humanistic society. I sincerely wish that some of the talented youngsters graduating out today devote their careers in these fields which have great relevance to the long term well being of our country. It would therefore be necessary for you to adopt a holistic approach rather than a compartmentalised one.

Many of you young men and women would also be aspiring to work in your respective fields in some of the leading institutions abroad and this quest for knowledge is to be accepted as a legitimate means of catching up with the rest of the world. Nonetheless it would perhaps be most laudable for all of them to have their sights on the needs of their motherland like the eagle which soars high in the sky but has its sight firmly on the ground looking for its prey. It will also be my desire to pass this message across to all those young men and women working and living abroad to come and participate in building up a prosperous India. ☐

New Delhi-110002

Problems of Hill Area Development

The Geographical Society of the North-Eastern Hill Region (India) and the Department of Geography, North-Eastern Hill University jointly organized a seminar on "Problems of Hill Area Development with Special Reference to the North Eastern Region" at NEHU, Shillong. Sponsored by the Indian Council of Social Science Research, North-Eastern Regional Centre and North-Eastern Hill University, Shillong, the seminar was inaugurated by Shri P.A. Sangma, Chief Minister, Meghalaya and was presided over by Prof. R.K. Mishra, Vice-Chancellor, NEHU. Prof. M. Taher, Department of Geography, Gauhati University, delivered the keynote address.

Shri Sangma in his address emphasised the need for better data on land-records and tenancy relations. He also stressed the need for greater interaction of the region with the rest of the country through proper development of transport and communication so vital to the integrity of the nation.

He said that the hill areas of the country had to face certain problems different from other areas inhibiting the process of development. Difficult terrain, variable agro-climatic conditions, distinct socio-cultural features had led to the backwardness of these areas and their slow pace of development. These areas therefore drew the special attention of the planners right from the inception of the plan era after Independence. The emphasis on hill area development emerged from the growing concern over inter-regional disparities and the disadvantaged hill people. It was realised that these areas in the country could not be developed in isolation from the adjoining plains with which their economy was closely inter-linked.

Shri Sangma pointed out that in order to look into the problems, potential and strategy for development of the hill areas, various committees and task forces were set up by the Central Government. As a result of the findings of these committees, task forces and high-power groups, the Sixth and Seventh Five-Year Plan documents highlighted the problems of hill areas of the country and contained the special strategies covering linkages, infrastructural and organisational support, harmonisation of socio-economic growth with eco-restoration, eco-preservation, and eco-development, integrated watershed management with people's participation as the basis of hill areas development.

Describing the characteristics of the hill areas of the north east, Shri Sangma said that in recognition of the special characteristics and problems of these areas, the hill states of the North Eastern region along with some other states have been treated as special category states by the Government of India. Consequently, in determining the size of the Plans of these states, the Planning Commission gave emphasis on the actual developmental needs rather than the resource raising ability. Central assistance provided for the development of these states comes in the form of 90% grant and 10% loan.

While dwelling at length on the schemes for rural development, particularly poverty alleviation programmes drawn up on an all India pattern, Shri Sangma stressed the need for looking into local situations and local constraints and adapting these schemes to suit the requirements of individual states. Agriculture was another area where it was necessary to look at the pattern of development, entirely different from the pattern fixed for the rest of the country. Discouraging the practice of jhum cultivaiion, he opined that the thrust in agricultural production in the hill areas ought to be on horticulture which, among other things, would be less damaging to the ecology of the region. He asked for evolving a strategy for the setting up of widely dispersed small processing units for the agricultural produce of the hill areas. Any serious plan for the development of agriculture in the hill areas needed a significant component of storage, processing and preservation of agro-horticultural produce, he added.

Referring to the chronic shortage of skilled manpower in the region, Shri Sangma said that emphasis had to shift from general education to vocationalisation of education. It was necessary to make use of the District Manpower planning and Employment Generation Councils to study the employment in the districts and to identify the requirements of different categories of manpower. He thought that greater stress could then be laid on setting up technical institutions which are more relevant to the hill areas.

Shri Sangma also emphasised that the development strategy for the hill areas should take into account the principle of integration of the ecological, economic and sociological coordinates.

Prof. Mohammed Taher of the Department of Geography, Gauhati University, in his keynote address presented an outline of the problems which the north eastern region in general and the hill areas in particular were facing. He dwelt at length on the rugged topography of the north eastern region, about seventy per cent of which is covered by hills, mountains and plateaus. In spite of multifarious social and demographic developments in the region, the economic changes have been slow. With the help of data, he pointed out that the high rate of participation in work was not due to the capacity of the economy of the region, but a pathetic reflection of incapacity of the prevailing economy to generate surplus. Agriculture, with its meagre productivity, due mainly to the primitive methods of cultivation, engage about 32% of the total population of the region directly. He put the proportion of workers engaged in the secondary sector of industries in the hills at one per cent of the total population and that in the tertiary sector, especially in services, between 9 and 13 per cent. This state of economy of the region has resulted in a low per capita income of Rs. 911.00 as against Rs. 1163.00 of the nation (1980-81). He regretted the lack of infrastructural facilities in the region and stated that the hills region has a total available electric energy accounting for 0.34% of that of the nation.

Prof. Taher observed that it was in this physical, demographic and socio-economic background of the region, that measures are needed to be adopted for its all round development and the causes of failure to develop during the last four decades should help the scholars, administrators and planners to find out a workable methodology.

Over 30 participants from all over the country and 40 participants from Shillong and NEHU participated in the deliberations of the seninar which was spread over five technical sessions. After the two days of deliberations, the following recommendations were made :

(1) Land Records may be prepared specially in respect of registration of land on ownership basis consulting the village lyndohs, village mantris and village Durbers. These works should be preceded by a thorough cadastral survey of the entire region.

(2) Levels of development may be assessed at a micro-level in different areas before suggesting developmental measures.

(3) Fields cleared for shifting cultivation in a particular year should be replaced in a the subsequent year by quick growing useful tree which after the jhum cycl can be used before clearing again for shifting.

(4) Lack of infrastructural facilities specially in respect of transport and communication should be looke into and stress must be given for their quick development.

(5) Village level social organisation should be formed to implement and look after all developmental programmes including IRDP.

(6) The University and other research organizations should be associated in al developmental programmes.

Seminar on Autonomous Colleges

A two-day Seminar on Autonomous Colleges was held at the Gauhati University recently. Sponsored by the University Grants Commission (UGC), the Seminar was inaugurated by Prof. J.M. Choudhury, former, Vice-Chancellor, Gauhati University and was presided over by Prof, D.P. Barooah, Vice-Chancellor, Gauhati Uniuersity Shri Kamaleswar Bora, Vice-Chancellor, Dibrugarh University and Dr. J.B. Ganguli, Vice-Chancellor, Tripura University also attended the Seminar.

The seminar focussed on (1) Scheme of Autonomous Colleges—Necessity, Objectives, Relationship with the parent University, Strategies for implementation of the scheme; (2) Programme of action of National Policy of Education relating to the development of Autonomous Colleges and Teachers' Training; and (3) Restructuring of Courses at the undergraduate level.

The seminar generally accepted the revised U.G.C. guidelines for autonomous colleges and recommended to the Government of Assam. University Grants Commission and the Gauhati University authorities to take urgent steps in regard to following :

(1) To make suitable provision in the University Acts to enable the colleges and the University Departments to enjoy autonomous status on a selective basis, it being understood that the concept of autonomy and accountability implies that the autonomous units have the power of self-governance and decision-making in regard to academic programmes and administrative and financial matters.

(2) To take steps to formulat a scheme of incentives for University and college teachers as provided under 9(c) of the Plan of Actio (POA) on National Policy of Education (NPE), 1986.

(3) To make provision for cen

percent financial assistance from the Central Government beyond a period of five years under the programme of autonomous colleges.

(4) Having regard to the statement in POA (para 5.31), the present system of discrimination between the Central and the State Universities in allocation of funds should be eliminated. It was felt that to motivate the teachers of the colleges and the Universities the revised UGC pay scales for the teachers be implemented promptly. It was generally agreed that motivation of teachers is important for implementation of National Policy of Education in the field of Higher Education.

(5) To take steps for early setting up of State Council for Higher Education on the basis of the recommendations approved by the UGC.

(6) To take urgent steps in restructuring the Courses at the undergraduate level and in this regard the seminar recommends the following subjects for consideration of the appropriate bodies. To start with only one subject be introduced in each college :

Computer Science, Electronics, Bio-Chemistry, Industrial Chemistry, Food Processing and Technology, Instrumentation techniques, Material Science, Forestry, Diary farming, Petrochemicals, Land use techniques, Music, Dance and Dramma, Book keeping and Accountancy, Photography, arts, potteries etc., Hotel Management, Journalism and Mass Communication, Automobile-maintenance and repair, Population Education, Rural Banking, Co-operative Management, Entrepreneurship, Agriculture Marketing, Tourism, Environmental Studies, Nursing, Midwifery, Social Pathology, Physical Education, and Confectionery.

(7) To take immediate steps to introduce some of the application oriented subjects in permanently affiliated colleges from the next academic session.

(8) To take steps for intensive training for the Principals and academic staff of the concerned colleges selected for autonomy.

(9) To provide for adequate funds for appointing additional staff for subjects introduced under restructuring of courses.

A number of Vice-Chancellors of the North Eastern Region, local academicians, selected Principals of the affiliated Colleges of the region, Principals and teachers of the local Colleges, University teachers, State Government and University officials attended the seminar.

Emerging Dimensions in Accounting & Auditing

The Faculty of Advanced Commerce, Business and Industrial Management of Kanpur University organised a UGC sponsored National Seminar on "EMERGING DIMENSIONS IN ACCOUNTING & AUDITING" at the University recently. Besides the inaugural and valedictory sessions there were four technical sessions in which the following topics were discussed :

> Accounting and Auditing in the 21st Century, Accounting Standards in India and abroad, From Statutory Audit to Management and Tax Audit, Management Control Systems and Accounting, Cash Flow Accounting, Accounting for Price Level Changes, and Professional Ethics and Hazards in Auditing.

The Seminar was inaugurated by Dr. Gaur Hari Singhania. Vice-President of the J.K. Organisation, Kanpur and Dr. K.B. Agrawal, President of the U.P. Stock Exchange delivered the keynote address. The three-day seminar was presided over by the Vice-Chancellor Dr. B.N. Asthana while Shri D.N. Dixit, Chairman and Managing Director of the British India Corporation delivered the valedictory address.

The Seminar made a number of recommendstions including the one suggesting setting up of a Kanpur Management Association.

About 60 participants including those from Delhi University, Allahabad University, Jamia Millia, Aligarh Muslim University, and Institute of Chartered Accountants of India attended the Seminar at which over 35 papers were presented.

OUAT Reports. . .

The Orissa University of Agriculture & Technology (OUAT) has introduced a degree course in Forestry, a Postgraduate diploma Courses in Computer Science and a diploma course in Sericulture. The University has also established a Video Project in collaboration with the Memorial University, Newfoundland, Canada, which will greatly help in the transfer of technology to farming community in their own environment.

Under its literacy drive programme, the University has set up a Distance Education Programme for educating the semi-literate farmers on scientific farming through correspondence courses. So far, about 800 farmers have been enrolled for courses on different aspects of farming like Scientific method of groundnut production, rice cultivation, mushroom cultivation, cattle management, vegetable production, etc.

With the financial assistance of Ford Foundation, farm research projects with Farm Science Research have started functioning in the State at Phulbani, Dhenkanal and Puri districts. This programme will provide need-based farming technology to small and marginal farmers dependant on rainfed rice-based farming systems.

Advances in Mathematical Techniques

A three-day All India Conference on Recent Advances in Mathematical Techniques and Applications-II was organised by Dr. Y.S. Parmar Institute of Mathematical Sciences at Shimla from 18-20 May, 1988. Inaugurated by Shri Virbhadra Singh, the Chief Minister of Himachal Pradesh and attended by delegates from 18 states of India, Bangladesh and Nepal, the conference focussed on Bio-fluid Dynamics, Mathematical Physics, Mathematical Methods and Chaos, Stability and Turbulence. The conference resolved that more applicable mathematics such as used in Bio-Sciences, Medical Sciences, Social Sciences and in any other field to benefit the society be identified and attention paid to highlight it and train manpower to work in this field. It was also resolved that Dr. Y.S. Parmar Institute may act as the coordinating centre for this work.

News from Agril. Varsities

Rural Development and Eradication of Poverty

Sardar Tarlok Singh, former Member of Planning Commission delivered the Second Sir Chhotu Ram Memorial lecture at Haryana Agricultural University. "Intensive agriculture and intensive rural industrialisation, alongwith necessary social services and human resource development, adapted to the conditions of each region or area, hold the key to the development of agriculture and the eradication of poverty. They would also lead to expansion of employment, and productive use of the literate young men and women in the villages," observed Mr. Singh.

He explained the major issues in agriculture planning, in relation to poverty, referring to small industries and said, "Most small industry has gone to metropolitan and industrial and urban centres and their rural spread has been exceedingly small. Therefore, one of the major aims in view has remained unfulfilled".

The stagnation in agricultural production after 1983-84 and the severe drought which has prevailed over large areas in the country over the past year have created misgivings about the adequacy of current agricultural policies and programme. Any stagnation or decline in agricultural output deepens rural poverty, which continues to be a marked feature of the rural life of a large part of the country. He asked whether agricultural development programme reach out to the roots of poverty ? Are they based on an adequate diagnosis of the nature of the problem of poverty ? In adding expansion of employment to the alleviation of poverty, what new strategies do we envisage ?

Dr. Har Swarup Singh, Vice-Chancellor, who presided, disclosed that Sir Chhotu Ram Chair (Prof. of Eminence) in Agricultural Economics has been instituted at HAU and memorial lectures are delivered by eminent scientists, educationists, administrators in the broad field of agriculture and rural development on the occasion of birth anniversary of Deen Bandhu Sir Chhotu Ram.

New Oilseeds Varieties

The Indian Council of Agricultural Research (ICAR) has identified a number of new and high yielding varieties of different oilseed crops including sunflower, sesame and niger for the coming Kharif season. The varieties are sunflower, MSFH-17, a high-yielding hybrid for all sunflower growing areas except areas of Maharashtra infested with downy mildew: sesame, is five and RT-48, all high-yielding strains with multiple tolerance to leaf curl, stem rot, bacterial oozing, gall fly, and niger CHH-1, RDR-140 and GA-5, high-yielding and responding well to inputs and good crop management.

PAU Develops Gasifier System

The School of Energy Studies for Agriculture of the Punjab Agricultural University, has developed a 2 to 6 KW capacity gasifier system to operate on rice husk or groundnut shell. The producer gas generated by the system is used as a supplementary fuel in 7 hp diesel engine which can subsequently be connected to a pumping set or electric generator. While engine is operated on a dual fuel mode, about 75 per cent of energy is supplied by producer gas whereas the balance 25 per cent is met by diesel. Consumption of rice husk for a 7 hp engine is 6 kg/hr. This range was selected because most of the farmers own 3 to 8 hp engine for various farm operations.

According to Professor A.P. Bhatnagar, Director of the School of Energy Studies for Agriculture, the application of this technology on large scale will reduce the dependence of the farmers on highly scarce and expensive petroleum fuel and would reduce the country's petroleum products import.

Sugarcane Crop Pests

The Entomologists of the Punjab Agricultural University have observed that under the prevailing hot and dry weather conditions, the attack of black-bug and mite on sugarcane crop is likely to increase in Punjab. Both these insects suck cell sap from the plants. As a result of black-bug attack, the crop looks pale inspite of proper manuring and irrigation while in the case of mite attack, the leaves of the plant turn red.

To save the crop from the attack of black-bug, the experts have suggested to the farmers to spray their crop with 1.5 kg BHC 50 WP or 350 ml Thiodan 35 EC or 225 ml Sumithion/Follithion/Accothion 50 EC or 350 ml of Dursban 20 EC in 150 litres of water. The spray material should be directed into the leaf whorl. In case of mite attack, the farmers are advised to spray their crop with 400 ml malathion 50 EC in 150 litres of water per acre. Since **baru** is an alternative host weed plant, from which the mites spread to the sugarcane crop, this weed should be destroyed.

News from Abroad

Academic Exchange Fellowship Programme

Academic Exchange Fellowship Programme started by the Commonwealth Fund for Technical Cooperation aims at the promotion of academic movement amongst universities in the less developed countries of the Commonwealth to share with each other the fund of experience and expertise which has accrued among them. The programme, operated by the Association of Commonwealth Universities (ACU), may take any one of the following forms :

(a) attachments of university staff, both academic and administrative, to other universities in Commonwealth developing countries to obtain greater experience and training;

(b) short study tours of university staff in Commonwealth developing countries to enhance their ability to contribute to national development

(c) exchanges of staff between universities in developing countries with a specific developmental objective in view;

(d) university-sponsored seminars with a national or regional developmental orientation, where support could be provided for organisation or for teachers or students to attend.

Fellowships will be awarded for not more than three months' duration. Award would normally provide for economy or tourist class travel and a modest daily subsistence allowance but in no circumstances, would exceed a total of £2,000. The proposals by the member universities with necessary details should be addressed to Mr. P.B. Hetherington, Deputy Secretary General (Commonwealth Awards and Appointments), John Foster House, 36 Gordon Square, London WCIH OPF.

Conference on Education and Development

An International Conference on Education and Development will be held in Manila, the Philippines from November 16-19, 1988. Jointly sponsored by the Southeast Asian Ministers of Education Organization Regional Center for Educational Innovation and Technology (SEAMEO/INNOTECH), the Southern Illinois University at Carbondale, and the University of South Carolina, the Conference will bring together leaders and practitioners in the field of educational development, rural education, distance learning and low-cost instructional programming. The Conference will explore potentialities and directions of education as a process in paving the way for material inputs and in supporting material development projects, to extend the benefits of development to much larger segments of target populations.

Details about the Conference can be had from :

INNOTECH Director,
P.O. Box 207,
University of Philippines,
Diliman, Quezon City,
Philippines.

OR

The Dean, School of Technical Careers, Southern Illinois University
Carbondale
Illinois 62901, USA

Research and Training in Italian Laboratories

In pursuance of its aims to facilitate and promote mutual contacts between scientists in developing countries and those in industrialised countries and to further relations between their scientific institutions, the Third World Academy of Sciences (TWAS) awards grants to researchers of proven ability, working and living in developing countries, for the purpose of carrying out research, learning new techniques or undertaking some other form of training by working with colleagues in Italian Research Laboratories. A number of grants will be awarded in 1988 in Biological Sciences, Chemical Sciences and Geological Sciences in which there is recognised Italian experience. Applicants should be nationals of developing countries normally with some research experience and with permanent positions at universities or research institutes in developing countries.

The scheme will cover living expenses in Italy and will amount to a minimum of Italian Lire 1,400,000 per month. Limited funds for travel expenses will be available in case these are not covered by other sources. The grants also cover health insurance for the visitors and their accompanying families. A monthly family allowance for those having dependent family members will be granted. Requests for application form as well as a list of Italian laboratories may be made to :

Prof. M.G.K. Menon,
Vice-President, TWAS,
Yojana Bhawan,
New Delhi-110001.

Requests for participation should reach not later than 31 October, 1988 to the Excutive Secretary. The Third World Academy of Sciences, C/o International Centre for Theoretical Physics (ICTP) P.O. Box 586-34100 Trieste-ITALY

We Congratulate . . .

Dr. Nityananda Pattnaik who has taken over as Vice-Chancellor of the Orissa University of Agriculture and Technology, Bhubaneswar.

ANNAMALAI UNIVERSITY

ANNAMALAINAGAR

No. K2/7/88 **Dated : 20.5.88**

NOTIFICATION

Applications are invited for admission to the following courses for the academic year 1988-89.

1. M.P.E.S.
2. M.P.Ed.
3. M.Phil. in Physical Education.

The applications along with prospectus can be had from the REGISTRAR, ANNAMALAI UNIVERSITY, ANNAMALAINAGAR-608 002 on payment of Rs. 25/- in person or through a demand draft payable on Indian Bank or Bank of Madura at ANNAMALAINAGAR or State Bank of India at CHIDAMBARAM with a self-addressed envelope of size 30 cm. x 13 cm. and stamped to the value of Rs. 1.80 alongwith a requisition specifically stating the course for which the application is required. The application form together with the prospectus will be issued from 25th May 1988.

The last date for the receipt of filled in applications by the University is 30.6.88.

R. Rajamanickam
REGISTRAR

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

RESEARCH IN PROGRESS

A List of Research Scholars Registered for Doctoral Degrees of Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Chandel, R.S. *Some problems in fixed point theory.* Devi Ahilya. Dr. Ashok Ganguly, Lecturer, Department of Mathematics, Shri G.S. Institute of Technology and Science, Indore.

2. Jadhav, B.P. *Problems in the non-Newtonian power-law fluids.* Shivaji. Dr. B.B. Waghmode, Reader, Department of Mathematics, Shivaji University, Kolhapur.

3. Sarachandran, T.G. *Semi groups*. Kerala. Dr. S. Madhavan, Prof., Department of Mathematics, University of Kerala, Trivandrum.

Statistics

1. Apte, N.S. *Ranking and selection of populations in binary response models.* Shivaji. Dr. M.S Prasad, Prof. and Head, Department of Statistics, Shivaji University, Kolhapur.

2. Huggi, M.R, *Optimal confidence procedures.* Shivaji. Dr. R.N. Rattihalli, Reader, Department of Statistics, Shivaji University, Kolhapur.

3. Shirke, D.T. *A study of the confidence regions of the parameters.* Shivaji, Dr. R.N. Rattihalli, Reader, Department of Statistics, Shivaji University, Kolhapur.

Physics

1. Dial Chand. *A study of transient waves in thermoelastic and magneto thermo elastic media.* HP. Dr. J.N. Sharma, Department of Physics, Himachal Pradesh University, Shimla and Dr. S.P. Sud, Department of Physics, Himachal Pradesh University, Shimla.

2. Ganesh Kumar, T. *Study on oxide materials.* BHU. Prof. O.N. Srivastava, Department of Physics, Banaras Hindu University, Varanasi and Dr. R.S. Tiwari, Department of Physics, Banaras Hindu University, Varanasi.

3. Jadhav, S.R. *Electrical and magnetic properties of substituted copper-zinc ferrite system.* Shivaji. Dr. S.R. Sawant, Department of Physics, Shivaji University, Kolhapur.

4. Singla, Chhotu Ram. *Study of A.C. conduction in amorphous semi-conductors at microwave frequencies.* Panjab. Prof. K.K. Srivastava, Department of Physics, Panjab University, Chandigarh.

Chemistry

1. Bassi, Kamal Dev. *Designing of protecting reagents useful in peptide chemistry with handles attachable to polymers* HP. Dr. C.S. Pande, Department of Chemistry, Himachal Pradesh University, Shimla.

2. Bhardwaj, Shashi Kant. *Molecular and x-ray structure of some dibutyltin (IV) carboxylates and related derivatives.* Panjab. Prof. S.P. Narula, Department of Chemistry, Panjab University, Chandigarh.

3. Jain, Neena. *Derivatization of cross-linked polymers as reagents in organic synthesis.* HP. Dr. C.S. Pande, Department of Chemistry, Himachal Pradesh University, Shimla.

4. Jain, Vinay Kumar. *Studies towards synthesis of some heterosteroids and related compounds.* Panjab. Prof. S.V. Kessar, Department of Chemistry, Panjab University, Chandigarh and Prof. I.R. Trehan, Department of Chemistry, Panjab University, Chandigarh.

5. Kale, B.B. *Modellirg of gas solid non-catalytic reactions.* Shivaji. Dr. B.D. Kulkarni, National Chemical Laboratory, Pune.

6. Pandhi, Sat Bhusban. *Studies towards the synthesis of β-lactams.* Panjab. Prof. S.D. Sharma. Department of Chemistry, Panjab University, Chandigarh.

7. Rascovt, Prakash Chand. *A study of transport process of some electrolytes in binary solvent mixtures.* HP. Dr. V.K. Syal, Department of Chemistry, Himachal Pradesh University, Shimla.

8. Singh, Jitender Pal. *Synthesis of new β-lactams as potential antibacterial agents.* Panjab. Prof. S.D. Sharma, Department of Chemistry, Panjab University, Chandigarh.

9. Singh, Sdmrit. *Investigations of some dianion reactions of synthetic utility.* Panjab. Prof. S.V. Kessar, Department of Chemistry, Panjab University, Chandigarh and Dr. Y.P. Gupta, Department of Chemistry, Panjab University, Chandigarh.

10. Vohra, Rahul. *Studies towards the synthesis of benzazepine alkaloids.* Panjab. Prof. S.V. Kessar, Department of Chemistry, Panjab University, Chandigarh and Dr. Tejvir Singh, Department of Chemistry, Panjab University, Chandigarh.

Earth Sciences

1. Badoniya, Rajender Kumar. *Ground water investigations in Jatara Block, Tikamgarh District, M.P.* HS Gour. Prof. G.N. Saxena, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar and Dr. L. P. Chourasia.

2. Bajpai, Rakesh Kumar. *Geological impact on the quality of subsurface water and its effects on the environment, Sagar District, M.P.* HS Gour. Dr. M.V. Durge, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

3. Jain, Ajay Kumar. *A study of geology, hydrology, geohydrology, groundwater availability and soil conservation planning for the area Mandawra and Sunrai Regions, District Lalitpur, U.P.* HS Gour. Dr. S.K. Mishra, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

4. Jain, Chaudhary Sunil Kumar. *Geological aspects of Rihand lake near Singrauli with special emphasis on the environmental effects.* HS Gour. Dr. S.K. Babu, Prof., Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

5. Jain, Jitender Kumar. *An advanced study for planning and monitoring of groundwater availability, utilisation, pollution and its impact on environment in tail reaches of Matatila command, M.P.* HS Gour. Dr. L.P. Chourasia.

6. Jain, Mahender Kumar. *Environmental studies around Katni and adjacent area, M.P.* HS Gour. Dr. M.V. Durge, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

7. Jain, Pawan Kumar. *A study of geology and groundwater hydrology of the area around Gulganj-Angore, Chhatarpur District, M.P.* HS Gour. Dr. S.K. Mishra, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

8. Khare, Arun Kumar. *Geology and quality of surface water and its impact on the environment in and around the Sagar District, M.P.* HS Gour. Dr. M.V. Durge, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

9. Namdev, Mukesh Kumar. *Environmental studies of the coal mines and its surroundings of Chhindwara District, M.P.* HS Gour. Dr. M.V. Durge, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

10. Patel, Dhaniram. *Geological and geochemical inventory of Chauraiya area, Damoh District, Madhya Pradesh.* HS Gour. Dr. P.O. Alexander, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar and Dr. S.S. Dave.

11. Patil, B.S. *Structural and stratigraphic studies around Bewar, Ajmer District of Rajasthan using remote sensing techniques* Shivaji. Dr. R.R. Patil, Head, Department of Geology, Shivaji University, Kolhapur.

12. Rajeev, S. *A study on ground water resources, evaluation and environmental hazards of the Tawa command area, M.P. using remote sensing techniques.* HS Gour. Dr. L.P. Chourasia and Dr. S.N. Pandey, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

13. Raina, Ravinder Pal Singh. *Structural geology and tectonic history of the precambrian rocks and their bearing on the mesozoic-cenozoic vulcanism in the area East of Barwaha City, Western Madhya Pradesh, Central India.* HS Gour. Dr. P.P. Rodey, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

14. Singh, Dinesh Kumar. *Geotechnical and hydrogeological studies of Rajghat Dam project.* HS Gour. Dr. L.P. Chourasia and Dr. R.G. Gupta.

15. Surjeet Kumar. *Geology, coal deposits and environmental problems due to coal mining around Churcha, District Sarguja, Madhya Pradesh.* HS Gour. Prof. G.N. Saxena, Reader, Department of Applied Geology, Dr. Hari Singh Gour Vishwavidyalaya, Sagar.

16. Tiwari, Naresh Kumar. *Remote sensing study of parts of central Rajasthan and detailed structural and metamorphic study of the rocks of the Bhilwara supergroup around Banare in Bhilwara District.* HS Gour. Prof. T.V.V.G.R.K. Murthy.

Engineering & Technology

1. Baljinder Kaur. *Adsorption of organion organics from aqueous phase by active carbons.* Panjab. Prof. R.C. Bansal, Department of Chemical Engineering and Technology, Panjab University, Chandigarh.

2. Dutta, Debjani. *Studies on very high speed devices.* BHU. Prof. B.B. Paul, Department of Electronics Engineering, Banaras Hindu University, Varanasi.

3. Sharma, Naresh. *Preparation and characterisation of carbon molecular sieves.* Panjab. R.C. Bansal, Department of Chemical Engineering and Technology, Panjab University, Chandigarh.

4. Tiwari, Shailash Kumar. *Speech synthesis.* BHU. Prof. Raghunath, Department of Electronics Engineering, Banaras Hindu University, Varanasi.

5. Tiwari, Tapeshwar. *Electron gun.* BHU. Prof. R.K. Jha, Department of Electronics Engineering, Banaras Hindu University, Varanasi.

BIOLOGICAL SCIENCES

Anthropology

1. Sonia. *ABH secretion in health and disease.* Panjab. Prof. V. Bhalla, Department of Anthropology, Panjab University, Chandigarh.

Marine Biology

1. George, C.K. *Studies on the parasites and diseases of marine fishes.* Kerala. Dr. S. Radhakrishnan, Lecturer, Department of Aquatic Biology and Fisheries, University of Kerala. Trivandrum.

2. Xavier, Barnabhas. *Studies on the functional morphology and ecology on the genus Chela ftom S.W. Coast of India.* Kerala. Dr. P. Natarajan, Prof. and Head, Department of Aquatic Biology and Fisheries, University of Kerala, Trivandrum.

Biophysics

1. Sharma, Rakesh Kumar. *Interference of certain chemical agents with epididymal physiology : A possible approach to male contraception.* Panjab. Dr. N.R. Kalla, Department of Biophysics, Panjab University, Chandigarh.

Biochemistry

1. Gupta, Reena. *Studies on epithelial cell surface glycosylation in mice intestine : Effect of different nutritional regimens.* Panjab. Dr. Akhtar Mahmood, Department of Biochemistry, Panjab University, Chandigarh.

2. Mohini. *Studies in environmental toxicology : Some aspects of the propane-1, 2-diol induced biochemical changes in rat erythrocytes.* Panjab. Dr. M.K.P. Amma, Department of Biochemistry, Panjab University, Chandigarh and Dr. J.P. Nagpaul, Department of Biochemistry, Panjab University, Chandigarh.

3. Sharma, Sangeeta. *Biochemistry of nuclei and metabolism in plant seedlings.* BHU. Dr. (Mrs). V. Taneja, Department of Biochemistry, Banaras Hindu University, Varanasi.

Botany

1. Amarjit Kaur. *Organic acids and fat metabolites of some Cladosporium spp.* Panjab. Prof. G.S. Rawla, Department of Botany, Panjab University, Chandigarh.

2. Ashok Kumar. *Studies on the anti-phytosocial properties of eucalyptus.* Panjab. Dr. R.K. Kohli, Department of Botany, Panjab University, Chandigarh.

3. Fernadis, S.F. *Studies on nitrogen and phosphorus in estuarine ecosystem of Western Maharashtra.* Shivaji. Smt. L.J. Bhosale, Department of Botany, Shivaji University, Kolhapur.

4. Kulkarni, P.K. *Some ecological and physiological aspects of Rhizophora propagules.* Shivaji. Dr. (Smt.) L.J. Bhosale, Department of Botany, Shivaji University, Kolhapur.

5. Malvinder Kaur. *Physiological and biochemical aspects of eradication of Lantana.* Panjab. Dr. R.K. Kohli, Department of Botany, Panjab University, Chandigarh and Dr. K.K. Dhir, Department of Botany, Panjab University, Chandigarh.

6. Ramanjit. *Biotechnology of organic acids and fats from some plectomycetes.* Panjab. Prof. G.S. Rawla, Department of Botany, Panjab University, Chandigarh.

7. Ranjit Kaur. *Taxonomy of some North Indian Agarics.* Panjab. Prof. G.S. Rawla, Department of Botany, Panjab University, Chandigarh.

8. Said, Shirzadian. *Systematic study of some Iranian mosses.* Panjab. Dr. S.S. Kumar, Department of Botany, Panjab University, Chandigarh.

Zoology

1. Augustine, S. *Studies on macrozoobenthic population and their utility as pollution indicators with special reference to industrial effluents at Dewas.* Devi Ahilya. Dr. A.P. Diwan, Prof., Department of Zoology, Govt. P.G. College, Mhow.

2. Bhanot, R.K. *Studies on some aspects of the biology of white grubs.* Shivaji. Dr. G.P. Bhawane, Lecturer, Department of Zoology, Shivaji University, Kolhapur.

3. Chona, Mukesh Kumar. *Biomonitoring and ecological succession of industrial effluents of Chandigarh.* Panjab. Prof. H.S. Vasisht, Department of Zoology, Panjab University, Chandigarh.

4. Dalip Kumar. *Taxonomic studies on some Indian zygopinae with special reference to the external genitalia (Curculionidae : Coleoptera).* Panjab. Prof. H.R. Pajni, Department of Zoology, Panjab University, Chandigarh.

5. Oulkar, J.M. *Impact of biotic and abiotic factors on the population dynamics of some hairy caterpillars on economic important crops.* Shivaji. Dr. T.V. Sathe, Department of Zoology, Shivaji University, Kolhapur.

6. Patil, P.N. *Studies on the phytotoxins in the control of molluscan pests.* Shivaji. Dr. S.G. Nanaware, Department of Zoology, Shivaji University, Kolhapur.

Agriculture

1. Nayar, Punam. *Agroforestry ecosystem dynamics in Himachal Himalaya.* Panjab. Prof. P.K. Khosla, Department of Forestry, Himachal Pradesh Krishi Vishwavidyalaya, Solan and Dr. S S. Kumar, Department of Botany, Panjab University, Chandigarh.

Medical Sciences

1. Chandrasekharan Nair, M.K. *A study of developmental outcome and effect of early interventional therapy on babies with various perinatal insults.* Kerala. Dr. Elsie Philip, SAT Hospital, Medical College, Trivandrum.

2. Gopal Das. *Biology of human variation : A biostatistical approach.* BHU. Prof. G.P. Dubey, Department of Basic Principles, Banaras Hindu University, Varanasi.

3. Jyothindra Kumar, K. *Tissue response to orthodontic treatment..* Kerala. Dr. George Jacob, Prof. and Head, Department of Orthodontics, Dental College, Trivandrum.

4. Tripathi, Virendra Kumar. *Chemical investigation of medicinal plants with special reference to Terminalia arjuna and evaluation of biological activity.* BHU. Dr. V.B. Pandey, Department of Medicinal Chemistry, Banaras Hindu University, Varanasi and Dr. K.N. Udupa, Department of Medicinal Chemistry, Banaras Hindu University, Varanasi.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Chakraborti, Subinay. *On some problems of atomic scattering of charged particles.* Calcutta.

2. Gupta, Babu Lal. *Operations management production planning and control : Application of operation research techniques.* Rajasthan. Dr. B.S. Gupta, Department of Accountancy and Business Statistics, University of Rajasthan, Jaipur and Dr. R.S. Khandelwal, Department of Mathematics, University of Rajasthan, Jaipur.

3. Ramachandra Murthy, V. *Marangoni and Rayleigh-Benard convection.* Bangalore. Dr. N, Rudraiah, Prof. and Head, Department of Mathematics, Central College, Bangalore.

4. Sucheta. *Dimension subgroups and Schur multiplicator.* Panjab.

Statistics

1. Gurumurthy. *Sampling strategies and mixture distributions in crop loss estimation.* Bangalore. Dr. Sundararaj, Department of Statistics, Bangalore University, Bangalore; Dr. T. Srivenkataramana, Department of Statistics, Bangalore University, Bangalore and Dr. M. Nagaraj, Department of Statistics, Bangalore University, Bangalore.

2. Rout, Udaya Nath. *Some properties of a generalized discrete distribution.* Utkal.

Physics

1. Abdul Baten Ahmed. *A study of thermally stimulated luminescence in some feldspars.* Manipur. Dr. R.K. Gartia, Assoc. Prof., Department of Physics, Manipur University, Imphal.

2. Al-eweisi, Mohammad Adel Hamdan. *Studies in atmospheric electrical behaviour with special reference to the kinetics of ionospheric irregularities.* Nagpur. Dr. G.N. Navneeth, Director, Electronics and Spacephysics Laboratory, Department of Physics, Nagpur University, Nagpur.

3. Arivu Oli, D. *Growth of trihalides, chalcogenides chalcohalides of arsenic, antimony and bismuth from vapour and some studies of microhardness behaviour and etching.* Anna.

4. Aroumougame, R. *Fragmentation theory for synthesizing new and heavy elements through heavy ion collisions.* Panjab.

5. Badiger, Nagappa Mahadevappa. *Study af internal Bremsstrahlung in the optical region and in kev region.* Karnatak. Prof. N. Umakantha, Department of Physics, Karnatak University, Dharwad.

6. Bhattacharyya, Pranab Kumar. *The study of tension variation of jute yarns and its effects on the preparatory and weaving operations and fabric properties.* Calcutta.

7. Chaudhuri, Siddhartha. *Crystal and molecular structures of some compounds of biological interest.* Calcutta.

8. Gupta, Anil. *Compton scattering studies of some materials.* Rajasthan. Dr. B.K Sharma, Department of Physics, University of Rajasthan, Jaipur.

9. Koparkar, Pramila Vinayak. *Studies in ionospheric physics with special reference to ionospheric irregularities and VHF scintillations.* Nagpur. Prof. G.N. Navneeth, Department of Physics, Nagur University, Nagpur and Prof. R.G. Rastogi, Indian Inststute of Geomagnetism, Bombay.

10. Mohammad Aslam. *A study on locally convex spaces and dual nuclear locally convex spaces.* Magadh.

11. Nath, Malabika. *Some aspects of high energy cosmic ray air shower and multiparticle production phenomena.* Calcutta.

12. Rajegowda, M.B. *Investigations on the growth of external Bremsstrahlung produced by beta particles in thin foils.* Karnatak. Dr. T.S. Mudhole, Reader, Department of Physics, Karnatak University, Dharwad.

13. Singh, Ram Pal. *Rb-Sr dating and Sr isotopic studies of some granites and gneisses of Kumaun and Garhwal Himalaya, U.P. India.* Panjab.

14. Verma, Renu. *Present state of dielectric measurements for amorphous semiconductors.* Panjab.

15. Udaya Shankar, N. *Application of digital techniques to radio astronomy measnrements.* Bangalore. Prof P. Paramashivaiah, Department of Physics, Central College, Bangalore and Dr. S. Krishnan, Raman Institute of Science, Bangalore.

Chemistry

1. Arora, Seema. *Bioactive fluorine containing indoles with C-3 as spiro atom.* Rajasthan. Prof. K.C. Joshi, Department of Chemistry, University of Rajasthan, Jaipur.

2. Ayyaswami, N. *Electro synthesis : Electroreduction of certain aximes.* Madurai.

3. Chandraiah, U. *Kinetics and mechanism af oxidation of some compounds by tetravalent nickel.* Osmania.

4. Dave, Anjani M. *Studies on medicinally important compounds.* Bhavnagar. Dr. P.B. Trivedi, Reader, Department of Chemistry, Bhavnagar University, Bhavnagar.

5. Deshpande, Subhash Bhagwan. *Studies on structural, dielectric and piezoelectric properties of some modified ceramics of Pb* (*Zr-Ti*) O_3. Shivaji. Dr. P. Roy Chowdhury, Scientist E, Physics Chemistry Division, National Chemical Laboratory, Pune.

6. Dhabre, Ramrao Punjaji. *Inductive and mechanistic studies of oxidation of organic acids in redox reactions viz-Fe (II)-Cr (VI), Fe (II)-Mn (VII) and AS (III)-Mn (VII) reactions.* Nagpur. Dr. B. Madhava Rao, Visveswaraya Regional College of Engineering, Nagpur.

7. Dube, Bhim Raj. *Physico-chemical studies of the bivalent metal complexes of some substituted monothio-β-diketones.* Rajasthan. Dr. A.K. Rai, Department of Chemistry, University of Rajasthan, Jaipur.

8. Dube, H.N. *Kinetics and mechanism of the oxidation of some diols by N-bromobenzamide.* Vikram. Dr. V.R. Shastri, Prof. Department of Chemistry, Vikram University, Ujjain.

9. Gokavi, Gavisiddappa Shankarappa. *Kinetics and mechanism of some oxidation reactions.* Karnatak. Dr. J.R. Raju, Reader, Department of Studies in Chemistry, Karnatak University, Dharwad.

10. Gupta, Ragini. *Fluorine containing bioactive heterocycles.* Rajasthan. Dr. K.C. Joshi, Department of Chemistry, University of Rajasthan, Jaipur and Dr. V.N. Pathak, Department of Chemistry, University of Rajasthan, Jaipur.

11. Joseph, Lucy. *Studies on chelating ion exchange resins.* CUST. Dr. V.N. Sivasankara Pillai, Reader, Department of Applied Chemistry, Cochin University of Science and Technology, Cochin.

12, Kalluraya, Balakrishna. *Synthesis, characterization and biological activities of some nitrofuran and oxadiazole derivatives.* Mangalore. Dr. B. Shivarama Holla, Reader, Department of Chemistry, Mangalore University, Mangalogangotri.

13. Katre, Y.R. *A kinetic study of oxidation of some amino acids by chloramine T in micellar system.* Vikram. Dr. S.K. Solanki.

14. Laloo, Didcy. *Kinetics af oxidation of some organic substrates.* NEHU. Dr. M.K. Mahanti, Reader, Department of Chemistry, North Eastern Hill University, Shillong.

15. Mohapatra, Biswamohan. *Chemical annealing of damage fragments in gamma irradiated pure and doped potassium nitrate.* Utkal.

16. Mukhtiar Singh. *Chemical investigation of some Indian and Malaysian medicinal plants.* Rajasthan. Dr. Lalit Prakash, Department of Chemistry, University of Rajasthan, Jaipur.

17. Murtada, Yahya S. *Studies in fluorine containing benzoyal-14-benzoquinones and related compounds.* Rajasthan. Dr. K.C. Joshi, Prof. Department of Chemistry, University of Rajasthan, Jaipur.

18. Nagar, Padam Nabh. *Dialkylphosphonate and dialkyl thiophosphonate derivatives of tin (IV) and arsenic (III).* Rajasthan. Dr. R.C. Mehrotra, Department of Chemistry, University of Rajasthan, Jaipur and Dr. G. Srivastava, Department of Chemistry, University of Rajasthan, Jaipur.

19. Nalini, Veerapaneni. *Crystal engineering and topochemistry of some thiazole-2(1H)-thinones : Designing the packing of planar aromatic heterocycles using non-bonded contacts to sulphur.* Hyderabad. Dr. Goutam R. Desiraju.

20. Pachhamia, V.L. *Studies on heterocyclic compounds.* Saurashtra. Dr. A.R. Parikh, Department of Chemistry, Saurashtra University, Rajkot.

21. Pandurang, Nikam Bhagawan. *Studies in synthesis in some oxazines and flavones.* Shivaji. Dr. M.B. Hogale, Department of Chemistry, Shivaji University, Kolhapur.

22. Rajinder Kumar. *Studies on substituted biologically active nitrogen compounds.* Jammu. Dr. C.S. Andotra.

23. Sarala, G. *Kinetic and mechanistic aspects of oxidation by trivalent silver.* Osmania.

24. Sharma, Kanti. *Synthesis of some novel fluorine containing heterocycles.* Rajasthan. Prof. K.C. Joshi, Department of Chemistry, University of Rajasthan, Jaipur.

25. Sharma, Saroj. *Photometric determination of transition metal ions with sulphur containing ligands.* Rajasthan. Dr. S.P. Mathur, Department of Chemistry, Govt. College, Beawar, Rajasthan.

26. Shetti, Shreedhar Nemanna. *Study of metal complexes using thio compounds as ligands.* Karnatak. Dr. A.S.R. Murthy, Department of Studies in Chemistry, Karnatak University, Dharwad.

27. Srinivasan, T.N. *Synthesis of nitrogen heterocycles of biological importance : Reactions with chlorosulfonyl isocyanate.* Karnatak. Dr. P.B. Sattur, Deputy Director and Head, Organic Chemistry (Drugs), Regional Research Laboratory, Hyderabad.

28. Surama Devi. *Synthesis and testing of new herbicides.* Utkal.

29. Syed Mushtak Ali. *Stereo-chemistry and thermal behaviour of some metal hydroxamates.* Devi Ahilya. Dr. P.V. Khadikar, Department of Chemistry, Devi Ahilya Vishwavidyalaya, Indore.

30. Varma R., Hari Kumar. *Studies on some silver (I) complexes.* Kerala. Dr. C.P. Prabhakaran, Prof., Department of Chemistry, University of Kerala, Trivandrum.

31. Venugopal, D. *Studies in generation of orthoquino dimethanes and application in synthesis.* Panjab.

32. Vijayalakshmi Rao, R. *Kinetics and mechanisms of some redox reactions in solution.* Mangalore. Dr. B. Thimme Gowda, Reader, Department of Chemistry, Mangalore University, Mangalagangotri.

Earth Sciences

1. Chandra Sekaran, V. *Geochemistry of the basic, acid and alkaline intrusives and oxtrusives of Sarnu-Dandali Area, Barmer District, Rajasthan.* Rajasthan. Dr. R.K. Srivastava, Department of Geology, University of Rajasthan, Jaipur.

2. Guptha, M.V.S. *Calcareous nannoplankton from the quaternary sediments of the Western Indian Ocean.* Andhra.

3. Khan, A.A. *Geomorphic evaluation at quarternary sedimentation in upper Ganga Basin, Garhwal Himalaya, U.P.* Vikram. Dr. A.C Chatterjee, Reader, Department of Geology, Vikram University, Ujjain.

4. Paul, Kokkelagadda John. *Studies on low-level laterites in and around Visakhapatnam, India.* Andhra.

Engineering & Technology

1. Bhattacharyulu, Yadavalli Chandrasekhara. *Rate phenomena in high temperature interphase reactions in a flow system.* Nagpur. Dr. G.D. Nageshwar, Director, Laxmi Narain Institute of Technology, Nagpur.

2. Joseph, Rani. *Curing studies of elastomer blends with special reference to NR/SBR and NR/BR blends.* CUST. Dr. D. Joseph Francis, Head, Department of Polymer Science and Rubber Technology, Cochin University of Science and Technology, Cochin.

3. Mhaisalkar, Vasant Anant. *Role of rapid mix in the process of flocculation.* Nagpur. Shri B.B. Sundaresan, Vice-Chancellor, University of Madras, Madras and Shri A.G. Bhole, Visveswaraya Regional College of Engineering, Nagpur.

4. Nanda, Raj Kumar. *Resonant response of beams and rectangular plates with discrete viscoelastic dampers and absorbers.* IIT, Delhi. Prof. B.C. Nakra, Department of Mechanical Engineering, Indian Institute of Technology, New Delhi.

5. Rama Gopal, Sarepaka Vizia. *Design aspects of some basic photographic objective configurations : A study.* IIT Delhi. Dr. B.N. Gupta, Instrument Design Development Centre, Indian Institute of Technology, New Delhi.

6. Thukral, Kapil. *An analysis of India's oil policy alternatives.* IIT Delhi. Prof. P.S. Satsangi, Department of Electrical Engineering, Indian Institute of Technology, New Delhi.

7. Verma, Mukul Ranjan. *Fail safe signal processing techniques using microprocessors and application to design and development of route interlocking system for railways.* IIT, Delhi. Dr. Vinod Chandra, Department of Electrical Engineering, Indian Institute of Technology, New Delhi.

ANNAMALAI UNIVERSITY

DIRECTORATE OF DISTANCE EDUCATION

ADMISSION NOTIFICATION FOR THE YEAR 1988-89

The Directorate offers the following courses of study. Admission is open to persons all over India.

I. Professional Courses

1. B.Ed. (English and Tamil Media)
Duration : One year
Eligibility : (i) Any graduate employed teacher working in schools recognised by the Department of School Education; and
(ii) Any Post-graduate

2. M.Ed. (English and Tamil Media)
Duration : One year
Eligibility : B.Ed./M.H.Ed. or an equivalent degree.

II. Under-Graduate Courses

Duration : Three years

3. B.A. History (English and Tamil Media)
4. B.A. Sociology (English and Tamil Media)
5. B.A. Psychology (English Medium)
6. B.A. Economics (English Medium)
7. B.A. English
8. B.Lit. (Tamil)
9. B.Com. (English and Tamil Media)

Eligibility : A pass in Pre-University/Higher Secondary Examination/Second Year Foundation Course or an equivalent examination.

10. B.Sc. Mathematics (English Medium)
Eligibility : A pass in Pre-University/Higher Secondary Examination/Second Year Foundation Course or an equivalent examination with Mathematics as one of the subjects.

III. Post-Graduate Courses

Duration : Two years

11. M.A. Tamil
Eligibility : B.A./B.Sc. with Tamil under Part I or III or B.Lit.

12. M.A. English
Eligibility : B.A./B.Sc. with English under Part II or III

13. M.A. History (English and Tamil Media)
Eligibility : B.A./B.Sc.

14. M.A. Economics (English Medium)
Eligibility : B.A. Economics or B.Sc. Statistics/B.Sc. Mathematics with 50% of marks in Part III of the B.Sc. Degree.

15. M.A. Psychology (English Medium)
Eligibility : B.A. or B.Sc with 40% of marks in Part III

16. M.A. Sociology (English Medium)
Eligibility : B.A./B.Sc.

17. M.Sc. Mathematics (English Medium)
Eligibility : B Sc. Mathematics/B.Sc. Statistics

18. M.Sc. Physics (English Medium)
Eligibility : B.Sc. Physics

19. M.Sc. Chemistry (English Medium)
Eligibility : B.Sc. Chemistry

20. M.Sc. Zoology (English Medium)
Eligibility : B.Sc. Zoology

21. M.Sc. Botany (English Medium)**
Eligibility : B.Sc. Botany

22. M.Com (English and Tamil Media)
Eligibility : B.Com./B.B.A /B.A. Corporate Secretaryship/B.A. Co-operation.

IV (a) Law Degree Courses

23. B.A.L. (Bachelor of Academic Laws) (English Medium)
Duration : Three years.
Eligibility : Any Degree.

24. B.G.L. (English Medium)**
Duration : Two years.
Eligibility : Any Degree.

(b) Diplomas in Law : (English Medium)
Duration : One year

25. (a) Diploma in Company Law with Banking Law and Practice
(b) Diploma in Labour Laws with Administrative Law
(c) Diploma in Law of Taxation
(d) Diploma in Management Laws
(e) Diploma in Criminology and Administration of Criminal Justice
(f) Diploma in Insurance Laws

Eligibility : Any Degree

V. Management Courses

26. Diploma Courses in Management (English Medium)
Duration : One year
(a) Diploma in Production Management
Eligibility : A degree in B.E./M.Com./M.B.A./M.A. Economics, M.Sc. Mathematics/M.Sc. Statistics/Diploma Holders in Engineering

(b) Post-Graduate Diploma in Materials Management

(c) Post-Graduate Diploma in Business Administration

(d) Post-Graduate Diploma in Personnel Management

(e) Post-Graduate Diploma in Marketing Management

(f) Post-Graduate Diploma in Financial Management

Eligibility : Any Degree

VI. Foundation Courses : (English and Tamil Media)

27. **First Year** : Eligibility : Pass in 10 year SSLC (New Pattern) or an equivalent examination/failed in 11 year SSLC.

28. **Sebond Year** : Eligibility : Pass in 11 year SSLC or an equivalent examination.

VII. Job Oriented Courses

Duration : One year

29. (a) Diploma in Concrete Technology and Design of Concrete Structures (English Medium)

Eligibility : Diploma in Civil Engineering/B.E. Civil Engineering, B.E. Civil and Structural Engineering

(b) Diploma in Chemical Process, Instrumentation and Control (English Medium)

Eligibility : B.Sc. Graduates with Physics/Chemistry/Mathematics main and ancillary subjects OR Diploma holders in Chemical, Mechanical, Electrical or Electronics Engineering.

(c) Diploma in Maintenance Management (English Medium,

Eligibility : (i) B.E. (Mechanical), B.E. (Production), B.E. (Electrical), B.E. (Chemical).

(ii) A.M.I.E. (Mechanical/Electrical/Chemical)

(d) Certificate Course in Automobile Technology (English and Tamil Media)

Eligibility : A Pass in SSLC (X Standard) or equivalent examinations.

**To be introduced this year.

Caution

Some Private Institutes/Individuals posing as our Agents are allegedly collecting fees, issuing Application Forms and promising admission to our courses. The Directorate has no such Agents and takes no responsibility for their actions. Candidates are therefore advised to correspond cirectly with the **Directorate only**.

The candidates are advised to apply direct to the Directorate individually for Application Forms as well as for admission. Applications for admission received through tutorials or any other agency will be summarily rejected.

The cost of application form and prospectus for each course is Rs. 25/-. Applications will be sent to all by registered post.

Application form and prospectus can be had from the Director, Directorate of Distance Education, Annamalai University, Annamalainagar-608002 by sending a requisition alongwith a crossed Demand Draft for Rs. 25/- drawn in favour of the **Registrar, Annamalai University**, on any bank at Annamalainagar Chidambaram, mentioning clearly the name of the course for which the application form is required and a self-addressed unstamped cover of size 25 cm. x 15 cm. Cheques, Postal Orders, Money Orders and Outstation Demand Drafts are not accepted. Demand Draft should be purchased on or after 1.6.1988.

The last date for receipt of filled in application is **31st August, 1988**.

Study Centres have been opened at the following places for the benefit of the students.

1. 19, Marshals Road, Egmore, Madras-600 008
2. 7, Gnanam Colony, 1 Main Road, Ramalinga Nagar, Woriyur, Tiruchi-620 003
3. 15, Dr. Subbarayan Street, Salem-636 001
4. 70, Ammasi Madam Street (Near T.T.C. Bus Stand) Meenakshipuram, Nagercoil-629 001
5. 4, Thiagarajapuram, Vellore-632 001
6. 276, Annanagar (Near Gupta's Auditorium) Madurai-625 020
7. 47, Basant Enclave, New Delhi-110 057 (Phone No. 607407)
8. DDE Building, Annamalai University, Annamalainagar. (Phone No. 2610-Chidambaram)

Liaison Officers at the different Study Centres may be contacted for any further clarification regarding admissions. Applications can be had from the Study Centres also on payment of Rs. 25/- by Demand Draft drawn in favour of '**The Registrar, Annamalai University**' as instructed above. Study Centres will remain closed on all Tuesdays, Second Mondays and all other public holidays.

Those who want to get application by post should apply to the Directorate only and not to the Study Centres.

Filled in applications should however be sent only to the Director, Directorate of Distance Education, Annamalai University, Annamalainagar, South Arcot District, Tamil Nadu, Pin Code : 608 002. **In no case filled in applications should be sent to the Study Centres.**

Application and Prospectus can be had from the Directorate of Distance Education, Annamalai University, Annamalainagar and Study Centres from 1.6.1988.

Admission cannot be claimed as a matter of right and the Directorate reserves to itself the right of admission.

K. Ansari Baig
DIRECTOR

MINISTRY OF DEFENCE

DEFENCE RESEARCH & DEVELOPMENT ORGANISATION

M.Sc. Computer Science (Software) Programme—Sponsored by DRDO

Scheme

The Defence Research and development Organisa-(DRDO) has sponsored the M.Sc. (Computer Science-Software) Programme in seven Universities in the country. The aim of the Scheme is to train young talented Science Graduates in the area of Computer Software and to attract them to join DRDO as Scientists. The duration of the Course is two years during which a Fellowship of Rs. 800/- per month is awarded by DRDO to all the selected candidates. On successful completion of the Programme, the candidates are likely to be absorbed as Scientist 'B' (Group 'A' Gazetted).

Career Prospects

The DRDO offers excellent career prospects to young Scientists. The Defence Research and Development Service comprises the following grades :

Scientist 'B'	—	Rs. 2200-4000
Scientist 'C'	—	Rs. 3000-4500
Scientist 'D'	—	Rs. 3700-5000
Scientist 'E'	--	Rs. 4500-5700
Scientist 'F'	—	Rs. 5100-6300
Scientist 'G'	—	Rs. 5900-7300

Under the 'flexible complementing' scheme in operation in DRDO promotions are based on merit rather than the availability of vacancies.

Universities

The Programme is being conducted in the Universities of Allahabad, Andhra, Cochin, Indore, Madurai, Mysore and Pune.

Eligibility

Candidates possessing a first class Degree in Mathematics, Physics, Computer Science or Electronics from an Indian University or equivalent are eligible for admission.

Age

Not more than twenty three years as on 1st August of the year of admission; this is relaxable by five years in the case of SC and ST candidates.

Admission Procedure

Admissions to the Programme will be made by the respective University directly for which the Universities would issue advertisements in leading newspapers in May-June for the ensuing session. The candidates desirous of joining the Programme should be on the look-out for the advertisements for applying for admission. They can also obtain more information from the office of the Registrar or the Computer Science Departments of the concerned Universities.

UNIVERSITY OF DELHI SOUTH CAMPUS

BENITO JUAREZ ROAD, NEW DELHI-110 021

ENTRANCE EXAMINATION FOR ADMISSION TO M.TECH. IN MICROWAVE ELECTRONICS

Applications are invited on the prescribed forms from the candidates to appear in the above examination for admission to M.Tech. in Microwave Electronics to be held on Friday the 8th July, 1988 at 10.00 A.M. at the above address.

Qualification : For admission to M.Tech., the Candidate should have passed M.Sc. in Electronic Science or M.Sc., in Physics Examination of Delhi University/ohter Universities with 55% marks in M.Sc. or equivalent grade. **OR** B.E. (Electrical Electronics Engineering) Examination from Delhi University or an examination recognised as equivalent thereto with 55% marks or equivalent grade.

General Information : (i) No person shall be qualified for admission to the M.Tech. Course in Microwave Electronics unless he/she is 21 years of age on or before 1st October, 1988.

Provided that Vice-Chancellor on the basis of individual merit may relax the age limit upto a maximum of one year.

(ii) The questions in the Entrance Examinations would be based on the following topics :

Analogue and Digital Electronics, Communication Electronics, Computer Programming, Mathematics, Electromagnetic Theory, Microwaves, Opto-Electronics and Microprocessors.

(iii) Ten stipends of Rs. 600/- each are available which will be awarded to admitted candidates in order of merit in the Entrance Examination.

The application forms can be obtained by sending a self-addressed stamped Re. 1/- envelope of 10"x4½" size to the Dean, Faculty of Inter-Disciplinary & Applied Sciences, University of Delhi South Campus, Benito Juarez Road, Dhaula Kuan, New Delhi-110 021.

The completed applications alongwith a Passport size Photograph must reach the Dean's Office by **24th June, 1988.**

P.L. Kadalbaju
DEPUTY REGISTRAR

INSA MEDAL FOR YOUNG SCIENTISTS–1989

Instituted by the Indian National Science Academy in 1974 the Medal is awarded annually in recognition of outstanding work of scientists below the age of 32 (as reckoned on 31st December preceding the year of award). Only those born on or after January 1, 1957 are eligible for consideration in 1989. The work done in India by the nominee will be taken into consideration for the award.

The awardee is presented a medal and a cash award of Rs. 5,000/-. In addition, the recipient is considered for a research grant by the Academy not exceeding Rs. 20,000/- per year, including stipend for a JRF for a period of three years for continuing research work, provided the research proposal is considered worthy of such support. Preferential consideration may be given under partial travel grant scheme for attending international conferences.

Nominations for the awards for 1989 may be made by Fellows of the Academy, established scientific societies of all India character, University faculties and departments, or the research institutions.

The last date for the receipt of nominations in the Academy is **November 15, 1988.**

Nomination Proforma can be obtained from the Indian National Science Academy, Bahadur Shah Zafar Marg, New Delhi-2 by sending a self addressed envelope of 28 cm x 12 cm size.

PANJAB UNIVERSITY (CHANDIGARH)

(Advertisement No. 6/88)

Applications are invited for the following posts so as to reach the Registrar, Panjab University, Chandigarh alongwith Postal Order of Rs. 10/- by **June 15, 1988**.

CLASSIFIED ADVERTISEMENTS

ALIGARH MUSLIM UNIVERSITY
ALIGARH

Advertisement No. 2/88-89

Dated : May 15, 1988

Applications on the prescribed form are invited for the following posts :

Professor : Rs. 4500-7300 plus allowances.

Readers : Rs. 3700-5700 plus allowances.

Lecturers : Rs. 2200-4000 plus allowances.

1. **Professor of Arabic, Department of Arabic.**

Qualifications

I—Essential

An eminent scholar with published work of high quality actively engaged in research. About ten years experience of teaching and/or research. Experience of guiding research at doctoral level.

OR

An outstanding scholar with established reputation who has made significant contribution to knowledge.

II—Desirable

Knowledge of modern Arabic language and literature and command in written and spoken Arabic.

2. **Reader in Political Science, Department of Political Science**

3. **Readers in Computer Science, Department of Computer Science**

4. **Reader in Home Science, Women's College.**

Qualifications

I—Essential

Good academic record with a doctoral degree or equivalent published work. Evidence of being actively engaged in (i) research or (ii) innovation in teaching methods or (iii) production of teaching materials.

About five years experience of teaching and/or research provided that at least three of these years were as Lecturer or in an equivalent position.

This condition may be relaxed in the case of candidates with outstanding record of Teaching/Research.

II—Desirable : For Post at Sl. No. 3 Reader in Computer Science

Experience of teaching and research in any of the areas of Theoretical Computer Science, Operating System, Information Systems, Computer Architecture, Computer Graphics and Communicatio networks.

5. **Reader in Civil Engineering (Structura Engineering), (Temporary but likely t become permanent), Department o Civil Engineering.**

6. Reader in Mechanical Engineering (Fluid Mechanic), Department of Mechanical Engineering.

Qualifications

I—Essential

A good academic record with a Doctor's degree in a relevant field. About five years experience of teaching and/or research and development.

Provided further that candidates not possessing Ph.D. may be considered if they have to their credit equivalent research published work or design/development work of a high order either in the Institution or in an Industry.

OR

In the case of persons to be recruited from Industry or Professional fields, candidates should possess good academic record with recognised professional work of about seven years which should include innovation and/or research and development.

II—Desirable : For Post at Sl. No. 6 Reader in Mechanical Engineering (Fluid Mechanic).

Published research work in reputed Journals, teaching experience to Post-graduate classes.

7. Lecturers in Arabic (One permanent and one Temporary but likely to become permanent), Department of Arabic.

8. Lecturers in Computer Science, Department of Computer Science

Qualifications

I—Essential

(a) A Doctor's degree or research work of an equally high standard; and

(b) Good academic record with atleast second class (C in the seven point scale) Master's degree in a relevant subject from an Indian University or an equivalent degree from a foreign University.

Having regard to the need for developing interdisciplinary programmes the degrees in (a) and (b) above may be in relevant subjects.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, a person possessing a good academic record (weightage being given to M Phil. or equivalent degree or research work of quality) may be appointed provided he has done research work for atleast two years or has practical experience in a research Laboratory/Organization on the condition that he will have to obtain a Doctor's degree or give evidence of research of high standard within eight years of his appointment, failing which he will not be able to earn future increment until he fulfils these requirements.

II—Desirable : For Post at Sl. No. 8 Lecturers in Computer Science

Experience of teaching and research in any of the areas of Theoretical Computer Science, Operating Systems, Information Systems, Computer Architecture, Computer Graphics and Communication networks.

9. Lecturers in Electrical Engineering, Department of Electrical Engineering.

Qualifications

I—Essential

(a) Master's degree in appropriate field in engineering/technology.

(b) Consistently good academic record with a bechelor's degree in Engineering/Technology. First class at Bachelor's degree and/or Master's degree level.

(c) One year's relevant professional experience outside academic / research institutions.

Having regard to the requirement of emerging fields of Engineering and of developing inter-disciplinary programmes, the requirements of Engineering/technology degrees may be waived in the cases of otherwise well qualified candidates.

Provided further that if a candidate does not possess professional experience or a person possessing such experience is not found suitable, the person appointed will be required to obtain desired professional experience within a period of five years of his appointment failing which he will not be able to earn future increments, until he fulfils this requirement.

If the candidates with M.Teck./M.E. qualifications are not available or not found suitable for appointment the essential qualifications may be relaxed and first class Engineering graduates may be appointed subject to the condition that the candidate concerned shall have to obtain the M.Tech./M.E. degree within a period of five years ailing which he will not be able to earn future increments until he acquires the prescribed qualifications.

10. Lecturer in Architectural Assistantship, University Polytechnic.

Qualifications

Bachelor's degree in architecture plus two years of relevant professional experience.

OR

Master's degree in architecture and one year's relevant professional experience.

Provided further that if a candidate does not possess a master's degree in architecture and professional experience or a person possessing such experience is not found suitable, the persons appointed will be required to obtain the desired professional experience within a period of five years on his appointment failing which he will not be able to earn future increment until he fulfils this requirement.

11. Reader in Bio-Physics, Department of Bio-Chemistry, JN Medical College.

Qualifications

I—Essential

M.D. (Biophysics)/
Ph.D. (Biophysics)/
M.D. (Physiology) or
M.D. (Bio-Chemistry) with one year training in Bio-physics

Teaching/Research Experience.

As Lecturer in Bio-Physics for five years in a Medical College.

II—Desirable

The candidate should have made notable contributions in Biophysics/Biophysical Chemistry and in particular in the areas of conformation of proteins, nucleic acid, conformational transitions and protein folding.

Job Specifications

The selected candidate will be responsible for organising the teaching and research programme in Biophysics, particularly in the areas of structural studies of Protons and nucleic acids.

Note : If candidates with Medical qualifications are not available, or are found unsuitable, candidates with Ph.D. Degree in Physics/Chemistry who have worked on Biophysical problems for 5 years after obtaining their Ph.D. degree may also be considered for appointment.

12. Reader in Anatomy (Temporary), Department of Anatomy

Qualifications

M.S. (Anatomy)/
MBBS with M.Sc. (Anatomy)/
Ph.D. (Medical Anatomy)/
D.Sc. (Medical Anatomy)

Teaching/Research Experience

As Lecturer in Anatomy for 5 years in a Medical College

13. Reader in Cardiothoracic Surgery, Department of General Surgery.

Qualifications

I—Essential

M. Ch. (Thoracic Surgery)

Teaching/Research Experience

As Lecturer in Thoracic Surgery for 5 years in a Medical College

II—Desirable

Research experience and publications in the speciality

14. Assistant Librarian (Two posts) (Permanent) Maulana Azad Library.

Scale of Pay: Rs. 700-1600 plus allowances (Pre-revised)

Qualifications

I—Essential

(a) Good academic record with atleast High Second Class Master's degree in a subject other than Library Science.

(b) First class or high second class Master's degree in Library Science.

II—Desirable

At least three years experience as Professional Assistant in a University or an Institution of higher learning. Experience/Knowledge of documentation work/Computer based information work.

15. Medical Officer (Blood Bank) (One post) (Permanent). JN Medical College Hospital.

Scale of Pay: Rs. 700-1600 plus allowances (Pre-revised)

Qualifications

I—Essential

(a) M.B.B.S.

(b) PG Degree or Diploma in Pathology.

(c) Three years experience as Blood Transfusion Officer in a recognised Hospital or three years experience of working in a Blood Bank of a teaching Hospital.

II—Desirable

Special training in Blood Transfusion from a recognised institution.

16. System Analyst Grade II (One post) (Temporary but Likely to continue), C.C. Unit, Controller's Office.

Scale of Pay : 1640-60-2600-EB-75-2900 plus allowances.

Qualifications

I—Essential

1. Post B.Sc. Diploma in Computer Science Applications/Bachelor's Degree in Computer Science.
2. Atleast three years experience of using packages like file editor, word processor dBase, LOTUS-1-2-3-etc. which should include atleast one year experience of operating system management on multi programming time sharing Computer System.
3. Working knowledge of command language and Programming language like FASCAL, BASIC, FORTRAN COBOL.

OR

1. Bachelor's Degree in Science.
2. Atleast five years experience of using packages like File editor Word Processor, dBASE, LOTUS-1-2-3 etc. and operating system management on multi programming time sharing Computer System.
3. Working knowledge of command language and Programming languages like FASCAL, BASIC FORTRAN, COBOL.

17. Staff Nurses (17 posts) (Permanent), J.N. Medical College Hospital

Scale of Pay : Rs. 1400-40-1600-50-2300-EB-60-2600 plus allowances.

Qualifications

Essential

Registered Nurse and Registered Midwife of B.Sc. (Nursing).

18. Technical Personal Assistant (Computer) (Ona post) (Temporary but likely to continue), C.C. Unit, Controller's Office.

Scale of Pay : Rs. 1400-40-1800-EB-50-2300 plus allowances.

Qualifications

I—Essential

1. Bachelor's degree.
2. Diploma in Computer Programming.
3. Atleast two years experience of operation of time sharing Computer System, using software packages like File Editor, Word Processor, dBASE LOTUS-1-2-3 etc.

OR

1. B.Sc. degree.
2. Atleast three years experience of operation of time sharing Computer System using software packages like File Editor, Word Processor, dBASE, LOTUS-1-2-3 etc.

19. Technical Assistant (Store) (One post) (Permanent) Department of Bio-Chemistry, Faculty of Life Sciences.

Scale of Pay : Rs. 1400-40-1800-EB-50-2300 plus allowances.

Qualifications

I—Desirable

1. B.Sc./B.Com.
2. Two years experience in the relevant field after obtaining degree.

II—Desirable

(a) The experience should preferably be in Biochemistry or Chemistry Department.
(b) Knowledge of use of microcomputers in maintaining stores inventory and accounting.

20. Technical Assistant (Store) (One post) (Permanent) Department of Applied Physics, Z.H. College of Engg. & Technology.

Scale of Pay : Rs. 1400-40-1800-EB-50-2300 plus allowances.

Qualifications

I—Essential

B.Sc./B.Com. with two years experience in the relevant field after obtaining degree.

OR

Diploma in Mech./Elect. Engg. with three years experience in the relevant field after obtaining Diploma.

II—Desirable

Experience in Book Keeping and Accounts.

21. Research Associates (Two posts) (Temporary), Department of History.

Scale of Pay : on a fixed honorarium detailed below :

Category	**Value**
'A'	Rs. 1,400/- p.m.
'B'	Rs. 1,600/- p.m.
'C'	Rs. 1,800/- p m.
'D'	Rs. 2,000/- p.m.

Qualifications

I—Essential

Doctoral Degree and independent published work in any field of Medieval Indian History.

II—Desirable

Age below 45 years (For Men) and Age below 55 years (For Women)

22. Trained Graduate Teacher (Urdu) (One post) (Permanent), A M.U. City High School.

Scale of Pay : Rs. 1400-40-1800-EB-50-2300 plus allowances.

Qualifications

I—Essential

1, Graduate with Urdu an one subject in the graduation Course (or equivalent recognised degree).
2. Degree/Diploma in Education.
2. Atleast five years experience of teaching upto High School classes in a recognised Institution.

II—Desirable

Ability to arrange extra-curricular activities such as Drama and debates etc.

23. Trained Graduate Teacher (Physics) (One post) (Permanent) A.M.U. City High School.

Scale of Pay : 1400-40-1800-EB-50-2300 plus allowances.

Qualifications

Essential

1. B Sc. (with Physics as one of the subjects)
2. Recognised degree or Diploma in Education.
3. Ability to teach through Urdu, Hindi and English medium.

24. Trained Graduate Teacher (Chemistry) (One post) (Permanent), A.M.U. City High School.

Scale of Pay : 1400-40-1800-EB-50-2300 plus allowances.

Qualifications

Essential

1. B.Sc. (with Chemistry as one of the subjects).
2. Recognised degree or Dipoma in Education.
3. Ability to teach through Urdu, Hindi and English Medium.

25. Key Punch Operator Gr. I (Four Posts) (Permanent) Computer Centre.

Scale of Pay : Rs. 1320-30-1560-EB-40-2040 plus allowances (Revised).

Qualifications

Essential

1. Bachelor's degree or Diploma in relevant field.
2. Atleast two years experience of handling data processing machines and of using packages like File editor, Word Processor, dBASE. LOTU5-1-2-3- etc. on PC/Computers. Key in speed 10,000 depressions per hour.

OR

1. Higher Secondary or equivalent.
2. Atleast 6 years experience of handling data processing machines and of using packages like File editor, Word Processor dBASE, LOTUS-1-2-3- etc. on PC/Computers. Key in speed 10,000 depressions per hour.

26. Senior Laboratory Assistant (Ono post) (Permanent) Department of Physics.

Scale of Pay : 1320-30-1560-EB-40-2040 plus allowances.

Qualifications :

I-Essential :

1. B.Sc.
2. One year experience in the relevant field after obtaining degree.

OR

1. Higher Secondary (Science)
2. Six years experience in the relevant field after passing Higher Secondary.

27. Primary Teacher (One post) (Permanent), A.M.U. City Branch School

Scale of Pay : 1200-30-1560-EB-40-2040 plus allowances

Qualifications

1. Matric trained

   OR

   Higher Secondary with J.B.T. 2 years.

   OR

   Intermediate (or 10+2 course) with J.B.T. one year.

   OR

   Graduate with five years teaching experience in Primary School (with the proviso that he/she will complete a recognised formal training course within three years).
2. Ability to teach through Urdu/Hindi/English medium.

28. Wireman (Three posts) (Permanent), Department of Electricity (Work & Maintenance Section)

Scale of Pay : Rs. 975-25-1150-EB-30-1540 plus allowances.

Qualifications

(i) Wireman's Licence
(ii) Two years experience of different types of internal wiring.

Note : The candidates will have to undergo a practical test before interview.

Higher initial start may be given to candidates possessing exceptional qualifications and experience. Candidates interviewed may be paid contribution towards their T.A. equal to one single second class Railway fare only.

Prescribed application forms and instructions may be had from the Assistant Registrar (Selection Committees), Registrar's Office, A.M.U., Aligarh on payment of Rs. 10/- for posts at S.No, 1 to 16 and Rs. 7/- for remaining posts to be deposited in the Cash Section, Finance Office, A.M.U., Aligarh or through an Indian Postal Order payable to the Finance Officer, A.M.U., Aligarh either personally or by sending a self-addressed stamped envelope of size 9'' x 4''.

Last date for receipt of applications is 30th June, 1988 (during office hours). Incomplete applications and those received late will not be considered.

INLAKS SCHOLARSHIPS

1989

"Initiative and achievement.
Enterprise and the ability to
make an impact on one's
environment. The drive and
energy to transform ideas into
reality. And the capacity to
take full advantage of all
aspects of experience abroad."

Fifteen scholarships abroad are offered in 1989 for projects or studies in any field or subject. They are awarded after a number of personal interviews to candidates who fulfil the criteria listed above. Scholarships will be for one or two years and include all expenses.

There are three kinds of scholarships

A. Undergraduate or graduate courses at Cambridge, Oxford, LSE. Imperial College, Royal College of Art and Harvard Law School.

B. Professional courses at any American or European university for which candidates have secured admission before applying.

C. Specific projects as proposed by the candidates for training, research or professional improvement.

Applications are invited from unmarried Indian citizens resident in India, aged 19 to 28, with a good undergraduate degree. For details and an application form, send a 10 x 23 cm. self-addressed envelope with a Rs. 1.50 stamp to :

INLAKS FOUNDATION
P.O. Box No. 2108, Delhi-110007

Completed applications are due by August 15 for admission in 1989.

International Co-operation of Universities In Research*

L. S. Srinath**

The word "Research" has been defined in a very broad sense by Sri John Kingman to cover the whole activity of acquisition of knowledge, refinement and codification of knowledge and advancement of knowledge. It is also stated that this knowledge is to be transmitted in a number of ways for the benefit of the community. It is in the context of these that international cooperation of universities in research is to be analysed. I will be touching upon collaborative research programmes only and the remarks are based upon my personal experience and the cases cited are related to my present institution.

Cooperation, both national and international, in all those activities that are beneficial to mankind is highly desirable. Many national and international organizations exist to promote such endeavours not only in general activities, but also in research activities. These organizations have been functioning for many years with good service records. While these world organizations are primarily promoting and managing agencies, the real active research work gets done, by and large, at the level of individuals and groups of individuals. While dissemination of knowledge is taking place in a variety of modes, real cooperation in active research is beset with many difficulties. Let me cite an example. I will be focussing my attention and emphasising on collaborative research programmes.

The Indian Institute of Technology (IIT), Madras, was established about twenty six years ago, as a joint venture between the Government of India and the Government of the Federal Republic of Germany. During the initial stages, the contributions from West Germany were directed towards establishing academic departments, providing necessary sophisticated equipment, sending experts for long periods of time. and to a limited extent guiding the academic programmes. As the Institute started growing, the aid mainly assumed the form of providing grants for epuipment, offering limited training facilities to faculty and staff, and also making it possible for a limited number of experts to visit IIT-Madras for short durations. To-day, IIT-Madras is one of the premier academic institutions in the country with good international reputation. During the last eight years, IIT-Madras is associating itself with a few a selected German Universities in a large number of Joint Research Programmes. Each joint research programme involves two investigators—one from IIT-Madras and the other from one of the universities in Germany. A problem of common interest is identified, on which investigations get carried out at both places. The results of these investigations are shared for mutual benefit. The project provides opportunities for brief visits of the investigators concerned to each other's laboratories. One would think that such a programme would be an ideal example of international cooperation or collaboration in research. But, a detailed examination reveals that the results of these joint research programmes are not all that exciting as one would have hoped or liked to see. It is in this background that I would like to make the following remarks.

**Paper presented at the 14th Quinquennial Commonwealth Universities Congress, 7-12 February, 1988.*

***Director, Indian Institute of Technology, Madras 600036.*

Research, to me, is a highly personalised or individualistic activity. For persons working in academic institutions, success in research means same kind of ego satisfaction, recognition through publications in referred journals, through presentation of research findings in national and international conferences, etc. Career advancement, future opportunities in administrative cadres, etc., are also involved.

In the Universities, one of the common methods of getting research activities done is through research students who have registered themselves for some degree programmes. This factor imposes some serious constraints on the types of problems chosen. In order that one research worker may collaborate with another, it is necessary that a need should exist for active and voluntary collaboration. Some of the needs are obvious. These are :

Common problems or areas of investigation;
Desire to share result for mutual benefit;
Optimum utilisation of time and effort without much duplication;
Optimum utilisation of resources at one's disposal; etc.

Unfortunately, research as a highly personalised or individualistic activity with ego satisfaction, cannot easily accommodate these requirements. This is particularly so in the field of science and technology. Of course, in those areas of research work which involve national security, product or market competition, etc., free and active collaborations at international levels are not at all possible. Such topics are not being discussed in this presentation.

In the example cited, i.e., Joint Indo-German Research, though the problems that were identified for joint investigations were of common interest, the nature of these problems did not lend themselves to much exciting results. Consequently, over a period of time, the interest in these gradually waned. In addition to these, as the research work involved students who were anxious about their research degrees, the nature of problems got changed to meet institutional and other degree requirements. An added complication was, the research investigators in both universities became engaged more and more in those problems which were funded through their own several national funding agencies. Consequently, there was no common pace of progress in the areas that were initially identified. Very few publications based on the joint research., activities have appeared. However, the research investigators have been actively engaged in various other research problems. Of course, there were a few notable exceptions. But, what we thought was an ideal set up did not function. Another interesting aspect was the following. At the initial stages, there were considerable interests for the professors from the German Universities to come and spend considerably long periods of time in India. Over the years, this interest waned and the same professors started travelling to China and a few other South Asian countries. India, as a country of tourist and other interests got replaced by China as a new venture place. An analysis of those research problems which could be considered as reasonably successful for cooperation belonged to either humanities and social sciences or those areas dealing with agricultural sciences, low cost housing, pest control, etc. There were no problems which one would classify as belonging to hi-tech or to frontiers of science.

Having made these statements, let me start once again from the beginning. First, about the need.

We all agree that there definitely exists a need for international cooperation in research; particularly when research deals with knowledge; I mean knowledge in the true sense, when the knowledge is for the betterment of mankind and the world the mankind lives in. But, we all know, that this is as unrealistic a notion as the new economic order. In reality, there are severe constraints and restrictions for international cooperation in research. We can appreciate these constraints when we realise how research work gets done in the Universities. In these activities, either individuals or small groups of individuals are involved. Further, by and large, most of the research activities are not de novo activities. This is revealed by the way the research papers appear in journals. Each paper is an extension of earlier ones, as given in the references cited; and the current papers give rise to a new set of papers in which the current papers appear in their cited references. The reputation of a paper depends on the number of times it gets cited and the number of new papers it gives rise to. Dissemination of knowledge and generation of new papers through such publications is one of the commonest methods in the international scene. Now, for two individual research workers from two different countries to come to an agreement to carry out joint or collaborative investigations, several conditions have to be satisfied.

There should exist a common desire for collaboration.
The problem chosen should be broad enough, so

that the results of the two investigations are complementary or reinforcing and not merely duplication.

There should be no communication barrier, either in the language or in sharing fully the results of the investigations.

The level of competence of the two investigators must be comparable.

The resources available, financial as well as facilities, should be adequate in both the countries.

Exchange of information should be fairly frequent.

The efforts of each investigator should be capable of being assessed independently.

The results of investigation should provide opportunities for the ego satisfaction and recognition of both partners. It should at the same time provide opportunities for their individual growth and career opportunities in their respective institutions.

The problems chosen should not be in conflict with their respective national security or other protective national interests.

One can certainly think of a few more constraints of the above types. The solution space, which meets all the previously mentioned constraints, is naturally extremely small. The categories of problems on which international cooperation is possible will therefore be very limited. Problems in the areas of hi-tech are definitely out of the picture. Problems dealing with national security and defence are also out. Under these circumstances, what kinds of problems lend themselves either for co-operative research or for sharing of information ?

Problems in the area of humanities and social sciences are possible. Agriculture, animal husbandry, health, family planning are possible.

Low cost housing, appropriate technology developments; certain types of alternative sources of energy like Windmill, Biogas, Wave energy; epidemic disease control, are also possible areas.

Fundamental research investigations whose results are not immediately known or cannot be visualised yet are also possible.

One can enumerate a list of such problems or problem areas on which international cooperation and collaboration is possible. But, one common characteristic of a large majority of such problems is that the interest in their solutions will be one-sided. For example, in the case of low cost housing or low cost construction materials, more interest will be shown from the developing countries. So is, in the case of appropriate technologies, family planning, etc. This raises an interesting question, i.e., whether cooperation is not possible among the universities in developing countries themselves, since they apparently share common problems. Unfortunately, the number of such ventures are rather limited. This may be due to large variations in the quality and standards among the research investigators, capability of resource mobilisation, and a few other incompatible and disparate factors that exist among the developing countries. Further, resources, particularly financial resources being a constraining factor among the developing countries, the potentiality for collaboration does not appear to be high. An intesting paradox is the following. Let me state it without bringing in too many complexities.

I started with the premise that, for cooperation and collaboration in research to take place, there should exist a need or a desire among the research workers for such collaboration. If such a desire were to be mainly towards knowledge sharing and knowledge dissemination, and totally directed towards the betterment of mankind, it is obvious that there should be no hesitation for cooperation. Further, if one were to identify a class of problems that is common to a group of countries, then it is advantageous if these countries could share the knowledge among themselves for their mutual benefit. Unfortunately, this kind of cooperation does not take place naturally, unless deliberate attempts are made to promote them. Even in these cases, very few success stories exist. The so called dedicated or committed research workers belonging to this category are very small in number. The so called active research worker wants to shine by himself. He desires recognition. So, he focusses his attention towards the activities of the world outside his own country. This is one of the reasons for the frequent statements made that many of the research activities carried out in developing countries are irrelevant to their needs. Very few instances exist where a worker from India or Pakistan desires recognition in Sri Lanka, or a research worker from Sri Lanka desires recognition in West Indies, or a research worker from West Indies seeks recognition in one of the African countries. The attention, by and large, is focussed towards advanced or developed countries.

Under these circumstances, what kinds of international cooperation in research can one think of ? If by cooperation in research we merely restrict ourselves to dissemination and sharing of knowledge, then one can say that this has been going on fairly successfully in several modes, particularly when this knowledge pertains to unclassified categories. Improvements are possible, but these will bring only marginal changes. To me, what is important is active collaboration in research. Because, in this process,

problems of mutual interest are identified;
experts are identified;
efforts are made to provide enough resources and facilities based on the project requirements;
there is some sort of time constraint;
efforts and results are complementary;

and more than anything else, it brings a sense of participation and commitment.

While universities are the real sources of wealth and reservoir of intellectual power, at the same time, the elements of these systems are so individualistic that it is difficult to bring a degree of coherence among the elements for effective cooperation. Hence, a deliberate attempt should be made to bring these elements together. I would like to cite two proposals which are under our consideration, wherein the graduate students play the role of bridging elements.

The first one concerns joint Ph.D. guidance programme between IIT-Madras and a few selected universities in Germany. Under this programme, a research student has two guides, one from IIT-Madras and the other from a German University. A common research topic is identified and the student carries out the investigation initially in one of the institutions. A year later, he moves to the other institution and spends about a year under the supervision of the joint guide. The degree awarded comes from the institution to which the principal guide belongs. The important point to appreciate is that there is a joint responsibility between the two guides coming from two different institutions, with time constraint built in.

An interesting and at the same time a paradoxical thing that makes this kind of joint collaborative project successful at international level is the following. In India, just like in many developing countries, the industry-funded research is fairly small. Most of the research funds come from the Government and Government agencies. In recent years, the funds available for research are substantial. Consequently, not only have the research topics tended towards basic research, but also the sources of these problems are external to the country. Hence, it has always been possible to find problems of common interest, but not of much relevance to the needs of the country.

The second proposal deals with a recent offer that has come from one of the universities in Canada. This university wants a selected number of students who have registered themselves for a degree, to undergo all the course requirements at IIT-Madras and then go to Canada to complete the dissertation requirements. The research students obtain the degrees awarded by the particular Canadian University. While this scheme is quite attractive from the students' point of view, this reduces IIT-Madras to merely a teaching institution. This scheme is still under discussion for possible modification.

The third scheme that we plan to initiate soon involves industry as the bridging element. We recently acquired a mainframe computer from the Siemens Company in Germany. In this process, we have come to an understanding that the computer softwares that Siemens sells to various industries and other establishments will be developed jointly by IIT-Madras, the University of Aachen and the University of Kaiserslautern. In this, the Siemens Computer Corporation is the bridging element between these academic institutions. This particular scheme with suitable modifications can be copied advantageously by the Universities in Commonwealth Countries and multinational industrial set ups with their bases in these countries. International consultancy, joint product developments, developments of new technologies on a cooperative basis, are some of the possibilities.

In this brief paper on International Cooperation in Research, I have laid greater emphasis on active collaboration in research. Solutions are not simple, but I have tried to indicate a few schemes that have the potentialities of success, based on cases related to my institution. ☐

Researches In Educational Finance

Problems & Perspectives

J. L Azad*

This paper seeks to examine the present status of researches in educational finance in India with particular reference to its quantitative dimensions. An attempt has also been made to delineate the broad strategies of research development in this field. The discussion has been divided into two parts.

In **Part I**, an attempt has been made to subject the present status of research in educational finance to a critical review. Besides making a quantitative analysis of the research effort in this area in the post-independence period, a critical review has been made of the nature and type of researches conducted in this field. No attempt has, however, been made to assess the quality of researches completed so far.

In **Part II**, the research needs in the area of educational finance have been identified. Effort has also been made to specify the broad contours of the proposed researches in this field.

PART I

(a) A Quantitative Analysis

Educational research in Indian universities, besides being small in quantity and "mediocre or poor in quality"[1] is by and large traditional and stereotyped. A careful look at the researches coming out of our university institutions would reveal the preponderance of researches in conventional areas like educational philosophy, educational psychology, educational measurement, etc. While it is not intended to minimise the importance of these areas, it is disheartening to note that preciouse little attention has been bestowed to the newly emerging areas of research like economics of education, including educational finance, population education, ecology and education, and a host of related fields of research.

Although finance is a very crucial input in the development of education all over the world and its real or imaginary inadequacy has been debated at the various world forums, very few researches have been carried out to study the variegated problems of educational finance. The inadequacy of research effort in this field can be realised by the fact that, during the period 1956-74, out of over two thousand studies on economics of education (including articles, papers in journals) listed by Blaug (1978)[2], only less than 200 were concerned with problems of educational finance and costing. Out of these, the developing countries of Asia, Africa and Latin America accounted for only 35 studies. By no means a significant achievement.

In India, although the first recorded study on educational finance was made about 100 years ago, the subject has not attracted adequate attention of researchers either at the doctoral or post-doctoral stages. All through the British period, except for the various commission and committees, appointed by the British rulers from time to time, which studied the problems of educational finance from a purely functional point of view, there had been no attempt to study the different aspects of educational finance. Even after the attainment of independence, the subject has not attracted sufficient attention of the research scholars, so much so that the first ever study on educational finance was completed 12 yeas after the British Raj bowed out of this country.

The over all position about researches in educational finance has been far from encouraging even in the most recent period. This is evident from the fact that during the years 1981 and 1982, out of 148 theses accepted by the Indian Universities[3] for the award of the degree of Ph.D. in Education, only 7 were relating to the area of economics of education; out of this only 2 were concerning the problems of educational finance. Under Economics, out of 157 doctoral theses accepted by the universities, 7 related to economics of education and only one related to educational finance. Further under Sociology and Social Anthropology, out of 69 theses accepted by the universities, 3 related to economics of education and none related to educational finance.

The inadequacy of research in educational finance is evident from the following table, which gives the

---

**Consultant, Economics of Education Unit, Research Cell, Association of Indian Universities, New Delhi-110002.*

break-up of 17 doctoral theses under the subject of Economics of Education accepted by the universities during 1981-82 under the departments of Education, Economics, Sociology and Social Anthropology :

Subject Areas	Number of Doctoral theses accepted
Educational Finance	3
Educational Planning	2
Economic aspects of Education	4
Education and Employment	1
Socio-economic Status and Education	5
Others	2
Total	17

(b) Thematic Review

Researches in financing and costing of education in India could be broadly divided into the following two categories :

(i) Researches/studies/surveys commissioned by the government and its specialised agencies. These studies are mainly problem specific.

(ii) Researches undertaken by individual researchers. These researches are of theoretical as well as applied character.

Under category (i), mention may be made of the pioneering attempt at working out, among other things, the costs of educational reconstruction in the post-Second World War period by a Committee of the Central Advisory Board of Education (known as the Sargent Committee)[4]. Soon after the British hegemony ended, the Government of India appointed a high-powered Commission of University Education[5] under the Chairmanship of the Late Dr. Sarvpalli Radhakrishnan. The Commission examined, in a voluminous but extremely readable report, the problems of university finances as a part of the overall problems of university development. This was followed by the appointment of a Committee,[6] under late Shri B.G. Kher, to report on the methods of financing education including higher education in India. Some of the state governments also appointed committees to study the system of education in their respective areas including the problems of finance. The Education Commission (1964-66) also brought out a number of studies including those pertaining to financing of educational programmes.

The study group on the Resource Mobilisation for Education set up by the Ministry of Education in its report (1970)[7] reviewed the existing measures adopted by the state governments for raising resources for education and suggested additional measures for raising resources and using those resources and other facilities optimally.

The studies[8] sponsored by the Indian Council of Social Science Research related to micro-analyses of finances of selected universities. The six universities that have been studied are : Calcutta (Mukherjee, 1974), Kerala (Mathew, 1974), Patna (Jha, 1974), Rajasthan (Nigam, 1974), Karnataka (Nanjundappa, 1976), and Bombay (Panchamukhi, 1977). Some more studies are still under way. These studies have major focus on sources of finances and their relative importance, the adequacy or otherwise of the university revenues; expenditures under different heads and difficulties faced by the universities due to financial inadequacy.

While the major themes of these studies are almost similar, the individual scholars have varied their emphasis on certain essential details. For example, Panchamukhi[9] examined question like whether individual institutions are making enough efforts to mobilise resources and whether they are spending the funds efficiently and economically. He also worked out the quantum of subsidy available to students belonging to various disciplines in the university of Bombay. Nanjundappa[10] discussed the structure of university finances in relation to cost and performance. He examined the questions of costs of higher education and fees and pleaded for bringing about a closer alignment between the two.

The Association of Indian Universities has brought out two studies about resources for education and costs of university education. The first study[11] deals with the patterns of resource allocation and changes in it over a period of time. It also examines whether such allocations have any bearing on economic indicators. In the second study,[12] the structure and unit costs of different types of universities have been examined. One interesting conclusion of the study is that the administrative and supporting services claim a larger proportion on the operating budgets of the universities than the teaching costs.

The Institute of Applied Manpower Research has completed three studies (1964, 1972 and 1975)[13] about the pattern of expenditure relating to the Indian Institutes of Technology. In another study[14] (1979), the pattern of expenditure in engineering colleges and polytechnics has been examined. The study discovered substantial variations in the pattern of per student expenditure among the responding colleges and polytechnics.

The Indian Council of Social Science Research sponsored a comprehensive study in 1978 about the financing of social science research in India. The intention of the study was to quantify the financial inputs for social science research, to identify the sources of finance and to find out the extent of collaboration and coordination among the various bodies financing and/or sponsoring research in social sciences. The study has brought out very interesting facts about research in social sciences.[15]

Under category (ii) mention may be made of Misra's studies (1959, 1962, 1967)[16] on educational finances in India which give many historical details about the system of educational finance that existed in ancient India, during the British period and the early years of post-independence period. Nair and Pillai (1962)[17] focussed their attention on the financing of education in Kerala. Naik and Lawler (1965)[18] studied the problems of financing of elementary education. Kamat, Azad and Panchmukhi (1978)[19] discuss some aspects of financing of higher education in the post-independence period. They have highlighted the financial crisis in higher education.

Problems of financing of higher education in less developed countries were studied by Rizvi (1960).[20] The study by the present author about the financing of higher education in independent India (1975)[21] sought to analyse the behaviour of high education finance—aggregative as well as institutional—during the post-independence period. He also discussed certain basic policy issues pertaining to financing of higher education in the country. In his second study[22] (1975), a macro-analysis was made of patterns, procedures and policies of government grants to institutions of higher education. In another study[23], the author examined the problems of financing of higher education and research at an all India level.

There are very few studies on costs of various educational programmes. At the international level, Coombs and Hallak (1972)[24] carried out a comparative study on management of educational costs with particular emphasis on questions like the behaviour of educational costs in different countries and the measures of reducing costs. Similar studies were carried out under the auspices of OECD (1972)[25]. In India, Lakdawala and Shah (1978)[26] carried out a study on optimum utilisation of educational expenditure in Gujarat State. The study aimed at exploring the possibilities of bringing about economies in educational expenditure as also at ensuring its optimum utilisation.

The state grant-in-aid system, which has grown in size and complexity since 1854, when it was introduced in the country by the British rulers of India, has also received inadequate attention. In Independent India, this has been the main procedure of financing at all stages. Among the very few studies on the subject, mention may be made of the study by Naik (1965),[27] who made an analysis of rules relating to grant-in-aid to colleges of arts and science and secondary schools. Misra[28] also made an analysis of the grant-in aid system in vogue in the various states in India. As already stated, the problem of grant-in-aid in higher education has also been studied by the present author (1975) with special reference to patterns, procedures and policies of state grants. This was, however, a macro type of analysis.

The problem of returns from education has been studied by quite a few researchers.[29] The findings of these researches are however, not strictly comparable because each one of these studies is based on different assumptions and procedures of computation. One interesting finding of these studies is that returns from primary education are higher than those from college education and hence there is a case for diversion of resources from college education to lower levels of education.[30]

Summing Up

The preceding analysis of the research studies in educational finance undertaken in India brings to focus the following points :

(i) The total quantum of research effort is rather inadequate for a country of India's dimensions. To bring about this sordid state of affairs, the universities have made no mean contribution. If about 180 universities, (including institutions deemed to be universities and institution of national importance) were able to produce only three doctorates on the subject of educational finance during a period of about two years, the inadequacy of research effort in this important field of study can be very well appreciated. Even if we take into account the researches sponsored by the specialised agencies like the Indian Council of Social Science Research, University Grants Commission, etc., the total research output is rather disappointing.

(ii) The inadequacy of research effort is further compounded by the almost absence of researches in certain essential areas of educational finance. For example, studies on unit costs, educational cost indices, private costs and social costs have been almost conspicuous by their absence. The system of state grants to various types of institutions has also received inadequate attention. This indicates somewhat lack of planning in the formulation of research proposals in the university institutions.

(iii) It has also been observed that the bulk of the studies are at the macro level. Except for a few studies of university finances sponsored by the Indian Council of Social Science Research, most of the studies relate to the all India level. For obvious reasons, it is difficult to apply the findings of these studies to micro-level situations.

(iv) It has also been found that quite a few of these studies are historical and descriptive in character. Without denying the need for such studies, it is necessary that studies of a more analytical nature should be taken up.

(v) In the studies of educational finance, the analysis has been primarily limited to developmental expenditure i.e. the outlays included in the successive five year plans. The non-plan expenditures, which constitute about 80 to 90% of the total educational expenditures have been left outside the purview of most of the studies. Obviously, this analysis of the educational expenditures only tells a partial story and hence has a limited utility.

PART II

Research Needs in the Area of Educational Finances

Before making suggestions about the research needs in the area of educational finance, it would be pertinent to delineate, broadly, the general themes of such studies and to outline basic questions of policy that such investigations might seek to examine.

Research Themes

Studies in educational finance should be directed towards examining questions like the quantum of total resources available for education and their intersectoral allocations; patterns and procedures of government grants, identification and mobilisation of resources for education with reference to the national economy; costs of, and returns from, education, internal and external efficiency of the educational system, etc , specific problems of financing university education, secondary education and elementary education could also be examined.

Suggested Studies

Keeping in view, the broad questions of policy indicated above and the type of researches conducted in India so far, an attempt is made to suggest some of the important areas of research relating to educational finance. The recommended studies are, however, illustrative in character and are in no way exhaustive. Further, no attempt has been made to draw up a list of research priorities, because these will emerge in relation to the needs of the particular areas/institutions for which these studies are undertaken. Further, because of the inter-connected nature of these concepts, some overlap is unavoidable.

1. Growth of Public Expenditure on Education

The study could be undertaken in an historical perspective. The allocations for education both for maintenance and development may be studied in relation to the growth of national income, demographic expansion, the priority accorded to education in relation to the total plan outlays, the growth of expenditure in relation to the expansion in enrolment at various stages, etc. Studies under this head could be multi-dimensional in that the analyses could be aggregative i.e. for India as a whole or disaggregative i.e state-wise, region-wise, etc. Within education, it could be sector-wise i.e. for elementary, secondary and higher education, etc.

Another problem that could be studied in relation to public expenditure on education is the mechanism of allotment of resources for education. An important aspect to be studied would be to what extent political, social and economic factors influence the decision-making authorities.

2. Budgetary Allocations

Education has been the most vulnerable sector so far as budget allocations are concerned. The impact of the cuts made at the central and state levels on educational growth and efficiency needs to be studied.

It has also been found that even after sectoral allocations have been determined under the five year plans, there are large and frequent diversions from one sector to the other. The worst 'sufferer' in this regard is the elementary education sector. The causation of these monetary diversions and their impact on the quantitative and qualitative development of this sector needs to be studied.

3. Resources for Education

The changing pattern of educational resources like government—central and states, fees, private benefactions, etc., could be studied. The element of subsidy at different levels of education could be worked out. The measures for accelerating private resources for education could also be identified. Studies could be undertaken for mobilising private resources for education, that is, private donations and student fees. The manner in which industrial and commercial houses could contribute to education may also be subjected to an analytical review.

4. Non-Monetary Inputs

Given the scarcity of resources for education, accent should be laid on studying the optimum utilisation of academic and other physical facilities. This would necessitate studying school curriculum, working hours, school buildings/equipment utilisation; faculty arrangement in order to ensure better returns from the existing facilities, etc. Participatory management techniques involving the teachers and the students alike, development of a relevant academic ethos, opportunities for learning by doing and appropriate consideration to the problems of first generation learners are some of the other dimensions of the non-monetary inputs, which could be subjected to thorough investigation.

5. Costs of Education

The costs of education lend themselves to a three dimensional analysis :

(a) Social Costs

Since education has a long gestation period, its returns are available only after the lapse of a defined period. Further, the society has a stake in education because it also gains through the academic and professional capabilities of the educated personnel. So education is an investment activity, which benefits the society as much, if not more, as it benefits the individual. The problems to be studied are : how much the society spends on education and how much it benefits from the enhanced productivity of the educated persons. The social costs and returns could be studied separately for various stages of education.

(b) Institutional Costs

It may be worthwhile making in-depth studies of costs pertaining to the establishment and maintenance of institutions of verious types located in different regions. For example, the expenditure mix of elementary schools, secondary schools : public, private, recognised and aided, un-aided etc., may be studied.

The incomes and expenditures of various types of universities—central, states, institutions deemed to be universities, institutions of national importance etc., could be subjected to a critical review. The incidence and quantum of recurring deficits of the university institutions may also be analysed. The manner in which the university institutions manage to survive in spite of these deficits would also lend itself to interesting investigations Similar studies could be extended to colleges categorised from different stand points like (a) Management : Government, private, aided, unaided (b) Courses offered : Colleges of general education, professional education, special education, and (c) Location : rural, urban or semi-urban areas.

(c) Private Costs

The private costs of education have to be studied in a systematic way. One of the reasons for dropouts at the different stages of education is the apparent inability of the parents to finance the education of their wards. The magnitude of the opportunity costs to various groups of student population have also to be studied. This is important not only for being better informed about the burden on the students and their parents but also from the point of view of determining the policies of government financing of the educational system, including the policy about the award of freeships, scholarships, fellowships, etc.

6. Educational Cost Indices

No significant attempt has been made to work out educational cost-indices. According to common knowledge, the educational expenditure by government has increased manifold. From about Rs. 900 million in 1950-51, it is in the realm of about Rs. 80,000 million. How much of this has been rendered ineffective by the ever increasing costs of the educational apparatus needs to be studied. These studies could be done separately for different stages of education because of the variations in the expenditure 'mix' at different stages.

7. Relationship Between Investment in Education and Economic Growth

This can be done statewise/areawise. The first step would to calculate indices of enrolment by giving appropriate weightages to different stages of education per 100 of population and the state per capita income over the years. Correlation coefficients could be worked out between enrolment at different stages of education end economic growth for different years. This would, however, necessitate neutralising the effect of other factors like health, recreation, housing etc., on economic development.

8. Cost-Benefit Analyses

This is a related problem. The studies under this head would involve analysing the contribution that education makes to the individual and social development in terms of the financial inputs. The intention would be to maximise the individual and social returns from educational investment.

9. Socio-Economic Studies

Very few studies have been made about the socio-economic background of the students of different categories in educational institutions. The parental income, the size of the family and the number of dependents, particularly school and college going children, the per capita income in the family, the living conditions of students and a host of similar problems need to be studied systematically in order to have a clear idea about the financial problems that the students belonging to different socio-economic and cultural groups face.

10. Utilisation of Educational Infrastructure

Studies relating to the extent of utilisation of the educational facilities need to be undertaken. It has been found that the infrastucture in education is not optimally utilised. The result is that while at one place there is a surfeit of educational facilities, most of which are not adequantely utilised, at some other places in the vicinity, even the minimum facilities are not available. These studies, done on a regional basis, will throw much light on the utilisation of the existing facilities and will help in determining the extent to which the policies of educational expansion can be modified.

11. Systems of Assistance from the Government

This is another important area of investigation under which a number of studies could be undertaken. The patterns and procedures of state assistance for the maintenance and development of institutions could be analysed in an historical perspective. The studies could also be directed towards focussing the bureaucratic idiocyncracies in the sanctioning and release of state grants.

The following questions could be examined :

(i) how far the State Grants have a policy orientation about educational development;
(ii) how far the state (or central) grant-in-aid rules are unambiguous or liable to multiple interpretations;
(iii) how far the state grants are adequate to meet the rising needs of educational institutions; and
(iv) how far the state grants encourage innovations by the educational institutions, etc.

Conclusion

The discussion may be brought to a close by reiterating that research effort in educational finance is inadequate quantitatively, lacks planned effort and is far from comprehensive. There is a vast expanse of virgin lands which have escaped the attention of researchers. The university departments of education have, so far, not been able to make any worthwhile dent in this important field of investigation. It is therefore, necessary that they should shed their indifference, which is born mainly out of traditionalism and in some cases, lack of capability to adapt themselves to the fast changing needs of research. The newly emerging areas of research offer a challenge to the academics and intellectuals of our country and it is hoped that they will not be found wanting in meeting the challenge more than half way.

B.P.H.E. SOCIETY'S

Ahmednagar College, Ahmednagar 414001

(MAHARASHTRA)

Applications are invited from the qualified and experienced candidates for the post of Lecturer in the following subjects :

Biochemistry	4 post	(2 leave vacancy) (PG teaching)
Physics	2 post	(PG teaching)
Microbiology	1 post	(PG teaching)

Qualifications : Good academic record with B+ or High Second Class at the degree and Postgraduate level and with Ph D. or M.Phil. PG recognition is an essential qualification.

Preference will be given to SC/ST & NT candidates, other things being equal.
Scale : 700-1600 (unrevised)

Applications alongwith copies of academic record and testimonials should reach the undersigned on or before **25.6.1988.**

Dr. P.S. Jacob
PRINCIPAL

DEAR PARENTS/ GUARDIANS, PRINCIPALS OF SCHOOLS & COLLEGES

We know you are deeply committed to the Career Planning of your Sons/Wards and Students. The Army needs intelligent and bold youth who can think originally and act independently, meeting the QR. The Army offers an exciting career, a career that is satisfying, that is adventurous and highly educative too. On the job training in Army is matchless. An integrated and attractive Pay Scale + Perks and various other benefits. The following information will help you to guide your Sons/Wards/Students at the most opportune and right time.

Type of Entry	Age at the Time of Joining	Educational Qualification	Mode of Selection	How to Apply
1. National Defence Academy	16½-19 Yrs.	12th Class of 10+2 system of education or equivalent	NDA Exam. conducted by UPSC & SSB Interview	Apply to UPSC in response to detailed advertisement only during May/June — Nov/Dec.
2. Indian Military Academy Dehradun (for Army only)				
a) Direct Entry Civilians (Some vacancies are reserved for NCC 'C' Certificate holders for Army Wing)	19-24 Yrs.	Degree or equivalent at the time of joining the course	Combined Defence Services Exam. (CDSE) conducted by UPSC & SSB Interview	Apply to UPSC in response to detailed advertisement during Apr/May., Oct/Nov
b) Engineering Graduates	20-27 Yrs.	Engineering Degree	SSB Interview only	Apply to Addl. Directorate General of Recruiting Army HQ, West Block III, R.K. Puram, New Delhi-66 in response to detailed advertisement only during Apr/May — Nov/Dec
c) Post-Graduate for Army Education Corps & Army Ordnance Corps	23-27 Yrs.	Post-Graduate Degree in Subjects notified for each	SSB Interview only	
3. Officers' Training Academy, Madras (For Army only)				
a) Short Service Commission (Non Technical)	19-25 Yrs.	Degree or Equivalent	CDS Exam. conducted by UPSC, SSB Interview	Apply to UPSC in response to detailed advt during Apr/May & Oct/Nov
b) Law Graduates for JAG's Department	21-25 Yrs.	Law Degree (Professional) with 50% marks	Written Exam. conducted by JAG's Deptt. in Mar. SSB Interview in July	Apply to JAG's Deptt. Army Hqrs. Sena Bhawan, New Delhi-110011 in response to detailed advertisement only.

THIS ADVERTISEMENT IS ONLY OF INFORMATIVE VALUE. WATCH OUT FOR THE DETAILED ADVT FOR EACH COURSE. THE COMMISSION IN THE ARMY IS OPEN FOR ABLE BODIED UNMARRIED MALE INDIAN CITIZENS ONLY EXCEPT SRL 2(b), (c) AND 3 WHERE EVEN MARRIED INDIVIDUALS ARE ELIGIBLE.

Convocation

Be Proud to Be a Woman

"A woman should be proud to be a woman, not apologetic It is time that they made society realise the fact that a woman is not a piece of transferable property among men by her father, husband or sons. They shouid realise that it is possible for women to survive as individuals and can lead their lives independently. Women need not lose their femininity in order to rise above their traditional subservient roles. An intelligent, capable woman can hold herself with dignity and courage in any situation", exhorted the noted journalist Shri Kuldip Nayar. Shri Nayar was addressing the first Convocation of the Kanpur Vidyamandir Mahila Mahavidyalaya, Kanpur. Excerpts

It is heartening to see women doing well at studies and excelling themselves in various professions. Awareness of the importance of good education for girls in itself is a sign of positive social change. However, education does not merely mean being able to read and write or obtain degrees and diplomas. True education is much more than this. It exposes you to influences, enriches and refines sensibility. It also helps develop one's personality. An educated and professionally trained women has access to several careers; she is also likely to make a better wife and mother if she has chosen matrimony as her ultimate objective.

Looking at a glance we see women generally associated with idea of enclosures. It is universally assumed that home is where a woman's heart should be. A man is generally associated with the idea of wider spaces outside home. A woman's escape into the space from the enclosure is often frowned upon. Her return to the enclosure is always approved of. It is an ironical situation.

Domesticity is neither bad nor undesirable in itself but when it becomes compulsive and when it prevents creativity of other kinds, especially in a talented person, then it is questionable. Women who wish to break away from it should have the option open to them. Now, the option is not going to be given to them on a silver platter. They have to strive to obtain it and to hold on to it. An educated woman is the one who exercises her talents and capacities to control her circumstances rather than allow them to control her.

Belonging to womanhood, you carry the burden of the great collective memory of centuries of subjugation plus the responsibility of freeing yourself and the others from it in a constructive way. The idea of a woman as a picture of sacrifice is no longer relevant. We admire those who are intelligent, practical levelheaded and creative. A woman need no longer think that she would find ultimate fulfilment in serving others. If service is the paradigm of femininity, she should let others serve her on an equal basis.

But all this cannot be made to order unless you work towards it. You have to achieve the status that puts you in that position through clear thinking, hard work and a spirit of independence. Of course your responsibility will increase manifold and it will be your job to see that you as well as other women are treated with respect. It would be possible when you are aware of your identity as a person and when you can consciously exploit the fullest potential of your personality. A sensitive woman protests against both idolatry and abuse of women and only her actions can bring hope to others.

What happened in your own city is a country's shame. Three girls of marriageable age committed suicide because they saw little prospect of marriage in a society where woman often goes to the highest bidder. Dowry has not lessened over the years; it has only increased and the ostentatiousness which has come to be attached to weddings—five-star receptions, etc,—has made the scene vulgar and terrifying. But the blame does not lie on women but on the society which has surrendered to the custom, despite legal sanctions against it.

A woman should be proud to be a woman, not apologetic. It is time that they made society realise the fact that a woman is not a piece of transferable property among men by her father, husband or sons. They should realise that it s possible for women to survive as individuals and can lead their lives independently. Women need not lose their femininity in order to rise above their traditional subservient roles. An intelligent, capable woman can hold herself with dignity and courage in any situation. This is the lesson to be drawn from the Kanpur happenings; not a pall of disappointment and fear that has been hanging over many homes.

The immediate need of the hour for women is freedom. It is not only from decadant, meaningless customs and superstitious believes but also from dependence and bondage of all kinds. There is a need to cultivate a rational approach towards life and towards the problems of survival in a world full of horrors—dowry deaths, sati, denial of secular justice to women, amniocentesis tests and female infanticide. It is necessary to make a lot of noise about social injustice based on gender. It is also essential to protest in an organised and consistent manner. But mere protests are not enough for justice is to be demanded, obtained and maintained.

In the name of "this is tradition" many evils are sanctified. A particular behaviour is expected and insisted upon. But tradition is not something frozen. It undergoes changes from generation to generation. In the Hindu mythology, it has happened again and again. In Shakutalam, Dushyanta married Shakuntala in Kanvar's hermitage. That was a gadharva marriage which does not require any rituals or ceremony. Will that marriage be accepted legal today even though tradition has it ?

Again, there are various versions of the Ramayana. Sita is submissive in one, assertive in another. In the Buddhist Jataka literature, Ram and Sita are described as brother and sister and they were exiled alongwith Lakshman.

There is nothing sacred about tradition. It is a convenient instrument used by the vested interests to keep the society in bondage. Child marriage, sati, non-marriage of widows—all customs are practised at the instance of men to keep women in subjugation.

During the Vedic period, woman was worshipped and the relics of those days indicate the respect in which they were held. Even now in Rajasthan, among the Rajputs, where sati is glorified, Mirabai lived in the 16th century and she did spend her life serving her husband, let alone giving up her life for him. Mira's songs openly proclaim her determination to undertake a spiritual quest, resisting the opposition of her husband and in-laws.

In one song, she addresses her husband thus : "Ranaji, you cannot stop me now/I love to be among the wise/I throw off the veil of modesty....../Take your necklaces and jewels/I tear and flick your finery/Mira wanders, a mad woman,/Her hair flies free". (Ranaji, Ab na rahoongi tori hatki).

She lived a highly unconventional life, breaking out of seclusion, travelling widely with a following of women, and singing and dancing in temples. In many songs she stresses her defiance of social opinion :

> Mira dances with bells on her feet.
> 'Mira is mad' people say
> 'Destroyer of family' kindred call me

Mira dances with bells on her feet......(Pag ghungroo bandh......)

In one song she even states : "I will sing of Girdhar/I will not be a Sati......(Girdhar gasya Sati na hosya).

One hears a lot about women's liberation movements all over the world. A truly liberated woman does not run down or consider men inferior to her. She considers them equals with whom she can communicate on an equal footing. An ideal society calls for equal opportunities for both men and women. In our country there is need to do a lot towards this goal. A happy society is where (a) women enjoy financial independence and opportunities of work in their chosen spheres; (b) there is no fear of derision, humiliation and molestation just because they are women; (c) there is no need for separate queues and reserved seats for women; (d) mother's name is given equal importance to father's in legal/official papers; (e) women are not included in the minorities and weaker sections of society; and (f) women are considered persons and not commodities.

Cynicism or pessimism towards the prevalent conditions is not the right attitude. A beginning has already been made in the form of awareness of their rights among women in India. It is for young women like you to carry the task ahead.

"We seemed to be helpless in the grip of some all-powerful monster; our limbs were paralysed, our minds deadened. The dominant impulse in India was that of fear pervasive, oppressing, straling fear; fearof the army, the police, the widespread secret service, fear of the official class; fear of laws to suppress and of prison," this is what Jawaharlal Nehru said, while describing India under British domination.

I am reminded of a novel "The House on the Embankment" which stirred wide attention in the Soviet Union. The theme was that passiveness paved off. The author, Yuri Trifonov, narrated the story of Glebov, the central figure, who by avoiding firm stands on important issues goes higher in the life and stays out of trouble.

"His gift was to be nobody", says an acquaintance of Glebov. "As I realised later, people who have the genius to be nobody go very far...... are always successful."

How true it is in today's world. If the lives of successful men and women were to be found that most of them belonged to the tribe which knew how to get along. They never came in others' way; they never walked out of step; they never made any thing an issue Their preference was to keep quiet and if at all they spoke, they were seldom out of tune. Some would criticise them for playing it safe but from any standard they were successful and climbed the ladder higher and higher.

Indeed, success has become synonymous with passiveness. If you know how to get along, you advance in life. If you donot accept any responsibility, if you do not take risks, if you just lie low, you read the maximum crop. And people even come round to believe that you must be possessing some talent.

Take the civil servant. Those who take no decisions can make no mistakes. They may only push the file with their "dhobi mark" to use the bureaucrats, lingo, but they invariably go places. You may say that they lack initiative, but how does it bother them ? They get their annual increments and even out of turn promotions. What else do they want from life?

No doubt, all that they do is to discuss the pros and cons of a case, record a note which summarises both sides and leave the rest to their superiors. They know from their experience that it never pays to express their opinion. Why take in any risks in expressing an opinion or taking a decision if you can safely "pass the buck" ? It may mean slowing down the decision-making process or stalling some programmes which could have been expedited. But that is not their concern if they can stay out of trouble. Why should they stick their neck out ?

Intellectuals are no better. Conformism has become the badge of their community. They rationalise every happening in their life. Independent thinking is only a make-believe behind which they indulge their lives of security and good living. The rule "I sing the song of him whose bread I eat" sums up their philosophy. They would do anything to retain all that they have—and their comforts. It is not that they do not appreciate the value of sacrifice or suffering for one's convictions but it is a precept which they want others to follow.

Whether they believe in anything at all is difficult to say. But they do give the impression of people who are interested in themselves primarily. In the words of a philosopher, "No doubt, when modesty was made a virtue, it was a very advantageous thing for the fools, for everybody is expected to speak of himself as if he were one".

They may talk of values—and they endlessly talk of principles and ideals—but it is the material rewards that they are after. But then their great gift, as Yuri Trifonov says in his novel, is to be nobody. Since this has paid them so far, why should they change ? ☐

Indian Council of Medical Research

RESEARCH CAREER DEVELOPMENT AWARDS

The Indian Council of Medical Research has instituted a limited number of 'RESEARCH CAREER DEVELOPMENT AWARDS" from the year 1988-89 to provide young talented Scientists/Scholars with an opportunity to pursue their research interests in any institution in India, including the ICMR's own institutes. The basic eligibility criteria are :

(i) Scientists between the ages of 25 and 40 years who have completed doctoral or other equivalent professional training i.e. M.D. or Ph.D. and have a proven track record in the proposed field of research.

(ii) Applicants should be holding permanent posts

(iii) The staff of the ICMR in the Headquarters Office or in any of the institutes of the ICMR are not eligible for the RCDA.

(iv) Applicants engaged in private practice will not be considered for the award.

(v) The last date for receipt of completed applications has been extended to **31st July, 1988**.

Those who have applied in response to the earlier advertisement need not apply again. It may, however, be noted that the minimum duration for the Research Career Development Award will be one year (and not three years as indicated in RCDA forms supplied earlier). All other terms and conditions will remain the same.

Further details can be obtained from the Director General, Indian Council of Medical Research, (Division of Administration-III), Ansari Nagar, Post Box 4508, New Delhi-110029.

Imphal Seminar on Monitoring & Implementation of NEP

The Association of Indian Universities is organising a series of seminars in the various regions of the country to consider the monitoring and implementation of the National Education Policy (NEP) and its Programme of Action. Vice-Chancellors, Deans and Principals from Universities are participating in these seminars.

The first such seminar was organised at Delhi from 14th to 16th April, 1988. It was reported in the **University News**, April 25 issue.

The second seminar was organised at Imphal from 19th to 21st May, 1988. Twenty seven participants from 14 universities including 9 Vice-Chancellors participated. The themes discussed at the Seminar were: Making the University System Work; Improvement in Efficiency; Mobility of Teachers and Students; and Language, Development and Cultural Perspective. The Conference was inaugurated by the Hon'ble Chief Minister of Manipur, Shri R.K. Joychander Singh. Prof. K.J. Mahale, Vice-Chancellor, Manipur University presided. Prof. S.K. Agrawala, Secretary of the Association of Indian Universities introduced the themes of the Seminar to the participants. Dr. V. Natarajan, Director (Research) in the Association, introduced the Keynote speakers Prof. B. Chatterjee, Vice-Chancellor, Rabindra Bharati University, Prof. Ramaranjan Mukherji, ex-Vice-Chancellor, Burdwan and Rabindra Bharati Universities, Prof. S.P. Banerjee, Vice-Chancellor, Burdwan University and Shri G.B.K. Hooja, ex-Vice-Chancellor, Gurukula Kangri Vishwavidyalaya and ex-Chairman, Manipur Public Service Commission

The Chief Minister emphasised that every country develops its own system of education to express and promote its unique socio-cultural identity and also to meet the challenges of the time. India has been no exception to it. In order to achieve the desired objectives, the Education Policy of 1986 has suggested removal of disparities, reorganisation of education at different stages, technical and management education, reorienting the content and pedagogy of education, teachers' education and the management of education, as the key areas requiring maximum attention. He mentioned that in the State of Manipur, they have taken up the implementation of the policy in right earnest. The important features of such efforts were: rationalising the school education system; delinking pre-university classes from degree colleges; vocationalisation in selected higher secondary schools; setting up a secondary model in each district; introducing new syllabi in the school classes; supply of free exercise books to students studying from classes 1 to 8; free supply of uniforms to girl students belonging to SC and ST classes, etc.

The themes of the seminar were discussed in four separate groups and consensus arrived at on several points like :

(1) In the university system, the responsibility of all the functionaries should be clearly defined so that specific persons can be held responsible for specific lapses.

(2) With this objective, some specifically defined responsibilities for all the important university functionaries have been suggested. Similarly, minimum responsibilities of the teachers and students have also been spelled out as well as those of the Govt Departments and administrators.

(3) The seminar emphasised that in case the Govt. does not meet its minimum commitments, as procedurally determined, in respect of finances and infrastructure facilities, the college and university system just cannot function.

(4) Norms of teacher evaluation have also been suggested.

(5) Minimum student facilities relating to accommodation, sports, cultural and recreational activities, co-curricular and extra-curricular and extension activities, health facilities, etc. have been spelled out with due emphasis on student counselling.

(6) The basic components of the machinery for the removal of grievances of the teachers, students and employees have also been suggested.

(7) Modalities for student participation for making the system work have also been suggested.

Specific recommendations have also been laid down with respect to the other themes relating to the 'mobility of teachers and students'; 'Improvement in efficiency' in the university and college systems and'; 'Language Development and Cultural Perspective'.

This is the second in the series of seminars in which senior academics participated for 3 days to deliberate on specific steps for implementation of the programme of action and monitoring the progress of the implementation of the National Education Policy. The deliberations were a great success when viewed in the light of consensus reached on several crucial issues. The reports of all these seminars shall eventually be considered by the Govt of India, Ministry of Human Resource Development, which is financing these seminars. ☐

Education for Women's Equality

Mother Teresa Women's University, Kodaikanal organised a Principals' Meet on Implementation of New Education Policy with special reference to education for women's equality on 28.5.1988 at the University's Research and Extension Centre at Madras. The Vice-Chancellor, Dr. J.K. Pillai, presided.

Dr. Mary Josephine Louis, Professor and Head of the Department of Education, Mother Teresa Women's University, welcomed the gathering and spelt out the objectives as identifying areas of Women's Studies that could be incorporated into the curriculum, areas of Research and Extension work, activities that would promote building up a positive image and inculcate critical thinking. Dr. J.K. Pillai in her presidential address emphasised the role of Education in the liberation of women from the subservient position occupied by them, with a few illustrations and appealed to Principals to stimulate teachers in their colleges towards substantial changes that ought to occur in higher education towards women's equality.

Mrs. Sarojini Varadappan, President, All India Women's Conference, Madras and a member of the National Committee for Women's Development, appraised the group of the National efforts for the development of women. She promised to carry the recommendations of the Principals' Meet to the National Meet and ensure their implementation.

The Principals' Meet resolved that :

— women dimensions be incorporated in different disciplines, first in autonomous Colleges and later to be taken up by the Boards of Studies of the various Universities;

— a Women's Cell be instituted in all Women's colleges with the assistance of the UGC and the Cell take up studies in women related topics and organise Seminars, Workshops on women's issues;

— discretion be given to Principals of Women's Colleges to take up activities related to Women's Development in their NSS Programmes;

— during the year 1988-'89, the Women's Colleges in Tamil Nadu to take up women's issues as their central theme of co-curricular activities ;

— self employment dimensions be included in various courses. The modalities would include career information services, lectures by successful role-models from industries, government and other organisations;

— training courses be organised during summer holidays to make girls employable;

— women's Colleges should encourage physical education activities, and girls interested in sports activities should be given special encouragement and training;

— women's colleges to give special attention to the eradication of illiteracy among women, through the package programmes as formulated by the UGC guidelines—Adult Education Centres, Jana Siksha Nilayams, Non-Formal Education Centres;

— leadership training programmes be organised for girls with the help of Voluntary Organisations and Youth Welfare Departments;

— more girls be inspired and encouraged to sit for the competitive examinations; special training courses be offered with the help of the UGC;

— women teachers develop competence on par with men teachers and to this end, staff development programmes be organised by the colleges. Women teachers should be encouraged to attend Seminars/Workshops organised by National Agencies like NIEPA, NCERT, UGC, ICSSR, etc;

— to enable women teachers to update their knowledge and skills, they should be given training in time-management, reducing durdgery in home management, innovations in child-rearing practices, in simplification of their task and in changing their food habits;

— to appeal to the Government to provide some percentage reservation for women in important decision-making bodies such as Planning Commission;

Dr. B. Regina Papa, Registrar, Mother Teresa Women's University, who proposed a vote of thanks suggested forming a network of Women's Cells in all colleges to be monitored by Mother Teresa Women's University.

Syllabus Design & the Teachers' Role

A Workshop for the college teachers on Syllabus design and the teachers' role in converting the given syllabus into practical courses was organised by the Central Institute for English and Foreign Languages' Regional Centre, Shillong in collaboration with the Department of English, North-Eastern Hill University and the Directorate of Public Instruction, Government of Meghalaya.

The five-day workshop had before it the following tasks :

(i) Critically examining the proposals given in the Document : National Policy of Education, 1986, Programme of Action, Government of India, Department of Education, New Delhi.
(ii) Analysing the rationale underlying the Meghalaya English curriculum of the undergraduate level.
(iii) Planning long-term and short-term courses based on the given Syllabus.
(iv) Investigating the practical problems faced by the teachers of English in Meghalaya.

In discussing the U.G.C. proposals for improvement of the language competencies of students, the participants agreed that emphasis should be shifted from book learning to developing language skills, study skills, cognitive strategies for interpreting texts and discovery learning. The participants also agreed that streaming on the basis of merit and the specific needs of the students would help solve the problems of handling a large mixed ability group of students. The need for investigating the level of proficiency of the students in English and evaluating the learning outcome was also greatly felt by the participants.

A framework for analysing the Meghalaya English curriculum was developed to facilitate assessment of its merits and weaknesses. The analysis indicated that the principle of streaming had been adopted in principle in Meghalaya as different English syllabi have been recommended respectively for the B.A., B. Com., B.Sc., and Home Science students. However, a detached analysis suggests that these syllabi are not need based as there is a lot of overlap in the topics and teaching items included in these syllabi. It was also felt that the language papers in the syllabi are not properly graded and sequenced on a hierarchical basis from the P.U. to B.A. Compulsory/Elective/Honours, B.Sc. and B.Com. levels.

The participants also felt that the majority of the college teachers have no say in designing the syllabus. It was suggested that the only way in which the teachers can actively participate in planning and re-orientation in teaching is by developing practical courses based on the given syllabus. The workshop provided opportunities for training in long-term planning of courses to facilitate the process.

On the concluding day a number of college teachers demonstrated some of the innovative methods they have used so far in their classes. These demonstrations as well as the innovative methods indicated that the carefully preserved opinions in some quarters, that college teachers on the main are inimical to changes and are allergic to innovative exercises, was a myth.

University Information & Library Networking System

The University Grants Commission (UGC) has constituted a Committee under the Chairmanship of Prof. Yash Pal, Chairman, UGC to work out the details regarding University Information & Library Networking System (UNIFLIB-NETS). The Committee at its first meeting held on 22nd April, 1988 decided to set up a working group consisting of librarians, Information Specialists, Computer Software Specialists, Tele-Communication Specialists and others. The working group has been asked to submit a Detailed Project Report within next 3 months indicating necessary details alongwith the estimated cost of the project.

The working group has prepared a questionnaire on "Survey of the University Libraries" which has been sent to all the Vice-Chancellors of the Universities in India with a copy to the concerned university librarian. At its first meeting on 25th May, 1988, the working group decided, inter-alia, that Library/Bibliography Automation may be done in respect of one University in the first instance. The University of Poona, Pune and the Jawaharlal Nehru University, New Delhi are being considered for the purpose. Filled in questionnaires and any other suggestion that may be helpful to the working group may be sent to Shri K. Gunasekaran, Education Officer, University Grants Commission, Bahadur Shah Zafar Marg, New Delhi-110002.

SPU Develops a Teaching AID

The University Science and Instrumentation Centre (USIC) attached to the Sardar Patel University, Vallabh Vidyanagar, has developed a teaching aid based on analytical: (a) X-ray diffraction, and (b) Electron diffraction which are incorporated in B.Sc. as well as M.Sc. syllabi of the science colleges of Gujarat State. The cost of each teaching aid will be about Rs. 250/- Further details can be had from the Head, USIC, Sardar Patel

University, Vallabh Vidyanagar-388 120 (Gujarat).

New Professional Courses

The Sardar Patel University proposes to offer a 2-year M.Sc. Electronics course and a 2-year Postgraduate course in Computer (M.Sc. Computer) from the academic year 1988-89.

Refresher Course in Mathematics

The Academic Staff College, Bihar University, Muzaffarpur, organised a Refresher Course in Mathematics for College Lecturers from 18 April to 7 May, 1988. This was a need-based course with the broad objectives of equipping the participants to effectively cope with the core contents of Bachelor level syllabus, which has been drastically modernised with the introduction of 3 year degree course in the Universities of Bihar. The lecturers working in the constituent/affiliated colleges of the Bihar University and the L.N. Mithila University, Darbhanga constituted the target group—26-from Bihar University and 11 from L.N. Mithila University. The Head of the Deptt. of Mathematics was Course Coordinator and the teachers of the Postgraduate Deptt and some teachers from outside acted as Resource Persons.

Since the universities of Bihar do not have at the moment new entrants, appointed on regular basis, in the Deptt/Colleges, the U.G.C. had desired the Bihar University Academic Staff College to conduct such a need-based refresher course in place of the usual orientation courses that are being organised by other A.S.Cs. It is proposed to conduct such refresher courses in other subjects also.

Environmentalists Meet

The 9th Annual Session of the Academy of Environmental Biology, India will be held at Valvada, District Bulsar, Gujarat from 29th to 31st December, 1988. A symposium on "Environmental Risk Assessment and Management" will be organised on the occasion. The main objective of the session will be to share the scientific knowledge and also to work out how best the common men should work for conserving and sustaining the cleaner environment.

Further details can be had from Dr. P.B. Deshmukh, General Manager and Study Director, Jai Research Foundation, P.O. Valvada: 396 108, District Bulsar, Gujarat.

Youth and Nationalism

Quoting Benjamin Disraeli that almost everything that was great, had been done by youth, Mrs. Kumudben Joshi, Governor of Andhra Pradesh, called upon the students to dedicate themsleves to the tasks of reiterating and restoring the unity and strength of the nation. Mrs. Joshi was speaking on Youth and Nationalism at the Goa University.

Stating that India's freedom was result of youth struggle on a national scale, Mrs. Joshi exhorted the students to usher in peace and goodwill amongst students in universities by creating proper environment. She called upon students to rise above the narrow regimentations and disruptive forces of casteism, communalism, parochialism, distorted linguism, sectarianism and disruptive regionalism, which were shaking the foundation of our society.

She observed that university was an opportunity to students to formulate and imbibe a national character, dignity, honour and aspirations to achieve national progress. She said it was for the youth to destroy the 'poverty trap' and take up the initiative to provide a direction to the millions in the country's villages, shrouded in ignorance, superstition and tradition, and eradicate the evils of dowry, casteism, communalism and drug addiction.

Dr. Gopal Singh, Governor of Goa and the Chancellor of the Goa University, stressed the need to discard obstructive mental hangups and bring about a social revolution to build the nation.

Diploma in Instrumentation

The Gauhati University has decided to introduce Diploma Course in Instrumentation in the Department of University Services and Instrumentation Centre (USIC). The Diploma Course, which is endorsed by the UGC, will cater to the needs of the technicians of the entire North-Eastern Region of the country.

JNU-IGNOU to Produce Video Software

The Jawaharlal Nehru University and Indira Gandhi National Open University (IGNOU) have joined hands in the production of educational video and audio software for the upliftment of national educattional standards. An agreement has been signed between the two universities for making available video and audio studios at JNU to Indira Gandhi University for educational video software production.

During May 1988, three video and two audio programmes were recorded. The video programmes titled "Writing for the Children", "Unit Design for Distant Learning" and "Management" were directed by Miss Vibha Sharma, Mr. Yusaf Mehta and Miss Zeba Khan. The JNU team headed by Engineer V.K. Sahni, Maintenance Engineer, Language Lab Complex is working in close cooperation with IGNOU team to produce excellent quality educational software. Possibilities are also being explored for the development of software of common interest to both the Universities.

News from Agril. Varsities

Parmar Varsity Dedicated to the Nation

The Prime Minister of India, Shri Rajiv Gandhi, dedicated the Dr. Y.S. Parmar University of Horticulture and Forestry, Solan to the Nation on 30th April, 1988 in a formal ceremony at the University Campus, Nauni (Solan), In his address the Prime Minister said that this was the first University of its kind in Asia and second in the entire world, which would help transform Himachal Pradesh into a prosperous state. He said that the Union Govt. would give special aid for the development of horticulture, food processing industries and assured full assistance and cooperation to the University in the field of research and extension education.

Mr. Gandhi commended the achievements of the State in the field of horticulture and said that the University at Solan would benefit the farmers and orchardists by disseminating the latest knowledge in the field of horticulture and forestry.

Mr. Gandhi planted a sapling of 'Khirk' (Nettle wood) which is a local fodder tree and is used for fuel and fodder. He also released a book "Production and Conservation of Forests" written by Dr. P.K. Khosla, Dr. D.K. Khurana and Mr. Atul of the University. A book "Apple Production Technology and Economics" authored by Mr. S.M. Kanwar, the Agricultural Production Commissioner of the State was also presented to Mr. Gandhi. University publications were presented to Mr. Gandhi by Dr. M.R. Thakur, Vice-Chancellor of the University.

Shri Virbhadhra Singh, Chief Minister of the State said that this University would also serve the twin purpose of preservation of eco-system and environment in the state.

Dr. M R. Thakur, Vice-Chancellor of the University said that since the State Government was wedded to conserve and preserve the ecology, environment and natural resources of the State and to alleviate the poverty of its people through its various policies and programmes, the University will provide necessary technology to harness the available potential. Dr. Thakur assured that University will serve the cause of hill horticulture and forest farming in the best possible manner.

Summer Institute on Buffaloes

In the Indian context, scientists should specially look into particular problems and constraints of buffalo production and management at the level of the small farmers who own nearly 80% of the buffaloes of the country, said Dr. Har Swarup Singh, Vice-Chancellor Haryana Agri. University, Hisar (HAU). He was inaugurating a Summer Institute on Optimisation of Buffalo Production through Management organised at the College of Animal Sciences.

Dr. Singh disclosed that since 1972 buffalo numbers have increased by nearly 3.5% in Haryana despite the fact that an estimated 50,000 high yielding buffaloes are being exported from the State to other States of the country and abroad.

He called upon the scientists to draw up a comprehensive and integrated buffalo development programme with regard to traditional problems of buffalo production like high calf mortality, late maturity, summer depression of mortality, etc.

The Summer Institute was presided over by Dr. R. Nagarcenkar, Director, National Dairy Research Institute, Karnal. He lauded multidisciplinary integrated research at the buffalo research centre at HAU which has established a nucleus of elite murah buffallo germ-plasm for genetic improvement of this world famous breed.

About 30 scientists attended the Summer Institute organised by the Department of Livestock and Management.

Castor Sheller

The Tamil Nadu Agricultural University (TNAU) has developed and evaluated a hand/power operated castor sheller. It consists of a trapezoidal feed hopper with a shutter to regulate the feed rate, shelling discs and a screw auger to convey the castor pods in between shelling discs. The shelling discs are made of two wooden discs fastened with 6 mm thick rubber sheet. One of the discs is rigidly fixed to the frame and the other is mounted on the rotating shaft. The clearance between the discs is adjustable and the rotating discs is held against the stationary disc by means of a compression spring. A fly wheel is provided for easy operation. A blower is fitted to clean the shelled castor. The unit can be either operated manually without connecting the blower or operated by a 0.5 hp electric motor with blower.

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

CURRENT DOCUMENTATION IN EDUCATION

A List of Select Articles culled from periodicals received in the AIU Library during May, 1988

EDUCATIONAL PHILOSOPHY

Das, R.C. Education in values. *J. Indian Edn.* 13(4), 1987, 37-42.

Fincher, Cameron. Knowledge, competence, and understanding as educational outcomes. *Res. Hr. Edn.* 27(3), 1987, 283-8.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities.

BIOLOGICAL SCIENCES

Marine Biology

1. Koya, M.S. Syed Ismail. *Ecobiology of helminth parasites of finfishes and shellfishes of Cochin waters with special reference to digenetic trematodes.* CUST. Dr. A Mohandas, Reader, School of Environmental Studies, Cochin University of Science and Technology, Cochin.

2. Naik, Ulhas Ganesh. *Studies on the plankton and productivity of Kali Estuary and inshore waters of Karwar,* Karnatak Dr. B. Neelakanthan, Chairman, Department of Studies in Marine Biology, Kodibag, Karwar.

3. Suresh, K. *Haematology of some marine and estuarine molluscs of commercial importance.* CUST. Dr. A. Mohandas, Reader, School of Environmental Studies, Cochin University of Science and Technology, Cochin.

Biochemistry

1. Upadhyay, Avinash Ajay. *Certain biochemical aberrations in diabetic polymorphonuclear leukocytes during phagocytosis.* Nagpur. Dr. N. Nath, Reader, Department of Biochemistry, Nagpur University, Nagpur.

Botany

1. Anil Kumar. *Phytosociological and productivity studies of Bhadarwah Forests, Jammu (J & K).* Jammu. Dr. Shashi Kant, Reader, Department of Botany, University of Jammu, Jammu.

2. Antony, Johny. *Microbiological activities in the root region of coconut, Cocos nucifera Linn.* Kerala. Dr. N.P. Jayasankar, Joint Director, Central Plantation Crop Research Institute, Regional Station, Kayamkulam.

3. Datta, Soumana. *A study of pathogenesis of certain nematode diseases of guar, Cyamopsis tetragonoloba L and their control.* Rajasthan. Dr. B. Tiagi, Department of Botany, University of Rajasthan, Jaipur and Dr. P.C. Trivedi, Department of Botany, University of Rajasthan, Jaipur.

4. Deb, Pronoy Ranjan. *Studies on the effect of organic-inorganic amendments on the soil and rhizosphere microflora in relation to the biology and control of soil borne plant pathogen, i.e. S clerotium rolfsii.* NEHU. Dr. B.K. Dutta.

5. Jha, Vidyanath. *Cytochemo-ecological studies of Euryale ferox Salisbury in North Bihar.* Ranchi.

6. Krishnamurthy, R. *Impact of sodium chloride on the metabolism of rice, Oryza sativa L. varieties differing in salt resistance.* Baroda.

7. Lalrawna. *Study on seed mycoflora of rice, Oryza sativa L. grown in Mizoram.* NEHU. Prof. R.R. Mishra, Head, Department of Botany, North Eastern Hill University, Shillong.

8. Lenjewar, Sharad Gangadhar. *Fossil flora of the Deccan intertrappean exposures of India.* Nagpur. Dr. N.R. Yewale, Department of Botany, Institute of Science, Nagpur.

9. Mand, Sangeeta. *Physiological and genetic studies on guar, Cyamopsis retragonoloba rhizobia with particular reference to plasmids.* HAU.

10. Mandal, Wahed Ali. *Studies in monocarpic senescence of some rice cultivars.* Burdwan. Prof Monojit Acharya Choudhuri, Department of Botany, University of Burdwan, Burdwan.

11. Mondal, Tapati. *Physiological and biochemical studies on some naturally occurring edible fungi in the plains of West Bengal.* Calcutta.

12. Niranjana Murthy, H *Cytogenetical studies in Guizotia case, (Coreopsidinae-Compositae).* Karnatak. Dr. S. C. Hirenath, Reader, Department of Studies in Botany, Karnatak University, Dharwad.

13. Padala, Satish. *Studies on selected cyatheaceous fern taxa of Rajasthan.* Rajasthan. Dr. T. N. Bhardwaj, Department of Botany, University of Rajasthan, Jaipur.

14. Rathi, Seema Narendra. *Palynological investigations on some papilionaceous crop plants.* Nagpur. Dr. G. V. Patil, Department of Botany, Institute of Science, Nagpur.

15. Sheikh Maqsood Ahmed. *Studies on the inheritance of qualitative and quantitative characters and resistance to Fusarium wilt caused by Fusarium oxysporum f.sp. lini in linseed, Linum usitatissimum L.* Rajasthan. Dr. S. K. Agarwal, Department of Botany, Govt. College, Kota.

16. Thakre, Rameshchandra Gulabrao. *Induced mutants in blackgram, Vigna mungo (L) Hepper.* Nagpur. Dr. C. R. Bhatia, Nuclear Agriculture Division, Bhaba Atomic Research Centre, Trombay, Bombay.

17. Wankhar, Borabell. *Biology of Centella asiatic (Linn) urb : A medicinally important clonal perennial.* NEHU. Dr. R. S. Tripathi, Prof,, Department of Botany, North Eastern Hill University, Shillong.

Zoology

1. Datta, Gungun. *Morpho-histochemical and autoradiographic studies on the internal reproductive organs of some insects of West Bengal.* Burdwan. Dr. Mahitosh Banerjee, Reader, Department of Zoology, University of Burdwan, Burdwan.

2. Debnath, Gopal Chandra. *Studies on fresh water fishes of Visakhapatnam with special reference to the larvicidal fish Gambusia affinis, Baird and Girard (Osteichthyes : Atheriniformes : Poecilidae).* Andhra.

3. Debnath, Jogendramohan. *Physiological studies on the effect of cyanocobalasin on magur fish, Calrias batrachus.* Calcutta.

4. Gupta, Sushma. *Histozoic and coleozoic myxozoan parasites (Protozoa : Myxozoa, Myzosporea) of freshwater fishes of Northern India.* Panjab.

5. Jain, Nirmala. *Studies on the hepatotoxicity of an organophosphate phosphamidon in Swiss albino mice.* Rajasthan. Dr. Pradeep Bhatnagar, Department of Zoology, University of Rajasthan, Jaipur.

6. Lal, Deepali. *Studies on the efficacy of chitin synthesis inhibitors including the histopathology of peritrophic membrane against Tribolium castaneum and Heliothis armigera.* Rajasthan. Dr. S. C. Saxena, Prof, Department of Zoology, University of Rajasthan, Jaipur.

7. Laxma Reddy, Ramalingam. *Some aspects of the regulation of ovarian function in the rat and bonnet monkey.* Hyderabad. Prof. P. R. K. Reddy, Reader, Department of Life Sciences, University of Hyderabad, Hyderabad.

8. Mehrotra, Vimal. *Studies on seasonal variations on certain haematological parameters in the Indian Camel, Camelus dromedarius and their association with growth rate.* Rajasthan. Dr. M. L. Gupta, Department of Zoology, Dungar College, Bikaner.

9. Purohit, Ashok K. *Antifertility studies of neem plant materials in male rat with special reference to lipid metabolism affecting reproduction.* Rajasthan. Prof. V. P. Dixit, Department of Zoology, University of Rajasthan, Jaipur.

10. Ram Singh. *Ecological, behavioural and biological studies of rodents in Jaipur region and their control.* Rajasthan. Dr. Y. Saxena, 6-A Kalyan Path, Police Memorial Circle, Jaipur.

11. Ramadevi, Kasireddy Ramalakshmi Satya. *Studies on the ghost crab, Ocypoda platytarsis Milne-Edwards, (Crustacea : Bracchyura).* Andhra.

12. Ratna Kumar, Balla Vijaya. *The ultrastructure and functional characterization of the cell types in the epididymis of rhesus monkey, Macaca mulatia.* H.S. Gour. Dr. B S. Setty, Asstt. Director, Division of Endocrinology, Central Drug Research Institute, Lucknow and Dr. A. C. Shipstone, Asstt. Director, Electron Microscope Unit, Central Drug Research Institute, Lucknow.

13. Seshachalam. R. V. *Studies on the metabolism of a few selected amino acids in the silkworm, Bombyx mori L.* Bangalore. Dr. A. R. Kasturi Bai, 46, Vth Main Road, Jayamahal Extension, Bangalore and Dr. R. V. Krishnamoorthy, Assoc. Prof, Department of Zoology, University of Agricultural Sciences, Bangalore.

14. Sharma, Savita. *An investigation on the mode of action of postcoital antifertility agents during implantation stages of pregnancy in rat.* Rajasthan. Dr. Dennis Jacob, Assoc Prof, and Dr. D. K. Vyas, Department of Zoology, University of Rajasthan, Jaipur.

15. Singh, N. Ibotombi. *Structure and behaviour of meiotic prophase chromosomes in Indian silkworms, Antheraea and*

Philosamia species. Manipur. Dr. S. C. Kundu, Department of Life Sciences, Manipur University, Imphal.

16. Surendar Singh. *Survey of insecticides from the aquatic environment and their interaction with microorganisms.* Rajasthan. Dr. Pradeep Bhatnagar, Department of Zoology, University of Rajasthan, Jaipur.

17. Viswanadham, Bammidi. *Studies on littoral bryozoa, Ectoprocta at Visakhapatnam, Bay of Bengal, India.* Andhra.

18. Wadhwa, Vibha. *Investigations on the effects of certain posticide combinations on the urinogenital organs of Basser domesticus L.* Rajasthan. Dr. P. P. Bakre, Department of Zoology, University of Rajasthan, Jaipur.

Agriculture

1. Anbudhurai, R. Ponnin. *Effect of methyl parathion, an organophosphorous insecticide on photosynthetic electron transport.* Madurai.

2. Bandu, Mahabari Mohammed. *Effects of some growth regulators, chemicals and stage of maturity on ripening of bananas, Musa paradisiaca L.* M. P. Agrl. Dr. B. B. Desai, Head, Department of Biochemistry, Mahatma Phule Agricultural University, Rahuri.

3. Chaudhari, Suresh Madhav. *Studies on heterosis, combining ability and correlations in bitter gourd, Momordica charantia L.* MP Agrl. Dr. P. N. Kale, Prof. Department of Horticulture, Mahatma Phule Agricultural University, Rahuri.

4. Dabas, Dharam Singh. *Studies on molybdenum availability in Haryana soils.* HAU.

5. Foning, Mikthuk S. *Studies on flower and seed production in some winter annuals.* Calcutta.

6. Ganga Krishan, A. *Genetic analysis of cytoplasmic systems in grain sorghum, Sorghum, bicolor (L) Moench.* Marathwada Agrl. Dr. S. T. Borikar, Seed Research Officer, Seed Unit, Marathwada Agricultural University, Parbhani.

7. Godara, Anil Kumar. *Studies on the quality improvement of grapes and standardisation of raisin making.* HAU.

8. Gupta, Ravinder. *Soil hydrothermal variations associated with different mulches and their impact on the growth and yield of strawberry.* HP Krishi. Dr. C. L. Acharya, Department of Soil Science and Water Management, College of Agriculture, Palampur.

9. Ishwar Singh. *Response of aestivum and durum wheat varieties to different levels of irrigation and fertility.* HAU.

10. Jagdish Chander. *Studies on genetics of seed vigour, yield and its components in Indian mustard. Brassica juncea (L) Czern and Coss.* HAU.

11. Kutaaj, Sukhwinder Singh. *Biological control of bacterial leaf sport of mungbean. Xanthomonas campestris pv. Vigna radiatae.* PAU.

12. Mahla, Jagdish Chander. *Bio-ecology of sugarcane shoot borer, Chilo infuscatellus Snellen.* HAU.

13. Mangat Ram. *Studies on the production potential of raye, Brassica juncea (L) Czern and Coss, varieties under varying irrigation and fertility levels.* HAU.

14. Sharma, Girish Kumar. *Mutation studies in apple, Malus domestica/pumila.* YS Parmar. Dr. R. L. Sharma, Chief Scientist, Horticultural Regional Research Station, Bajaura, Distt. Kullu, H.P.

15. Shyam Lal. *Studies on genetic divergence, phenotypic stability and non-allelic interactions in pigeonpea.* HAU.

16. Singh, Bachchan Prasad. *Studies on Alternaria leaf spot of important cruciferous vegetables in Bihar.* Rajendra Agrl.

17. Singh, Parvinder Pal. *Hybridization studies in mandarin cultivars, citrus reticulata Blanco.* PAU.

18. Sinha, Ram Nandan. *Investigations on red spot disease of sugarcane caused by Colletotrichum falcatum Went in Bihar.* Rajendra Agrl.

19. Tak, Gh. Mohi-ud-din. *Studies on gene action for seed yield and fibre traits in linseed, Linum usitatissimum L.* HP Krishi. Dr. N. D. Rana, Department of Plant Breeding, College of Agriculture, Palampur.

20. Vinod Kumar. *Studies on osmoregulation in cultured cells of Vigna radiata (L) Wilczek var, radiata.* HAU.

21. Yash Pal. *Genetic studies on white rust, Albugo candida; seed yield and its attributes in Indian mustard, Brassica juncea (L) Czern and Coss.* HAU.

Medical Sciences

1. Bhattacharyya, Samita. *Role of macrophages in resistance to cancer and modulation of its functions.* Calcutta.

2. Dhenge, Sunanda. *Studies on fracture on hard sheets.* HS Gour. Dr. H.S. Maheshwari, Department of Criminology and Forensic Science, Dr. Harisingh Gour Vishwavidyalaya, Sagar.

3. Harbans Singh. *Development of hydrosurgery equipment (water scalpel): Its workability, efficacy and acceptability in hepatic surgery, an experimental study.* Rajasthan. Dr. R. N. Jhanji, Prof. and Head, Department of Surgery, J.L.N. Medical College, Ajmer.

4. Mukhopadhyay, Debnath. *A study on some drug therapies in acute myocardial infraction for reduction of infarction size and its clinical evaluation.* Calcutta.

5. Sapru, Mohan K. *A study on the molecular (biochemical) basis of major psychiatric disorders.* Bangalore. Dr. B S. Sridhara Rama Rao, Prof. and Head, Department of Neuro Chemistry, National Institute of Mental Health and Neuro Sciences, Bangalore.

6. Shah, Raksha Shashikant. *Studies on humun fetal and neonatal development in relation to gestational age, body weight and maternal nutritional status with special reference to lipids and lipid soluble vitamins.* Baroda.

7. Suresh Babu, N.P. *Studies on human filariasis with reference to detection, strain variation and development of microfilariae.* Kerala. Dr. R. Kaleysa Raj, Prof. and Head, Department of Biochemistry, University of Kerala, Kariavattom, Trivandrum.

Veterinary Science

1. Dina Nath Prasad. *Study on digestion and metabolism of nutrients relative to buffalo, cattle and sheep.* HAU.

2. Gurmej Singh. *Genetic analysis of closed flocks of avikalin and avivastra strains of sheep.* PAU.

3. Punia, Jogender Singh. *Studies on the disposition of norepinephrine and epinephrine in small intestine of WLH chicken.* HAU.

EDUCATION NEWS INDEX

No. Ad. DI 2/2994/88

Dated 23rd May, 1988.

NOTIFICATION

Applications are invited from qualified candidates for appointment to one post of Lecturer on Rs. 1300-2725 in the University Department of Computer Sciences. The vacancy is reserved for S.C./S.T. candidates.

Qualifications

(a) 1. First or Second Class M.Sc., M.Tech. or M.Sc. (Engg.) in Computer Science with not less than 50% marks of an Indian University or equivalent qualifications from a foreign University.

OR

2. First or Second Class Master's Degree in Mathematics, Physics, Statistics or Operations research B.E. or B.Sc. (Engg.) in Electrical/Electronics Engineering of an Indian University or equivalent qualification from a foreign University.

(b) Two years experience in teaching/research and development/industry in Computer Science and Applications.

Desirable : Experience in the utilization of a large Computer System.

Note : Requirement of experience may be relaxed in the case of candidates having outstanding research/industry/academic achievements in the field of Computer Science and Applications.

The qualifications prescribed under 2 (b) above are relaxable in respect of the candidates from Reserved Communities.

Age : Not more than 40 years as on 1-1-1988 (Usual relaxation of 5 years for S.C./S.T. candidates and 3 years for O.B.C. candidates will be allowed).

In the absence of suitable candidates from the reserved community, applications from other reserved communities will be considered in accordance with the rules relating to communal rotation. In the absence of suitable candidates from any of the reserved communities, applications from forward community candidates will also be considered.

Request for application form accompanied by S.B.T. challan receipt for Rs. 2/- remitted under Kerala University Fund Account or Crossed Postal Order for value of Rs 2/- payable to the Finance Officer, University of Kerala, Trivandrum (in the case of candidates residing outside Kerala State only), should be addressed to the Deputy Registrar (Administration-II), University of Kerala, Trivandrum Pin 695 034.

The last date for receipt of completed applications is **30 June, 1988.**

REGISTRAR

———

MINISTRY OF DEFENCE

DEFENCE RESEARCH & DEVELOPMENT ORGANISATION (DRDO)

Applications from Young Engineering Graduates with aptitude for Research and Development are invited for the following Fellowship Courses in DRDO :

1.	**FOURTH ELECTRONICS FELLOWSHIPS COURSE**	**100**	**UR—77** **SC—15** **ST— 8**
2.	**INTEGRATED MECHANICAL ENGG FELLOWSHIP COURSE**	**30**	**UR—23** **SC— 5** **ST— 2**
3.	**SENIOR FELLOWSHIP COURSES IN GUIDED MISSILE TECHNOLOGY LEADING TO M.E./M. TECH. DEGREE**	**30**	**UR—23** **SC— 5** **ST— 2**

The fellowships are tenable for 12 to 18 months in various Institute/universities. The selected fellows have to undergo training in specialised courses. On successful completion of courses they may be absorbed as Scientists 'B' (Central Service, Group 'A' Gazetted, Pay Scale : Rs. 2200-4000) in Defence Research Devclopment Service (DRDS).

Admission criteria and eligibility conditions for each fellowship programme is given in the succeeding paragraphs :

(1) ELECTRONICS FELLOWSHIP COURSE

Selected candidates would have to undergo specialised training as Fellows at Institute of Armament Technology, Pune for a period of 12 months. The fellows will have to pass such tests as are prescribed by the Institute.

Eligibility

(a) **Age** : Not exceeding 26 years (relaxable by 5 years in case of SC/ST candidates and Govt. servants. Age will be reckoned as on 29 June, 1988.

(b) **Educational Qualifications**: **Essential** : At least second class Master's degree in Physics/Applied Physics with specialisation in Elecronics/Solidstate Physics or second class Bachelor's degree in Electronics and/or Communication Engineering from a recognised university or equivalent.

(Candidates appearing in qualifying examination may also apply. Their candidature will be considered provisionally subject to their acquiring the essential qualifications by 31st July, 1988).

Desirable : GATE qualified candidates will be preferred.

(2) INTEGRATED MECHANICAL ENGG FELLOWSHIP COURSE

Fellowships are tenable for a duration of 12 months during which candidates would have to undergo training at the Institute of Armament Technology, Pune. They would have to pass such tests as are prescribed by the Institute. After initial training phase, fellows would be specialising in Gas Turbine Technology/Armament/Automobile/Structures/Robotics etc. 10 Fellowships are earmarked for Gas Turbine Technology course and 20 for other specialisations,

Eligibility

(a) **Age** : Not exceeding 26 years (relaxable by 5 years in case of SC/ST candidates and Govt. servants). Age will be reckoned as on 29 June, 1988.

(b) **Educational Qualifications** : **Essential** : At least second class Bachelor's degree in Mechanical or Aeronautical Engg. from a recognised university or equivalent.

Desirble : GATE qualified candidates will be preferred.

(3) SENIOR FELLOWSHIP COURSE IN GUIDED MISSILE TECHNOLOGY LEADING TO M.E./M. TECH. DEGREE.

The fellowships are tenable for a duration of 18 months during which selected candidates would have to undergo specialised courses leading to post-graduate degree in the subject concerned. The candidates should send their applications direct to University/Institute (addresses are given below) for the programme in which admission is sought. Candidates who will be admitted by the Universities/Institutes for their M.Tech programmes will alone be considered for the award of these fellowships. All desirous candidates therefore should apply for admission to these Universities/Institutes simultaneously. Names of Universities/Institutes where these courses are run, number of fellowships, qualification requirements and the addresses at which the applications should be forwarded are given below :

Name of the University/ Inst.	No. of Fellowships	Name of the Course	Qualification requirements	Address for forwarding applications
I	II	III	IV	V
Indian Institute of Science, Bangalore-560 012	6	Flight Dynamics, Control Computer Science	Graduate in Aero/ Mechanical Engg./ Computer Science	Dy. Registrar
Indian Institute of Technology Madras-600 036	4	Composites Production & Design.	Graduate in Aero/ Mechanical Engg.	Head, Dept. of Aeronautical Engg.

Indian Institute of Technology, Delhi - 110 016	3	MMW system and devices, Signal Processing	Graduate in Electrical/ Electronic/ Micro-wave Engg.	Head, Centre for Advanced Research in Electronics.
Indian Institute of Technology, Kanpur-208016	3	Computer Sciences and Simulations, Composite materials structure	Graduate in Computer Science/ Mech. Engg.	Dean Academic
Indian Institute of Technology, Kharagpur-721 302	4	MMW Signal processing	Graduate in Electrical/ Electronics Engg.	Head, Dept of Electronics
Osmania University, Hyderabad-500 007	4	Signal Processing & Micro Electronics	Graduate in Electrical/ Electronics Engg.	Head. Dept of Electronics & Communication Engg.
Jadavpur University Calcutta-700 032	3	Guidance Algorithm, Software	Graduate in Electrical/ Electronics Engg/ Computer Science	Head, Dept of Electronies Engg.
PSG College of Technology Coimbatore	3	Computer aided Design & Manufacturing	Graduate in Electronics/ Electrical/ Mechanical Engg.	Head, Mech. Engg, Deptt.

Candidates enrolled under the followship scheme will undertake studies in one of the disciplines in the M.E./M.Tech programme in one of the Universities/Institutes and specialise in the areas at the Institute choosing appropriate electives. They will be allotted project work by the Institute in consultation with DRDO and the work will be done in accordance with the required standards of the University/Institute.

Eligibility

(a) Age :—Not exceeding 26 years (relaxable by 5 years in case of SC/ST candidates and Govt. servants). Age will be reckoned as on 20 July, 1988,

(b) **Educational Qualifications : Essential :**—(i) At least second class Bachelor's degree in the subjects specified in column (iv) of the above table. (Candidates appearing at the qualifying examination may apply. Their candidature will be considered provisionally subject to their acquiring the essential qualifications by 31 July 1988). (ii) Passing of GATE 1988 examination.

General Conditions/Instructions

(1) Candidates working in Government/Public Sector/ Autonomous Organisations should apply through proper channel.

(2) Knowledge of German, French, Russian, Japanese or Chinese language is a desirable qualification in all cases.

(3) The prescribed Essential Qualifications are minimum and the mere possession of the same does not entitle candidates to be called for interview. Where the number of applications received in response to an advertisement is large and it will not be convenient or possible for the Recruitment and Assessement Centre (RAC) to interview all those candidates, the RAC may restrict the number of candidates for interview to a reasonable limit on the basis of qualifications/merit higher than the minimum prescribed in the advertisement.

(4) The RAC at their discretion, may hold a written test of candidates applying for Fellowship. No travelling or other allowance will be paid by the RAC for appearing at such written test. Only those qualifying in written test, (if held) will be called for interview. TA will be admissible for those called for interview. The number of Fellowships mentioned is tentative and may change.

(5) In case SC/ST candidates are not available in the required number, general candidates will be considered.

(6) Applications should be sent on the plain paper in the format given below (to be typed in A-4 size paper, 23 x 10 cm) accompanied by a crossed non-refundable current Indian Postal Order of the value of Rs. 8.00 drawn in favour of Senior Accounts Officer, RAC, Defence Research and Development Organisation, payable at New Delhi. There is no fee for Scheduled Caste/Scheduled Tribe candidates.

(7) Self-attested copies of certificates in support of educational qualifications, experience etc. should be attached with the application. Candidates will have to produce during interview the proof of details furnished by them in the application.

(8) The application should be accompanied by two self-addressed unstamped covers of 23 cm x 10 cm size.

(9) Only typewritten applications will be accepted. Incomplete applications will be rejected and no correspondence will be entertained in this respect.

(10) Only Indian nationals need apply.

(11) The applications should be sent to Director, Recruitment and Assessment Centre, Lucknow Road, Timarpur, Delhi 110007 preferably by registered post in a cover superscribed "Application for Fellowship Programme". Completed applications should reach latest by **29th June, 1988** for Electronic and Mechanical Engg. fellowships courses (items 1 and 2) and by 20th July 1988 in respect of Senior Fellowship Course for Guided Missiles Technology Course (item 3). Last date of receipt of applications for candidates from Andaman and Nicobar, Laksnadweep islands and abroad is 13 July/03 Aug. 1988 respectively.

(12) Candidates for specialised Engineering Fellowship Scheme should send their applications alongwith requisite Postal Orders direct to the Institute to which they would like to seek admission in the M.E./M.Tech. Programme (addresses have been given above under Column V of the table).

(13) CANVASSING IN ANY FORM WILL MEAN DISQUALIFICATION.

(14) Selection : Selection will be on the basis of a test/ interview.

(15) Stipend & Salary : During training, the trainees will be paid a consolidated stipend of Rs. 2000)- per month. In addition, book allowance would be admissible. They may be given suitable Hostel Accommodation during the period of Fellowship on payment of rent as per rules. On successful completion of the training, candidates would be placed in one of the Laboratories/Establishments as Scientists 'B' in the scale of Rs. 2200-75-2800-EB-100-4000. The approximate total emoluments (ATE) at the minimum of the scale vary from Rs. 2726/- to Rs. 3036/- per month depending upon the place of posting.

(16) For instructional tours and summer training in the DRDO establishments, the Fellows will be entitled to TA/DA as admissible to Central Government Group 'A' Officers drawing a basic pay in the scale of Rs. 2200-75-2800-EB-100-4000.

(17) During the operation of the Fellowship Scheme, the Fellows will be required to pass all tests/examinations which are prescribed by the Institute. Those who are not able to pass such tests/examinations and do not successfully complete the training shall not be considered for appointment to the grade of Scientist 'B'.

(18) Bond : Candidates will be under contractual obligation to serve the Defence Research & Development Organisation for a period of three (3) years, after completion of training. During training the candidates will not be permitted to apply/appear for any interview/selection/examination.

(19) Promotion Prospects : DRDO offers excellent opportunities for career advancement as Scientists. Result-oriented and highly motivated scientists can look forward to promotion to the following grades. Approximate total emoluments (ATE) at the minimum of the pay scale will depend upon the place of posting.

Scientist 'C' : Rs. 3000-4500 (ATE Rs. 3710 to Rs. 4090)
Scientist 'D' : Rs. 3700-5000 (ATE Rs. 4575 to Rs. 5055)
Scientist 'E' : Rs. 4500-5700 (ATE Rs. 5475 to Rs. 6055)
Scientist 'F' : Rs. 5100-6300 (ATE Rs. 6079 to Rs. 6659)
Scientist 'G' : Rs. 5900-7300 (ATE Rs. 6951 to Rs. 7531)

Promotion in DRDO depends upon merit and performance and is not linked to availability of vacancies.

PROFORMA APPLICATION

APPLICATION FOR FELLOWSHIP COURSE IN————

Affix Passport size latest Photograph

1. Name in full (Shri/Smt/Km.) (in block letters)
2. Title of Fellowship :
3. (a) Name of the Institute/University at which admission is being sought
   (b) Name of the discipline of Engineering for which admission is sought
4. (a) Date of Birth (in Christian Era in Figures)
   (b) Age as on 29 June/ 20 July 1988* (*As applicable)
5. Nationality
6. Marital Status
7. Father's/Husband's Name
8. (a) Address for correspondence (in block letters with pin code)
   (b) Permanent address (in block letters with pin code)
9. Details of Postal Order (No. Date and Amount)
10. Nearest Railway Station
11. Whether belong to SC/ST (if yes, attach certificate)
12. Educational Qualifications In chronological order from X Standard (SSLC/HS/HSC) onwards

Sr. No.	Course Passed	University/ Institution/ Board	Year of Passing	Subject taken	Percentage of Marks

13. (a) Are you a Govt. servant : Yes/No
    (b) If yes, whether in Central/State Govt/Union Territory Govt.
14. Professional Training.

	Period		
Organisation	From	To	Details of Training

15. (a) Are you qualified at GATE 88.
    (b) If qualified, please give the percentile score :
16. Employment Record :

Name & address of Employer	Period of service		Designation of the post held	Scale of pay of each post	Detailed description of work*	Reason for leaving
	From	To				

* Separate sheet may be attached if necessary.

17. Minimum joining time required :
18. Field of Special interest :
19. List of Papers Published ;
20. Are you under any contractual obligation to serve Central/ State Govt/PSU/Autonomous Body ? If so, give details.
21. Details of relatives already employed in DRDO :

Name of Relatives	Relationship	Lab/Estt in which employed	Post Held

22. Any other information you may wish to add (Use separate sheet if necessary)
23. Declaration.

I declare that the foregoing information is correct and complete to the best of my knowledge and belief and nothing has been concealed/distorted. If at any time, I am found to have concealed/ distorted any material information, my appointment shall be liable to summary termination without notice/compensation. I will, if and when required, take up duty in the discharge of government assignments anywhere in India.

VACANCY NOTIFICATION

SPECIAL RECRUITMENT FROM SC/ST COMMUNITIES

No. Ad A3/54/77

Applications in the prescribed form are invited from qualified candidates belonging to Scheduled Caste/Scheduled Tribe Communities for appointment to the following posts included among the non-teaching service of the University.

CLASS II CATEGORY POSTS

1. **Systems Analyst** (Rs. 1300-2725)—1 post (Temporary but likely to become regular)

Qualifications & Experience : (1) I or II Class M. Tech Degree in Computer Science. (2) Proficiency in Database development, Computer Graphics, System Software, Languages like PASCAL, 'C'.

2. **Technical Assistant Grade 1** (Material Science/Solid State Physics) Rs. 1250-2500 (Temporary but likely to become regular)—1 post.

Qualifications & Experience : Master's degree in the concerned/related subject with two year's laboratory experience.

3. **Computer Programmer** (Rs. 1250-2500)—1 post.

Qualifications & Experience : (1) A University degree and a Diploma or Degree in Computer Science from a recognised University. (2) Sound knowledge of COBOL, 'C', and PASCAL (3) Familiarity with database and hands on experience with mini computers desirable.

4. **Statistical Officer** (Rs. 1100-2100)—1 post.

Qualifications & Experience : M.Sc. in Statistics with experience/training in Computer Programming.

5. **Welding Technologist** (Rs. 1050-2000)—1 post

Qualifications : Essential : B. Tech in Mechanical Engineering. **Desirable :** Knowledge of advanced welding technologies like Electro slag and Electro gas welding.

CLASS III CATEGORY POSTS

6 **Technical Assistant Grade II** (Rs. 975-1720)—1 post

Qualifications & Experience : Bachelor's Degree in Chemistry with a minimum of five year's Laboratory experience.

7. **Library Assistant Grade I** (Rs. 850-1600)—2 posts

Qualifications : A University degree and degree/diploma in Library Science.

8. **Chemical Assistant** (Rs. 780-1320)—1 post

Qualifications & Experience : A Bachelor's degree in Chemistry.

9. **Technician** (Rs. 780-1320)—1 post

Qualifications : ITI in Instrument Machanics with a pass in Apprenticeship Training Examination.

10. **Ammonia Print-cum-Photocopier Operator** (Rs. 740-1245)—1 post

Qualification & Experiennce : Essential : (1) Matriculate or equivalent. (2) Two years experience in the specific field. **Desirable :** Experience in carrying out minor repairs on xerox machine.

11. **Tracer/Overseer Grade III** (Rs. 675-1125)—1 post each.

Qualifications : (1) SSLC or equivalent and (2) Diploma in Civil Engineering or any other qualification equivalent thereto, as prescribed in Kerala Engineering Subordinate Service (General) Rules.

12. **L.D. Typist/Stenographer** (Rs. 675-1125)—2 posts.

Qualification : (a) General : Pre University/Pre-Degree pass certificate or pass in Part I English of the Intermediate examination. The afore-mentioned minimum general qualification will be relaxed in the case of those who have any one of the following qualifications:

(1) SSLC with 50% marks in English (2) SSLC and Typewriting High Speed English (KGTE/MGTE) (3) SSLC and Shorthand English Lower (KGTE/MGTE)

(b) **Technical :** (1) Higher Grade Examination in Typewriting English (KGTE/MGTE) or equivalent qualification (2) Lower Grade Examination in Typewriting Malayalam (KGTE).

13. **Gardener** (Rs. 575-900)—1 post.

Qualifications & Experience : (1) Ability to read and write. The maximum qualification shall not exceed a pass in 9th Standard. Experience in gardening desirable.

1. Age not below 18 years and not above 40 years as on 1-1-1988. The age limit prescribed will not apply to employees already in the service of the Cochin University of Science & Technology.

2. Separate application should be submitted for each post applied for,

3. Prescribed application forms alongwith instruction sheets can be had free of cost from the Administrative Office, Cochin University of Science and Technology, Cochin 682 022 on a requisition made to the undersigned.

4. Application forms will be sent by post, if requested alongwith a self-addressed envelope bearing postal stamps worth Re. 1/-. Request for applications by post received after 23-6-1988 will not be entertained.

5. Completed applications along with true copies of documents to prove age, community and caste, qualification, experience etc. should reach the undersigned before 5.00 p.m. on or before **30-6-1988.**

6. Late and defective applications will be summarily rejected.

3. Relaxation in upper age limit as in the Government of Kerala will be available for all the aforesaid posts. The age limit prescribed will not be applicable to the teachers already in the service of the University.

4. Appointments will be made in accordance with Section 7(2) of the Cochin University of Science and Technology Act, 1986 (Act 31 of 1986) and as per the rules framed by the Syndicate of the University.

5. Prescribed application forms alongwith information sheets can be had on payment of Rs. 5/- at the University Cash Counter. Application forms will be sent by post, if requested along with a postal order worth Rs. 5/- drawn in favour of the Registrar, Cochin University of Science & Technology, payable at Cochin-682 022 Post Office, and a self-addressed envelope bearing postal stamp worth Rs. 3/-.

6. Separate application should be submitted for each post applied for,

7. The persons who have already applied for the post of Readers in Computer Science and Electronics in response to the notifications dated 20-6-87 and 23-6-87 need not apply again.

8. Request for applications by post received after 23 June, 1988 will not be entertained.

9. Completed applications along with copies of documents to prove age, community, qualifications, experience etc., should reach the undersigned before 5.00 p.m. on or before 30 June, 1988. Late and defective applications will be summarily rejected.

V.J. Pappoo
REGISTRAR

COCHIN UNIVERSITY OF SCIENCE AND TECHNOLOGY

COCHIN - 682 022

VACANCY NOTIFICATION

No. Ad. A3/12/87

Applications in the prescribed form are invited from qualified candidates for appointment to the following posts coming under the non-teaching service of the University.

CLASS I CATEGORY POST

Maintenance Engineer (Rs. 1950-2950)
1 Post

Qualification and Experience : (1) B. Sc. (Engg.)/B.E./B.Tech in Electronics & Communication Systems or equivalent. (2) Five Years experience in repair/maintenance of sophisticated electronic equipment. **Desirable :** Experience with Microwave equipment, Radar/Microprocessor and Computer Systems. Persons from reputed electronic manufacturing firms or ex-servicemen will be preferred.

CLASS III CATEGORY POSTS

1. **Technical Assistant Grade II** (Rs. 975-1720)—2 Posts

Qualifications & Experience : (1) B.Sc. Engg./B.Tech./Three Year Diploma in Electronics and Communication, Instrumentation Electrical Engineering. (2) Two years' experience (for graduates) & four years experience (for diploma holders) in repair and maintenance of consumer items like TV, VCR, Radio, Tape Recorder, Electrical appliances etc. **Desirable** : Acquaintance with modern electronic consumer items like Typewriters, Word Processors, Micro-processor controlled machines.

2. **Library Assistant Grade I** (Rs. 850-1600)—2 posts

Qualifications : A University degree and degree/diploma in Library Science.

3. **Instrument Technician** (Rs. 780-1320)—1 Post

Qualifications & Experience: (1) Three Year Diploma in instrumentation awarded by a University or a Directorate of Technical Education. (2) A minimum of two years experience in an educational/research/R & D Organisation belonging to the Public Sector in the repair and maintenance of scientific instruments including electronic instruments.

4. **Overseer Grade-III** (Rs. 780-1320) — 2 Posts

Qualifications : (1) SSLC or equivalent and (2) Diploma in Civil Engineering or any qualification equivalent thereto as prescribed in the Kerala Engineering Subordinate Service (General) Rules.

---

*Appointments will be subject to the rules for communal reservation and rotation as provided for in Section 7(2) of the Cochin University of Science and Technology Act, 1986 (31 of 1986), as applied to posts collectively comprising each category.

*Age limit prescribed for the aforesaid posts will be not below 18 years and not above 35 years as on 1-1-1988. Relaxation in upper age limit to backward classes, Scheduled Caste-Scheduled Tribe, Ex-servicemen, physically handicapped etc., as in the Government of Kerala will be available for the aforesaid posts. The age limit prescribed will not apply to employees already in the service of the Cochin University of Science and Technology.

*Application forms can be had on payment of Rs. 2/- at the University Cash Counter. Application forms will be sent by post, if requested alongwith a Postal Order for Rs. 2/- drawn in favour of the Registrar, Cochin University of Science and Technology, Cochin-682 022 payable at Cochin-682 022 Post Office and a self-addressed envelope bearing postal stamp worth Re. 1/- Requests for application by post received after 23-8-1988 will not be entertained. Completed applications alongwith documents to prove age, date of birth, community, qualifications, experience etc., should reach the undersigned befor 5.00 p.m. on or before 30-6-1988. Late and defective applications wrll be summarily rejected.

V.J, Pappoo
REGISTRAR

INSTITUTE OF MICROBIAL TECHNOLOGY

1389, SECTOR 33-C,
CHANDIGARH

(Council of Scientific and Industrial Research)

Advertisement No. 5/88

I. Applications in the prescribed form are invited for the following posts:

1. Scientist EI/EII (Biochemical Engineer) : Two

Gr. IV(3) Rs. 3700-125-4700-150-5000
Gr. IV(4) Rs. 4500-150-5700

Educational qualifications and experience. Essential : A Ph.D. Degree in Biochemical Engineering/Chemical Engineering with 10 years postdoctoral research experience in a reputed institution or industrial organisation or experience of handling industrial operation/process in a biochemical/fermentation process based industry. Alternatively, a first class M.Tech degree in biochemical Engineering/Chemical Engineering with 12 years research/industrial experience in a fermentation industry or a biochemical/biological process based industry. Exceptionally qualified candidates may be considered for placement in Gr. IV (4) by the Selection Committee. Candidates otherwise suitable but with lesser experience may be considered at lower grade with the consent of the candidate

Desirable : Publications in reputed journals and/or relevant patents. Good knowledge of biochemistry of metabolism/microbial physiology/microbial processes. Knowledge of mathematical modelling application of computers in fermentation and other processes will be an advantage.

Job description : This is a senior level position in which the incumbent is expected to lead a research and development team to design new/improved processes upto pilot plant level. The person should be capable of interacting with industries so as to encourage industrial participation in the developmental programme of the Institute.

Age : Preferably below 40 years.

2. Scientist C

Gr. IV (2) Rs. 3000-100-3500-125-4500
No. of posts : One

Educational qualifications and experience. Essential : A Ph D. Degree in any branch of modern biology with 2 years experience or in chemistry with at least 6 years research experience (after Ist class M.Sc.) in one or more of the following areas as evidenced by an excellent record of published work. (i) carbohydrate and peptide chemistry (ii) recombinant DNA technology, (iii) targeted drug delivery, (iv) Enzymology and microbial/molecular genetics.

Desirable : Two years postdoctoral research experience in a reputed institution or industrial research and development organisation. Consistent good academic record and a broad based knowledge of biological sciences.

Job description : The incumbent is expected to be involved in the planning and execution of research programme under the overall supervision of a senior investigator or independently and to carry out related activities assigned to the scientists from time to time.

Age : Preferably below 35 years.

3. **Scientist B**

Group IV (i) Rs. 2200-75-2800-EB-100-4000

No. of posts : Three : Unreserved 1 post

(Reserved for SC-1 post
Reserved for ST-1 post
but General Category may apply)

Educational qualifications and experience :

A Ph.D. Degree in microbiology, biochemistry, cell biology, molecular biology, immunology or in any other branch of biology or a first class M Sc. Degree.

Job description : The selected person will work in one of the on-going projects which is considered suited to his/her qualification and research experience. The incumbent is expected to provide scientific assistance in execution of research projects of the institute and to carry out related activities that may be assigned to him/her from time to time.

Age : Preferably below 30 years.

4. **Scientist B** (Veterinary science) : One

Group IV (1) Rs. 2200-75-2800-EB-100-4000.

Educational qualifications and experience

Essential : Ph.D./Ist class M.V.Sc. Degree in Veterinary Science.

Desirable : 2-3 years experience in animal handling, care and breeding.

Job description : The incumbent will be responsible for maintenance of a modern animal house facility for biomedical research.

Age : Preferably below 30 years.

5. **Scientist B (Horticulture) (Gr. IV)—One**
(Rs. 2200-75-2800-EB-100-4000)

Essential : Ph.D./Ist Class M.Sc. in Agriculture/Horticulture.

Desirable : 2 to 3 years experience in care and management of gardens and green houses etc.

Job description: The incumbent will be responsible for landscaping, plantation, beautification and maintenance of the campus grounds.

Age : Preferably below 30 years.

6. **Junior Technical Assistant**
(Animal House Facility) : One
Grade VIII—Group III (I)
(Rs. 1400-40-1800-EB-50-2300)

Educational Qualification & Experience

Essential

A B.Sc. Degree in biological science.

Desirable

2 years working experience in animal handling, care and breeding.

Job description

The incumbent will be involved in maintenance of a modern animal house and other duty assigned to him/her. May be required to do shift duty.

Age : Preferably below 28 years.

II. Microbial Type Culture Collection & Gene Bank (MTCC)

Institute of Microbial Technology operates MTCC as a national facility jointly supported by CSIR and Deptt. of Biotechnology. This well equipped modern laboratory is devoted to serve the scientific community in academic institutions, research organisations and in industries. Principal objective of MTCC is maintenance, preservation and supply of authentic micro-organism and providing other services expected from a reputed culture collection.

7. **Scientist C : No. of posts : Two**
Group IV (2) (Rs. 3000-100-3500-125-4500)

Educational qualifications and experience

Essential : A Ph.D. Degree in any branch of biological sciences and consistent good academic record. At least two years post-doctoral research experience in a reputed institution. An excellent record of publication in reputed journals. Work experience in identification/taxonomy/preservation of micro-organisms such as actinomycetes/bacteria/fungi/yeasts. Commitment to excellent research in a field relevant to a culture collection.

Desirable : Research experience pertaining to taxonomy/environmental microbiology/ecology / genetics/molecular biology. Familiarity with modern and rapid methods of and approaches to microbial Indentification and taxonomy.

Job description : The incumbent would be assigned responsibility in various aspects related to a major microbial culture collection including identification, computerization, maintenance, preservation and distribution. In addition, should be involved in research either independently or as a part of an ongoing research group.

Age : Preferably below 35 years.

Scientist B : No. of post—2
Group IV (1) Rs. 2200-75-2800-EB-100-4000.

Educational qualification & Experience

Essential : A Ph.D. Degree in mycology or microbiology or in any branch of biological sciences. Alternatively, Ist Class M.Sc. in any fields mentioned above.

Desirable : Experience in taxonomy/identification of fungi and bacteria and familiarity with modern techniques of their maintenance and preservation. Specialised knowledge of any group of fungi/bacteria. A consistent good academic record and commitment to excellent research.

Job description: The incumbent would be associated with a senior scientist and would be involved in identification, maintenance, preservation and distribution of micro-organisms. He/she will be assigned responsibility in an ongoing research project.

Age : Preferably below 30 years.

Applicable to all Posts

Number of vacancies advertised may vary at the time of selection. In the event of a candidate being exceptionally good he/she may be offered higher grade/salary. Candidate(s) may also be considered, with his/her consent, for a post lower than applied for. In case of an excellent candidate requirement can be relaxed by 3 years. 5 years relaxation in age for SC/ST candidates is also admissible.

Total emoluments at minimum of the scale payable at Chandigarh at present :

Scientist E II	:	Rs. 5375.00
Scientist E I	:	Rs. 4575.00
Scientist C	:	Rs. 3710.00
Scientist B	:	Rs. 2726.00
Junior Technical Assistant :		Rs. 1792.00

General Conditions

Persons working in Govt. Deptt./Undertaking/Autonomous bodies should send their application through proper channel. Application form can be had free of cost from the Administrative Officer, Institute of Microbial Technology, House No. 244, Sector 35-A Chandigarh upto **20.7.88.** Number of advertisement, name of the post applied for and full address in block letters must be indicated at the top of the request which should be sent together with a self-addressed and stamped for Rs. 1.40 envelope of 22 cm x 10 cm size for obtaining the application form. Complete application in the prescribed form together with non-refundable application fee of Rs. 8 (No fee in case of SC/ST candidate) in the form of crossed Indian Postal Order drawn in favour of the Director, Institute of Microbial Technology, Chandigarh, alongwith attested copies of the testimonials/certificates should reach the Director, Institute of Microbial Technology, House No. 1389, Sector 33-C, Chandigarh, latest by **29.7.88.**

Canvassing in any form and/or bringing in any influence, political or otherwise will be treated as a disqualification for the post.

Since it is not possible to call all the candidates for interview/test, the applications will be short listed for the purpose and the decision of a duly constituted Screening Committee of the Institute will be final.

"Interim enquiries will not be attended to"

REGISTRAR

MANIPUR UNIVERSITY

CANCHIPUR : IMPHAL

Advertisement No. 7/88 **Dated the 25th May, 1988**

Applications are invited for the following posts :

Post	Department	No. of Post	Specialization
PROFESSOR	1. POLITICAL SCIENCE	1	Research Methodology and Social & Political Thought of Modern India
	2. MANIPURI LANGUAGE & LITERATURE	1 (Temporary, initially for 2 years against a Chair)	Manipuri Language, Literature & Culture
ASSOCIATE PROFESSOR	1. LIFE SCIENCES	1	Genetics
		1 (Temporary, appointment to be for 2 to 3 years)	Ecology
	2. MANIPURI LANGUAGE & LITERATURE	1	Folklore
	3. ENGLISH LANGUAGE & LITERATURE	1	English Language Teaching (Method)
LIBRARIAN	...	1	...

Scales of Pay

PROFESSOR Rs. 4500-150-5700-200-7300/-

ASSOCIATE PROFESSOR Rs. 3700-125-4700-150-5700/-

LIBRARIAN Rs. 1500-60-1800-100-2000-125/2-2500/- (Pre-revised)

Essential Qualifications

Professor : An eminent scholar with published work of high quality actively engaged in research in the relevant field. About ten years experience of teaching and/or research. Experience of guiding research at doctorate level.

OR

An outstanding scholar with established reputation who has made significant contribution to knowledge in the relevant field.

N.B. : The post of Professor in Manipuri Language & Literature is against a Chair. The appointment will be initially for two years and the Professor will be required to make a critical review of Grierson's works on Indian Language during the first two years.

Associate Professor : (a) Good academic record with a doctorate degree or equivalent published work in the relevant field. Evidence of being actively engaged in (i) research or (ii) innovation in teaching methods or (iii) production of teaching materials.

(b) 5 years experience of teaching and/or research provided that at least three of these years were as Assistant Professor/Lecturer or in an equivalent position.

This condition may be relaxed in the case of candidates with outstanding record of teaching/research.

Librarian : Essential : (a) First or second class M. Lib. Sc.

OR

M.A./M.Sc./M.Com. plus a First or Second class B.Lib.Sc. or Diploma in Library Science.

(b) At least ten years experience as Librarian or in a responsible professional capacity in a University Library.

(c) Ph.D. Degree on equivalent research work in the field relevant to the profession.

Desirable : Training in Computerization/Information Technology/Specialized areas.

Candidates invited for interview will be given 1st Class railway fare as T.A. from the place of origin and back or the actual expenses on fare, whichever is less.

How to Apply : Applications on plain paper (in duplicate) with attested copies of certificates showing candidate's name, father's name, academic and professional attainment, teaching/professional and research experience, field of specialization, publications (to be enclosed with reprints), Seminars/Conferences attended, details of visits to foreign countries and assessment reports from at least two persons well acquainted with the candidate's professional work should reach the Registrar, Manipur University, Imphal-795 003 on or before **25th June, 1988.**

Applications received late or incomplete in any respect may not be entertained. Persons already in service must apply through their employers so as to reach this office on or before the last date fixed. No candidate will be considered for appointment unless he/she produces a "No Objection Certificate" from his/her employer at the time of interview.

Retired persons who have not attained the age of 62 years may also apply for appointment on contract basis. It will be open to the University to consider the names of suitable candidates who may not have applied.

In case a candidate is found not suitable for the post applied for and he is found suitable for a lower position, he may be considered for the latter on his request.

APPOINTMENTS

Applications are invited on the prescribed form for the following posts so as to reach the office of the undersigned latest by **25th June, 1988.** The application form can be obtained from this office on payment of Rs. 10/- (Ten) only through Indian Postal Order payable to the Registrar, University of Jodhpur, Jodhpur alongwith a self-addressed envelope of 24 x 11 cms. size bearing postal stamps of Rs. 5·90 n.p. Application fee for SC/ST candidates will be Rs. 2.50.

1. **Professor :** (one post)

Rs. 1500-60-1800-100-2000-125/2-2500 (unrevised) Electronics and Communication Engineering for Master of Computer Application Programme.

Qualification : An eminent scholar with published work of high quality actively engaged in research. Ten years experience of teaching and/or research. Experience of guiding research at doctoral level.

OR

An outstanding Engineer / Technologist with established reputation who has made significant contribution to knowledge.

2. **Associate Professors (Readers)** (two posts)

Rs. 1200-50-1300-60-1900 (unrevised)

(a) Electronics and Communication Engineering for Master of Computer Application Programme. (One)

(b) B.Sc. Diploma course in Consumers Electronics and T.V. Technology. (One)

Qualifications : Good academic record with a Doctor's degree in a relevant field. About five years experience of teaching and/or research and development. Provided further that candidates not possessing Ph.D. may be considered if they have to their credit equivalent research published work or design/development work of a high order in the institution or in an industry.

OR

In the case of persons to be recruited from industry or professional fields, candidate should possess good academic record with recognised professional work of about 7 years which should include innovation and/or research and development.

The interviews shall be held as per under noted programme. No separate interview letters shall be issued.

S.No.	Name of Post	Date & Time of Interview
1.	Professor	2nd July, 1988 at 10.00 a.m.
2.	Assoct, Professors	2nd July, 1988 at 3.00 p.m.

3. **Programmer Assistant for Master of Computer Applications Programmes** (one post)

Rs. 1720-40-2000-50-2300-60-2600-75-3050-100-3350.

Qualifications : Master's Degree in Computer Science/Computer Engineering/Master in Computer Applications with two years experience.

OR

Degree in Engineering with one years' experience in Computer Applications.

OR

Degree with Post-graduate Diploma in Computer Science / Technology / applications and two years' experience in Computer Science / Computer Engineering.

OR

Diploma in Engineering with post diploma in Computer Science/ Technology / applications and two years' experience in Computer Science/Computer Engineering,

4. **Senior Technical Assistant for Master of Computer Application Programme** (one post)

Rs. 1550-30-1640-40-2000-50-2300-60-2600-75-3050-100-3250.

Qualifications : Post-graduate Diploma in Computer Science/Computer Engineering/Computer Applications with two years experience

OR

Master Computer Applications.

5 **PCB Supervisor** (B.Sc. Diploma Course in Consumers Electronics and T.V. Technology) (one post)

Rs. 1490-30-1640-40-2000-50-2300-60-2600-75-3050.

Qualifications : Diploma in Electronics/Electrical with two years experience in P.C.B. fabrication.

OR

I.T.I. Certificate in Electronics/ Electrical with 10 years experience in P.C.B. fabrication.

6. **Technical Assistant for Master of Computer Application Programme.** (one post)

Rs. 1400-30-1640-40-2000-50-2300-60-2600-75-2825.

Qualifications : Graduate in Arts or Science with Mathematics Statistics/ Computer Science options or Graduate in Commerce or Management. One years' experience of Training/ Working in Computer Applications.

OR

Diploma in Electronics / Electrical Engineering with post-graduate diploma in Computer Applications.

OR

Diploma in Electronics with at least one year's experience in Computer Applications.

OR

Graduate in any branch of Engineering with exposure to Computer Applications.

The date and time for interview for the posts at Sr. No. 3, 4, 5 & 6 shall be intimated separately to the applicants.

Note :

1. Dearness Allowance, House Rent Allowance, City Compensatory Allowance etc. and PF will be payable as per University rules.
2. The University reserves the right to increase or decrease the number of posts. The University also reserves the right not to fill the posts, if deemed necessary.
3. Applications received after prescribed date will not be considered at all.
4. Candidate should affix passport size photo (latest) on the application form.
5. The University may call for interview only limited number of candidates for the posts at Sr. No. 3, 4, 5, 6. No TA and DA will be paid to candidates appearing for interview.
6. 16% and 12% posts are reserved for SC and ST candidates respectively. If no suitable SC/ST candidates are available these posts will be considered as general.

ADMISSION NOTICE

BHOPAL UNIVERSITY
BHOPAL

DEPARTMENT OF COMPUTER SCIENCE AND APPLICATIONS
(1988-89)

Applications are invited for admission to Post B.Sc. Diploma in Computer Science and Applications. Admission to this course is based on (i) academic record, (ii) written test, and (iii) interview. The aim of the test is to find out individual's logical, mathematical and analytical ability. Only those candidates who qualify the written test will be called for the interview. In all cases, the decision of the admission committee will be final and binding on the candidates.

The duration of the course will be one academic year, comprising of two semesters and a project work according to UGC/DOE guidelines.

Eligibility

(A) Minimum 60% marks (55% for SC/ST) in B.Sc./B.E /M.Sc./M.Com. M.Stat./ M.A. (Economics) M.B.A.

OR

(B) Minimum 60% marks (55% for SC/ST) in B.A./B.Com. with at least one of the following major subjects:

(i) Mathematics, (ii) Statistics, (iii) Economics, (iv) Commerce.

The Schedule Caste/Tribe will be given a relaxation of 5% on the total of the above three criteria.

Candidates, who have appeared in the final year of a Bachelor's/Master's degree examination may also apply, However, they must produce evidence of having passed the Bachelor's/Master's degree with firt class marks in aggregate by **July 28, 1988.**

If at any stage, it is found that a candidate does not satisfy the eligibility condition or the information furnished in the application is incorrect or his progress is not satisfactory, the University has all rights to cancel his/her admisson.

Prescribed application forms can be obtained from the office of the Head of the Department of Computer Science, Bhopal University, Bhopal-26 by sending a written requisition accompanied by a crossed I.P.O. of Rs. 8/- payable to the Registrar, Bhopal University and a self-addressed envelope of 23 cm x 10 cm affixed with a postal stamp of Re. 1/-. Completed application forms alongwith a crossed I.P.O. of Rs. 30/- (Rs. 10/- for SC/ST) payable to the Registrar, Bhopal University must reach to the Head of the Department latest by **20th July, 1988.** Candidates belonging to SC/ST must attach a certificate from the competent authority. The candidates in employment must enclose 'No Objection Certificate' from their employers.

DATE OF ENTRANCE TEST : **31st July, 1988 (Sunday) at 11.30 A.M.**

People's Science Movement
Karnataka Rajya Vijnana Parishat

M. I. Savadatti*
M. A. Sethu Rao**

The Karnataka Rajya Vijnana Parishat (KRVP), a voluntary organisation founded in 1980 and devoted to the popularisation of science and spreading of scientific temper, was recently awarded the inaugural prestigious national award of the National Council of Science and Technology Communication (NCSTC), Government of India. We are pleased to publish this write-up on this torch bearer of the People's Science Movement.

Introduction

The aim of Science is to acquire an accurate and dependable knowledge of the world around us. Aim of technology is to devise methods of using that knowledge for man's benefit. So, one can easily see that the origins of Science and Technology merge with the origin of man himself. For, man got differentiated from the rest of animals when he started using stone tools and the use of stone tools presupposes a knowledge of different kinds of stones (Science), and a knowledge of the methods of shaping them into the desired implements (Technology).

Science and Technology which thus arose out of the daily labour of the common man, started slowly moving away from him on account of specialization. In course of time they became so highly specialized that the common man got alienated from them and they became the preserve of a small coterie of supposedly wise men, who did all the Science and Technology and passed on the fruits to the common man, who, in the meanwhile, stopped taking interest in Science. The last few decades, however, have witnessed the wheel turning a full circle and today the common man can no longer afford not to take interest in Science. These are some of the factors responsible for the new situation calling for Popularisation of Science.

Firstly, Science through its handmaid, technology, has penetrated into the day to day life of the common man even in the remotest corners of the world. Rural electrification in this part of our country can serve as a pointer. Half a century ago, not more than half a dozen cities and towns of Karnataka had the benefit of electric lighting. Other electrical appliances were curiosities. Today, 93 per cent of villages in Karnataka have been electrified. The average villager is familiar not only with electric lighting but also with electric pumpsets and other gadgets. He is conversant with tractors, chemical fertilizers, pesticides, varieties of plastics, transistors, radio sets and TV sets. Because of all this it has become imperative that he should acquire some measure of knowledge

---

**President, Karnataka Rajya Vijnana Parishat (KRPV) and Head of the Dept. of Physics, Karnatak University, Dharwar.*

***Hon. Secretary, KRVP, Indian Institute of Science Campus, Bangalore-560 012.*

concerning the how, why and what of all these accessories of modern life.

The second important change that has come about is that science has invaded statecraft, the art of running state affairs, in an unprecedented manner. A dozen or more Government Departments of today are wholly concerned with Science and Technology: the Departments of Science and Technology, Atom Energy, Space, Electronics, Ocean Development, Environment and so on. The total involvement of these departments in science is reflected in the fact that the secretaries who run these departments are often not professional administrators but professional scientists. Laying down policies for these departments, allocating budgetary provisions, deciding priorities are the responsibilities of the elected representatives of the people, who, in a true democracy, have to be guided by public opinion. In such a situation, scientific illiteracy of the common people can be exploited by vested interests. So, if our loyalty to democracy is genuine, imparting science education to our people is a matter of highest priority. Steps have to be taken to disseminate knowledge about science, its history, its achievements, its potentialities, its impact on society and, more than all, its method of approach to problems. It is in this background that Jacob Bronowski declared that the world today is made by science and is powered by science and for any person to abdicate an interest in science is to walk with open eyes into slavery.

The third reason why scientific education of the masses is of paramount importance is because of the salutary effect of the prevalence of a science and technology consciousness among the people and the harmful effect of the lack of such consciousness. If the majority of persons in a community evince an interest in scientific and technological developments, look for scientific reasons for all happenings and seek scientific solutions for their problems, it would create a climate in which even the scientifically untrained would tend to fall into the same groove. The absence of such a climate would push even the scientifically trained to adopt superstitions and obscurantist postures.

There is thus a need for an extensive programme of disseminating Science and the Scientific attitude among the masses. Scientists, no doubt, play an important role in such a programme. But, science has become far too important to be left to the scientists alone ! Nothing short of a people's movement encompassing all sections of the population can meet the needs of an organised effort to popularise science.

Karnataka Rajya Vijnana Parishat (KRVP)

The situation being ripe for it, the need for such a People's Science Movement was felt more or less simultaneously in different parts of our country during the last two or three decades and the period has witnessed the formation of several voluntary organisations in different linguistic regions.

The Karnataka Rajya Vijnana Parishat (KRVP) itself is a voluntary organisation founded in 1980, and devoted to the popularisation of Science and Spreading of Scientific Temper. It commenced as a project of the Karnataka State Council for Science and Technology (KSCST) on popularisation of science. Shri M.A. Sethu Rao, Joint Secretary of KSCST convened the project which later blossomed into a statewide organisation. KRVP now has about 300 units and 42 science centres spread across the length and breadth of Karnataka. KRVP's main target groups include children, students and youth, especially those in the rural areas.

KRVP has developed strong links with sister organisations such as KSCST, ASTRA, CES (IISc), ABAA, and is also associated with People's Science Movements throughout the country. KRVP spearheads a popular science movement in the State. It has secured the academic support of scientists from the Indian Institute of Science, universities in the State, the National Aeronautical Laboratory, Association of Bangalore Amateur Astronomers and other national and state bodies of Science and Technology. It has drawn upon the resource personnel of the IISc to deliver popular science lectures and works in close coordination with the UGC's popular science lecture scheme of IISc.

Supported by the Department of Science and Technology (Government of Karnataka) and the Department of Science and Technology (Government of India), KRVP is popular among students and youth of the State. Work of KRVP has been recognised by Government of India whose NCSTC has awarded the inaugural prestigious national award to KRVP for outstanding work in popularisation of Science and Technology. The citation refers to the effective network of KRVP units in the State, its telescope workshop and astronomy books, its efforts in popularising scientific temper and dissemination of rural technology etc.

Some Significant Programmes

A few significant components of KRVP's programmes are : Setting up Science Centres; Creation of scientific literature in Kannada, Production of science films, science kits, slides and posters, Environmental studies, camps, etc. Organisation of workshops, seminars, Organisation of All Karnataka Science Conference (Sammelana), and Dissemination of rural technologies.

1. Telescope Workshop

In association with the Association of Bangalore Amateur Astronomers (ABAA) four telescope workshops have been organised during 1984, 1985, 1986 and 1987. During 1986 and 1987, States outside Karnataka have also sent their representatives.

As a part of our project on Astronomy, the following books have been published and there is a continuous popular demand for them.

1. A Guide to the Night Sky (English and Kannada)
2. How to build a telescope (English and Kannada)
3. Clusters, Nebulae and Galaxies (English and Kannada)

It is proposed to organise such astronomy workshops every year with the financial support of NCSTC.

2. Production of Slides and Science Films

With the assistance of the Department of Science and Technology (Government of Karnataka), KRVP has produced the following films :

1. Parisara
2. Environmental Pollution
3. Energy (English and Kannada)
4. Scientific Attitude (English and Kannada)
5. Health and Hygiene.

Schools, colleges, KRVP units, theatres and doordarshan have been screening these films. A few copies are available for sale.

Besides these, KRVP is providing the following slide sets for popular science lectures and science exhibitions :

(1) Universe, (2) Starwars, (3) Western Ghats,
(4) Energy, (5) Forests, (6) Indian Scientists,
(7) Snakes etc.

The audio visual media is being effectively used for communication, especially in rural areas.

3. Environmental Camps

In collaboration with other organisations, KRVP units have been organising environmental camps. In these camps, environmental education is provided through films, nature studies, bird watching, expeditions, lectures, slide shows, wall posters etc. Camps are held in rural areas.

4. Science Festival

A few of the very active KRVP units have launched a programme of science festival. The programme generally spreads over a period of two to four weeks.

During this festival, KRVP activists participate in processions highlighting various themes such as environmental protection, pollution, etc., with the aid of slogans, films, slides, folk dance, plays etc. An intensive programme of selling popular science books is also one of the tasks. During October 1985, a month long science festival was organised by the Tumkur unit of KRVP. The festival turned into a multimedia communication effort and a precursor to Bharatk Jan Vigyan Jatha '87.

5. Science Centres

KRVP has established a number of Science Centres in the State. Prominent ones are at Institution of Engineers, Mysore and Belgaum Vijnana Kendra at Belgaum.

Objectives of the Science Centre

1. To enable the students to familiarise themselves with fundamental concepts in mathematics, physics, chemistry and biology through experimentation.
2. To develop a scientific attitude,

3. To provide a platform for scientific activities in villages, towns, taluks etc., and
4. To highlight environmental issues.

Belgaum Vijnana Kendra

The main inspiration for this is the Vikram Sarabhai Community Science Centre at Ahmedabad.

The Centre has already organised science education programmes for students of high schools and colleges. It has ongoing programmes for women working in nursery schools (Anganwadis). Some of the significant activities of the Science Centre are : Computer training, Seminars on energy, Science kit production, Environmental education programme, Science playground, and Curriculum development, etc.

6. KRVP Publications

Balavijnana

KRVP has been publishing 'Balavijnana', a science monthly in Kannada, since 1977. This caters to the students of high schools, neo-literates, etc. In addition to articles on selected subjects, it contains 'Do it Yourself', 'Science Quiz', 'Science Progress', 'Science Wonder', 'Question Box'' as permanent features. Today the print order of Balavijnana is 16,000 copies. Balavijnana has become an asset to students.

Popular Science Books

KRVP has so far published about 35 books on popular science and these low priced books have turned out to be very popular. Some of the titles have established a record in the history of Kannada book sales. These have gone through two or three editions, each of 5,000 copies or more.

Vijnana Deepa

Vijnana Deepa is a monthly wallnewspaper on science, produced for the benefit of students of primary schools. So far 20 issues have been brought out.

7. Akhila Karnataka Vijnana Sammelana

To ensure public participation in KRVP programmes and to coordinate unit activities, a state level science conference is held once in two years. The first conference was held at Dharwad in May 1984, the second in Gulbarga in October 1985, and the third was held at Tumkur in October 1987.

8. Rural Development Programme

KRVP units have been engaged in the construction, diffusion and evaluation of the ASTRA OLE (fuel efficient woodstove) programme.

Our units are also assisting KSCST in monitoring wind speed in various places as a prelude to installation of windmills.

Other rural development activities include Social forestry, Free health check ups, and Animal husbandry.

9. Dissemination of Rural Technologies

Programme at Mariammanahally (Raichur District)

1. Mariammanahally becomes an adopted village
2. Smokeless village by constructing ASTRA OLE in every house.
3. Free medical examination and vaccination.
4. Free eye treatment in camp.
5. Nutrition camp for Anganwadi teachers.
6. Science film shows.
7. Training in gardening, sericulture, etc.
8. Attempts at eradication of Devadasi system.

10. Future Plans of KRVP

In the near future the KRVP intends to take up the following programmes :

1. Intensify science kits development programme.
2. Production of video films, films and slides on science.
3. Production of a science glossary/dictionary.
4. Monitoring Astra Ole in the villages of Karnataka.
5. Organising Zilla Vijnana Sammelanas.
6. Establishing Planetarium in each district of Karnataka, etc. ☐

UNIVERSITY-INDUSTRY LINKAGE

S. P. Gupta*

Higher education has changed a great deal in its character in the recent past. Some of the changes are visible on the surface while some like a subcurrent are imperceptible, yet slow and sure like natural evolution they do happen along the arrow of time. Two deep features of this evolution are especially significant. First, higher education is becoming more diverse as the call for wide access gathers strength More women and more students from the weaker sections of society are now entering the portals of universities and colleges. Further, there is growing interest in late entry into universities, as a degree is becoming more valuable to an individual for his professional development, cultural enrichment and social status improvement. More than half of Swedish entrants to higher education are over 25 years old now.

So, with the growing interest of adults in furthering their education and opening of open universities and distance education programmes, more and more students will be part-time, more courses will be continuing education courses and more research will be of the applied kind. Secondly, higher education is becoming less liberal and more vocational in its ethos. The classical mission to socialize a student and to make him a gentleman has to give precedence to the demand for vocational education. There is a demand for gearing the courses and curricula more closely to the labour market. Both State and Society want vocational skills to be taught at universities—for example, computer programming, secretarial practice and accountancy. Students favour an education with clear job prospects. Yet, the supply of seats in vocational programmes cannot meet the demand, not to say of courses in engineering and medicine. Our universities have to accommodate vocational courses themselves in the absence of vocational colleges or Polytechnics of the British kind or community colleges of the American kind.

These shifts in the character of higher education are producing a changed environment in the total educational scenario. A university can no longer be content with the classic function of creating liberal minds, well equipped to face an issue as it comes in varied walks of life. More than anything, the country needs good quality manpower and higher education should be in the business of producing good quality graduates. Whatever their subjects, such people should possess broad and lively minds reinforced by intellectual, practical and last but not the least, physical competence. Analysis and problem solving in their broad sense are no less important in an arts graduate than flair, imagination and good communication ability in an engineering graduate. Apart from their merit *per se*, these qualities are called for in the field and professions. All kinds of graduates—arts to engineering—are being recruited into the areas of marketing, management, finance and civil services. They all will need to be able to think systematically, analyse, synthesize and even to create. In addition, they all will need to operate the management tools including the modern office equipment.

All graduates must eventually go to various employers for jobs, viz., government, commerce and industry. However, one of the glaring drawbacks of higher education in India is the want of any interaction whatsoever with the employres. In the employer—higher education linkage the scope for cross—fertilization is enormous, and because both have much to offer, the mutual benefits can be quite substantial. Sir Kenneth Baker, Secretary to the British Department of Education & Science, recently stressed the urgency of forging stronger linkage between universities and industries in Britain where there is already a base built up for decades. Among other things, the concern of British Universities and Polytechnics today is to attract large sums of money from industry and commerce. While this may not be the immediate issue in India, there are other significant results to be expected. Let us see how the university-industry linkage can be forged and how it may work in India :

(1) The teachers once they are in the academic system hardly go to the field for practical training or long exposure. With the proposed linkage they should gain breadth of experience and expertise; keep up to date with the latest developments and techniques, and obtain access to expensive equipment and other resources.

(2) Our industrial and commercial concerns do

---

* *Additional Secretary, University Grants Commission, New Delhi-110 002.*

not continuosly refashion themselves in keeping with the international trend. They can benefit from the research and consultancy services of the universities. The range of expertise which they can tap provides opportunities to expand their activities and marketing potential. Some sections of their employees would gain from the contacts established but most, if not all, would gain from the increasing development of continuing education provision, refresher courses and seminars at the institutions.

(3) As regards the students, they would gain from their teachers' updated knowledge; from arrangements whereby knowledgeable people from outside universities act as visiting faculty, from involvement by industrialists and others in course design; and from the cycle of sponsorship, work experience and employment which is beneficial to all.

It is possible to organise a variety of regular academic courses with the collaboration of industries, for example, the practice school system of the BITS, Pilani or sandwich courses whereby the students spend several semesters of their course in the industry itself.

(4) Another aspect of industry-university linkage is the development of science parks' involving partnership between a university and a leading industrial or commercial investor. The science parks provide highly valued consultancy services and technology transfer facilities. They are in the forefront of the latest development and active in new science and hi-tech. American universities also encourage their academics to set up their own enterprises based on their R & D work.

In India this is yet to begin. The Department of Science & Technology, Government of India, started a programme called STEP (Science and Technology Entrepreneurship Park) whereunder entrepreneurs are attracted to start industrial activities and the basic infrastructural facilities are provided by the universities/colleges.

It seems the mutual benefits of the linkage have yet to be conveyed to the industries as too few of them know what higher education institutions can uniquely offer to them. It is a two-way process and both universities and industries have to continually interact. It is necessary to represent industry and commerce in higher education at different forms, e.g., Boards of Studies, various kinds of management committees, Executive Council, etc. This is perhaps essential for the reform of higher education functioning. But for all this to work effectively, we need more of outside academic people to devote time to educational responsibilities at various stages of their career. It is then for the institutions to ensure that they put the time of their collaborations to most effective use.

What would then be done by the universities and colleges? To start with they can initiate dialogues with industries, research funding agencies of various government departments, research institutions and commercial establishments and come to some understanding as regards the scope of collaboration. Thereafter joint groups may sit to chalk out the modus operandi. If it is decided to set up a joint centre, institution or laboratory at the University Campus, it will be necessary to provide it full autonomy. Already there are some autonomous institutions at the university like the Mass Communication Centre at Jamia Millia Islamia, Nuclear Science Centre at the JUN and the Rangapur Observatory at the Osmania University.

While the universities are autonomous institutions they have not yet provided desirable autonomy to its departments and colleges and in the circumstances they themselves bear the ever-increasing load of administration, course designing and curricula, examinations and disciplinary matters. Many departments of universities can go on their own if given the necessary freedom in administrative, academic and financial matters. A move has been made by the Bombay University, for example, in giving autonomy to its Department of Chemical Technology and the Jamnalal Bajaj Institute of Management Studies. The UGC is framing guidelines for autonomous departments with the help of a committee, as it has done in the case of autonomous colleges.

It is well known that many of our colleges have good potential for development if they have the freedom to initiate and implement educational programmes which they think to be in the best interest of the society. The affiliating system does not allow the required freedom to the colleges to meet the demands expected by the society from them. The academic decisions need quicker pace for making innovations and designing curricula and methods more relevant to the area in which the institution works. Given autonomy, the teachers and students of a college can make innovations, use their creative talent and collaborate with outside institutions more

(Continued on page 17)

Convocation

CHANGE AGENTS

"You cannot go in as normal input into the system which is already designed and you are going to fit in. You must go in as change agents for change which is geared towards tomorrow. You must create new work environment, new work standards, new work ethics, new work ethos, only after that kind of concern, you will be able to make a contribution", said Shri S.G. Pitroda, Adviser to the Prime Minister on Technology Missions, Government of India while delivering the Convocation Address at the second convocation of the Birla Institute of Technology, Mesra, Ranchi. He however sounded a word of caution when he said "It won't take more than five years in the system we have for you to loose your initiative and I urge you to be on guard every minute. I urge you to be on guard in every opportunity you get to make sure that you remain change agent. Your success is going to depend on your ability to remain as a change agent with fresh mind and fresh thinking". Excerpts.

Agriculture has been one of the important success stories of our time. Inspite of the drought last year we didn't have to import any food in 1987-88. That speaks for the professional in agriculture that we have been able to produce in our country. Similarly, we have had our success stories in Space, Atomic Energy, some other areas but inspite of all these success stories, we continue to remain concerned about poverty. Some of these successes have not been able to reach 300 million people who are below the poverty line. We have not been able to make a dent to our satisfaction in improving standards of living for millions and millions of our countrymen.

We had in 1987-88 National Missions on Drinking Water, Immunization and Literacy. It is a national shame for all of us that 250 thousand of our children get Polio in 1986-87 inspite of all our technological capabilities. Inspite of all our knowledge, we have not been able to address some of these key issues, in our Society. Our success stories, though few, ought to give us a lesson to tackle our future programmes. As you get out of the colleges and are ready to tackle the practical world, you will find that the world is quite different from what you have been used to on Campus. It is going to be very competitive, it is not going to be very real in terms of what you have had been experiencing. To some extent it is going to be cut throat, to some extent it is going to be wide open. It is going to be rigid at the same time it will have room for you to function. This world of tomorrow is waiting for technological solutions. Not to say that the technology is the only answer to handling our problems but since we are talking about technology, we are at an Institute of Technology, we have to focus on technology and not on politics and social consciousness. Political framework, motivation, mobilisation of resources, are all going to play an important role. However, two or three technologies of tomorrow will definitely shape the future we are going to have for ourselves and for our children. Biotechnology is one which will have far reaching implications in agriculture, health, environment, water so on and so forth. Another one is information which will again have far reaching implications in improving productivity and efficiency, in linking variety of services as major infrastructure of tomorrow and hopefully, information would be an agent of social transformation. Energy, alternate energy, is going to be equally critical. Today we are looking to solar energy as the ultimate answer. We still don't have the solutions and the world is waiting for you to explore the answer to many of the problems, we have not been able to find. These kind of technological scenarios will have to be based on self-reliance where you begin to do your own thing, you begin to find answers based on what we need in this country and you begin to create jobs as opposed to take jobs from people. During my informal interactions with students, I find that the major concern has been jobs. "Now that I have graduated what am I going to do ? Where am I going to find the jobs?" Some leave for foreign countries in an effort to explore unknown abroad, some stay at home, some continue to study, some work for private companies, some look for Government shelters.

some very few in fact, become entrepreneurs. What we need in our system is more of our people who would create jobs as opposed to take jobs. As you come out of the University environment your options are either hard options, or soft options. Soft option is what everyone goes for. Hard option is one which requires you to create jobs and not take something away from somebody. In these kinds of technologies that I mentioned earlier lot is to be explored. Innovation is waiting for you to be there. Innovation is waiting for you to explore lot of new ideas, new products, new services suitable to our needs, suitable to our environment and badly needed for our people, badly needed to provide basic infrastructure whether it is water, health services, shelter, clothing, food or whatever and also badly needed to line up scenario for the next 25-30 years to come. The work environment is going to be your biggest bottleneck.

As you go into the work environment, you will find that the systems are very hierarchical and you are used to an egalitarian system in friendly environment. Though you had experience of hierarchy at home, to some extent experience of hierarchy at the University with your professors and all but to a larger extent in your friends circle you have had egalitarian system. All of a sudden in the work environment you will find absence of agalitarian environment. You will be puzzled by the hierarchical system which will demand certain respect, certain discipline from you which itself would be detrimental to the progress that you are going to plan for yourself. So you need to go to all these organisations as change agents. You cannot go in as normal input into the system which is already designed and you are going to fit in. You must go in as change agents for change which is geared towards tomorrow. You must create new work environment, new work standards, new work ethics, new work ethos, only after that kind of concern, you will be able to make a contribution. You are coming out, very fresh, open, sincere, honest, if you are not careful, in five years, you will be corrupt. Your minds would be corrupt and you won't be able to think the way you are thinking today. It won't take more than five years in the system we have for you to loose your initiative and I urge you to be on guard every minute. I urge you to be on guard every opportunity you get to make sure that you remain change agent. Your success is going to depend on your ability to remain as a change agent with fresh mind and fresh thinking. As you begin to get sucked into the system, you will begain to loose the strength you have. You begin to loose the contribution you will be able to make. I know these are some heavy words, heavy advices. I am not here to advise you. I am here to share with you my concern. In the system we have don't complain. Complaints don't do any thing. You will have road blocks after road blocks, you will have bureaucratic road blocks, you will have political road blocks, you will have financial road blocks, you will have road blocks from the family, friends. Road blocks are there for you to solve. Unless and until you take the initiative and begin to work in the existing environment, you will not be able to appreciate the challenge ahead of you. You will always have financial constraints in whatever you are trying to do. The day we will not have financial constraints we will cease to remain a developing society. Every sector you go in, every job you will undertake, you will have financial constraints. You will have to learn to live with it. This is going to be a way of life for you for next 25 years to come atleast.

The system which is based on patronage, you will damn and you will want to change it based on the performance and the system will react. You will have to be tuned to the patronage on one hand to move forward with the performance criteria. You are as change agent going to show the system what performance is all about.

We look to you as a society to help us give new direction. We look to you to set new standards, new path, new goals, as a generation. It is your generation that is going to make the difference. I would like to close by saying that there are lots of challenges ahead of you. At the same time there are lots of roadblocks ahead of you. Don't get discouraged. World is tough but I know you can solve it. We have great deal of confidence in you based on what you have achieved on Campus and based on what you are going to achieve in future for all of us. We need your desire, burning desire, to make a contribution. We need your energy, we want to channelise your energies to something fruitful, something meaningful for all of us. You must focus on self-reliance. You must focus on being a change agent. The future world that we all live in will depend on how you are conscious of your contributions, cognisant of the fact that your contribution today will shape the future for you and for your children. We look to you for help and with confidence, we wish you all the luck in the future. We are here to support you but you have to make it happen. □

International Workshop on 'Future Studies'

A 10-day International Workshop on 'Future Studies' was organised at Inter-University Centre for Postgraduate Studies, Dubrovnik, Yugoslavia by the World Federation of Future Studies (WFFS) from March 28 to April 8, 1988. Over 25 academicians, researchers and government officials from Belgium, Bulgaria, Denmark, Ethiopia, Finland Holland, Hungary, France, Germany, India, Italy, Mexico, Norway, Poland, Sweden, Switzerland, U.K., USA and Yugoslavia participated in the workshop. Professor Jim Dator, Secretary General (WFFS) of University of Hawai, conducted the workshop.

The major objective of the workshop was to sensitize the researchers and policy makers about the concern for the well being of the future generations who are not participating in the decision making process and whose interests are not properly protected in the developmental activities of the present generations. The workshop was therefore geared to stimulate thinking among the masses to facilitate change in attitude towards meeting the future challenges. To achieve this objective, a multi-dimensional approach comprising lectures, group discussions, panel discussions and brain storming sessions was pursued. The deliberations generated a fund of ideas for scanning of the futures scenario, the search for the alternative action plans and implementation strategies to be adopted and executed by the policy planners throughout the world. The exercises in futures scenario building are essential for a long term perspective planning for an integrated socio-cultural and economic development of a country. In this context, the role of education in general and higher education and research in particular, is of crucial importance from the points of view of both moulding the attitude of people to change and shaping the future in desirable direction as well as designing appropriate policy instruments to attain the desired goals.

The essence of future oriented education and policy formulation lies in the fact that whatever we do today, by way of allocation of physical and financial resources, innovation and/or choice of technology, re-organisation of social activities, and reorientation of regulatory measures, have important implications for the social and economic well being of the people in future. It is therefore imperative to make a critical and objective assessment of the strengths and weaknesses of various national systems and discern the patterns of change so as to ensure that the developmental efforts are adequate and in the right direction.

The courses in future studies or futurology provide the framework and a rational approach to scan and map out the future course of action so as to improve upon the socio-cultural and economic environment and to lay the foundation for creating a prosperous and just society capable of contributing to world civilization, culture and knowledge. The realization of such goals is however not easy since it is difficult to carry out experiments about future or accurately make a quantitative measure of such aspects that have not occured as yet. Nevertheless, it is feasible to foresee and identify a number of alternative and possible futures on the basis of objective analysis of phenomena of changes such as social, cultural, economic and ethical values, long term policies for development, statutory and legal regulations for harmonious social behavior and action, etc. Such factors are conducive to judging possibilities that are likely to occur. Studies in future are thus a powerful planning tool. Its application gives vital clues to assessing the performance and results of certain policy instruments in the foreseeable future. Futurology also helps in identifying future opportunities and judge in advance, the likely future threats. The identification of such future events provides long term perspective on economic and social development and provide the basis for the planners to avoid future threats and to explore new opportunities for protecting the interests of future generations.

The workshop discussed in detail the methodologies that are employed for scanning future. As future studies are interdisciplinary subjects, a number of approaches can be made use of. Research techniques are drawn from physical, statistical, mathematical and social sciences disciplines to build quantitative and qualitative future scenarios for sectoral development. There is hardly any acceptable research technique which can be employed uniformly among various countries having varying socio-cultural milieu and stages of economic and scientific developments. The participants were however agreed about the prospects of development in research activities pertaining to future studies everywhere. With the continuing research efforts of educationists, scientists and social scientists especially the members of the World Federation on Future Studies, futurology would emerge as an important subject of study. The workshop emphasised the need for orienting all the developmental policies from the futuristic viewpoints, lest the attempts to underscore short term gains impinge upon the long term gains of future generations who are not currently participating in the decision making process of development for protecting their interests.

The workshop urged upon the community of academicians, policy planners and researchers to generate new ideas, search new options, create and develop alternative and/or redesign the old institutions and modify existing practices so that human society could be continuously improved and strengthened.

Of the various themes discussed at the workshop, some of the important ones are Future studies and everyday life in 21st century, From Information Society to Interaction Society, Futures Labs, Everyday life in East European Countries, From content to Form—A cultural society, General Evolutionary Impact on everyday life, The Technology of the Future, Girls and Women in 21st Century, and the Role of Women in everyday life and the Future. Shri M.M. Ansari, Project Director, Research Cell, AIU made a presentation on 'The Indian scenario for 2000 AD'. Some of the important conclusions that emerged in the presentation are as follows :

(i) Even though India has been able to produce more foodgrains than its total population actually requires, as our buffer stocks would suggest, about 40 per cent of people are still below the poverty line and the absolute number of poor people are continuously rising at the rate of about 3.7 million per annum. India would continue to produce foodstuff in 21st century more than what its people require but in the absence of efficient and equitable measures for providing employment to poor and for distribution of foodgrains, it will have more people below the poverty line in 2001 than it had at the time of independence. This indeed calls for multidimensional approach to deal with the complex problem of poverty so as to begin the new era of 21st century with the properly fed people.

(ii) The growing number of illiterates is another serious concern for the planners in India. While the literacy ratio has improved from 17 per cent in 1951 to about 40 percent in 1985, the absolute number of illiterates has increased from 300 million to 450 million during the same period. It is likely that of the total illiterates population in the world, more than 50 per cent would be found in India by the year 2001. This phenomenon of growing illiteracy has occurred in spite of the constitutional commitment to universalise elementary education by 1960, which has been re-set for the year 1990. On the present reckoning of educational policies, and more importantly, the implementation strategies, there is seemingly no hope for realizing 100 per cent literacy even by 2010 A.D. This qnantitative assessment calls for vigorous attempts to liquidate illiteracy.

(iii) On the basis of projected rates of growth of population at 1.8 per cent and GNP at 5 per cent, per capita income of India would be less than 400 US dollars by 2000 AD which would be much lower than many developing countries. As the twin problems of poverty and illiteracy have augmenting effect on each other, there is need to launch integrated programmes to tackle these problems simultaneously. It hardly needs to be pointed out that simultaneous existence of poverty and illiteracy has been causing considerable wastage of physical and financial rosources in the Indian economy. Even though the capital formation in the Indian economy has been at the rate of 5.5 per cent over the last three decades, the increase in per capita GNP was less than 1.5 per cent per annum. One of the attributable reasons for the low rate of increase in income is that the capital investments have been managed and administered largely by illiterates, semi skilled and inadequately trained personnel. Even now, more than 70 per cent of labour force in Indian economy comprised illiterates and unskilled population. Such factors generate inefficiency and lower the level of productivity which in turn dampen growth of the economy. It is for this reason that capital output ratio has increased from 3.5 : 1 in the IInd and IIIrd Five Year Plans to 6 : 1 in the VIth Plan. This means that in order to generate one rupee the amount of investments has increased from 3.5 rupees to 6 rupees over the plan periods. The implication for education system is to provide for skilled and trained manpower so as to increase productivity and production in order to accelerate the pace of development. This is indeed a challenging task for the Indian education system.

(iv) India is a relatively young country as about 42 per cent of its population is below 35 years. With the growing base of elementary and secondary education, the demand for higher education which is already very high, will rise in future even at a faster rate than is currently observed. It would therefore require expansion and diversification of educational institutions so as to meet the growing demand for higher education. In the absence of adequate allocation of financial resources for infrastructure facilities, as has been the case in the past, the problem of enhancing the quality and improving the relevance of higher education might aggravate. As a consequence the number of university graduates seeking employment would multiply and increase considerably by the year 2001 since the projected slow pace of development of the economy would not be able to absorb them. If this situation occurs, the incidence of wastage of resources on account of both investments on education of unemployed graduates and their maintenance at subsistence level would be substantial as they would hardly contribute to income generation process of national development. Rather, the growing frustration among them might increase the social tension, affecting thereby, political stability in the country. It follows, that the task before the Indian higher education system is indeed stupendous since the system is responsible for identifying socio-economic problems and suggesting solutions thereof for speedy development of the country. The plans to tackle the emerging problems should begin now, lest the dimensions of social unrest should acquire unmanageable proportions.

(v) In the context of responsibilities of higher education towards social and economic needs of the country, the issues pertaining to growing urbanization and pollution hazards, environmental degradation, rural-urban socio-economic disparities, increasing requirements for health care and shelter were also discussed. Keeping in view the inherent strength of Indian culture and philosophy of pursuing the path of development through mixed economic system, democratic and federal polity and secular traditions, it was concluded on an optimistic note that on realization of existing potentialities India would emerge a strong society which would continue to occupy a place of prestige in the community of nations and contribute to the world civilization. The system of higher education and research has however great deal to do in this direction especially by way of providing a set of policy options and alternatives to development.

The workshop expressed an urgent need to orient and interduce relevant courses on future studies at the graduate and post-graduate levels in every country. Institutions of higher learning should be encouraged to organise seminars/conferences and training programmes on future studies in various subject areas so as not only to acquaint the participants about the imperative need for promoting studies in future but also training adequate number of teachers and researchers for undertaking similar tasks in future. ☐

Financial Administration in Universities

The Association of Indian Universities in collaboration with the University Grants Commission and the University of Poona, organised a Group Discussion-cum-Orientation Programme on Financial Administration in Universities from June 6-10, 1988 at Pune.

Dr. D.M. Nanjundappa, Vice-Chancellor, Bangalore University inaugurated the discussion. He briefly outlined the various constraints of university finance and its administration. He also highlighted the lack of resources and funds for the development of universities as also the lack of a rational framework for financial administration. He suggested that there should be a scientific link up between financial administration and the university bodies so that there is an integrated result-oriented financial administration. He also referred to the vagaries of State-University financial relations in the determination of grants. He pleaded for better University Grants Commission and University relations. He said that the grants should be regularly released to educational institutions and financial benefits should be equally shared by the universities. He wanted the universities to explore alternative sources of funding. He pleaded for the creation of endowments and liberal tax concessions for educational purposes.

Shri J. Veera Raghavan, Secretary in the Ministry of Human Resource Development, Govt. of India, in his valedictory address, emphasized the role of Finance Officers in spending as well as raising of resources. He was of the view that the financial management procedures should be flexible and conducive to the efficient functioning of the universities. The institutional objectives should be achieved at all costs. The managers of finance have to be watchdogs of public funds and at the same time should boost the morale of the Faculty.

Dr. V.G. Bhide, Vice-Chancellor of University of Poona in his Presidential Address said that there should be no disparity in the funding of the universities. Government should encourage the industrialists to provide additional financial resources. He referred to the establishment of the Science and Technology Parks and the Consultancy Services rendered by the faculty members.

The meeting of 43 Finance Officers from different Central and State Universities gave an opportunity to them to interact with each other and share their experiences. The Guest Speakers spoke on different topics ranging from financial administration, managerial effectiveness, need for computerization, budgetary reforms and zero based budgeting, effective utilization of resources etc., which were followed by lively and indepth disscussions. ☐

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
June 27-July 8, 1988	Short-term Intensive Training Programme on Abstracting & Indexing	To train the participants in the application of abstracting and Indexing methods and construction of an indexing language (Thesaurus).	National Institute of Small Industry Extension Training, Hyderabad.	Mrs. K. Subhashini, Course Director, NISIET, Yousufguda, Hyderabad-500045
July, 12-14 1988	International Symposium on Recent Advances in Male Reproduction	The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis.	University of Hyderabad in collaboration with the Indian Society of Andrology.	Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134
September 26-28 1988	International Conference on Welding Technology in Developing Countries	To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.	University of Roorkee, Roorkee.	Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667
October 27-29, 1988	National Seminar on Statistics in Medicine, Health and Nutrition.	To discuss Data-Base and Analysis in Health and Nutrition—Present and Future.	Department of Statistics, National Institute of Nutrition, Hyderabad.	Dr. K. Visweswara Rao, Organising Secretary, National Seminar on Statistics in Medicine, Health and Nutrition, Department of Statistics, National Institute of Nutrition, Indian Council of Medical Research, Jamia Osmania, Hyderabad-500 007
December 13 17, 1988	International Seminar on Education and Training in Water Resources in Developing countries.	To assess the requirements of manpower, education and training in Water Resources Sector upto the year 2025 in the developing countries.	Central Board of Irrigation and Power, New Delhi.	Mr. C.V.J. Varma, Organising Secretary, International Seminar on Education and Training, Central Board of Irrigation and Power, Malcha Marg, Chanakyapuri, New Delhi-110021
Dec. 15-17, 1988	National Conference on Fluid Mechanics and Fluid Power	To provide a forum for exchange of information on topics in fluid mechanics and design, research and development activities in areas like power generation, aerodynamics, fluidics, biomechanics, etc.	Harcourt Butler Technological Institute, Kanpur.	Dr. N.L. Kachhara, Organising Secretary, 16th National Conference on Fluid Mechanics and Fluid Power, Mechanical Engineering Department, Harcourt Butler Technological Institute, Kanpur-208002

Folklore Centre at Telugu Varsity

The Telugu University is planning to set up an exclusive centre for folklore, to study and conduct research in folk literature and folk arts alongwith other genres like lyrics, games, beliefs and customs. This was disclosed by Prof. T. Donappa, VC, while delivering the presidential address at the inauguration of International Workshop Series on Folkloristics. He said that the University would further develop an archives in folklore to preserve folklore texts by utilising modern technology like audio and video tapes. In addition, the University would also equip scholars with modern tools of research which had been tested elsewhere with a view to give a fillip to folkloristic research in the country.

Inaugurating the workshop, Dr. R.V. Vaidyanatha Ayyar, Principal Secretary, Education, opined that cultural dissemination in the country would be possible only through integration of folkloristics with modern electronic media. He felt that effect ive communication with the rural masses could be achieved through the usage of folkloristics.

Mr. Justice P. Jaganmohan Reddy, former Supreme Court Judge, while emphasising the importance of folkloristics said that folklore material formed the basis for building up the cultural history of mankind. He said that the changes in man's behaviour, beliefs and customs since times immemorial had been recorded in folklore through songs, tales, myths, riddles and proverbs. By studying this discipline one can extract a clear picture of the culture of the Universal man, he added.

Justice Jaganmohan Reddy pointed out that folkloristics was the study of ancient observations, customs, notions, myths, beliefs, superstitions and prejudices among common people. But today the radio and television coupled with urbanisation and industrialisation has shifted the centre from villages and rural areas, from common folks to the urban elite.

Summer Institute in Asian Studies

The SNDT Women's University in collaboration with the United States Educational Foundation in India (USEFI) has been conducting Summer Institutes in Asian Studies Programme since 1976 for the visiting American school and college teachers. The 8th Summer Institute is being organised from 25th June to 30th July, 1988 for a group of teachers from the New York University.

The Summer Institute will give an opportunity to American teachers to know India and her civilization at closer quarters yet in an objective manner. The purpose of the programme is to help these teachers prepare educational projects for teaching history and culture of India, in American schools. The experience and the knowledge gained at this Summer Institute, would help teachers in developing curriculum for Asian (Indian) Studies Programme in their country.

The course at the Summer Institute consists of a series of lectures, demonstrations, discussions and field trips. The teacher trainees at this Institute will have an opportunity to hear experts from different fields on various aspects of Indian life—History, Culture, Arts, Literature, Economy, Politics, Social Structure, Status of Women, etc. While organizing the programme, care is taken to focus on recent developments in India, with a view to provide the teacher-trainees an insight into contemporary life and society here.

The teacher-participants in this programme shall have access to library facilities and services at the Women's University Library. A Book Shop-India is being organised by the University Library on this occasion. Consultation with faculty members of various departments of the Women's University is made available to the teachers for their guidance of their individual educational projects related to society and culture of India.

Dr. Dhairyabala Vora is directing the programme and Dr. Lata Murugkar is assisting her as the Co-Director.

AP Varsities Plan New Engg. Courses

The Andhra Pradesh Government proposes to start full time B.Tech. Degree Courses exclusively for diploma holders at the existing polytechnics in Kakinada, Hyderabad and Ananthapur. This was announced by the State Technical Education Minister, Mr. D. Satyanarayana. He said that an expert committee, under the chairmanship of Prof. Koteswar Rao, Principal, Regional Engineering College, Warangal was being constituted to examine the feasibility of starting 3-year full time B. Tech Degree Courses in the three polytechnics. The study would be made with reference to the norms and conditions stipulated by the All India Council for Technical Education.

The Minister said that the

Vice-Chancellors of different Universities, with whom he had a meeting recently, had agreed to issue notification for admission into 4-year part-time Degree Course in University colleges and 3-year full time degree course in private engineering colleges. The diploma holders would be entitled for admission into these courses. The admission notification would be issued shortly.

The Vice-Chancellors had also agreed to enhance seats at the rate of 10 in each branch of civil, mechanical and electrical engineering. They also agreed to examine the need to enhance the seats in electronics and communications engineering also.

The Vice-Chancellors Meet has also agreed to examine starting of correspondence - cum - contact Degree courses in chemical engineering and computer engineering in Andhra University and Metallurgy in Regional Engineering College, Warangal.

The Vice-Chancellor of Jawaharlal Nehru Technological University agreed to increase seats in correspondence - cum - contract Degree Courses of electrical, mechanical, civil, and electronics and communications engineering courses offered by JNTU.

It was also agreed to examine the scope of admitting non-engineering diploma holders in Diploma in Commerce and Computer practice, dress-making and costume design, diploma in domestic science, diploma in hotel management, catering and food technology, etc. into B.A., B.Sc., and B.Com.

Seminar on Commerce Education

A two-day Seminar on Commerce Education and Accounting Profession was organised at the Kurukshetra University on May 12-13 under the joint auspices of Department of Commerce and the Institute of Chartered Accountants of India, New Delhi. About 100 teachers of commerce from various colleges of Haryana and forty teachers from commerce faculties from different universities attended the seminar. The topics discussed at the seminar included (i) Commerce Education at undergraduate level, (ii) New Developments in Accounting, (iii) Coordination between the Institute of Chartered Accountants of India and Universities, and (iv) Accounting standards.

New Courses at Kurukshetra Varsity

The Kurukshetra University proposes to introduce a three year degree course in Physical Education, Adult Education and Sports in its affiliated colleges from the current session 1988-89. A two-year course in M.Sc. (Electronics) is also proposed to be started from the next academic session.

The university also propose to start Postgraduate Departments in Tourism, Geology and Anthropology from the ensuing session. Diplomas in Personnel Management and Marketing will also be started in the university and in some affiliated colleges.

Kuvempu Varsity to Start PG Courses

Kuvempu University proposes to start postgraduate courses in English, History and Archaeology, Political Science and Sociology, Theoretical Physics, Electronics, Zoology, Botany and Ecology from the academic year 1988-89 on its new Shankaran Ghatta campus at B.R. Project.

According to Dr. Shantinath Desai, Vice-Chancellor, the Mysore University would conduct major examinations on behalf of Kuvempu University during the next five years but postgraduate and engineering (semester system) examinations would be conducted by Kuvempu University from the current academic year.

Andhra Varsity Offers New Courses

The Andhra University has decided to introduce three New courses, viz., BE (Naval Architecture), M.Tech (Remote Sensing) and M.E. (Electronics and Instrumentation) from the current academic session. This was revealed by Mr. Gopalakrishna Reddy, Registrar, recently in Visakhapatnam.

Central Aid for Tribal Research

Prof. S. Agesthalingam, VC, Tamil University, said that the Union Government had sanctioned Rs. two crore for establishing a museum and providing other facilities at the university's tribal research centre. He made this announcement while inaugurating a summer course on "inter-disciplinary research methodology in study of tribal communities". He said the government had sanctioned Rs. one crore for a period of five years to the university for research work.

Thirty four persons, including six women are participating in the 41-day course, which is being conducted by the Tamil University under the sponsorship of the University Grants Commission.

News from Agril. Varsities

Workshop on Dryland Agriculture

The Central Research Institute for Dryland Agriculture (CRIDA), Hyderabad in collaboration with Sher-e-Kashmir University of Agricultural Sciences and Technology, organised XII Workshop on All India Coordinated Research Project for Dryland Agriculture at Srinagar from 25th-29th May 1988. Scientists from various centres of CRIDA, Hyderabad (ICAR), Agricultural Universities and ICRISAT interacted and presented their work, besides, evolving futuristic plans for overcoming effects of drought conditions. They also drew out contingency plans to mitigate effects of recent drought in dryland areas based on zones under specific conditions of country.

Inaugurating the workshop, Dr. Farooq Abdullah, Hon'ble Chief Minister of Jammu and Kashmir State stressed upon scientists to work whole heartedly irrespective of caste, colour and religion for the betterment of our 80% population living in villages. He was critical that despite huge expenses on development programmes, country has not made cognisable breakthrough in agriculture. He said we were still dependent on 'Monsoons' while a lot of money has been sunk in major and medium irrigation projects since the commencement of planned development in India. He stressed the need for long term measures in mitigating effects of drought by developing economically feasible technology.

Prof. A. Ahmad, Vice-Chancellor, of Sher-e-Kashmir University of Agricultural Sciences and Technology stressed the need for development of dryland agriculture based on farming system which should include forestry, horticulture, fodder, animal husbandry besides the coarse grain instead of the present trend towards development of crops requiring more water. He emphasized the need of sincerity and devotion on the part of scientists and said that they should not be carried away in today's society infested with economic and political ills.

Founding-father of dryland agricultural concept in the country, Dr. J.S. Kanwar, currently Professor Emeritus ICRISAT and former Deputy Director General, ICAR also participated in the Workshop. His presence served as an incentive to participating scientists whose achievements were highlighted at the Workshop.

During the 5-day deliberations of the workshop it was pointed out that 31 model watersheds have been developed in various parts of the country that had proved effective. Besides, foreign collaboration has also become handy for betterment of agriculture management in dryland areas. Progress made under Operation Research Projects and Watersheds has indicated that 14 watersheds out of 31 established so far, have already achieved their targets. It was heartening to note that in some of the severely drought affected areas, 60-80% area could be sown in watersheds located in such regions whereas 50-80% cultivated area was left unsown in adjacent non-project areas.

Several thrust areas were identified and it was suggested that each centre in the dryland area will concentrate on such programmes besides their normal work on priority basis. First amongst important programmes is characterisation of environment of each centre of region i.e. collection of climatic information for last 30 years or more, its consolidation, analysis and evaluation, besides, characterisation of soils of the centre. This will serve as a guiding factor for a zone represented by that particular centre. Next priority has been attached to critical analysis of data already available at CRIDA and its documentation. These two activities are essential for developing future research in a specific zone.

Under research priorities prime importance is given to formulate and implement long term studies to mitigate drought effects, selecting varieties of crops, efficient use of fertilizers, dry seeding, harvesting of water or life saving water utilisation and recycling of water at all centres. It was also decided to study rainwater management involving land treatment for moisture conservation. It will also include study of vegetative barriers, though this study has been taken-up about 2 years ago in some centres but more centres will undertake such study.

Another aspect, which is considered for implementation, is that of management of cropping system. It has been observed that there is monocrop system usually practised in the drylands but double cropping and inter-cropping systems have to be developed depending upon resources of each region. Studies are to be directed towards development of technology for establishing second crop to ensure success of subsequent crop which will include fertilizer management, weed control in double cropping systems. In the inter-cropping systems research will be directed towards weed control, varietal compatibility of intercrops and efficient use of fertilizers. Stress will be laid for development of fodder based cropping systems so that good fodder will be available for cattle during drought conditions.

Feasibility of developing agroforestry system in dryland agriculture has also to be looked into and such trees could be located which can grow in symbiosis with crops besides providing land cover and improving ecological environment. Development of horticulture and management of cattle resources based on agropastoral system has also to be considered in the dryland zones will undertake such research programmes.

In the plenary session, Prof. A. Ahmad, who presided, observed that development of drylands should also keep in mind development of eco system and change of food habits in these regions.

New Grapes Hybrids

The Indian Agricultural Research Institute (IARI), New Delhi, has evolved new hybrids of grapes, which can give a fillip to grape cultivation in North India. The new hybrids not only produce early ripening berries of uniform maturity and excellent quality for table purposes, but also have a good potential and can bring about a "significant improvement" in the grape processing industry.

Dr. A.M. Michael, Director, IARI, said the new grapes hybrids were selected keeping in view their economical cultivation and the socio-economic condition of growers in the North.

Solar Powered Cargo Vehicle

Two engineering students of Kerala University are reported to have developed a prototype solar-powered cargo vehicle suitable for airport and industrial use.

"Suraya Vahan", as the vehicle is called, was designed and built by Sushil Eapen and Vikas Khitha of the Trivandrum Engineering College with the assistance of the solar engineering group of the Electronics Research and Development Centre. It is claimed to be the first solar vehicle in the country intended to take cargo.

The present model is a three-wheeled vehicle, able to carry about two tonnes of cargo. The eight photovoltaic panels form a canopy over the luggage area. In bright sunlight, these panels deliver about 330 watts. The panels would then need four hours to recharge the batteries for every hour the vehicle was used. If the solar panels could not function, the four standard truck batteries, fully-charged, would be able to run the vehicle for upto two hours, it would then have a range of around 20 km. AD.C. series motor, drawing power from the batteries, drives the front wheel which is also used for steering.

The vehicle was designed to move cargo at airports. With solid rubber tyres and no suspension, it needs smooth surfaces to operate. Since the vehicle will be out on the tarmac where it will get sunshine, the batteries will be charged automatically. With a maximum speed of ten km per hour the vehicle could be used even in factories for moving cargo.

Electric motors score over internal combustion engines in being far more silent and doing away with smoke and fumes. The electric motor's higher starting torque makes it suitable for start-stop conditions.

According to Eapen anc Khitha the vehicle was made—afte six months of thought and on year of fabrication—for the fina semester project. The Departmen of Science, Technology an Environment had given a grant c Rs. 23,750. But that was n enough since the vehicle costs ov Rs. 1 lakh to make. ANERT su plied the solar panels which co about Rs. 28,000, the ERDC ga an old industrial truck which w souped up to provide the bas frame. Batteries were another hi cost item, coming to about I 15,000.

They said its present efficien was probably not enough to ma it a commercial proposition. I the efficiency could be impro in a variety of ways. Better sc panels (imported ones, for i ance, had much higher ene conversion efficiency than indigenous ones) was one such to improve. If lighter batte could be used, the vehicle i could be made a great deal li and, consequently, the e consumption, much less. M processor or thyristor speed co could be substituted for the re control used in this vehicle. added.

New Crop Varieties

Haryana Agricultural University scientists are reported to have evolved three new varieties of bajra, cotton and raya.

The new bajra, variety—HHB 60 matures in 76 dayas and is tolerant to downy mildew disease. Its yield is 9 to 10 per cent more than the HHB 50 variety released sometime ago.

The cotton variety HS 45 (American cotton) is suitable for early sowing. It matures in about 190 days. The yield of this variety too is 10 per cent more than other similar varieties now popular among farmers.

The raya variety RH 8113 has a maturity period of 150 days. The oil content of the new variety is also slightly better than the existing varieties. It is also resistant to several diseases.

News from Abroad

Proposals for Cooprative Projects

The Centre for Art, Science and Technology, a non-profit research and educational organization in Canada, is interested in cooprative projects with Indian researchers which might be eligible for support by the International Development Research Centre (IDRC) of the Canadian Government. The IDRC promotes scientific and technical research projects conceived and carried out by Third World researchers including collaborations between developing countries and Canadian private organizations.

The IDRC's funding mechanism is based upon a process which involves evaluation procedures of research proposals presented by institutions in the Third World. The fields which are eligible for financial and professional support include agriculture, health, social sciences, information sciences, earth and engineering, sciences, training and implementation of research results.

Further information can be had from Dr. P.Z. Hartal, Director, Center for Art, Science and Technology, P.O. Box 1012, St. Laurent, Montreal (Quebec) Canada, H4L 4W3.

Grants for Scientific Meetings

The Third World Academy of Sciences (TWAS) entertains requests for grants to support scientific meetings to be held in developing countries in the fields of Biological Sciences, Chemical Sciences, and Geological Sciences. The grants are made to encourage the organization of regional and international scientific conferences, workshops and special meetings in the Third World.

Scientific institutions and organizations in Third World countries organizing meetings in these countries may apply for grants to cover the travelling expenses of lecturers from abroad and/or young scientists from the region. Likewise, organizers of international conferences being held in developing countries may apply for grants to assist with travelling expenses of eminent scientists from developing countries, the expenses of principal speakers who are unable to obtain sufficient funds from other sources, or travalling expenses for young promising scientists from the region. Special consideration is accorded to meetings that are likely to benefit the scientific community in developing countries and to promote regional and international cooperation in developing science and its application to the problems of the Third World.

Last date for receipt of requests on prescribed proforma for meetings to be held during July-December 1989, is 1 December 1988. *Application forms and other details can be had from* The Executive Secretery, The Third World Academy of Sciences c/o International Centre for Theoretical Physics (ICPT) P.O. Box 586-34100 Trieste—Italy.

UNIVERSITY-INDUSTRY LINKAGE

(*Continued from page 6*)

fruitfully than in the present straitjacket system of affiliation. No doubt, more funds will be needed by the institutions to implement innovations and new programmes and this can be taken care of largely by the national apex bodies and partly by the industry and commerce.

But what an institution of higher education needs most is interaction, collaboration and formal linkage with the community around and other institutions, as well as employers and professionals in the field. They should change their perspective and style. The great philosopher, A.N. Whitehead had asserted "There is only one subject matter for education and that is life in all its manifestations". (The Aims of Education and other essays). The institutions of higher education should extend their field of activity and end their 'splendid isolation' from the industry and commerce. This would help them play their due role as agents of change in the Indian society.

NATIONAL INSTITUTE OF HYDROLOGY

JAL VIGYAN BHAWAN, ROORKEE

Advt. No. 7/88-NIH (Admn.) **Dated : 9th June, 1988**

Applications are invited for the following posts in National Institute of Hydrology (A Govt. of India Society) Roorkee from Indian Nationals satisfying qualifications and experience laid down therefor :

1. SCIENTIST 'E' : 5 posts in the areas of : **Conjunctive Use–1 Post, Hydrological Investigation-1 Post, Surface Water Hydrology-3 Posts :** (likely to be increased). **Scale of Pay :** Rs. 3700-125-4700-150-5000. Total emoluments at the initial of the scale is Rs. 4330 excluding H.R.A.

Age : Below 45 years.

Qualifications : 1. High Academic qualifications in Civil Engineering or Agricultural Engineering with specialisation in Hydrology or Water Resources, or equivalent OR High academic qualifications in Geology/Geophysics with specialisation in Hydrological investigations. 2. Ph. D. Degrees desirable. 3. Experience in Field Problems, Corporate membership in professional institutions desirable. 4. About 7 years experience in teaching, research, design or planning. 5. Proven ability of conducting and guiding research.

NOTE : 1. Persons selected can be appointed on deputation basis also.

2. SCIENTIST 'C' : 5 posts in the following areas: **1. Surface Water Hydrology–3 posts. 2. Remote Sensing Application–1 post. 3. Drought Studies–1 post. Scale of Pay :** Rs. 3000-100-3500-125-4500. Total emoluments at the initial of the scale is Rs. 3540 excluding H.R.A.

Age : Below 40 years.

Qualifications: For areas (1 & 3): SURFACE WATER HYDROLOGY/DROUGHT STUDIES : 1. A Bachelor's degree in Civil Engg. with minimum of 60% marks or 7.0/10.0 CPI or equivalent OR Master's degree with specialisation in Water Resources/Hydraulics Engg./Hydrology, with minimum of 60% marks or 7.0/10.0 CPI or equivalent. 2. 5 years experience of Design/Teaching, research in institutions dealing with Water Resources Area.

For area (2): REMOTE SENSING APPLICATION: 1. A Bachelor's degree in Civil Engg. with minimum of 60% marks or 7.0/10.0 CPI or equivalent OR Master's degree in Science with specialisation in Geology/Geophysics with remote sensing as a subject, with minimum of 60% marks or 7.0/10.0 CPI or equivalent. 2. 5 years experience of Design/Teaching, research in Institutions dealing with Water Resources Area.

Desirable : Ph.D. with Science/Engineering

NOTE: Persons selected can be appointed on deputation basis also.

The above mentioned posts carry usual allowances as admissible under the Central Government Rules. Age will be relaxable for persons already in service in the Institute and other Govt./Semi-Govt./Autonomous organisations as well as candidates belonging to SC/ST community, retrenched employees of Defence services and physically handicapped persons, as per rules of the Government of India.

Age will be determined as on 29.7.88.

Persons already employed in Govt./Semi-Govt./Autonomous Bodies should apply through proper channel. Application not forwarded through proper channel may not be considered.

Candidates applying for more than one post should use separate application form for each post and remit fees separately for each post.

Application forms may be obtained by **15.7.88** from Chief Administrative Officer, National Institute of Hydrology, Jal Vigyan Bhawan, Roorkee 247 667 (UP) by sending a self addressed envelope of the size 12 x 28 cms. Application form duly completed in duplicate with copies of all testimonials alongwith an application fee in the form of Indian Postal Orders of Rs. 8/- (SC/ST candidates are exempted from payment of fee) payable to the National Institute of Hydrology at the Roorkee University Post Office should reach the Chief Administrative Officer, National Institute of Hydrology, Jal Vigyan Bhawan, Roorkee-247 667 (UP) **on or before 29.7.1988**.

JOB LOCATION: ANYWHERE IN INDIA.

SW/NIH-2/88

Book Review

FRANK AND FORTHRIGHT

Mishra, R.S. How I faced an invited trouble, (Lucknow) Prakashan Kendra, 1988, pp. 143. Rs. 75/-.

G.B.K. Hooja*

The word "trouble" seems to denote the state of universities in India. It is certainly not a coincidence that Amrik Singh called his memoirs relating to the Punjabi University, Patiala as 'Asking for Trouble: What it means to be Vice-Chancellor'. I agree with him when he says that a Vice-Chancellor's job is one of the most demanding ones in the country. Ministers, bureaucrats, heads of business organizations, newspapermen all have diverse pressures and demands upon them, but they have a range of powers and ability to provide patronage. In the case of a Vice-Chancellor, the demands are greater, but his capacity to deliver is tightly circumscribed or controlled. It is a nightmare to find solutions for the conflicting demands and interests of the various wings forming the family of the university, namely teachers, employees, students, parents, not to mention politicians, who hold the pursestrings. The latter, and even the members of the Senate and the Syndicate, says Dr. Singh, are seldom present when any of the refractory wings of the university chooses to exert pressure. It is the Vice-Chancellor who is on the anvil to face the agitated, the angry and the violating, and yet receives no danger pay.

Mishra, too, had his measure of troubles, which called all his tact, maturity, sobriety, gamefulness, sense of humour, gained during a long course of academic life, into play and enabled him not only to survive, but survive with satisfaction and happy memories, which are recorded in this small book with characteristic candour and sympathy.

The book consists of two parts. The first part consists of 12 chapters on 'Officers and other Functionaries', and the second part consisting of 19 chapters relates to general matters, such as teaching, research, admissions, examinations and re-examination, halls of residence, Teachers' Association, Students' Union, Karmachari Sangh, campus maintenance, Tagore Library, selection committees, University Court, Executive Council, Academic Council, etc. Thus there is not a facet of university life which has not fallen under the purview of his penetrating but sympathetic gaze. He served as the Vice-Chancellor of Lucknow University from 1982 to 1985. In order, therefore, to make his memoirs serve a useful purpose, he decided to concentrate more on the problems of Lucknow University and present suggestions for their solution. However, since the problems facing the university system all over India are similar, the solutions suggested by Dr. Mishra have a national relevance and may be considered with respect by the managers of institutions of higher learning all over India.

Says Mishra, "Teachers form an integral part of university life. They are builders of nation and, therefore, should set an ideal before the students and the public. The students are their best judges and through their students, they are known in public at large, both for good or bad points. India had a tradition of respect for teachers. They were as much revered as parents or even as God... But all this is fast vanishing now. Having been a teacher for more than forty years, I have no hesitation in saying that the responsibility for this is more or less of the teachers themselves. It is for them to regain their respect by students and society."

As for his style of work, here is a vignette :

> "As a regular habit, I got up quite early in the morning. After I joined LU, I used to sit in my verandah right from 6 in the morning doing self-study. I preferred to meet visitors after 10 in the morning, but some teachers used to come to me even at 0600 hrs, sometimes with purpose and sometimes without it. Some teachers would come with something in their mind but would simply sit and go without expressing it. Every visitor expressed himself as my greatest supporter and well-wisher. Some of them sincerely wished to guide me whereas others tried to misguide me. There were a few teachers who gave the impression to other teachers that they were my right hand and I did as they wanted me to do. Teachers who believed them, started dancing attendance on them. However, such teachers were soon disap-

pointed. With my long experience of different facets of university life in the DU, LU, AU, GU, JU, KU and BHU and a number of foreign universities, I soon realised how sincere a teacher was. But I encouraged meeting even insincere teachers because I could get a feedback from them in what was going on in different departments and offices. I could make out what they had in mind even when they were talking about differently. Though from morning to evening no time was mine or for my family, it was very rewarding to me."

This practice of accessibility and spirit of accommodation enabled him to manage the students equally effectively and affably. As the LU does not have a VC's residence, Mishra was allotted a room in the State Guest House to begin with. One evening when he returned to the GH after an official dinner, he saw 2 hearse cars standing on the road outside the GH. This set him having peculiar speculations. When he entered the gate, he saw about 100 youngmen squatting on the lawn. Realizing that they were waiting for him, he walked upto them. They were students of KGMC and hearse cars were easily and readily available to them. They had some examination problems. He called the Registrar and the Principal and had the matter sorted out. When he moved to 14, Kalidas Marg, the students of KGMC went there also twice at about midnight in hearse cars with their examination problems, which were duly sorted out. While going out, however, they carried his name-plate as a souvenir, muses the learned academician. He also records :

"Before I moved to Kalidas Marg I understand that I was being considered for a Type V quarter in the Raj Bhawan Officers Colony, where one of the former Vice-Chancellors of LU, Mr. Ashok Kumar Mustafi used to live. The residents of the colony objected to my being allotted the quarter, because they feared that if I lived there, the students would come in batches and in crowds and would disturb them. But now I am convinced that I would not have been a bad neighbour either because of my students or otherwise."

As may be anticipated, Mishra's reaction is typical of the man and his personality, mild, mellow, mature, although it may be noted in passing that matters have come to such a state that VCs are no more persona grata in good neighbourhoods. It goes to the credit of Mishra that LU had a number of events after several years, some after decades. Mention may be made of 3 of them. LU held a special convocation to confer the degree of Doctor of Literature (Honoris Causa) on Mr. Amadu Matar M-Bow, Director General of Unesco on Dec. 10, 1983. Then they had the annual session of ISCA, which was inaugurated by the President of India on Jan. 3, 1985. And the Convocation to confer the degrees, diplomas and medals of the exams of 1983 was addressed by the PM of India, Shri Rajiv Gandhi on March 23, 1985. In fact, the period between Dec. 10, 1983 and March 23, 1985 was celebrated as the Diamond Jubilee Year of LU, which was established in 1920-21. Mishra utilized this opportunity to concentrate on the academic side, as he found that the academic life in the University had received greatest set back. He encouraged seminars, symposia and colloquial talks in depts, besides debates and an Inter-University Drama Competition on 'Drinking and Drug Abuse'. The end of Mishra's tenure was climaxed by the celebration of the State level Youth Festival, Umang-85, in which 11 universities of the State participated.

In the Introduction to this book, Mishra refers to the Vice-Chancellor of a neighbouring state, who, while tendering his resignation had enumerated 3 qualities which a VC should possess, namely, (i) the brain of a monkey, (ii) the skin of a rhino, and (iii) the tongue of a parrot. The interested readers, the managers of the university system would do well to read this very frank and forthright account to find out how Mishra could continue for the full term in spite of the fact that he is not endowed with any of the above characteristics.

A welcome addition to the literature on higher education in India. May we hope that in the years to come many more of the tribes shall come forward to enrich this genre by recording their valuable experiences, bitter and/or sweet, in the field of higher learning, for the benefit of the policymakers and system operators.

We Congratulate . . .

(i) Dr. Chandan Badan Tewari who has taken over as Vice-Chancellor of the Meerut University.

(ii) Dr. P. Selvie Das who has been appointed Vice-Chancellor of the University of Mysore.

(iii) Dr. R.V. Ramakrishna who has been appointed Vice-Chancellor of the University of Agricultural Sciences, Bangalore.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month, while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through inter library loan for which requisition must be made through your Librarian.

RESEARCH IN PROGRESS

A List of Research Scholars Registered for Doctoral Degrees of Indian Universities

SOCIAL SCIENCES

Library Science

1. Anand, Virender Kumar. *Evaluation of literature in 'cancer' its treatment in various classification scheme and a proposal for special scheme of library classification.* Panjab. Dr. (Mrs.) Ranjana Vohra, Department of Library Science, Panjab University, Chandigarh.

2. Gupta, Neru. *Legal information system for India : A proposed model.* Panjab. Dr. H. R. Chopra, Department of Library Science, Panjab University, Chandigarh.

3. Jaspal Singh. *Effects of participative decision making process on staff satisfaction in Indian Universities libraries and its impact on library services and patrons satisfaction : A study using Merchant's performance measurement models.* Panjab, Dr. U. K. Tikku, Department of Library Science, Panjab University, Chandigarh.

4. Singh, Naorem Giridhari. *Personnel problems in library management : A study of the University and Post Graduate Centre Library in the North Eastern Region of India.* Manipur.

Psychology

1. Gujral, Supreet. *A study of personality and motivational correlates of type A behaviour.* Panjab. Dr. Meena Sehgal, Department of Psychology, Panjab University, Chandigarh and Dr. Anuradha Bhandari, Department of Psychology, Panjab University, Chandigarh.

Sociology

1. Batra, Jagdeep Kaur. *Factors of divorce and problems of subsequent adjustment : A sociological study.* Panjab. Dr. (Mrs.) Raj Mohini Sethi, Department of Sociology, Panjab University, Chandigarh.

2. Goyal, Radhey Shyam. *Caste inequaiities socio-culture and fertility behaviour : A study of selected village communities of Punjab and Haryana.* Panjab. Dr. S. R. Mehta, Department of Sociology, Panjab University, Chandigarh and Dr. G. P. Mehta, Department of Statistics, Panjab University, Chandigarh.

3. Meshram, Shiv Charan. *Jati evam pramparagat vyavsay : Balaghat Jile kee Koshti Jati ka samajshastriya adhyayan.* H.S. Gour. Dr. N. K. Gurha, Department of Sociology, Dr. Harisingh Gour Vishwavidyalaya, Sagar.

4. Munjal, Brij Mohan. *Social heritage of the Balmiki Ramayana and the Mahabharata.* Devi, Ahilya.

5. Pothan, K. P. *A sociological study of the impact of mixed marriages onfamily life, inter-community understanding and adjustment as well as national integration in India with particular reference to Madhya Pradesh. D. Litt.* Devi Ahilya.

6. Trivedi, Kiran. *Gramin samudayon ke samajik arthik vikas mein jansanchar madhyamon kee bhumika : Indore Jile ke sandarbh mein.* Devi Ahilya. Dr. (Smt.) S. Pothan, Department of Sociology, Govt. New Girls Degree College, Indore.

7. Zarabi, Dasy. *Knowledge of and attitudes towards population education : A comparative study of employed and unemployed women in a selected area of Chandigarh.* Panjab. Dr. S. R. Mehta, Department of Sociology, Panjab University, Chandigarh.

Political Science

1. Guite, Siamkhum. *A study of the changing faces of the Paite community.* Manipur.

2. Joseph, Shaji. *India's role in the search for a new international economic order : A study.* Kerala. Dr. G. Gopakumar, Lecturer, Department of Politics, University of Kerala, Trivandrum.

3. Mini, B. S. *Socio-economic status and political participation of women in Kerala : A study of Trivandrum District.* Kerala. Dr. D. Jayadevadas, Lecturer, I.C.C., Kariavattom.

4. More, Trambak Shivram. *Political strategy of Dr. Ambedkar from 1930-1950 : A critical study.* Shivaji. Dr. A. S. Chausalkar, Department of Political Science, Shivaji University, Kolhapur.

5. Pakhuongte, Ruolblei. *Political development in the Hill Areas of Manipur.* Manipur.

6. Pawar, Devidas Yenkatrao. *Indian politics and elite news papers, 1967-75 : A critical Study.* Shivaji. Dr. A. S. Chausalkar, Department of Political Science, Shivaji University, Kolhapur.

7. Singh, Salam Sanatomba. *Pak-U.S. axis during, 1979-86.* Manipur.

8. Singh, N. Tarunkumar. *The Meitei minority in Bangladesh : A case study of its economic, social and political status.* Manipur.

Economics

1. Bahuguna, Sanjeev. *Economic aspects of population growth in the North Eastern Region.* Manipur.

2. Meetei, K. Ibomcha. *A study of the khadi and village industries in Manipur..* Manipur.

INDIRA GANDHI NATIONAL OPEN UNIVERSITY

Announces Admission to

Bachelor's Degree Programme, 1988-89 (B.A. & B.Com.)

Indira Gandhi National Open University, an autonomous institution set up under an Act of Parliament, invites applications from eligible candidates for admission to its Bachelor's Degree Programme leading to the award of degrees in B.A. and B. Com. The University offers opportunities for higher education through the use of distance teaching methods which include carefully designed self-instructional printed study materials, continuous evaluation of student's assignments, facility for use of audio and video cassettes, counselling programmes at more than 100 study centres spread all over the country. The University also plans to make use of other mass media like radio and television in due course to provide still better means to its learners/students living in remote areas of the country. THE SALIENT ASPECTS OF THE PROGRAMME OFFERED AND INSTRUCTIONS GIVEN BELOW SHOULD BE CAREFULLY READ AND COMPLIED WITH BEFORE FILLING UP THE ACCOMPANYING FORM.

PRE - REQUISITES & FEATURES OF THE PROGRAMME

1. Who can be admitted ?

The candidates should have passed Senior Secondary School Examination (Plus Two Stage under the 10+2 Pattern), Intermediate Examination or Higher Secondary II or an equivalent Examination from a recognised Board of Education or a University.

2. What Age ?

There is no restriction of minimum or maximum age. However, the University reserves the right to rationalise admission on the basis of merit at the entry qualification.

3. How long to study ?

A minimum study period of three years is required to be devoted; HOWEVER THE STUDENTS HAVE THE FREEDOM TO COMPLETE THE PROGRAMME SUCCESSFULLY IN A MAXIMUM PERIOD OF 8 YEARS. Thus persons engaged in their professions or domestic chores can pace their studies depending on time and other facilities available with them.

4. How much to study ?

The students will have to earn 96 credits in all for the award of B.A. or B.Com degree. Each credit would require 30 hours of study. The study programme would comprise Foundation Courses-24 credits. Elective Courses in Hindi, English, History, Pol. Science, Public Admn., Economics, Sociology and Commerce 56-64 credits and Application-oriented courses 8-16 credits. The programme of study is divided into small and manageable printed course modules of 4 or 8 credits each.

Courses equivalent of maximum 32 credits can be offered in a single year.

During the first year, however, the students will be required to take Foundation Courses carrying 24 credits. Students can also do one elective course of 8 credits alongwith the Foundation Course.

5. What medium of instruction ?

Undergraduate courses, other than languages, are available in English as well as Hindi. The choice is left to the student.

6. How frequent the Testing ?

The first examination in the course/courses offered will be at the end of concerned academic session. The students can pace their studies and earn credits according to their convenience, subject to 3 above.

The progress of the student will be assessed on a continual basis through assignments which the students will be required to submit on a regular basis as per schedule announced. The performance in continuous evaluation (assignments) will be counted towards final result as per the rules of the University.

7. Where will you get counselling facilities ?

Counsellors/Tutors shall be available at one of the following study centres to be allocated after admission.

Hyderabad, Tirupati, Vijayawada, Guntur, Warangal, Anantpur, Somajiguda (Hyderabad), Port Blair, Itanagar, Guwahati, Patna, Jamshedpur, Dhanbad, Muzaffarpur, Bhagalpur, Ranchi, Chandigarh, Delhi, New Delhi, Margoa, Ahmedabad, Vadodara, Rajkot/ Kurukshetra, Sonepat, Panipat, Bhiwani, Rohtak, Shimla, Mandi, Solan, Jammu-Tawi, Bangalore, Mangalore, Dharwad, Trivandrum, Bhopal, Jabalpur, Durg, Gwalior, Bilaspur, Indore, Sagar, Rewa, Bombay, Pune, Satara, Kolhapur, Nagpur, Imphal, Shillong, Kohima, Bhubaneswar, Cuttack, Rourkela, Berhampur, Angul, Balasore, Bolangir, Sambalpur, Jallandhar, Jaipur, Udaipur, Kota, Jodhpur, Bikaner, Madras, Coimbatore, Madurai, Tiruchirapalli, Lucknow, Agra, Allahabad, Bareilly, Dehradun, Kanpur, Modinagar, Varanasi, Gorakhpur, Sultanpur, Haldwani (Nainital), Jhansi, Hamirpur, Aligarh, Calcutta, Kanchrapara.

Though the scheme is open in nature and the University would make its programme accessible to all those who are otherwise eligible for it, it however reserves its right to limit admissions depending on facilities and resources available with it. AS SUCH FULFILMENT OF ELIGIBILITY CONDITIONS DOES NOT GUARANTEE ADMISSION TO THE PROGRAMME OR TO THE USE OF ANY FACILITY OFFERED BY THE UNIVERSITY OR CREATION OF NEW FACILITIES IN ANY WAY.

Applications complete in all respects in the accompanied format should reach the University on or before Monday the 11th July, 1988 alongwith the Registration Fee of Rs. 15/-. The relevant documentary evidence will be required at the time of confirmation of admission to the Programme. IT IS THEREFORE ADVISABLE THAT AUTHENTICITY OF INFORMATION SUPPLIED IN THE APPLICATION FORM IS CAREFULLY ENSURED. In the event of any information found incorrect or having any bearing on the eligibility of the case, the admission shall be liable to cancellation any time.

Universities and Continuing Education in Industrialising and Developing Countries

LIBRARY & DOCUMEN
11 JUL 198
C. F. T. R. I., MY

Kamalini H. Bhansali*

Background

In this paper, it is proposed to develop the sub-topic 'Recent developments in newly industrialising and developing countries' under the main heading of 'Universities and Continuing Education'. It is necessary for such a purpose to take a model of industrialising and developing country, and it is aimed to bring about the realities of the question of Continuing Education through the model of India. Such a procedure needs indicating the constraints that arise in a situation of diverse sociological strata needing development of new strategies and techniques to fulfil our objective.

A developing country from the economic stand point is one in which there is enough potential for economic growth if the available natural resources are optimally utilised, the economic measures of such development being the rise in per capita income over a period of time.

Developing countries have generally to contend with excessive growth of population, lack of savings and a low rate of capital formation accompanied by imbalance between the different sectors of the society and India is no exception to these characteristics. Thus, even while granting the growth that we have achieved so far and a good deal of progress that we have made over three decades of planning, the basic problem of population explosion on the one hand and the chronic shortage of capital on the other still persists.

To achieve the desired developmental planning, India naturally aims to foster industrialisation through promotion of an efficient industrial structure with emphasis on cost reduction, quality improvement and upgradation of technology.

One must not lose sight of the fact that economic development by itself does not constitute total development of a society. There are other vital dimensions which need to be considered when we speak of national development. Factors such as economic, political, social, religious, ethical all go to make an integrated identity of a nation. If economic development leads to a rise in the per capita income, the level and the quality of moral and ethical values, the accepted political ideology would strengthen or weaken the social fabric and would contribute to hasten or retard national development.

Politically, India is lauded by the world as the biggest democracy. India has accepted the socialistic pattern of society and the creation of an egalitarian society where equality of opportunity to all is the watchword. Hence, the third world countries look to India for leadership.

Paper presented at the 14th Quinquennial Commonwealth Universities Congress, 1988.

**Vice-Chancellor, SNDT Women's University, Bombay 400 020.*

The two important tenets of a social democracy, equality and social justice pose a difficult task. To meet this need, India has the largest programme of upliftment of the conditions of the weaker sections and has emphasised the role attributed to women towards gaining equality through empowerment.

The Indian society faces a dichotomy of traditionalism and modernity. This has resulted in diversity between the different social groups towards their attitudes to life styles and towards their requirements in skill and knowledge. The Indian scenario reveals a total population of 685 millions with the literacy rate at 36%.

To meet the above challenge, the Indian economy has to achieve a balanced growth of all its sectors, and industrialisation is the prime key to it. Such industrialisation requires a high rate of capital formation.

Since savings are low in a poor country, it has to make the best of its available capital resources. It is in this sense that human resources development assumes considerable importance. Recognising the importance of this facet, a Central Ministry with the designation of Human Resource Development (HRD) is created. It is accepted that one of the primary tasks of the nation is to harness the country's human resources and improve their capabilities for development with equity. Programmes for alleviation of poverty, improving health programmes, control of demographic trends, reduction of economic and social inequalities through legislative measures and social welfare and improving productivity should be integrated with educational development as these are indicators related to the progress of the nation.

The programmes would particularly focus upon women, youth and economically weaker groups to enable them to make increasing contribution to the socio-economic development of the country.

Education can be formal or non-formal. Formal higher education is entrusted to the universities and with the emerging needs of development, there has been a tremendous expansion of the formal systems of education. In 1985-86, the higher education system had a complex of 149 universities; 5723 educational institutions; 50,000 teachers; and 35.70 lakhs students.

Recipients under the formal educational system have an ultimate objective of employment. However, mass social requirements of such an education demand increasing efforts for non-formal education. It is in this context that the vast complex of formal reservoir of human resource can be best utilised.

Extension as Third Role of University System

In the welter of words, new educational concepts suffer **Embrass de Riches** and continuing education under non-formal education is no exception to this dictum. The multi-dimensional concept of continuing education includes adult education, life long education, substitute education, second chance education, further education and so on. In spite of this wide diversity of terminology, the distinguishing feature of the different terms has a common core, namely, non-formal approach and non-formal process. For an individual, continuing education is a non-formal mode of learning that continues throughout life; for an individual it is an offering of a multifaceted life long educational service.

A sea change has come over the educational scene during the last century. Impact of demographic explosion spawned the new concept of continuing education to help society to adjust to continuous social and occupational change and introduce de-schooling as an alternative to the formal system.

It was as far back as in 1970 that the University Grants Commission initiated the programme of Continuing Education. Today, over 90 universities and 2,000 colleges in the country are involved in adult education, of which 30 universities and 50 colleges offer continuing education programmes.

The University Grants Commission in its policy frame in 1978, accepted the concept of extension as an equally important function of higher education, in addition to teaching and research; thus giving an opportunity to universities and colleges to promote increasing participation in a dynamic way. Guidelines were evolved emphasising that there should be maximum spread of knowledge and skills covering all sections of society not forgetting the underprivileged.

In order to have a comprehensive and integrated approach, various facets of education such as continuing education, adult education, population education, legal literacy, science for the people, planning forums were aggregated under one single umbrella of extension.

It is a happy sign that the University Grants Commission in less than two decades has made far reaching strides to concretise extension as the third function of universities. A review undertaken has pointed out that there have been positive gains like making the system flexible and open, reflection of relevancy in restructured courses, change in attitude towards obligation to society through a two-way process, programme expansion and emergence of Adult Education as a discipline.

The thrust areas under continuing education include:

- † Development of vocational skills and professional competence among technical, managerial, industrial and office workers, entrepreneurs and unemployed youth;
- † Remedial or bridge courses;
- † Promotion of activities for self-employment and self-reliance;
- † Need-based programmes for community development, and for particularly less privileged sections of society;
- † Training and extension packages for functionaries of various social development.

The main target groups would be women, workers including slum dwellers and migrant workers, school dropouts and unemployed youth, professionals and para-professionals, business executives and the citizens as per the demands.

Operational Approach

The operational approach for continuing education needs an analytical definition and here I would like to refer to the one given by International Commission on Development Education :

> "There are many possible definitions of **adult education**. For a large number of adults today, it is **a substitute**, for the basic education they missed. For the many individuals who received only a very incomplete education, it is the **complement** to elementary or professional education. For those who it helps to respond to new demands which their environment makes on them, it is the **prolongation** of education. It offers **further** education to those who have already received high level training. And it is a means of **individual development for everybody**. One or the other of these aspects may be more important in one country than in another, but they will have their validity".

The definition highlights the following five types of extension education : Substitute education, complementary education, prolongation or extended education, further or enrichment education and individual development for personality rounding off of every person, which are all different forms of continuing education.

Substitute Education

In the Indian context, the first function relates to making illiterate adults literate. Nearly 50% of the world's population is illiterate and one-third of that is in India. Leadership in India has accepted adult education as a national movement and the Government launched the National Adult Education Programme (NAEP) in 1978, followed by a comprehensive revised programme in 1983 comprising the Adult Education Programme (AEP) with a focus on universalisation of elementary education for those in the age group 6-14 years and the programme of eradication of illiteracy for those in the age group of 15-35 years through a centre based approach. The AEP dealt with literacy, social awareness and functional development through literacy, post-literacy, continuing education and mass programme of functional literacy (MPFL).

Prime Minister Rajiv Gandhi has identified eradication of illiteracy as one of the five missions. The Technology Mission for Eradication of Illiteracy (TMEI) is set up to mobilise social focus for raising the quality of life of the people. Continuing Education under the Literacy Mission will be achieved through Jana Shikshan Nilayam (JSN) or community centres to serve clusters of 4-5 villages with a population of 5,000, through evening classes, library services, short duration training courses, recreational and cultural activities and setting up of communication centres.

Universities and colleges as per the direction of the University Grants Commission will adopt an Area Development Approach wherein total learning needs of the area would be responded through a process of providing multiple inputs and multiple strategies including MPFL and Centre based approach. JSN will also be used as one such strategy. UGC, through the above approach, will provide universities and colleges with an integrated package of programmes including adult education, continuing education, population education, legal literacy and so on.

The contribution of Indian Universities Association of Continuing Education (IUACE) is crucial in promotional and coordinating roles through a series of workshops bringing personnel in the field on a common platform.

Second Chance Education

The problem of dropouts leading to educational wastage is an immense one, second to that of illiteracy in its intensity. Dropouts reverse to where they were before and hence in the employment market, they have the same status as that of illiterates who in addition, have missed the regular span of time-frame. Adult education, therefore, provides a second chance and has proved a useful complement to education. Time is not far when it will become an important alternative to the formal school system. The 'Open University' system is a very bold step in this direction. The Central Board of Secondary Education (CBSE) provided an alternative to the formal school for out of school learners, working adults, house wives and others through bridge courses to enable learner aspirants to later on take up secondary level courses through the Open School. Condensed courses s also another such programme of education designed for women by the Central Social Welfare Board.

The SNDT Women's University pioneered in 1974 its 'Open University Programme' providing opportunity to women, who are 21 years of age and above, irrespective of their academic qualifications, to join the University mainstream of formal education after undergoing a specially devised bridge course operated through distance education.

The Indira Gandhi National Open University (IGNOU) is the most recent experiment of open learning through distance education techniques designed to widening the access to education. Some of the other ongoing experiments in this respect are by the Mysore, Madurai Kamaraj and Andhra Pradesh Open Universities. The aim of these programmes, as in the Open University of U.K., is to provide educational opportunities for adults in their own homes and in their own time and thus enable them to further their knowledge leading to formal programmes or credit courses of a non-formal nature.

Supplementary Education

The third aspect, prolongation or extended education, was given a shape through evening classes, Adult Schools, Shramik Vidyapeeths (Institutions devoted to workers), People's Universities assisting adults in extending the education acquired by them in their youth and thus equipping them to fulfil the multifaceted acquisitions expected of them in the organised and unorganised sectors. The objective here is to consider the worker as a whole man for the different roles demanded of him. This strategy helps in widening horizons, advancing professional competence and training for new skills. Thus it provides supplementary education. This area of extension work has been successfully undertaken by universities and colleges.

Further Education

Further education or education for enrichment, the fourth factor implies deepening of knowledge and furtherance of education through inservice training courses and updating of professional knowledge and skills. With the strides that knowledge is achieving, this need is increasingly felt and professional institutes of medicine, nursing, library science, home science, management studies, education and such others are engaged in meeting these ever increasing needs of advancing technology as well as the expanding content of professional education through their Continuing Education Cells or Extension Departments. This demand is also met by professional associations, public sector organisations, banks and similar institutions through courses in further education and continuing education.

Linkages within curriculum have been established on various fronts, through involvement of students in field activity, through projects, curricular restructuring and offering training programmes for manpower development.

Women and Continuing Education

The aim of a learning society should be to make education accessible to every one through a varietyof different paths as may be necessary at any age of the aspirant. This is applicable more sharply to women as they, as a group form a disadvantaged section of society and have to face the pressures of dull or multiple roles. Women as a class constitute nearly half the total manpower resources and due to this nature of composition, they are the major sufferers of the ills of illiteracy, ill-health and social injustice. Moreover, women form a substantial segment of the labour force both in rural and urban areas. All the above characteristics and the women's movements of varying kinds that have arisen as a natural consequence of these handicaps have had an inevitable impact on the nature and practice of extension education. This is undoubtedly a pointer to the need for special action in regard to women's programmes. The role of women's universities is particularly crucial in this respect. They should provide leadership to women. They should also work for educating women in a manner that will make women conscious of seizing opportunities to acquire equality in social status. University education must enhance women's capabilities for empowerment, failing which the continuation of the inferior position assigned to women will jeopardise the future of Indian society. The New Education Policy of the Government amply substantiates this.

The SNDT Women's University in this respect, over the years, has organised programmes with different orientation under the continuing education process. The first is the academic orientation which facilitates recipients to receive the degree of the University through the bridge course of its 'Open University Programme'.

Culturally focussed programmes are specifically oriented for women to develop appreciative attitudes towards the performing arts and appreciation of the country's cultural ethos. Socially oriented courses bring about awareness of socio-psychological issues surrounding women even with respect to their legal position in their life cycle.

Self-employment oriented courses have been taken advantage of by a number of women to utilise gainfully their leisure time, thus relieving the economic stress on the family. The SNDT University thus provides the type of extension education and community action programmes through its diverse dimensions which do not consider women only at the receiving end, but also help in developing their self-confidence and self-reliance. The various departments of the University are also working as a transferring belt of knowledge by giving the role of providers to women. Further, the university has developed models through which women assume the role of change agents.

Programmes Within the System and Outside

The Indian scene presents a complex panorama of multi-faceted education activities. This covers programmes within the tertiary system which can be classified at three levels, namely, at the high professional level, at the middle level and at the grass root level. In addition, there are several agencies and organisations outside the educational system offering continuing education programmes, may be on a much larger scale. These, however, are limited to top level training of the highest quality for specialised groups through Government sponsored programmes under different Ministries, national institutes, professional bodies and associations, banks and commercial organisations, service organisations, public sector institutes, Nehru Yuvak Kendras, Institute of Workers Education, Shramik Vidyapeeths and several others.

In a modern society, to meet the fast developing needs, a stronger and closer linkage between institutions within the educational system and outside that system is needed to be built up so as to enable both to share the responsibility to create a learning society. Some of the emerging trends arising out of these efforts refer to development of education preceding economic growth, preparing men and women for a type of society to the creation of which we are looking forward, efforts in meeting contradictions arising between the products of education and needs of the modern society and most importantly, development of women. Both developed and developing countries are at grips with the transition taking place in the changed social order. Margaret Mead's words describe this situation realistically: "No one will live all his life in the world in which he was born, and no one will die in the world in which he worked during his maturity". All the scientific and technological developments must be harnessed through the agency of continuing education for the purposes of bridging this gap between the cradle and the coffin.

The Challenge

The challenge is before us. That challenge is to innovate and offer the last aspect of the definition, the individual development of the recipient without which all the previous formal or non-formal educational offerings will spell a failure. The individual development in a technological age necessarily comprises the two facets of such a development, namely, scientific attitude and value orientation. Why is it that the man who walks bouncingly on the surface of the moon walks hesitantly on his planet? This hesitancy may be due to a lack of critical aspects of this development. It is recognised that the implantation both of attitude and values cannot be achieved either by formal lecturing or by correspondence packages and set books of the Open University. It has been proved that scientific literacy and analysis of values can be cognitively offered. However. such offering needs to be sublimated into an attitude which crystalises in action. This can only be achieved through different strategies where a teacher possessing such supreme characteristics meets his students in workshops, in symposia, creating case histories and thus projecting components of a developed personality.

Aldous Huxley gives three dimensions of an educated person. The first 'Verbal', the second 'Symbolic' and the third 'Non-verbal'. The first two can be achieved by continuing education. What is 'Non-Verbal' education ? Wordsworth gives meaning of 'Non-Verbal' education as :

> "Enough of Science and Arts
> Close up these barren leaves
> Come forth and bring with you a heart
> That watches and receives".

Developed and developing countries have this challenge to meet by structuring strategies for the 'Non-Verbal' education by unique value creating pedagogy. ☐

THE INEVITABLE TENSIONS

J.N. Kapur*

The research workers work under an inevitable tension. The tension is between Pure Research and Applied Research, between Basic Research and Applications-oriented Research, between Academically-Respectable Research and Applicability-Respectable Research, between Curiosity-Driven Research and Market-Driven Research, between Abstract Research and Socially-Relevant Research and so on.

Every research worker is torn between two loyalties, loyalty to academic values and loyalty to society. On the one side, there is beauty, elegance, abstraction, generalisation and depth and on the other side, we have messy situations, short-term solutions and immediate applications. On one side, there are immediate academic rewards and possibilities of practical results in the long run; on the other side there are immediate economic gains and possibilities of basic research in the long run.

All research has its roots ultimately in the physical, economic and social needs of society. After immediate problems are solved, the gains of research are studied at leisure, are systematised, patterns in it are discovered, laws are formulated and academic research follows. This academic research may lead to new unexpected applications and from these unexpected applications, new lines of basic research may start. After this process of alternative applications-oriented and academic research is repeated a number of times, the academic research may be so far removed from real applications, that the possibilities of its applications may become insignificant. However the research problems may become so intellectually fascinating, challenging and absorbing to the research workers that they may henceforth do research for the sake of research only.

At this stage, some persons begin to question the relevance of this research. Some research workers meet the criticism by arguing for the dignity of the human mind, for its intrinsic right to meet intellectual challenges, by the need for intellectual food of the highest kind for mankind, while other research workers justify their efforts by the possibility of distant but possibly remarkable applications of this in-depth research. There are both aggressive and defensive attitudes, but there is unmistakable evidence of tension in the system.

Left to themselves, most research workers tend to gravitate towards academic research because of its intrinsic attraction, academic rewards, publishability and breadth of outlook, though there are some who still feel interested in practical problems. Society and governments therefore, apply economic pressures to push the research workers towards the practical problems. These pressures are applied by giving much larger funds to research laboratories dedicated to solution of practical problems and much less to academic institutes, by giving research grants to those research schemes which claim to be able to give practical results and withholding these from others.

However since the distribution of funds has to be made through academicians, academic research still receives some funds. Nevertheless in this process, some ethical values may be sacrificed. Academicians claim that their research schemes are oriented towards applications in the fields considered important by the fund-giving agencies, while in their hearts they know that the main research will be theoretical and the fall-out for applications will be only marginal. This again leads to tension in the minds of those who submit schemes and those who evaluate them.

Some research workers have a knack of getting on the bandwagon. Whatever be their expertise, they relate it to the fields considered important by the fund-giving agencies and use their influence to get big grants. On the other hand, there are research workers with 'conscience' who do not want to make false claims and who suffer in the process. Thus inevitable tension is there in both cases.

The funding agencies also know that the results claimed will not be obtained, but they are happy that in this way they can apply a gentle pressure which forces the research workers to be more practical. They also know that a stronger pressure may be counter-productive.

In developing countries, this inevitable tension is very pronounced. The political groups always plead for wholly practical and relevant research. They claim that their countries are too poor to afford the luxury

---

**Visiting Professor, IIT, Delhi & Delhi University.*

of fundamental and curiosity-driven research. However research grants administrators know that one cannot have application-oriented research without basic research, so they play a tight-rope game of pleasing both the political and the academic groups. They try to moderate the attitudes of both the politicians and the academicians. They try to work out compromises both in letter and spirit.

In science and technology research work starts from both ends and may converge somewhere in the middle. The practical problems of industry and technology require immediate solutions. As such scientists and technologists in industry survey the whole field of relevant science and technology and see if solutions to these or similar problems are already available and then try to adapt these solutions to problems at hand. They sometimes find gaps in knowledge which have to be filled in by fundamental research under great pressure. Once the fundamental research helps in solving the immediate problem, the interest of scientists may decline, since in the meantime they may have got other industrial problems to solve. However some of them and some academic scientists may go deeper into fundamental research and work on these for possible future benefits or for the sake of satisfying their own innate curiosity.

On the other hand, research may start for purely intellectual reasons, with no immediate possibility of applications. Over a time more and more practical applications may be discovered so much so that at later stages, all research in a field may be supported by industry alone.

In social sciences also, research may start at both ends. Some researchers study the existing practices, rationalise these, try to understand the reasons for their having been adopted; find regularity and patterns and discover laws of social behaviour in this way. On the other hand, there are others who formulate plausible axioms, deduce logical conclusions, compare these with what is actually observed and thus arrive at laws of social behaviour.

There is nevertheless tension between those who believe in going from data to the laws and those who want to go from laws to the data. However both approaches are essential for the progress of research.

The tension is inevitable everywhere, but it becomes very pronounced in disciplines which are highly mathematical. In mathematics itself there are pure or abstract mathematicians who postulate consistent axiom systems and then deduce beautiful results from them. These axioms may be about abstract systems which may have apparently nothing to do with real-life systems. Painstaking research may however be able to demonstrate that these abstract systems are related to real-life systems through a dozen or more successions of generalisations and abstractions. There are others who work on systems which are only four or five generations of abstractions away from physical reality and there are still others who are ready to work at the first level of abstraction.

Thus we may, at any time, have a dozen groups working at a dozen levels of abstraction. The tensions arise when those who work at the deepest level of abstraction i.e. at farthest distances from physical reality consider themselves as the only true Brahamins. Those who work on applications sometimes want to get respectability by using the sophisticated language of abstraction even when it is not needed. In applications, it should be the insight one gets rather than the language one uses, which should matter.

In other subjects, the number of levels of abstraction is smaller and accordingly the tensions may be consequently less, but the tensions are nevertheless there.

Thus in operations research we have theoreticians and practitioners. The theoreticians are found mostly in universities and enjoy a high status. The practitioners are found in industry and enjoy a relatively lower status because in industry workers are not expected to make decisions, but can only help those who make decisions. In economics, some economists get a high status because of their work in mathematical economics but they later migrate to positions where they deal with large scale real economic problems, with their status intact. With the advent of computers, theoretical engineers have risen in status relative to field engineers.

In every field, there is a tension between theoreticians and practitioners. Sometimes the scales are tilted against the theoreticians because a majority of workers in the field are weak in theory and they consider all which they do not know as unimportant. They may use only low level theory and may consider sophisticated theory as a luxury which can be dispensed with.

To be theoretically sound, one has to work hard continuously and remain uptodate. To be practically sound, one needs experience and commonsense.

UNIVERSITY EDUCATION IN BIHAR

A. K. Ghosh*

Recently one Mrs. Chinta Devi, Lecturer of Kanti Indira Mahila Mahavidyalaya, Patna, poisoned herself to dehth along with her two children for want of money to maintain her family. Many Chinta Devis of various Colleges in Bihar are on the verge of getting on the same boat. The catastrophe is the by-product of the new concept propounded by the State Government under which anybody is allowed to open a college without any financial assistance from the Government.

Selling Education

The race for setting up new colleges in Bihar by some private agencies has escalated their number to as many as 187 named as "bittiye bhar rahit" colleges (Colleges without financial aid). Some of them give a token salary to their teachers but majority of them do not pay anything. These colleges have been opened with donations from those desirous of a teaching job. The amount ranges from Rs. 10,000 to Rs. 20,000. Such teachers have to pay the donation at the time of creation of posts for them, at the time of appointment, at the time of Government announcement to convert the institution into constituent unit and also at the time of their actual take over by the Government. These colleges have been flourishing keeping the teachers in fools' paradise.

Starting a new college is supposed to be the best business these days. This industry is much more flourishing than any other industry. The exodus to towns and cities have intensified the need for more educational institutions than are available and unscrupulous people are taking advantage of this situation. They start a college in some hired house and then advertise in papers for teaching and non-teaching staff. After receipt of a large number of applications from educated unemployed persons, the bargaining starts. Even before the appointment letters are issued to the applicants for the job of lecturers, they are asked to work for some months and years on honorary basis, i.e., without any payment and after some time they are paid a very petty amount or Rs. 150 to Rs. 200 per month but they are required to sign on payment registers indicating full payment of a lecturer.

In such colleges, generally undeserving Principals are employed so that they can toe the line of the person who has established the institution. Through them are got done all sorts of wrong things for the benefit of the institution owner. Teachers and heads have to work at the mercy of the founder of these institutions and, hence, generally unprincipled persons are able to retain their service and undergo exploitation and principled persons are thrown out in course of time if at all they happen to enter such an institution.

The founder of the institution in the meantime manipulates the people at the helm of affairs in the University/Government to obtain grant/subsidy for the institution and generally he is successful in doing so. After the grant/subsidy of Government/University is obtained the founder gets the real benefit because only a part of it is actually utilised and a substantial portion of the fund goes to the benefit of the founder although on paper the entire amount is shown used for the purpose it was intended. Such institutions in course of time due to political and other pressures are taken over by the Government and then only the services of all the lecturers are regularised and they start enjoying the fruit of their donation for the whole life without at the same time contributing anything to the cause of higher education. During the eightees nearly 150 private colleges have been taken over by the Government/University in the State of Bihar only.

This is the only route left now to enter the university service in Bihar. The old practice of recruiting lecturers through the Public Service Commission or University Service Commission has been rendered obsolete for the last several years closing thereby the door for the brilliant people to enter the profession. Yet the provision of inter and intra university transfer of teachers is there to push these politically sound and economically rich but academically poor teachers to get their services transferred from their native moffusil constituent colleges to some premier institutions of the same or different university. The fate of the universities with such a weak backbone can be well imagined.

Also, during the last few years about a dozen of engineering colleges have been started in the private sector in the State despite the fact that thousands of engineering graduates are rotting and sitting idle for want of employment. These institutions have charged fifteen to thirty thousand rupees from each candidate as capitation fee (another name of donation) without ascertaining the merit of the candidates. To think of

---

**Deptt. of English, Falakata College, Distt. Jalpaiguri, North Bengal.*

the quality of the technocrats coming out of such institutions ! The students who have paid such a big amount cannot think of remaining honest after they get any employment on completion of their academic career. Thus the quality and integrity of the majority of the product of such institutions is bound to be affected and naturally their worth is questionable.

Ph.D.—A Mania or a Must

The mechanical criterion for the time bound promotion of a lecturer to the post of Reader has made the Ph.D. degree too cheap as this degree guarantees quick promotional avenues. Prior to such time bound promotional scheme teachers used to do research work for their academic interest. But of late they have no option but write Ph.D. thesis only to secure promotion. The rate of Ph.D. production is touching sky high and it would not be unfair to say that in the name of research leading to Ph.D. degree there is loss of teaching and wastage of money without any improvement in the quality of teaching. Some teachers even manage to go on leave with full pay plus extra amount as teacher fellowship for two or more years and in return their contribution to the cause of higher education is nothing. In the easiest examination called the Ph.D., nobody fails. This is an art of manipulation and to get this degree awarded what one has to do is to please the supervisor and the concerned University head as it is they who in connivance with each other manage the appointment of some pet examiners who are more concerned with their own T.A. and remuneration than the quality of the thesis, just recommend the candidate for the award of Ph.D. degree.

True, there are some dedicated and efficient teachers who cannot let themselves allow to hire so called pseudo Ph.D. degrees and hence they are virtually the worst sufferers. Their efficiency declines when they find to their dismay that they are superceded by their junior colleagues holding such Ph.D. degrees.

Unfair Examination

Now coming to the question of maintenance of arts, science and commerce Colleges in the private sector. There is invariably shortage of funds since their inception due to many reasons including misuse. There is lack of adequate and efficient teachers and proper arrangements for practical training by way of laboratories/workshops. As a matter of fact, the students who have not been properly taught are compelled to resort to unfair means to pass the examination. On the other hand the teachers while working in an ill-equipped college naturally have inclination to improve the result of their institution by not preventing their students from doing so. This is the main cause of the present day malady of use of unfair means in the examination.

In large number of cases, private Institutions are started not only with the intention of earning but with the aim of serving the cause of caste or community. The very inception of such institutions is based on caste or community feeling to perpetuate and promote casteism and communalism.

What to speak of the private calleges, practical classes do not receive proper attention in constituent colleges too. Due to financial burden, the universities are not able to meet the contingency expenses of the laboratories. The financial grant which the universities receive from the state Government is meagre in comparison to their actual requirement. Much of the amount is spent as T.A. or C.A. of the observers, flying squads and centralised evaluation of answer books. There are now no demonstrators to manage the laboratories as they have been promoted as lecturers after completing M.Sc.

This serves as another reason for the neglect of practical classes. The directives of the UGC allowed the appointment of Lab. Assistants for management of laboratories but lack of funds restrains the universities from doing so. Most of the promotee lecturers who have just managed to pass the M.Sc. examination with high marks in the practical papers, of course, are seen cutting a sorry figure in the class. In spite of all this the students who hardly work in the practical classes come out with flying colours in the examination.

Evaluation of Papers—a Farce

A report in the Hindustan Times Daily, Patna, Dated 7.12.87 reads : "The centralised evaluation of answer books of Magadh University has turned into a big farce with proliferation of corruption and nepotism. The sanctity of centralised evaluation has reached its lowest ebb as no examiner makes an effort to go through the entire answer books and marks are awarded virtually blindly... pulling strings and canvassing is the only way left to secure high marks...".

Experiments with Education in Retrospect

Ironically, over the last decade a number of steps have been taken for the upliftment of the economic and social status of the teachers but measures to promote the basic needs of the colleges have always been ignored. Needless to say, experiments after experiments have been carried out to enhance the academic standards in the State but without any tangible result. Actually most of the ills that afflict the universities today owe their genesis to the wrong decisions of the Government taken generally with a vested interest. The resolution of "passing without English" framed by the coalition Government in 1967 was clearly reflective of Govt.'s weakness for the students who had helped them in realising power as a result of which the examination and degrees lost their value. Credit goes to the succeeding Government led by late Kedar Pandey who took some right steps to curb the malpractices prevalent in the universities by appointing members of the IAS with powers of both the senate and the syndicate vested in them for keeping the universities away from political interference. But this period could not continue for long, In the name of autonomy of the university the old system was revived. Dr. Jagnnath Mishra's ministry, in a bid to have a full grip over the universities, took certain decisions that told upon the entire atmosphere of higher education. The net result is very much before us.

Remedies

It is imperative that the Government must put a complete ban on opening of educational institutions by the individuals. The Government at the same time should make arrangements for setting up new colleges according to the needs of the area. The colleges already started and being run by individuals should not be given recognition or encouragement by the Government. The Government should also be cautious in offering higher posts such as those of Vice-Chancellor, Registrar, etc. to the teaching staff of such private institutions taken over by the Government in the recent past so as to check the inferior quality of education administration.

Teaching in the universities cannot improve unless the sincere and devoted teachers are rewarded and promotional avenues are created for them. The appointment of teachers should be made on the basis of written and oral tests. Ph.D. examinations should be made strict so that pseudo Ph.D. degree is not encouraged. Research publications in standard research journals should be given due weightage. Minor research projects should be awarded to the deserving teachers and funds for such projects should be raised and adequate facilities provided. Adequate laboratory grants should be released for the improvement of science faculty.

No class should be made to suffer on account of examinations which take a considerable period of the teaching session. Private tutorial classes should be revived. The university should maintain progress report of the colleges regarding teaching. Postgraduate teaching should be planned and managed reasonably. Unwanted and indiscriminate growth of Postgraduate teaching centres should be curbed. It is high time proper measures are adopted and all out efforts made for the uplift of poor colleges already upgraded to constituent status to maintain standards of the university education in the State. □

THE INEVITABLE TENSIONS

(Continued from page 7)

A similar tension arises in the field of education. We have tension between Education for the Classes and Education for the Masses, Academic Education and Vocational Education, Liberal Education and Technical Education, Education for the Mind and Education for the Hand and so on. There is a constant pressure that education should be relevant to the needs of students, teachers and society. On the other hand there is also the school that believes that education is for training the mind, since a trained mind can learn any discipline it wants. Too much emphasis on relevance in education can make it irrelevant later.

The tensions in the academic community are often fed by vested intersts of individuals. We need both theoreticians and practitioners, we need both basic and applied research, we need abstract thinkers and down-to-earth problem solvers. Everyone has a role to play and different persons have different roles to play. There should be no caste distinctions on the basis of the positions individuals occupy in the spectrum between extreme concentration on theory and extreme concentration on practice.

There should be mutual appreciation instead of tension. While playing our roles, we should develop appreciation for the roles played by others. This will help all.

The tensions in research and education are similar to the conflicts between different religions. Just as different religions have the same goal of divinity of man, different groups placing different emphasis on different aspects of Education and Research have the same goal of Search for Truth has many aspects and different researchers explore different aspects. Co-operation between them is essential for a grand vision of the Whole Truth. □

Agenda for Agricultural Research

Dr. Raja J. Chelliah, Member, Planning Commission lauded agricultural research to bridge the gap between the proven potential and the actual yields on the farm through adaptive research to suit varying agro-climatic and socio-economic conditions. Dr. Chelliah was delivering the Convocation Address at the 22nd convocation of the University of Agricultural Sciences, Bangalore. He discussed the priorities in agricultural research and observed that "research for biological fixation of nitrogen and to increase the fertiliser use efficiency and evolving varieties incorporating multiple resistance against pests and diseases and adverse environmental conditions must be high on the agenda. Other priority areas in agricultural research, I may mention, are : (i) evolving suitable dryland technology for rainfed areas, (ii) varietal breakthrough in pulses and oilseeds, (iii) conservation and planned exploitation of germ plasm resources of plants, animals and fisheries to broaden the genetic base for improvements, (iv) strengthening of activities in respect of biotechnology; and (v) greater research support to agro-meteorology." Excerpts.

Convocation

Although the contribution of agriculture to the gross domestic product has declined from about 59 per cent in the early fifties to about one third in recent years, it remains the crucial sector in our economy in the overall perspective of development. Agriculture gives employment and hence livelihood-to the major proportion of the labour force and supplies the most important and basic requirement of the population, namely food. Hence agriculture will continue to dominate the perspective of the development of the Indian economy from the view point of food security as well as in terms of that sector's unique association with the problems of employment, income generation and poverty alleviation.

Since agriculture is the supplier of food and raw materials for industry and since at the same time the agricultural population constitutes the most important segment of the market for industrial products, it is clear that the overall rate of growth of the economy is limited by the growth of agriculture. To some extent the growth of exports can substitute for the growth of agriculture in terms of making possible a higher rate of growth of the economy. That is one good reason, among others, for pursuing policies for promoting exports. But since there are constraints on the growth of exports, in the present conditions of the world economy, we cannot pursue the goal of a higher growth rate only or mainly through raising the ratio of exports to GDP. Agriculture will continue to be a constraining factor, at least in the medium or long-term perspective.

Thus, while the building up of a modern, progressive industrial structure must be one of the main goals of planning in India, equal attention has to be paid to the growth of the agricultural economy and to raising its levels of efficiency andproductivity from the angles of (a) food security (b) employment and poverty alleviation; and (c) making possible attainment of a higher growth rate for the economy as a whole.

"Food security" has been defined as "access by all people at all times to enough food for an active and healthy life". Access to enough good for all people depends on two conditions: (a) sufficiency of supply/production of food in relation to the growing population, and (b) a certain pattern of income distribution to enable all the people to command enough purchasing power to have access to food necessary for an active and healthy life.

At the beginning of this century (in 1901) the Indian population (i.e. population of the present Indian territory) was 238 million and it increased at a slow rate till 1951. The reasons for slow growth were the frequently occurring famines and epidemics. By 1951 the population had increased to a level of 361 million. The average annual growth rate for the half century (1909—1951) works out to 0.83 per cent. The impact of economic development on the growth rate of population was not fully perceived at the beginning of the era of planned development. At the time of the formulation of the First Plan, it was assumed that the population would continue to grow at the annual growth rate of 1.25 per cent which was the growth observed in the forties.

But in actual experience, there was a sharp reduction in death rates leading to higher expectancy of life on the one hand, and higher and progressively increasing rate of growth of population on the other. The life expectancy increased from 32.1 years in 1950-51 to 54.4 years in 1980-81 and is estimated to have gone up to 56.5 years by 1984-85. The realised growth rate of population over the period 1951 to 1985 has been about 2.03 per cent per annum. The latter decades have shown even a higher growth rate, going up to 2.25 per cent during 1971-81. This was in spite of the fact that during 1951-1971, there was an almost constant fertility rate, and during the decade 1971-81, there was a decline both in fertility and in mortality. However, as yet there are no certain indications of decline in the growth rate of population, if the present trends continue the population may well cross the one billion mark by the turn of the century. This population by the turn of the century will also consist of a higher proportion of persons beyond 15 years of age (about 68 per cent by the year 2000 as against about 60 per cent in 1980) and hence would also consist of larger proportion of labour force.

The production of foodgrains is taken to be a convenient indicator of the food perspective mainly because statistics on production of foodgrains are more easily available than on the other items of food, and foodgrains constitute the bulk of food consumption, specially in a country like India. However, it would be useful to consider at the outset as to how large is the bulk of foodgrains in the total food consumption. As per the 32nd and the 38th rounds of the National Sample Survey, expenditure on foodgrains in rural areas constituted 58.1 per cent of total expenditure on food in 1977-78, and thir proportion declined to 55.3 per cent in 1983-84 for the entire rural population. However, for the poulation group just around the poverty line in rural areas, this proportion was about 63.5 per cent for both the rounds. For urban areas expenditure on foodgrains constituted 40.6 per cent of total food in 1977-78 and 38.8 per cent of total food in 1983-84. There is a clear evidence of diversification the food basket and of increasing share of meat, fish, egg, vegetables and fruits. The share of this group of food items in the total expenditure on food increased from 11.7 per cent in 1977-78 to 13.9 per cent in 1983-84 for the population in rural areas. Even for the population group around the poverty line in rural areas, there is a perceptible increase in the share of this group of food items from 11.3 per cent in 1977-78 to 12.3 per cent in 1983-84. In urban areas the expenditure on these items increased from 16.4 per cent of food items to 18.1 per cent over the same period. This has to be taken note of while considering the per capita availability or production of foodgrains in relation to the food problem. Also, the observed pattern of consumption of the different expenditure groups indicates the composition of the increase in food output that is to be brought about.

In 1950-51, the foodgrain output was about 51 million tonnes which reached 70 million tonnes in 1954, and since then the output has shown an increasing trend barring the fluctuation caused by weather conditions. A peak of 152 million tonnes was reached in 1984. Due to accelerated rate of growth of population particularly during the decade 1971-81 production of foodgrains in per capita terms has not shown a significantly increasing trend. However, during this period there has been a growth in the production of fruits, vegetables, fish and the products of animal hurbandry, which is also reflected in the diversification of the food basket.

The main Indian achievement on the food front, so far, can be described as (i) elimination of the need for food imports, (ii) maintenance of adequate stocks to stabilise prices and immunise production against the cob-web cycles, and (iii) achieving a pace of growth in food production which is more or less consistent with the growth of the rest of the economy. However, since about 37 per cent of the population (i.e., population below poverty line) is still undernourished, the total absolute requirements of food to feed the entire population at a level above the minimum nutritional requirements are still quite large. A calculation, taking into account the population growth and its changing age-structure, projected increase in per capita income and the expenditure elasticities for foodgrains, and keeping the target of feeding at least 95 per cent of people at a level above the minimum nutritional requirements, projects the foodgrains requirements at over 240 million tonnes for the year 2000.

Land, water and environment constitute the basic resources for agriculture. Out of the total geographical area of 329 million hectares in India, the cultivable area is estimated at about 186 million hectares, while the net sown area is 143 million hectares. The difference between the net sown area and the cultivable area consists of marginal lands. However, the net sown area which was 119 million hectares in 1950-51 increased by about 12 per cent during the decade 1950-51 to 1960-61 and by about another six per cent during the next decade (1960-61 to 1970-71), and thereafter it has remained more or less constant, fluctuating marginally around 141 million hectares. There is little scope of increasing it further. In fact, the growing need for housing, expanding industrialisation and spread of infrastructure may further encroach upon some of the cultivated lands. And since most of the activities and habitation get concentrated upon lands where water is available, the encroachment for such purposes upon better agricultural lands is more than upon the waste lands. However, a significant source of augmentation of cultivated land has been irrigation. Net irrigated area expanded from about 21 million hectares in 1950-51 to about 40 million hectares in 1982-83 and gross irrigated area increased from about 23 million hectares to over 52 million hectares over the same period. As a result, the gross cropped area increased from 132 million hectares in 1950-51 to 173 million hectares in 1982-83 and 175 million hectares in 1984-85. The cropping intensity has gone up from 111 in 1950-51 to 122 in 1984-85.

Water is thus the key resource for its direct contribution to productivity and for its contribution to multiple cropping, thereby augmenting the given land resource. The spread of irrigation has also helped in stabilising agriculture against the vagaries of the monsoon. The created irrigation potential was about 68 million hectares in 1984-85, which, at the end of the Seventh Plan, is targetted to reach about 81 million hectares. On the basis of existing technology and costs of water diversion, the ultimate irrigation potential is estimated, somewhat conservatively, to be 113.5 million hectares. However, the technology improves over time and relative costs and benefits change in the perspective of changing relative scarcities and more optimal uses of scarce resources. In such a perspective, a higher estimate of the ultimate irrigation potential which takes into account the possibilities of inter-basin transfers of water, is about 148 million hectares. Even if this potential were to be realised, a significant proportion of land would remain without irrigation. And yet this scarce resource, water, is being used much below the optimal or feasible efficiency levels. There is a yawning gap between creation of potential and its utilisation. Moreover, in most of the irrigation systems the overall average water use efficiency in terms of water used by the plants in relation to water released at the head of the system, ranges between 25 per cent and 30 per cent at present. There is a potential of raising this efficiency to bring it in the range of 50 to 60 per cent, which would amount to doubling the availability of usable water even within the existing systems. This can be achieved partly through additional investments in lining, control systems and local storages, and partly through improved operation of the system and better irrigation and land management practices.

The Command Area Development Programme was initiated in the Fifth Plan with a view to optimising agricultural production through better management of land and water use in the command areas of irrigation projects. The objectives are sought to be achieved through modernisation and efficient operation of irrigation systems, provision of adequate drainage, construction and lining of field channels, levelling and land shaping, conjunctive use of surface and ground water and reinforcement of extension services and supply of inputs to the farmers. Much remains to be done in fulfilling the objectives of the Programme.

Many State Governments have not paid sufficient attention, and at sufficiently high levels, to the question of water management and to the task of getting the maximum out of the irrigation potential already created. There are on the one hand financial lapses or shall we call it, inefficiency (cost overrun, leakages and kickbacks, inadequate recoveries from beneficiaries, etc.). Apart from that, we encounter in several States, technical inefficiency in terms of non-utilisation of high portion of potential, wastage of water, water logging, etc. Irrigation and water management must be placed in the hands of the best officers the State has and must receive the close and personal attention of the Chief Minister in addition of course to the supervision of the Minister concerned.

The importance of environment being a resource is being increasingly realised though still we cannot subject it to the type of measurement which is possible in the case of land or water. While macro-climatic impact of environment cannot be perceived even over a period of a few centuries, some of the consequences are easily seen and can be correlated to environmental degradation. For example, based on the record and analysis of flows in the Narmada for about 80 years, it is reported that the intensity of floods in the river significantly increased since the forties, and some of the biggest floods have been experienced in the later period. Heavy deforestation of the Narmada basins started during Second World War period, and since then the density of forests has been decreasing. This affects water retention capacity of the soil and run-off to the river increases. This run-off also erodes the soil. A similar situation is said to exist in several other basins as well. There are other types of environmental erosion, the consequences of which are seen in much shorter periods. Examples are the problems of water logging and soil salinity caused by overuse of irrigation water in soils which are not easily drainable. Tawi basin in Madhya Pradesh is an outstanding example of this, but the problem is more widespread than is realised particularly in the paddy and sugarcane areas in peninsular India and parts of Haryana and Punjab as well. Widespread irrigation also raises the level of humidity in the atmosphere and increases the incidence of pests and diseases on the crops. It is not that there are no preventive and corrective measures to these problems, but in the first flush of development these problems get ignored till the corrective measures become more difficult. Short term private gains also override the consideration of long term social costs, and hence the need to guide private actions in the perspective of long term social objectives.

Technology plays a vital role in "augmenting" the given national resources. Even the perception of given resources depends largely on the state of technology. The assessment of water potential, for example, will go up. If economically feasible technology is available to connect the northern river systems with the peninsular systems. But, as is well known, even more important in recent years, has been the role of technology in increasing yields through the introduction of new varieties particularly in the case of food production. The evolution of high yielding variety of wheat, adaptable to Indian agricultural environment marked the onset of the green revolution. Since then improved varieties have been evolved in respect of many other crops, and remarkable increases in yields have been observed. The all-India average yield of wheat has increased more than 2.8 times over the period 1950-51 to 1983-84 and that of rice more than twice over the same period. The yield of all foodgrains taken together also increased more than twice. These are only all-India averages which are still heavily weighted in favour of traditional agriculture. The green revolution has adequately covered only the north-western region and some pockets in other parts of the country. It has been estimated that such developed areas accounting for less than 15 per cent of the area under foodgrains contributed as much as 56 per cent of the increase in food production in the post-green revolution period. The area under high yielding was only 56 million hactares in 1984-85. Thus, the full potential of the new technology is far from being realised.

Yields have been observed, under field conditions, to reach as much as 4½ to 5 tonnes for rice and wheat on an average for a few pockets. The adoption of new technology depends very much on assured and timely water supply and a package of other inputs the most significant of which is fertiliser. Fertiliser application increased from about half a kg per hectare in 1950-51 to more than 46 kg/hectare in 1984-85 on an all-India average basis. Of considerable promise in the field of agricultural research is the effort to bridge the gap between the proven potential and the actual yields on the farm through adaptive research to suit the varying agro-climatic and socio-economic conditions. Research for biological fixation of nitrogen and to increase the fertiliser use efficiency and evolving varieties incorporating multiple resistance against pests and diseases and adverse environmental conditions must be high on the agenda. Other priority areas in agricultural research, I may mention, are: (i) evolving suitable dryland technology for rainfed areas, (ii) varietal breakthrough in pulses and oilseeds, (iii) conservation and planned exploitation of germplasm resources of plants, animals and fisheries to broaden the genetic base for improvements, (iv) strengthening of activities in respect of biotechnology, and (v) greater research support to agro-meteorology.

The importance of organising basic research programmes in the field of bio-technology as applied to agriculture and allied sectors needs hardly be emphasised in view of the need for breaking yield barriers in the major food crops, reducing dependence on non-renewable sources of energy and developing resistance to pests and diseases. This field of research has received considerable impetus with the establishment of the National Bio-technology Board and the development of short-term and long-term programmes of research. This field has immeasurable potential.

Yet any other aspect of resource management and policies not only as a means of raising the productivity of land but also as a principal determinant of class relations and social justice has been the emphasis on land reforms from the very beginning. The main components of land reform policy have been (i) abolition of intermediary tenures, (ii) tenancy reforms comprising regulation of rent, security of tenure aad conferment of ownership rights on tenants, (iii) ceiling on land holdings and distribution of surplus land, (iv) consolidation of holdings, and (v) compilation and updating of land records. The abolition in the 1950's of intermediary tenures like zamindars, jagirdars, inams, etc., which prevailed in nearly 40 per cent of the area of the country was a major achievement. Consolidation of holdings has been successfully completed in some of the States, and the consolidated area at the end of the Sixth Plan was about 52 million hectares, i.e., about 1/3rd of the net cropped area. In irrigated commands, consolidation of holdings facilitates efficient and economical layout of field channels and thus improves the efficiency of water use. In other areas consolidation encourages private investment in land. In Eastern U.P. particularly, it was after consolidation that fermers made investments in private tube-wells on a large scale and this became the triggering point of a chain of developments which have been noted in the last 6-7 years.

Agricultural price policy in conjunction with technological development has played an important role in India in raising production and stabilising prices. It has aided the adoption of high yielding varieties and enabled the farmers to go in for increased use of fertilisers. Price policy decisions are currently announced in respect of nineteen commodities, ten of which are commercial crops and the rest are food crops. Paddy, selected coarse cereals and wheat are covered under procurement prices and other crops are covered under the minimum support prices. Regular prices policy announcements have been initiated only after mid-seventies. In announcing these prices the Commission on Agricultural Costs and Prices has been taking into account not only a comprehensive review of the production and price trends of the particular crop but also a number of other important and related factors. In future, the agricultural price policy needs to be increasingly concerned with the maintenance of a scale of appropriate relative prices of crops so that the supplies of different commodities are brought in line with the respective demands. Even more challenging is the task to bring about a cropping pattern which is optimal from the point of view of a longer perspective on scarce resources like water and environment. Returns to water in crops like paddy and sugarcane are relatively much lower and their long term impact on soil salinity and water logging is highly adverse particularly in heavy soil areas. One has to think in terms of alternative crops and economic options to produce or buy. This of course is not a task to be handled by prices alone, but technological development also has to play a crucial role.

The green revolution and massive investment in irrigation and other infrastructure has raised land productivity significantly but labour productivity has not grown at an appreciable rate. In order to keep tolerable parity in incomes between those engaged in agriculture and those working in the non-agricultural sectors, heavy doses of subsidies are given to the agricultural sector in the form of subsidised input and irrigation. Also the price support system for major crops has been evolved to achieve this objective as well to minimise the cob-web type of fluctuations in agricultural production. This imposes severe strain on the public exchequer. In the future, labour productivity in agriculture must be increased so as to keep subsidies within reasonable limits.

However, with the increasing pressure of population on land, the average size of the operational holding is diminishing. This fact and the non-withdrawal of labour from agriculture in relative terms (i.e. reduction in terms of percentage of total labour force) serve to hinder the adoption of more efficient techniques and to reduce the relative level of per capita income in the agricultural sector. Obviously, for the fast growth of agriculture and the alleviation of poverty in rural areas, the secondary and tertiary sectors must absorb an increasing proportion of the labour force. Hence the accent on industrialisation and the growth in small industry. In the years to come, if we have a choice, we must aim to produce and export goods of light industries and obtain products of more capital intensive (non-strategic) industries from abroad. Also, we can see that the fast growth of industry is essential for the development of agriculture and the improvement in the living standards of the population.

At this point, I would like to digress a bit to say that those who have benefited from the substantial and expensive programmes of agricultural and irrigation development, price support policies and rural electrification, particularly the better off sections of the agricultural population, must be willing to contribute their bit to finance further development. It is idle to imagine that development can be had as a free good. Industry cannot be milked beyond a point for subsiding agriculture. And

Government has to meet many essential demands on its resources. Agricultural growth will require increasing amounts of ploughback of the profits of agriculture itself.

I may summarise what I have dwelt upon at some length. In the context of the development perspective of the nation agricultural production in general and production of food in particular need to be enhanced continuously in spite of severe constraints on land and water resources. Land productivity has been increasing, thanks to new bio-chemical technology, but at the same time the cost in terms of energy, water and chemicals has also been increasing. It may not be enough to take care of the productivity of land. Returns per worker engaged in agriculture too have to increase to compare with returns in the non-agricultural sectors, otherwise agriculture will have to be perpetually subsidised impairing the potentials of investment in agriculture and other sectors of the economy.

Although there are many serious problems, we take an optimistic view of the future. In the early sixties when most of the Agricultural Universities were set up in the country, our situation was much worse and resources, even for research and development, much poorer than what we have today. These institutions have justified their existence by bringing about a break-through in agricultural technology. Many of our research institutions have already taken up the frontier areas, particularly bio-technology in the context of agriculture of the future. There is much more consciousness about preservation of environment, conservation of soil and efficient management of water resources. I hope that the Agricultural Universities will take up work on agro-institutions and agri-industries as important disciplines in addition to agro-economics which they already have. □

Dr. Richard Holmes Visits IGNOU

Dr. Richard N. Holmes, Pro-Vice-Chancellor, Open University, UK recently visited Indira Gandhi National Open University (IGNOU) and the State Open Universities in Hyderabad and Kota. His visit was a part of the assistance IGNOU receives from the Overseas Development Administration (ODA) of UK.

During the course of his 9-day visit Dr. Holmes had detailed discussions with Prof. G. Ram Reddy, Vice-Chancellor and Prof. B. S. Sharma, Pro-Vice-Chancellor of IGNOU. The discussions centred round the adequacy and relevance of the existing assistance the UK Open University provides to its Indian counterpart. He also discussed further collaborations the two universities could have in future, especially in the light of the proposed Commonwealth Network. Dr. Holmes was greatly impressed by the speed with which IGNOU has prepared its courses. He opined that soon IGNOU would become, probably, the largest Open University in the world.

Dr. Holmes also had discussions with Prof. Shakti R. Ahmed, Director, School of Sciences, Prof. S.C. Goel and other members of the Faculty of Life Sciences of the University. The discussions focussed on the development of self-instructional print material in Life Sciences as well as the organisation of practical component through the distance education mode, which is being tried out for the first time in India at IGNOU. Dr. Holmes took special interest in understanding the Regional Services of IGNOU and had a meeting with Dr. S. N. Chaturvedi, Director, Regional Services Division.

Dr. Holmes also visited the Andhra Pradesh Open University, Hyderabad and the Kota Open University, Kota, to understand the progress of these universities as well as the relationship these universities have with IGNOU.

Fellowships & Visitorships in USA

The University Grants Commission (UGC) has asked the Universities and their affiliated colleges to sponsor teachers for some fellowships and visitorships for post-doctoral research work at the universities and the other institutions in the United States.

Teachers with a minimum of 10 years' teaching experience and published research work are eligible for these fellowships and visitorships. The fellowship will be for a period of one academic year (6-10 months), while the visitorship will be for a short period (2-3 months). The U.G.C. will provide international air-fare from India to U.S.A. and back. In addition, the U.S. authorities will provide allowance for maintenance, books and study related travel in that country.

The fellowships/visitorships are for fundamental studies in frontier areas in Physics, Chemistry, Mathematics, Life Sciences, Earth Sciences and Bio-Technology, Laser Technology, Marine Resources Development, Computer Science and Technology, Semi-Conductor Technology, Micro-Processors Applications and Micro-Electronics, Communication Technology, Educational Technology and Mass Media, Renewable Energy Studies, Environmental Sciences and Technology, Urban Development and Planning, Transport Studies and Social and Economic History (including Histriography), Science-Technology and Society, Comparative Literature, Literature and Society, Performing Arts, International Economic Cooperation, Money and Finance, Economics of Energy, Policy Sciences and Comparative Ethnography, Education, Planning and Management, Philosoppy of Sciences, Social and Political Philosophy.

Interested teachers may contact their own Universities. The nominations should reach the University Grants Commission latest by 31st July, 1988.

Project Methods of Teaching

A workshop on "Project Methods of Teaching" was recently conducted by Curriculum and Educational Media Development Centre of the Anna University. The objective of the workshop was to outline a project work on the production and development of a small centre lathe using the standard machine tools and the task was to be performed to meet the industrial standards in the areas of Mechanical, Civil, Electrical and Electronics Engineering respectively.

The resource persons for the workshop came from SPIC, TTTI, IIT and from Anna University itself. The participants of the workshop were from among the Lecturers/Assistant Professors of the constituent units of Anna University, namely, College of Engineering, Guindy, Madras Institute of Technology and Alagappa College of Technology who are in-charge of Projects/Workshops in the various departments.

OUAT Organises State Level Training Programmes

The State level training programme in Rice Production Technology, sponsored by the Ministry of Agriculture, Govt. of India was recently organised in the Extension Education Directorate of the Orissa University of Agriculture & Technology for the subject matter specialists of the State Deptt. of Agriculture, Orissa.

The University also organised a four-day training programme in Mushroom production technology in the College of Agriculture, Bhubaneswar in which 33 persons from different voluntary organisations of Orissa participated.

Continuing Education in Computer Applications

The Department of Electronics, Government of India, has approved a Continuing Education Programme in Computer Applications to be sponsored by Indian Society for Technical Education (ISTE).

The Thapar Institute of Engineering & Technology, Patiala has started an 8-week programme on 'Data Processing Techniques' from June 13, 1988. The course contents are Computer and Modern Office and Data Processing in Business; COBOL; Ciles and Program Design; System Analysis & Design; Data-Base; and Fundamentals of CAD, CAM and Spreadsheet. Fifty participants are attending the course.

This is the second course being run by the Institute while the first was on "Programming and Programming Methodology" and was conducted in June/July, 1987.

JNU Introduces M. Phil. in Russian

The Academic Council of the Jawaharlal Nehru University (JNU) has approved the institution of M.Phil Programme in Russian in the Centre of Russian Studies of the School of Languages from the Academic Year 1988-89. This is in accordance with the structure of courses for the programme approved by the Board of the School.

The Council has also accepted the recommendations of the Board of the School of Languages for providing for entry point for admission to 2nd year (3rd Semester) of the five-year integrated programme in languages to such of the candidates who successfully complete first year of B.A. under 10+2+3 pattern of education from a recognised university or any other public examination recognised by JNU as its equivalent.

Volunteer Corps for Literacy

The Indian Adult Education Association (IAEA) has formed a National Volunteer Corps for eradication of illiteracy under the National Literacy Mission. Its immediate task will be to organise a short-term campaign to eradicate illiteracy and to create an atmosphere for the emergence of a learning society.

The Association has decided to enlist cooperation of 1.25 lakh students/volunteers in the Union Territory of Delhi at the first stage of the programme to provide literacy education to 1.25 lakh illiterate adults.

IAEA has appealed to the students, the educated youth, house wives, ex-servicemen, pensioners and other social workers to join the volunteer Corps. The State Resource Centres for Adult Education in Delhi and other parts of the country will help the volunteers with reading material suitable to the specific groups of learners.

The Association has initiated preparatory steps to launch this programme in a massive way with effect from October 2, 1988. The volunteers may get themselves enrolled at the Office of the Indian Adult Education Association, 17-B, Indraprastha Estate, New Delhi or with any other educational/social institution collaborating with IAEA in this national programme.

News from Agril. Varsities

HAU Veterinary College Celebrates 40th Anniversary

Dr. G.C. Negi, Vice-Chancellor Himachal Pradesh Krishi Vishva Vidyalaya, Palampur, inaugurated the 40th Anniversary Celebrations of College of Veterinary Science of the Haryana Agricultural University (HAU). He said Veterinary education and manpower provision were among the most important matters confronting the Veterinary profession at this time. The pattern of growth of veterinary activities in the years to come will have to be perceived keeping in view not only the present level of development and the size of human and animal population, but also the changing pattern of animal husbandry practices and its impact on animal health and the financial resources. For future planning it is worthwhile to learn from the developments in other parts of the world. For instance, in the West European countries and North America, the number of holdings with cattle, pigs and poultry has been decreasing while the number of animals per holding per man employed and per hectare has been increasing.

Dr. Negi observed that the Veterinary education has been, so far, based on training the students on the patho-physiological approach with great attention being paid to clinical diagnosis. Although priority for this approach should be retained in the future, yet it should be noted that as a result of the present orientation towards sick animals, comparatively little attention is or has been given to the healthy ones. This is somewhat irrational as usually there are more healthy animals in a herd than sick ones.

Dr. Har Swarup Singh, Vice-Chancellor, Haryana Agricultural University, in his presidential address asked the scientists to enable the farmers to produce more and get higher income through an effective animal health programme. After green revolution it was the turn of the white revolution. 'we are aware of the fact that in comparison with crop cultivation, much less attention has been paid to animal production and control of animal diseases. It is the need of the hour that the farmers should be helped in diversified ways', he added.

PAU Develops Theileria Vaccine

A research team led by Dr. A.S. Grewal, Professor of Immunology of the Punjab Agricultural University has successfully developed a Theileria vaccine culture to control Theileriosis, an important disease affecting high milk yielding imported pure and their crossbred with local Indian cattle. The mass scale cross-breeding programme, launched at national level to get higher milk yield, suffers a major setback due to this disease. On accout of the non-availability of drugs to treat the suffering cattle, the only alternative is to use vaccine as preventive measure.

A new diagnostic test for Theileria, developed earlier by Dr. Grewal along with the availability of this vaccine culture, sets the stage for the effective control of this disease.

The industrial significance and field applications of these recent developments would be to provide information on incidence/prevalence of theileriosis in cross-bred cattle, buffalo and indigenous cattle; rate of occurrence of new infection from season to season; role of local cattle and buffalo as reservoir of infection for cross-bred cattle and buffalo as reservoir of infection for cross-bred cattle; assessment of demand and practical significance of Theileria vaccine for its control; monitoring vaccination trials in the field, correlation between infection and productivity of the animals.

INSA T-1B Programme of UGC

Between 1st July to 9th July, 1988 the following schedule of telecast on higher education through INSAT-1B under the auspices of the University Grants Commission will be observed. The programme is of one hour duration every day from 12.45 p.m. to 1.45 p.m. (Repeated from 4 p.m. to 5 p.m.) and will be available on the TV Network throughout the country. For the viewers in Delhi and surrounding areas these programmes can be seen on the second channel.

UGC Fellowships Value Enhanced

The University Grants Commission (UGC) has revised the emoluments rules and guidelines for Junior Research Fellows and Research Associates. The revised emoluments will be effective from 1.4.1987.

The revised value of Junior Research Fellowship would be Rs. 1800/- p.m. in the first two years and Rs. 2100/- in subsequent years. Revised emoluments will be applicable to those who have qualified in the National level tests conducted for the University Grants Commission, jointly by the UGC and CSIR, and GATE. Research Associateships as existing are in four slabs of Rs. 1400/-, Rs. 1600/-, Rs. 1800/- and Rs. 2,000/- have also been revised in the slabs of Rs. 2200-100-2700, Rs. 2700-100-3200, Rs. 3200-100-3700 and Rs. 3700-125-4325 respectively.

The scales of pay of Research Scientists selected and placed at various institutions by the Commission, have also been revised and brought at par with the revised pay scales of Lecturers, Readers and Professors with effect from 1.1.1986. The revised schemes for JRF, RA & RS for future selections have been circulated and universities advised to claim arrears due to the enhancement.

News from Abroad

Evaluating Corporate-Campus Cooperation

The Business-Higher Education Forum, an organization of campus and corporate chief executives affiliated with the American Council on Education has recommended that colleges, universities, and corporations need to improve the way in which they evaluate their collaboration in research and technology. It has noted that cooperative research and development and technology exchange programs have increased threefold in the last 10 years.

In a recent report it has observed that "the recent proliferation of partnerships demonstrates beyond a doubt that our two sectors are willing to cooperate—a significant improvement over the environment that existed decade ago." "The critical challenge" the report, further said, "is to ensure that our cooperative research and technology exchange programs are in fact producting, or will produce, their intended results."

To that end, the report made one principal recommendation: "Universities and corporations need to assess the results of their collaborative research and technology exchange efforts more systematically and effectively."

The two-volume report, entitled "Beyond the Rhetoric: Evaluating University-Industry Cooperation in Research and Technology Exchange," was prepared by a steering committee of forum members that was co-chaired by Stanley O. Ikenberry, President of the University of Illinois, and Jack D. Sparks, retired chairman of the board of Whirlpool Corp.

"We are tremendously impressed by the multiplicity and variety of university-industry relationships that have developed," Ikenberry said. "But we are concerned that efforts to assess programs have not always kept up with the rapid proliferation of exchanges. As a result, program participants are not always sure whether they're getting the intended results or if they're on the right track."

Sparks said the forum is not recommending "a single set of evaluation criteria. There's far too much diversity for that. Each program must be measured individually—on its own merits."

The first volume of the report, directed at chief executives, offers recommendations that draw from successful programs illustrating a range of corporate-academic "interactions."

The second volume is designed for administrators and evaluators of cooperative programs. It includes guidelines for defining program objectives, measuring university-industry cooperation, and designing an evaluation system.

The report is available from the Business-Higher Education Forum, One Dupont Circle, Suite 800, Washington, DC 20036. The cost is $9 for volume 1 and $16 for volume 2: both volumes cost $20.

Environmental Education at all Levels of Teaching

The Commission of the European Communities for South Asia has recently adopted a proposal for a Council Decision calling on the relevent authorities of the Member States to promote the introduction of environmental education at all levels of teaching as well as in the context of vocational and adult training programmes. The proposal calls on the competent authorities of the Member States to give consideration to the basic aims of environmental education when drawing up curricula, make provision for practical activities, develop teachers' knowledge, encourage their further training and provide teachers and pupils with appropriate teaching materials.

At Community level, the proposal invites the Commission to : produce an inventory of initiatives, organize meetings, seminars and symposia, place, basic documentation at the disposal of teachers and pupils promote meetings between young Europeans, encourge initiatives by young people, organize summer courses at European universities and include cooperation on environmental matters between the academic world and industry in the ARION, ERASMUS and COMETT programmes.

According to this proposal, the objectives of education in matters relating to the environment are to increase public awareness of the problems existing in this field and to guide the citizen's behaviour in the direction of the greatest possible protection of the environment and natural resources.

The achievement of these objectives demands an awareness of the environment as the common heritage of mankind; the ecological balance and the need to safeguard it; the need for a rational utilisation of natural resources; the effects of human activities on the local and world environment, the way in which each individual can, by his own behaviour, particularly as a consumer, contribute to the protection of the environment ; and the right to enjoyment of an unpolluted environment.

We Congratulate...

Dr. Maheswar Mishra, Prof. & Head, Deptt. of Animal Production, College of Veterinary Science and Animal Husbandry, Orissa University of Agriculture & Technology, Bhubaneswar who has been awarded Watumul Foundation Medal for outstanding contribution in the field of Life Sciences.

Books Received

(1) Aggarwal, J.C. and Agrawal, S.P. **Our Survival : Clean Life, Clean Politics and Clean Administration**. Delhi, Doaba House, 1987. 127p. Rs. 30/-.

Decries the sharp decline in the value system after the independence and makes a bold plea for inculcation of values, eradication of corruption and clean administration. Contents include vedic teachings on clean life, fundamental duties of citizens, 12 great spiritual leaders on clean life, our achievements, our non-achievements, corruption and its origin, portrait of clean public servant, and action oriented 49 Point Programme.

(2) Craig, Tom and Wate, Clive, eds. **University Entrance 1988: The Official Guide.** London, Association of Commonwealth Universities, 1987. 369p. £9.50.

Published by the Association of Commonwealth Universities (ACU) for the Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom (CVCP), University Entrance 1988 is the new annual publication which seeks to replace the 'Compendium of University Entrance Requirements' which had served students and their parents for over two scores of years and had come to be accepted as an essential source of information on entrance to universities in U.K. Colourfully produced, the new Guide provides profiles of 82 universities and colleges with standardised information on student enrolments, libraries and computer facilities, accommodation and entrance policy and practices, etc. The standardised format allows for comparisons between different universities. 59 subject tables which list 9,000 courses that are offered by British Universities, listing their entrance requirements, constitute the hall mark of the new annual. The fact that the Guide has been produced in collaboration with the Universities Council for College Admissions vouchsafes the authenticity of the data.

UNIVERSITY OF DELHI SOUTH CAMPUS

Benito Juarez Road, New Delhi-110 021

ADMISSION NOTIFICATION 1988-89

Admission to the following Post-Graduate Courses leading to Master's Degree in the Faculties of Arts, Social Sciences, Mathematics and Inter-disciplinary and Applied Sciences for the session 1988-89 for the students who have pursued 15 years of education will be made through centralized registration at South Campus, Benito Juarez Road, New Delhi-110 021 from 1-7-1988 to 8-7-1988 (except Saturday's and Sunday's) from 9.00 A.M. to 1.00 P.M. and 5 P.M. to 7 P.M.

Applied Psychology, Business Economics, Commerce, English, History Hindi, Philosophy, Political Science, Sanskrit, Mathematics, Biochemistry, Genetics, Microbiology. Electronics, Post B.Sc. Diploma in Electronic Instrumentation.

For M.Sc., in Plant Molecular Biology Admission will be made on the basis of an Admission Test and Interview for which separate notification has already been issued.

Bulletin of information containing details about the eligibility requirements, procedure for registration, etc. can be obtained on or after 24-6-1988 from the office of the South Campus, Benito Juarez Road, New Delhi-110 021 on payment of Rs. 2/- in cash or a crossed Indian Postal Order for Rs. 2/- drawn in favour of the Assistant Registrar, South Campus payable at the New Delhi Post Office alongwith a self addressed envelope (Size 13 cm x 20 cm) with postage stamps worth Rs. 2/-.

Note : (i) Students will be free to Register their names at either South Campus or North Campus or at both Campuses in so far as subjects in the Faculties of Arts, Social Science and Mathematics are concerned.

Registration for Business Economics, Electronics, Genetics, Microbiology, Biochemistry and Post B.Sc. Diploma in the Electronic Science would be done only at the South Campus.

Students may also note that the number of seats available in various courses at each Campus is limited.

(ii) Admission to the South Campus and its colleges will be made independently in order of merit from amongst the candidates registered at South Campus according to the number of seats available.

M.Phil PROGRAMME

M. Phil Programme in Commerce, Business Economics, Hindi, Political Science, Biotechnology, Electronics Science, Plant Molecular Biology are offered at South Campus. For admission forms, etc. please contact the office of the concerned department at South Campus.

Ph.D. PROGRAMME

Ph.D. Programme is offered by all the Departments in the respective Faculties. For the Faculties of Arts, Social Science and Mathematics please contact the respective Faculties at the North Campus; and for the Faculty of Inter-disciplinary and Applied Science, the Dean at South Campus may be contacted.

DIRECTOR

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month, while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

INDIRA GANDHI NATIONAL OPEN UNIVERSITY

ANNOUNCES ADMISSION TO CERTIFICATE PROGRAMME IN FOOD AND NUTRITION (SEPTEMBER 1988)

Indira Gandhi National Open University, an autonomous institution set up under an Act of Parliament, invites applications for admission to its Certificate Programme in Food and Nutrition'. The basic task of the Indira Gandhi National Open University is to advance and disseminate learning and knowledge by a diversity of means including the use of communication technology. In the process it has to increasingly aim at democratisation of higher education and maintenance of high qnality, covering larger segments of population, vocations and professions. Alongwith this, it has to encourage and strengthen the open and distance education systems in the country.

1. Who Should Apply ?

This programme is useful for all who are concerned with the health of family and community. It is open to all literate MEN and WOMEN who have attained the age of 20 years. However, being a pilot programme, initially it is open to the residents of the union territory of Delhi, and the States of Uttar Pradesh, Gujarat, Assam and Andhra Pradesh. Though the scheme is open in nature and the University would make the programme accessible to all above who are otherwise eligible for it, it however reserves its right to rationalise the limit in admissions depending on facilities and resources avaiable with it.

2. How Will You Study ?

The University offers opportunities for higher education through the use of distance teaching methods according to which the students will be supplied carefully designed self-instructional printed study materials, assignments for home work, facility for the use of audio-video cassettes and counselling/tutoring at the Study Centres spread all over the country. Counsellors/Tutors shall be available at study centres to which the students will be allocated after admission is finally confirmed.

3. How Long would you Study the Course ?

A minimum study period of 6 months is required to be devoted. However, the students have the freedom to complete the programme successfully in a maximum period of 2 years. Thus people engaged in their profession or domestic chores can pace their studies depending on time and other facilities available with them.

4. What will you Study?

The main thrust of this programme is on

—Knowledge and understanding of the basic facts relaetd to Food and Nutrition.

—Awareness of the existing common nutritional problems and supplementary feeding programmes.

—Management of food safety and economics of food, and

—Consumer awareness of the rights regarding food.

To suit the pace of learners the programme has been devised to be covered in three courses with related practicals interwoven in them.

CPFN—1	You and Your Food
CPFN—2	Your Food and its Utilization
CPFN—3	Economics of Food

5. In what Medium the Course will be offered ?

As a pilot programme the course will be offered in English, Hindi, Gujarati, Telugu and Assamese. Those who wish to take the course in Telugu will have to register for admission with Andhra Pradesh Open University for which there will be separate announcement by APOU.

6. How shall you be evaluated ?

(i) The first term-end examination will be held at the end of the prescribed duration of the Programme. The students can pace the studies by appearing at the subsequent term-end examinations organized every six months in one or more courses not completed in the first attempt.

(ii) The progress of the student will be assessed on a continual basis through assignments which the students will be required to submit on a regular basis as per schedule announced. The performance in continuous evaluation (assignments) will be counted towards final result as per the rules of the University.

7. How to Apply ?

Applications complete in all respects in the accompanied format alongwith the amount of programme fee should reach the University on or before Friday, the July 15, 1988. The relevant documentary evidences including the certificate of date of birth will be asked for only at the time of confirmation of admission to the Programme. It is therefore, advisable that authenticity of the information supplied in the Application Form is carefully ensured in the event of any information found incorrect or having any bearing on the eligibility of the case, the admission shall be liable to cancellation at any time.

The application forms should be addressed to :

The Director
Admissions and Evaluation
Indira Gandhi National Open University
A-39, Kailash Colony
New Delhi-110 048.

Please write APPLICATION-CPFN in block letters on the envelope containing the Application form. In case the candidates need acknowledgement, they should enclose a self-addressed postcard. The selected candidates will be sent communication by middle of August 1988.

APPLICATION FORM

Certificate Programme in Food & Nutrition

Last Date : Friday, July 15, 1988

This part of the advertisement may please be cut out and duly filled-in. For more copies for use of your friends and acquaintances/others, the form may be xeroxed or typed out or its columns be neatly re-drawn by hand if adequate facilities are not available.

General Instructions

1. While typing or redrawing by hand, draw only the columns. These should be in the same order as given in this proforma and should have sufficient space to write the needed information.
2. The entries be filled in English only and in CAPITAL LETTERS so that entries can be correctly recorded by the Computer.

1. Name CAPITAL LETTERS ONLY

Surname Name (First & Second)

Write only one letter in each box. Leave one box blank between Surname and Name. Please condense your name if the space is not sufficient.

2. Date of Birth

Date Month Year

3. Sex : Please write Code No. in the given box

1—Male. 2—Female

4. Nationality——————————————————

5. Father's Name

Surname Name (First & Second)

6. Postal Address (Complete)

1.

2.

3.

4. Village/Town

5. Distt & State

6. Pin Code

7. Educational Status

Write the Code of the highest qualification obtained by you:
Primary—1, Middle—2, Secondary—3.
Senior Secondary—4, and Graduation & Higher—5

8. Whether SC or ST Candidate?
(Write SC for Scheduled Caste or
ST for Scheduled Tribe, if applicable)

9. Write the Code No. of the area you belong to
Tribal—1, Rural—2, and
Urban—3.

10. Medium of Instruction
Please write the Code of related medium.

(a) For Delhi UT and Uttar Pradesh
Hindi=01, English=02.
(b) For Gujarat State
Gujarati=03,
(c) For Assam State
Assamese =04

11. Course Fee.

Remit Rs. 100 through a Bank Demand Draft payable to **"Indira Gandhi National Open University, New Delhi".**

Bank **STATE BANK OF INDIA ONLY**

Branch & Town——————————————————

Bank Draft No.——————————————————

(Letter Code) (Number) CAPITAL LETTERS ONLY

Date of issue——————————————————

I hereby declare that the particulars supplied by me are correct to the best of my knowledge and it will be supported by documents when asked for I am also fully aware of the fact that in the event of any information being found incorrec or misleading my candidature shall be liable to cancellation by the University any time.

POLISH GOVERNMENT SCHOLARSHIPS FOR PRACTICAL TRAINING 1988

Applications on plain paper in the format at Annexure 1 are invited from Indian nationals for the award of 6 (six) scholarships offered by the Government of Poland for short term specialisation in the following subject fields :

(i) FISHERIES (ii) COAL MINING ; and
(iii) SHIP BUILDING

Value : Adequate maintenance allowance, free accommodation and free medical care when necessary, will be paid by the Polish authorities.

Duration : 5 Months.

Qualifications : for (i) Uniformally good academic record, with 60% or above marks in Master's degree in the subject concerned or related fields. For (ii) and (iii) 60% or above marks in Bachelor's degree in Coal Mining/Mining Engineering and Naval Architecture respectively.

Note : Conversion formula is to be given where grades have been awarded by University/Institution.

Essential Experience : At least two consecutive years teaching/research/practical experience at the college or University level as on 1.10.1987 in subject field selected after passing the prescribed qualification. Successful completion of M.Phil./Pre Ph.D. would be considered as equivalent to the required experience.

Age : Must be less than 33 years as on 1.10,1987 (Relaxation in age upto two years will be given in the case of Scheduled Caste/Scheduled Tribe candidates). Upper age limit and experience can be relaxed but not by more than three months at the discretion of the Selection Committee in the case of brilliant candidates.

Passage Cost : Travel expenses from India to Poland and back will be borne by the candidate or his/her sponsors/employers. Subject to availability of funds, the passage cost may also be met by the Government of India, provided the candidate is eligible under the rules.

Note : (1) The following documents must be attached with the application (a) Attested copy of the certificate certifying the date of birth (b) Candidates belonging to SC/ST must attach a copy of certificate to this effect (c) Attested copies of marks sheets of the qualifying examination (d) Attested copies of all degrees/diplomas/certificates etc. (e) Candidates must furnish a clear and precise programme of study/research (f) A recent passport size photograph of the candidate duly signed in ink must be affixed on the prescribed application form (g) A crossed Indian Postal Order of Rs. 5/- (Rs. 1.25 in the case of SC/ST and other backward classes) issued after the date of publication of this advertisement and payable to the Secretary, Ministry of Human Resource Development, Department of Education, New Delhi (2) Application in the subject fields other than those specified above will not be considered (3) Candidates who have already been abroad for study/specialisation/training either on a scholarship or on their own are eligible to apply only if they have been in India for at least three consecutive years after their return from abroad (4) Application of candidates who are at present abroad, will not be considered (5) Candidates having contacts with Polish Institute (s) in the field of their study/training will be given preference (6) Candidates should have sufficient good knowledge of India and the donor country (7) Applications which do not contain Postal Orders and other required documents will be treated incomplete and will not be considered (8) No correspondence will be entertained with candidates not selected for interview/scholarship (9) Canvassing in any form will be a disqualification (10) Candidates must send their applications sponsored by their employers. Pending sponsorship by employer, an advance copy of the application duly completed in all respects may be considered provisionally provided the application through proper channel is received within a fortnight from the last date prescribed for receipt of applications. (Indian Postal Order is to be enclosed with the advance copy) (11) Applications received after the prescribed last date will not be entertained for consideration.

A minimum of 10 years of relevant administrative experience preferably in a Government, Educational or Research Institute or in a commercial organisation of national standing. Out of this atleast 5 years should be in a responsible position (in the pre-revised pay scale of Rs. 700-1300/700-1600). The candidates would be expected to have some familiarity with academic activities and working procedures in higher educational institution.

Desirable

1. Teaching and research experience or experience of life in a residential educational centre.
2. Experience of Computer Systems for Information processing and retrieving.

Candidates who are not found fit for the post of Deputy Registrar may be considered for the lower post of Asst. Registrar at the discretion of the Institute.

Finance & Account Officer

Qualification

1. A good Bachelor's degree in Arts, Science, or Commerce of a recognised University.
2. A postgraduate degree or diploma in Commerce of a recognised Institute/University or its equivalent or recognised qualification as Chartered Accountant/Cost Accountant.

Experience

A minimum of 10 years of relevant Accounts experience in a Government, Educational or Research Institute or a Commercial Organisation of national standing. Out of this at least 5 years should be in a responsible position (in the pre-revised scale of pay of Rs. 700-1300/700-1600). The candidates would be expected to have some familiarity with academic activities, working procedures, budget preparation etc., in higher educational Institute. The candidates must be conversant with Govt. of India rules such as Fundamental Rules & Supplementary Rules, General Financial Rules, Treasury Rules, Accounts Code, Civil Service Regulation etc.

Desirable

1. Experience of life on a residential campus.
2. Experience of Computer Systems for information processing and retrieval.

Estate Officer

Qualification

A good Bachelor's degree in Civil Engineering of a recognised University.

Experience

A minimum of 10 years experience in maintenance of residential, instructional buildings in a Government educational or research Institute or other organisations of national standing. Out of this 5-6 years should be in a responsible position (in the pre-revised scale of pay of Rs. 650-1200 or Rs. 700-1600). The candidates would be expected to have familiarity with estate rules regarding licensing of quarters, public premises, operation and maintenance of water supply, sewage disposal system and other estate properties of a large residential educational campus. The estate officer is entitled for licence fee free unfurnished accommodation in the campus.

One post of Deputy Registrar and the Post of Estate Officer is reserved for SC/ST candidates.

Age limit: Maximum 52 years for all posts.

General Information / Conditions/ Instructions

(i) For all posts, where Post graduate qualification is prescribed, experience means experience gained after Master's degree.

(ii) The prescribed qualifications are minimum and the mere fact that a candidate possesses the same will not entitle him/her for being called for interview.

(iii) The Institute reserves the right to restrict the number of candidates for interview to a reasonable limit on the basis of qualifications and experience higher than the minimum prescribed in the advertisement.

(iv) The Institute also reserves the right of rejecting any or all applications without assigning any reasons therefor.

For application form, please address the REGISTRAR, INDIAN INSTITUTE OF TECHNOLOGY, MADRAS 600 036 with a self addressed stamped (Re. 1.00) envelope (26 cm x 11 cm). Applicants are requested to indicate clearly the post and discipline for which they wish to be considered. Persons in the service of Government establishments and Public Sector Undertakings should apply through proper channel. Completed applications with a crossed non-refundable current Indian Postal Order of the value of Rs. 7.50 (Re. 1.90 for SC/ST candidates) drawn in favour of the Institute payable at IIT, Madras P.O., should be sent to the Registrar of the Institute.

The last date for the receipt of completed applications is **20-07-1988**.

CORRIGENDUM

Adv. No. 3/88

It is notified for the information of all concerned that qualifications for the post of Assistant Director (Adult Education) (Rs. 1200-50-1300-60-1900 (UGC) already published vide Advertisement No. 3/88 in the issue dated 20.6.88 be substituted as under :

Assistant Director

(a) Essential

(i) Good academic record in the subject of Adult/Continuing Community/Extension Education/Community Development from a recognised Indian University or an equivalent degree from a foreign University.

(ii) M. Phil, or Ph.D in a subject related to adult learning or Ph.D. in a subject under social sciences or Education/Evidence of published learning materials and learning resources on areas listed in (i) above or published research in any of the relevant area/areas indicated above.

OR

(i) Good academic record in the subject of Social Sciences/Social Work / Humanities / Education/ Sciences/Home Science.

(ii) Post Master's diploma in Adult & Continuing Education from a recognised Indian University or an equivalent diploma/degree from a foreign University.

(iii) M.Phil. or a Ph.D. in a subject related to adult learning or a Ph.D. in a subject under Social Sciences or Education or Evidence of published learning materials and learning resources in adult/continuing/community/ extension education/community development or published research in any of these area/areas.

EXPLANATION

For determining "good academic record" the following criteria shall be adopted :

(i) A candidate holding a Ph.D./ M.Phil. degree should possess atleast a second class Master's degree; or

(ii) A candidate without a Ph D. degree should possess a high second class Master's degree and second class in the Bachelor's degree; or

(iii) A candidate not possessing Ph. D. degree but possessing second class Master's degree should have obtained first class in the Bachelor's degree.

b. About five years experience of field work/teaching or research in a subject having bearing on Adult/Continuing Extension / Community / Non-

Formal Education or Community Development. This condition may be relaxed on the recommendation of the Selection Committee.

Applications on prescribed forms must reach Secretary, Banasthali Vidyapith, P.O. Banasthali Vidyapith (Rajasthan) 304022 within 30 days of the advertisement. Forms can be obtained by sending self addressed stamped envelope of 16×23 Cm. size with Rs. 4.20 stamps or Rs. 9.20 stamps for registered post in favour of Banasthali Vidyapith. No. 6/88.

BANASTHALI VIDYAPITH

DEEMED TO BE UNIVERSITY

National Institution for Education of Women

INVITES applications for the following:

1. **Department of Education**

   (a) **Instructor—1.** to teach Drawing and Painting to B.Ed. classes. II M.A. Drawing and Painting or 5 years Diploma in Fine Arts B.Ed. desirable.

   (b) **Computer Technician—1.** II M.C.A. or B.Sc. I/High II with Diploma in Computer Science (D.C.A.) or I B.Sc. with Computer Science (3 years Degree Course).

   (c) **Educational Technology Technician—1.** I/High II post B.Sc. Diploma in Electronics/T.V. Technology or I.T.I. Trained Technician (Electronics / T.V. Technology) with 2 years practical experience.

2. **Department of Computer Science**

   Technical Assistant--1. II M.C.A. or B.Sc I/High II with Diploma in Computer Science (D.C.A.) or I B.Sc. with Computer Science (3 years Degree Course).

3. **Department of Electronics**

   Technical Assistant—1. I/High II Post B.Sc. Diploma in Electronics or I.T.I Trained Technician with 2 years practical experience.

   B.E. (Electronics) preferred.

4. **Department of Textile Designing**

   Assistant Lecturers—2 I/High II Graduation with 3 years Diploma in Textile Designing / Technology (Specialization Printing/Weaving).

Pay Scale : (all above post in 1 to 4) 1490-30-1640-40-2000-50-2300-60 - 2600-75-3050.

(present initial emoluments Rs. 1684.00).

5. **Central Library**

   Sr. Technical Assistant--1. II M.A./M.Sc./M.Com. with II B.Lib.Sc. OR II B.A./B.Sc./B.Com. with II B.Lib. with 4 years experience.

Pay Scale : 1400-30-1640-40-2000-50-2300-60-2600-75-2900.

(present initial emoluments Rs. 1582.00)

6. **Laboratory Assistants—5.**

   (Biology, Computer Science, Electronics, Home Science, B.Ed.)

   II B.Sc. Biology, II B.Sc. Maths, II B.Sc., Home Science, II B.Sc. with Diploma/Certificate in Computer Science/Electronics.

Pay Scale : 880-15-1000-20-1200-25-1400-30-1640-40-1680.

(present initial emoluments Rs. 994.00 p.m.)

Dearness Allowance, Contributory Provident Fund, Gratuity Cum Insurance as per Vidyapith Rules. Residential Accommodation at Subsidized Rates.

Notes : (1) Employees must become habitual wearer of KHADI on appointment.

(2) Vidyapith reserves the right to reduce or increase the number of vacancies or not to fill up any post advertised.

(3) Preference to women candidates.

(4) II class return rail fare shortest route payable to persons appearing at interview for post at 1 to 5.

Applications on prescribed application forms (seven copies) for posts at 1 to 5 and on plain papers for posts at No. 6 with necessary supportings (Age certificate, attested copies of mark-lists) must reach Secretary, Banasthali Vidyapith, P.O. Banasthali Vidyapith (Rajasthan) 304022 within 30 days of the advertisement. Form can be obtained by sending self addressed stamped envelope of 16×23 Cm. size with Rs. 4.20 stamps. Rs. 9.20 stamps for registered post in favour of Banasthali Vidyapith. No. 7/88.

INDIAN INSTITUTE OF CHEMICAL BIOLOGY

(COUNCIL OF SCIENTIFIC & INDUSTRIAL RESEARCH)

4, RAJA S.C. MULLICK ROAD,
JADAVPUR,
CALCUTTA - 700 032

Advertisement No : 1/88

Applications are invited from the Indian Citizens for the following posts :

(I) Scientist-EI, One post, Scale Rs. 3700-125-4700-150-5000/-

Qualification High Academic qualification with Ph.D. degree in Chemistry with atleast ten years' experience in the Chemistry of Marine Natural Products as evidenced by publication in reputed journals.

Job requirement The selected candidates will be required to provide leadership and to plan, guide and execute research projects in the area of marine natural products and guide a group of Scientists working in this area.

(II) Scientist - B/C Two posts, Scale Rs. 2200-75-2800-EB-100-4000/- / Rs. 3000-100-3500-125-4500/-

Qualification M.Sc. 1st Class and preferably Ph. D. degree in Chemistry/Biochemistry with atleast 5 years research experience in the specified field.

Post (i) Desirable Knowledge in neuropharmacology, neuro-immunology and modern biological techniques.

Job requirement To work on neuroreceptors and their function in the central nervous system and to assist in the planning and execution of research projects in this area.

Post (ii) Desirable Experience in Microbial Transformation and chemical ecology and use of all modern physical methods as applied to marine natural products.

Job requirement—To carry out isolation, purification and characterization of marine and estuarine natural products, particularly lipids and to develop methodologies.

(III) Scientist B : Five posts, Scale Rs. 2200-75-2800-EB-100-4000/-

Qualification M.Sc. 1st Class degree in Biochemistry/Chemistry/Physiology/Zoology and atleast three years research experience with published papers in leading international journals, Ph.D. preferred.

Desirable Good exposure to modern methods/techniques in the relevant field in a reputed laboratory.

Job requirement

Post (i) (Reserved for ST candidate, General candidate may also apply)

To work on problems related to regulation of gene expression in higher plants, experience in recombinant DN technique being essential.

Post (ii) (Reserved for ST candidate, General candidate may also apply)

To work on the chemistry of natural products and application of modern physical methods in organic chemistry.

Post (iii) (Reserved for SC candidate, General candidate may also apply)

To work on Computer application to organic chemistry.

Post (iv) To work in the field of lipids in biological membrane specially in relation to isolation and mode of action of hormone.

Post (v) (Reserved for SC candidate, General candidate may also apply)

To work on synthetic organic chemistry and applied oriented natural products.

(IV) Technical Officer - B, Two posts, Scale Rs. 2200-75-2800-EB-100-4000/-

Post (i) (Reserved for SC, General candidate may also apply)

Qualification M.Sc. 1st Class in Chemistry/Biochemistry with at least three years research experience in a reputed laboratory. Ph.D. preferred.

Desirable Knowledge of handling, storage and disposal of radioactive materials.

Job requirement To carry on Radiolabelling of organic compounds, radio analysis and biodistribution studies. To assist the Project Leader in the management and supervision of radioactive materials and related matters.

Post (ii) Qualification A graduate with recognised Degree/Diploma of Library/Information Science. Atleast ten years experience in a reputed Scientific library.

Desirable Thorough knowledge in arranging and binding scientific journals/periodicals including Accessioning.

Job requirement The selected candidate will be required to independently handle subscription to foreign journals directly, reference queries survey literature and compile bibliographies for the research scientists.

(V) Technical Assistant, Gr-III (1) (Reserved for ST candidates) 2 posts, Scale Rs. 1400-40-1800-EB-50-2300/-

Qualification B.Sc. with Chemistry/Physiology/Zoology/Physics as one of the subjects.

Job requirement To work on culture and maintenance of parasites/routine work of a biochemical/chemical laboratory and the job as may be assigned from time to time by the Project Leader.

General Conditions

1. The posts are temporary but likely to continue and carry usual allowances as admissible to Central Government employees stationed at Calcutta. The posts of Scientist-EI, B/C, and Technical Officer-B are contractual in the first instance for six years but also carry option for pensionable benefits when the posts become permanent. Higher initial start may be given to the deserving candidates. Qualifications relaxed in the case of candidate otherwise well qualified and considered suitable for the posts.

2. The name of post applied for and its serial number as appeared in the advertisement must be clearly indicated in the application form. Candidates applying for more than one post should send separate application for each post.

3. The present emoluments at the minimum of the scale is as follows:

Scale of Pay	Emoluments
Rs. 3700-5,000/-	Rs. 5,030.00
Rs. 3000-4500/-	Rs. 4,240.00
Rs. 2200-4000/-	Rs. 3,146.00
Rs. 1400-2300/-	Rs. 1,947.00

4. Canvassing in any form and/or bringing in any influence political or otherwise will be treated as a disqualification for the post.

5. Applications must be on forms which together with detailed instructions are obtainable from the Administrative Officer, Indian Institute of Chemical Biology, 4, Raja S.C. Mullick Road, Jadavpur, Calcutta-700032 by sending a self-addressed 90 paise stamped envelope

of 24 x 10 c.m. size. Number of advertisement, name of the post applied for and full address in block letters must be indicated at the top of the request to be made by **8.7.1988** for obtaining application forms. Complete applications on the prescribed forms together with an application fee of Rs. 8/- (no application fee in case of **SC/ST candidates)** in the form of crossed Indian Postal Order payable in favour of the Indian Institute of Chemical Biology, Calcutta-32 should reach by **22.7.1988.**

6. Interim Enquiries will not be entertained.

JAMIA MILLIA ISLAMIA

JAMIA NAGAR, NEW DELHI-110025

ADMISSION NOTICE

No. 2/1988-89

Admissions are open to the following Courses for the academic year 1988-89.

A. Faculty of Humanities & Languages, Faculty of Social Sciences and Faculty of Natural Sciences:

(1) Ph.D.: Arabic, English, Hindi, History, Islamic Studies, Persian, Urdu, Economics, Political Science, Social Work, Sociology, Psychology, Commerce, Physics, Chemistry, Mathematics with Computer Science, Geography and Bio-Sciences. (2) M.A.: Arabic, Economics, English, Geography, Hindi, History, Islamic Studies, Persian, Political Science, Social Work, Sociology and Urdu. (3) M.Sc.: Physics (Material), Chemistry (Material), Mathematics with Computer Science, Bio-Sciences and Geography. (4) Postgraduate Diploma in Cartography, (5) B.A. (Hons): Arabic, Economics, English, Geography, Hindi, History, Islamic Studies, Mathematics, Persian, Political Science, Psychology, Social Work, Sociology and Urdu. (6) B.Sc. (Hons.): Physics, Chemistry, Mathematics and Geography. (7) B.Com. (Hons.). (8) B.A. (Pass). (9) B.Sc. (Pass). (10) Advanced Diploma in Modern Arabic (Evening Course). (11) Diploma in Modern Arabic (Evening Course). (12) Certificate in Modern Arabic (Evening Course) (13) Diploma in Urdu Language Proficiency (for foreign students only).

B. Faculty of Education

(1) Ph.D. (2) M. Phil. (3) M.Ed. (Full-time and Part-Time). (4) M.A. (Educational Planning and Administration). (5) M.A. (Education) (6) Master of Fine Arts (M.F.A.). (7) Advanced Diploma in Special Education. (8) B.Ed. (9) Bachelor of Fine Arts (B.F.A.) (10) B.A. (Hons.) in Art & Art Education. (11) Diploma in Basic Training.

C. Faculty of Engineering and Technology

(1) B.Sc. Engineering (Civil, Electrical and Mechanical). (2) B.E. (Civil) Evening Course. (3) Diploma in: (i) Civil Engineering and (ii) Electronics. (4) Certificate in: (i) Draughtsmanship (Mech.), (ii) Electronics and (iii) Refrigeration and Air-Conditioning.

Mass Communication Research Centre

(1) Ph.D. (2) Master's Degree in Mass Communication (Radio, Television and Film), (3) Diploma in Science Journalism.

E. Dr. Zakir Husain Library

Bachelor of Library and Information Science (Evening Course).

F. Correspondence Course in Urdu (through the medium of Hindi and English).

G. Prospectuses with Admission forms can be had from M/s Maktaba Jamia Ltd., Near Faculty of Education Campus, Jamia Nagar, New Delhi-110025 on all working days between 9.30 a.m. and 1.30 p.m. on cash payment of Rs. 8/- for all Faculties (Combined) and B. Lib. & Information Science Course or by Post by sending a Crossed Indian Postal Order of Rs. 10/- for Ordinary Post (U.P.C.), and Rs. 16/- for Registered Post for Faculties (Combined), Payable to M/s Maktaba Jamia Ltd., New Delhi, alongwith a self-addressed envelope of 18x25 cms. size. In order to save time the candidates, desirous of obtaining the Prospectuses with Admission Forms by post, are advised to write immediately to the Maktaba Jamia Ltd.

H. Prospectuses with Admission Forms for all Faculties and B. Lib. & Information Science Course are Available.

I. Last Dates (Upto 4.00 p.m.) for receiving the complete Admission Forms for various Courses are as follows:

(1) Ph.D. (for the Faculties): A **copy of the Ph.D. Regulation with Application Form** can be had from the Registrar's Office (Jamia) on cash payment of Rs. 5/- or by post by sending a Crossed Indian Postal Order of Rs. 6/- **payable to Jamia Millia Islamia, New Delhi** alonwith a self-addressed envelope of 18x25 cms. size. At present candidates may apply for admission three times in the year, namely, by 20th August, 20th December and 20th April (2) The Aforesaid Three Faculties (under A above): (i) M.A./M.Sc. (Previous)—19.7.88, (ii) B.A./B.Sc./B.Com. (Hons.), I year—11.7.88, (iii) B.A./B.Sc. (Pass), I year—15.7.88. (iv) Diploma and Certificate Courses—1.8.88. (2) Faculty of Education: (i) M. Phil.—5.8.88. (ii) M.Ed.—13.7.88 (iii) M.A. (Educational Planning and Administration)—20.7.88 (iv) M.F.A./B.F.A./B.A. (Hons.) in Art & Art Education—11.7.88 (v) M.A. (Education)/Advanced Diploma in Special Education—4.8.88. (vi) B.Ed./ Diploma in Basic Training—15.7.88. (4) Faculty of Engineering and Technology: B.Sc. Engineering (Civil, Electrical & Mechanical)/B.E. (Civil) Evening/ Diploma/Certificate Courses—15.7.88. (5) Mass Communication Research Centre: (i) Ph. D. (ii) M.A. in Mass Communication—25.6.88. A separate Prospectus for the Courses offered by Mass Communication Research Centre will be available from the Office of the above Centre during office hours. (6) Dr. Zakir Husain Library: Bachelor of Library and Information Science (Evening Course)—11.7.88.

J. Candidates seeking admission to the courses of the Faculty of Education and the Faculty of Engineering and Technology must enclose alongwith their Application Forms a Bank Draft for the amount noted against each Course below, drawn in favour of the Jamia Millia Islamia, New Delhi, payable on any Bank in Delhi/New Delhi, as Registration and Admission Test Fee (Non-Refundable). Postal Order/Money Order/Cash etc. are not Acceptable.

(1) Faculty of Education: (i) B.Ed. Rs. 50/- and (ii) Diploma in Basic Training—Rs. 50/-.

(2) Faculty of Engineering and Technology: (i) B.Sc. Engg. Rs. 60/-, (ii) B.E. (Civil)—Rs. 60/- and (iii) Diploma Courses—Rs 50/-.

Knowledge Knows no Boundaries.
Throwing open new horizons in learning....

INDIRA GANDHI NATIONAL OPEN UNIVERSITY.

You always wanted to improve your qualifications, skill and competence. But there were barriers. You were too old to start afresh. Or too busy and had no time for a full time course. Or you lacked the basic education to enrol. You thought this was the end of the road for you.

IGNOU throws open new horizons in learning for people just like you.

People living anywhere can benefit anytime from the courses of IGNOU

Consider the advantages IGNOU offers

- Relaxed entry qualifications
- Flexibility in choosing courses
- Study as per your convenience and pace
- Most modern and scientifically developed technique of distance learning such as audio and video cassettes and personal contact programmes for face to face instruction

And later through radio & television broadcasts.

COURSES OFFERED:

- **Bachelor of Arts**
- **Bachelor of Commerce**
- **Diploma in Management leading to Master's Degree**
- **Certificate Course in Rural Development**
- **Diploma in Creative Writing**
- **Diploma in Distance Education**
- **Certificate Course in Food & Nutrition**

UNIVERSITY NEWS, MONDAY, JUNE 27, 1988 Regd. No. R.N. 7180/63 Delhi Postal Regd. D(C) 1086

VIKRAM SARABHAI SPACE CENTRE, TRIVANDRUM

ISRO VISITING FELLOWSHIPS

ADVERTISEMENT No. VSSC-110

Vikram Sarabhai Space Centre, Trivandrum, of the Department of Space, Indian Space Research Organisation, invites applications for ISRO Visiting Fellowships, tenable at the Space Physics Laboratory, VSSC, from young scientists below the age of 25 years possessing a First Class Post Graduate Degree in Physics/Applied Physics/Physical Engineering/Meteorology. Only such students who passed or expect to pass their post-graduate degree in 1988 need apply. Students who expect to complete their M.Sc./M.Tech. final examinations before the end of August, 1988, can also apply, stating clearly the expected dates of the examination and the expected date of publication of the result. The selected candidates should have passed the M.Sc./M.Tech. in first class by the time of joining. Selection is based on the performance in a written examination and an interview for those candidates who pass the written test. The examination will test the depth of understanding of physics concepts and the ability to apply them to solve scientific problems. The test and interview are likely to take place over a period of 2 days around the last week of August, 1988 in VSSC, Trivandrum. At the Space Physics Laboratory, opportunities for experimental and theoretical research work on the Space environment of the Earth are available in the following areas;

(i) Electrodynamics of the Ionosphere—Magnetosphere system; (ii) Large scale dynamics and wave motions in the Troposphere, Stratosphere, Mesosphere and Thermosphere; (iii) Atmospheric Aerosols (and minor constituents) and their role in the scattering, Absorption and Transmission of Radiation in the atmosphere; (iv) Physics of the Atmospheric Boundary Layer.

Experimental facilities in SPL include Laser Systems, VHF Radars, Acoustic Radar and Solar Radiometers for studies on the Earth's atmosphere. Selected candidates will be working under the general guidance of experienced Scientists and Engineers in SPL and they are encouraged to register and complete their Ph.D. during the tenure of their Fellowships (only such persons who have strong aptitude and motivation for research need apply).

The Fellowships are granted initially for a period of one year and carry an amount of Rs. 1,000/- per month and a contingent grant of Rs. 3,000/- per year. M.E./M. Tech. Degree holders are eligible for a monthly stipend of Rs. 1,200/-. ISRO may renew the Fellowships annually for another two years subject to the total period of the Fellowships not exceeding a period of three years. For M.Sc. degree holders at the end of two years, if after assessment, the work of the Visiting Fellow is found to be satisfactory, the amount may be raised to Rs. 1,200/- per month. Fellowships amount are likely to be revised soon to make them on per with those of C.S.I.R./U.G.C. Applications should be sent on a plain paper (to be neatly hand-written or typed in A-4 size paper—210× 297 mm) alongwith a recent passport size photograph, giving the following details :

1. Post Applied for 2. Advertisement Number 3. Name in full (In block letters) 4. Date of Birth 5. Nationality 6. Father's/Husband's name 7. Address for correspondence (In block letters) 8. Permanent address 9. Educational/Professional qualifications (indicating clearly the examinations passed/Course Undergoing, expected dates of examination result, University/Board, Year of Passing, Class and Percentage of Marks, Subjects taken). Percentage marks for all the semesters completed so far are to be given 10. Details of previous/present employment held or Research/Training experience if any, in chronological order starting from present position backwards (indicating the name of employer with full address, post held, salary drawn. period of service, nature of duties. 11. If your replies to (9) to (10) do not cover all the period from School leaving till date, briefly state how you spent the uncovered period. 12. If selected, minimum time required to join the Fellowship. 13. Any other relevant information including references. 14. Whether applied for any post in ISRO/DOS before ? (If so, the details such as name of the Centre, Advertisement No., Post No., Name of Post, Date of interview, Result of interview, etc. may be furnished). 15. Major Scientific/Technical field(s) of interest : Give details of independent research work (if any). List of Publications (if any).

I affirm that information gived in this application is true and correct. I also fully understand that if at any stage it is discovered that any attempt has been made by me to wilfully conceal or mis-represent the facts, my candidature may be summarily rejected or my employment terminated.

17. Signature of the candidate with date.

General Conditions : (a) Candidates will have to produce proof of the details furnished in their applications as and when required. (b) Applications which do not give full details asked for and those received after the due date will not be considered. (c) Outstation candidates called for the interview will be paid to and fro second class railway fare by the shortest route on production of proof of journey such as railway tickets/ticket number. (d) Applications, completed in all respects, should reach the **Senior Administrative Officer, Recruitment, Vikram Sarabhai Space Centre, Trivandrum-695 022 within 15 days** of release of this advertisement. The applications should be sent in a cover superscribed "Application for the award of ISRO Visiting Fellowships". (e) Only Indian Nationals need apply. (f) No interim correspondence will be entertained. (g) Canvassing in any form will be a disqualification.
